SUDAN

A PERFECT WINTER RESORT

KHARTOUM, a modern town at 1,200 feet above sea-level, enjoys an ideal winter climate, constant sunshine tempered by invigorating breezes. The Grand Hotel is under the management of the Sudan Government Railways and Steamers.

OMDURMAN, the wonderful African Metropolis, lies near by, stretching for seven miles along the shores of the Nile.

BIG GAME SHOOTING.

The Sudan is one of the most easily accessible countries in which Big Game abounds, and its large territory offers a most varied choice of shooting grounds.

Express Steamer and Dining and Sleeping Car Service between Cairo and Khartoum.

Notes of the Week.

The Visit of King Fuad.

The obvious sincerity of the warm welcome accorded to King Fuad on his arrival in London will, it is to be hoped, not be lost on the people of Egypt. Among the crowds who assembled in the streets to do honour to King George's Royal Guest the subtleties of political considerations played no part. It was no concern of theirs in what category of diplomatic phraseology the relations between the two countries a few months ago or at any time during the last few years had to be placed. There are, in British public opinion, certain fundamental ties between Great Britain and Egypt, created by the close association of the two countries for nearly fifty years, which remain unaffected by any passing disturbance or temporary eclipse. In this attitude there is no sense of superiority, still less of ownership, but a strongly-rooted belief that the destinies of the two peoples are inevitably linked by the force of circumstances, and with that belief is bound up the desire that the responsible authorities in each country should place an official seal upon a relationship which seems at once natural and to the mutual advantage of both parties. In this connexion King Fuad himself will have noticed a strong contrast between the British public and the public of his own country. Political demonstrations among the former are the exception. It is inconceivable that British crowds should attempt to lay down a whole scheme of foreign or domestic policy in shouted expressions. They assembled to show honour to one whom their own Sovereign is pleased to honour, and in so doing endorse the policy in regard to Egypt that they are satisfied that the Government is conscientiously endeavouring to carry into effect. It would equally be a mistake for the Egyptians to suppose that in some subtle way Great Britain hoped by means of King Fuad's visit to win him over to any course of action that would not be wholeheartedly supported in Egypt. That difficulty has been experienced in conveying to the Egyptian public appreciation of the sincerity of British intentions cannot be

denied; but, as the past tendency in Egypt to settle foreign affairs, as it were, in the market place rather than in the Council Chamber is Egypt's concern alone, all that the British Government can hope to do is to make plain its intentions to those who are charged with the direction of Egyptian affairs and to leave to them the duty of carrying public opinion with them.

Towards a Formal Alliance.

With King Fuad comes his Prime Minister, Sarwat Pasha. The ground is thus set, not indeed for formal and final negotiations between the Egyptian and British Governments, but for comprehensive discussions which may well serve to clear away ambiguities and to present in more convincing form the various points of view of the two parties. Sarwat Pasha is no stranger in London, where his sound common sense, intellectual ability and conscientious patriotism are respected. If there are still points on which British policy in regard to Egypt can be further modified in the joint interests of the two countries, there is probably no one in Egypt whose views and wishes will carry more weight in friendly conference. The final arbiter in regard to any definite policy must always be the Egyptian people, as represented by Parliament; and the best hope for carrying preliminary discussions to a definite and practical stage lies in the fact that the British Government can place firm reliance on Sarwat Pasha's reading of his countrymen's psychology. In any optimism, however, that may prevail regarding the ultimate political issue of King Fuad's visit the steady spade-work done by the respective representatives of the two countries will not be overlooked—on the one hand the Royal Egyptian Legation in London with its record for undeviating tact and practical confidence in the ultimate identification of the two countries' interests, and on the other hand Great Britain's High Commissioner in Egypt, who has been able to press the British point of view without impairing the Egyptian belief in the conciliatoriness and sincere friendli-

ness towards Egypt. All that is now required is that the terms of an alliance between the two countries should be arranged with such dispatch as is possible.

Persian Problems.

Persia had the unusual distinction of providing two separate questions in the House of Commons last week, and since both problems are of considerable importance and are both awaiting solution, it may be well to record the answers. On June 28 Mr. Locker Lampson stated that the British Government had as yet sent no reply to the communication received from the Persian Government proposing the termination of the capitulatory rights and privileges enjoyed by British and other foreign residents in Persia. These rights be summarised as the privilege of having all cases, civil or criminal, in which British were defendants, tried by extra-territorial jurisdiction conferred by Order in Council. Manifestly, therefore, the British Government is, as we suggested it would, very carefully considering the Persian Government's not unnatural proposal. The other question, which arose on June 30, concerned the Persian debt to Great Britain. This is a matter about which considerable ignorance prevails, and the answer of the Chancellor of the Exchequer is especially to be commended to students of the quarterly reports on Persian finances by Dr. Millspaugh. Mr. Churchill explained that in April, 1925, the British Government reduced their claim in respect of various loans made to the Persian Government from over £4,500,000 to £2,000,000, and agreed to accept repayment by means of twenty-five annuities of £180,000 each to begin in 1926-27. The Persian Government, he stated, accepted this offer in March, 1926; but the promise to submit it for ratification by the Majliss had not yet been fulfilled. Representations were accordingly made on May 10 last to the Persian Government, urging that the agreement should be submitted for ratification without further delay. To the Western mind, the necessity of such ratification seems simple and inescapable, and, to say the least, procrastination in such a matter is a curious concomitant of a demand for the abolition of capitulations. Quite apart from the operations of the new Persian Courts of Justice, the Persians have an obvious way of strengthening their demand to live on complete parity with wealthier foreigners.

Italy and Georgia.

An interesting historical matter cropped up in the House of Commons on June 29, when the Secretary of State for Foreign Affairs was asked a question on the alleged "offer," by Great Britain and France, of Georgia to Italy. According to an ex-Prime Minister of Italy,

Signor Nitti, whose books are apparently much admired by a certain section of English "Liberal" opinion, an expedition to Georgia was actually prepared by Signor Orlando, but, in June, 1919, was cancelled on Signor Nitti's advice. The official spokesman in the House of Commons threw little light on what is possibly a matter of mainly historical interest; enough is known, however, of the impracticabilities which intrigued the world after the Great War for credence to be given to this particular story. Indubitably it is to the benefit of contemporary Italy that no march was made on Georgia, even though such had been made nominally to replace British by Italian troops; although whether Georgia could have fared worse than she subsequently did at the hands of the Soviets is open to doubt. It is just possible that the future shaping of the world may see an Italian charge contiguous with Soviet domain, but it is highly improbable. In any case, Georgia, unless she be independent, must, it would seem, always be under the aegis of Russia.

Palestine and Syria at the League.

As was to be expected, the British representatives of Palestine and Transjordan at the Permanent Mandates Commission at Geneva last week were able to make encouraging statements concerning the Holy Land. From the Mandatary's point of view the situation in Palestine and Transjordan has without doubt greatly improved: it is a curious fact that the general position in Palestine has been eminently satisfactory while the particular Zionist position has been unsatisfactory. We are not yet acquainted with the exact points of the inquiry of the Mandates Commission, but it is by no means presumptuous to suppose that the British representatives were able to satisfy it on all counts. Would that it were possible to make a similar supposition in regard to Syria! News from that unhappy country is, however, undeniably better, for it is officially stated that a large party of Druse Nationalists, under Sultan Pasha al Atrash, are going to settle in Wahhabi territory, and that the insurgents have withdrawn completely from Qasr al Azraq. It may be some time before Syria is able to resume its normal life, but all its well wishers must hope that a new era of peace and of subsequent prosperity is about to begin. The French Mandatary is, to all appearances, resolved to embark on no large constitutional scheme for the unification of Syria until the last vestige of violent discontent has disappeared.

The Albanian Incident.

The liquidation of the dispute between Yugoslavia and Albania arising out of the arrest and imprisonment of an Albanian employed as a dragoman at the Yugoslav Legation in Tirana was not finally consummated until last Sunday, when the French Minister to Albania, who had temporary charge of Yugoslavia's interests, visited the Foreign Minister to withdraw the original Note handed in by the Yugoslav Chargé d'Affaires and to substitute for it a second Note from which had been eliminated the words to which the Albanian Government had taken exception. The dragoman, who had been arrested on May 27 on a charge of espionage, was thereupon released. Honour is thus satisfied on both sides, and it remains for the two countries, for the well-being of each of whom good neighbourly relations are essential, to lose no time in resuming diplomatic touch with one another. It is to Yugoslavia's interests that she should appear in Albania's eyes as a disinterested friend, for whom good relations connote no designs on the political or economic independence of Albania. Albania's difficulties are mainly of a domestic order, and she will be well advised to avoid issues of an international character. The economic condition of the country, linked up, as it is, with Italy's financial control, the President's position and tribal restlessness are more than enough to keep the Tirana Government with its hands full.

THURSDAY, JULY 7, 1927.

ITALY AND ARABIA.

Without offence either to Italy or to Arabia, where, indeed, considerable action, as opposed to mere talk of it, is alike to be seen, it may be said that words play a more important part in the life of these two countries than they are made to perform in, say, lands farther West. Of all European nations contemporary Italy has perhaps most in common with Arabia, through the Fascist delight in verbal gesture, so that, whether words are meant and used to conceal thought or not, at least a common thrill runs through Roman and Yamani when a play in superlatives begins. Nor is there any need for cynical or superior contempt when, as in the great days of Christendom or of Islam, high and mighty descriptions are given to the work of men, such as Signor Mussolini, whose actions and motives may by the West be interpreted in less lyrical terms. This humdrum world should indeed be grateful to the Yamani mission which, through its chief, the Saiyid Muhammad ibn Yahya, referred last week to the Duce's "wisdom and perspicacity, grandiose and luminous actions, vast and elevated doctrine, and authoritative and intelligent influence"; such flowers of speech, coming from remote and happy Arabia, throw a delightful scent down our Western lanes of official and too often stereotyped thought. It was only right and natural, after such a floral gift, that the Imam's son should ask the Fascist leader not to confine his actions to the bestowal of peace and greatness on Italy, but to occupy himself with organising the peace of the world. To this naive Arab request, reply came with swift significance: "I intend to continue for the good of my own country and for the peace of the world." We only hope that the Yamanis noted the sequence of this thought, and that they understand the real difference between a patriot and a universalist. In any case, such comprehension seems certain soon to be provided for them.

Yet, however suspicious certain men in Arabia, especially outside the Yaman, may be of the integrity of Italian motives in this area, it is impossible not to be impressed with the energy displayed by the Fascisti on both sides of the Red Sea. Complaint may be made of the Italians' "colonising" ambitions, of their cynical disregard for Oriental sovereignties, of their disrespect for existing interests. It has to be remembered, however, that they have never had the advantage, or borne the burden, of a mandatory conscience, that their intentions in the East are far more economic than political, and that, as all the evidence goes to show, they have been loyal to Great Britain in the East. It is, of course, ridiculous to assert, as certain Italian journals asserted after the meeting of the Yamani Mission with Signor Mussolini, that Italy has brought peace to the Orient, and particularly

that Fascist policy has consolidated peace in the Arabian Peninsula. But this ignorant boast—which one would have thought that recollection alone of the necessitated Clayton-Gasparini conversations would have modified—will do harm to no one, least of all to those Yamanis whose prudence, more than Italian advice, counsels them against designs of aggrandisement in Asir. Italy, like Great Britain, may do something to help in the preservation of peace in the Arabian Peninsula, but tranquillity there depends really upon the wisdom or unwisdom of two men, King Ibn Saoud of the Hijaz and Najd, and Imam Yahya of the Yaman. If these two chieftains genuinely wish for the peaceful development of their respective countries—and all present indications point to so wise a desire jointly animating them—then there will be peace, and such things as the Pilgrimage in the Hijaz and cotton in the Yaman will deservedly continue to flourish; but if the good relations now subsisting between the Hijaz and the Yaman break down, not all Signor Mussolini's "authoritative and intelligent influence" could, we imagine, keep the peace between two such forceful Arabs as have not been seen for many years in the Arabian Peninsula. We venture to suggest, indeed, that there is one small way in which the Fascisti could assist in consolidating peace in the Peninsula, and that is by recognising the sovereignty of the Imam Yahya's great northern neighbour. In the way of such a step there are no difficulties like the difficulty which confronts the British Government in regard to the Aden Protectorate and the recognition of the Imam.

It seems inevitable that Italian interests in Arabia will increase. Nor is there any reason why this should not be so. Contemporary Italy has much to bring to the backward countries of Islam, industry, brains, and persistence. So long as ideas of domination are rigidly kept out of Fascist enterprises, dispassionate observers of other nations, such as Great Britain and France, can only wish Italy well, for the Fascist Government, which inherited so small a territorial legacy from the War, is resolved, in a way that more fortunately placed Governments do not appear to be resolved, to develop her overseas opportunities. Much is heard, admittedly, of Italian intrigue in the Eastern Mediterranean and Red Sea areas; now it is the displacement of Greeks from the Dodecanese, now the fortification of Rhodes, now a design on Syria and eventually on Anatolia, and now the domination of Abyssinia or of the Yaman. Suspicion is one thing, however, and proof of evil designs another. We are unaware—apart from the mistake, made jointly by Italy and Great Britain, in regard to Abyssinia—of any serious act of Italian disloyalty to her Allies or of bad faith towards lands not under Italian control. But suspicion of Fascist motives in the East does generally exist, and it would be an excellent thing, in our opinion, if British, French and Italian representatives could be brought to confer frankly and openly upon the whole set of problems which pertain to those countries touching the Red Sea and the Eastern Mediterranean. There are many ways in the East of helping at once the native populations and oneself, without scoring off one's friends. And as for the pro-Islamic policy, of which the Yamanis' visit to Rome was hailed as the first step on the part of Italy, there is no reason why such a policy should not always be pursued by the leading nations of the West. Response to such a policy will, of course, depend upon its motives; for Islam in general is sufficiently intelligent now to estimate motive together with act.

The Near and Middle East*

From Our Own Correspondents.

Cairo, June 25.

The Royal Visit.

King Fuad received a very warm send-off when he embarked yesterday at Alexandria on the Mahrussa for his European tour. Sarwat Pasha, the Prime Minister, who at the last moment it was decided should be in attendance on His Majesty in London, did not accompany him, but left to-day by the French steamer for Paris, where he will join the King. In addition to the Premier, King Fuad's suite will include Said Zulfikar Pasha, the Grand Chamberlain, who has fortunately recovered from his recent serious illness, Ahmed Hassenein Bey, First Chamberlain, who is now in London co-ordinating arrangements for the stay in England, Mohamed Shaheen Pasha, Under-Secretary of State for Public Health and the King's private physician, Amin Anis Pasha, Vice-Director of the Royal Cabinet, and Achille Sekaly Bey, Director of the European Office of the Council of Ministers.

The presence in England later on of Abdel Hamid Badawi Pasha, Head of the Government Legal Department, and a personal friend, and the right-hand man, of Sarwat Pasha, and of Abdel Hamid Suliman Pasha, General Manager of the Egyptian State Railways, Telegraphs and Telephones, who was the Egyptian member of the recent Nile Commission, has been taken in local politician circles as an indication that negotiations for the settlement of outstanding questions will be initiated in England this summer. But whatever may have been the motives prompting the journey of these high officials—

Abdel Hamid Pasha, as a matter of fact, usually visits England in connexion with the affairs of his administration—and whatever may be the hopes indulged in by higher political circles here, it can be fairly definitely asserted that no such thing as negotiations will take place this summer. The most that may occur will be that in general terms the situation in Egypt may be talked about, but if negotiations are to take place it will most certainly be in Cairo, which in the present peculiar state of politics in Egypt is the most natural centre if any successful issue backed by Egyptian public opinion is to be secured.

The War Office Budget.

The War Office debate, which, in view of the imminent departure of the Prime Minister, was put on ahead of other budgets, passed off without any serious incident, if one may except the decision taken by the Chamber to re-transfer the Coast-Guards Administration back to the Ministry of Finance. The proposal before the House was for its amalgamation with the Frontiers Districts Administration and without any previous advice to the Government the resolution for its return to the Ministry of Finance was submitted and passed almost unanimously.

The ground had been prepared by the extreme Zaghouloulists, and the majority of the Chamber, cognisant of the decision taken in this respect overnight at the Zaghouloulist Club, where all these matters are concerted before hand, readily acquiesced in the manoeuvre. The object undoubtedly was to create a difficult situation for the Cabinet in regard to any undertaking it might have given to the British Government based on the amalgamation of the two administrations. But as a matter of fact it is only the Frontier District Administration that concerns Great Britain, and the assurances required by the British can be carried out just as easily with the Coast-Guards Administration under the Ministry of Finance.

Public Works.

Good progress is being made with the great projects which the Minister of Public Works has in hand. The survey of the Asswan Dam, in view of the possibility of a further heightening in lieu of the Barrage at Gebel Aulia, has advanced so far that it is expected confidently that the report thereon will be ready by the autumn. As regards Nag Hamadi, the preliminary work is in full swing and intensive operations will start in November.

The Chief Archivist's Departure.

A well-known and much-respected figure has disappeared from the Residency this week in the person of Mr. A. R. Craig, the Chief Archivist, who has been transferred in the same capacity to Tokio. Mr. Craig first joined the Residency Staff in 1905. He has thus served under seven pro-Consuls and has passed through all the great and eventful periods which have marked the history of Egypt since the Cromerian régime. He had become in fact the Remembrancer of successive British representatives and filled a niche at the Residency in which by reason of his local experience and knowledge it will be exceedingly difficult to replace him. By none will he be more missed than by the staff who had an affectionate regard for him and gave him a farewell dinner at Gezira on the eve of his departure.

Bank Misr.

With reference to a paragraph which appeared in one of my recent letters, I have been requested to give publicity to the following *communiqué* issued by the Bank Misr: "The Bank Misr declares publicly that since its founda-

*Under this heading appear weekly or at regular intervals, communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

CUNARD
TO
MEDITERRANEAN
LEVANT and
BLACK SEA PORTS
—
Regular Freight Sailings from
LIVERPOOL
GLASGOW
SWANSEA
MANCHESTER

For full particulars of sailings, rates, etc. apply CUNARD LINE, Cunard Building, Liverpool, 98, Mosley Street, Manchester, or Local Offices and Agencies.

tion no European element has taken part in its management and that the confidence reposed in it by Egyptians, particularly the wealthy classes, has never reached the point which it enjoys to-day. The Bank further declares that the Government funds deposited with it are destined for advances to industrial undertakings and agricultural syndicates and that the bulk of these funds has been utilised for this object."

This *communiqué* appears mainly to have been prompted by an inaccurate telegraphic summary of the paragraph referred to above in which I was represented as having said that "the Bank had not been able to make use of the Government funds deposited with it and had had to deposit them with the National Bank of Egypt." I have not by me a copy of the letter in which the offending paragraph appeared, but I am certain that I never said what is attributed to me. To the best of my recollection I stated that "if, as had been proposed in Parliament, the funds at present deposited by the Government with the National Bank of Egypt were transferred to the Bank Misr the latter would not know what to do with them," and I adhere to this statement. I am glad, however, that this has given the Bank Misr an opportunity to bring its activities to the attention of the general public.

Ljubljana, June 22.

Dissolution of the Skupshtina.

An interesting change has taken place in the internal political situation of the Kingdom of Serbs, Croats, and Slovenes. Nikola Ouzounovitch's Government—consisting of the Radical and Slovene People's (or Koroshetz) Parties—resigned, and a new Government was constituted very quickly and quietly under the presidency of M. Vukitchevitch, who was Minister of Education in the Ouzounovitch Cabinet and is a member of the Radical Party. M. Vukitchevitch recruited his Government mainly from the Radical Party, but a few members belong to the Democratic Alliance, which consists of the Davidovitch Democrats and the Bosnian Moslems. This is all the more important, because in Serbia the Democrats have been the most determined opponents of the Radicals, just as the Muslims have always been opposed to them in Bosnia. In spite of these differences, a working Government consisting of Radicals and Democrats *cum* Muslims has now been established under M. Vukitchevitch.

This new Government took Yugoslav public opinion by surprise. First of all by the way of its constitution. There had been none of the customary consultations between the party chiefs. The list of prospective Ministers was suddenly published, passed with equal suddenness, and the Ministers at once took the Oath. All this has given rise to the impression that the present Government was in fact already prepared beforehand behind the scenes, and this would mean a definite determination to modify the course of the internal politics of the Kingdom, to give a new character to its political development.

Gradually the new political situation revealed itself more clearly. M. Vukitchevitch's new Government marks the beginning of an attempt to break with an old-established tradition, whereby the Radicals are the leading political party in Serbia, and indeed in Yugoslavia, with other parties merely grouped around them. Now M. Vukitchevitch has sought the support of the Democrats, who have been given very important offices, among others the Ministry of Foreign Affairs, which has been entrusted to

Dr. Marinkovitch. It is obvious that the new Government is counting upon the permanent co-operation of the Democrats, nay, that it regards them as an essential part of itself, which is emphatically a novelty in the recent political history of Yugoslavia.

For this and other reasons the Radicals have taken up a position more or less hostile to the new Government. Of course it must be remembered that the Radical Party has long since ceased to be that united body which it once was. The differences between the various factions have steadily widened. On the one side we have the closer partisans of the late Nikola Pashitch, as strongly opposed to M. Vukitchevitch at present as they used to be to M. Ouzounovitch. In the middle are the so-called Centrumashi, adherents of the former Prime Minister, Ouzounovitch, Dr. Nintchitch, Minister for Foreign Affairs, and M. Maksimovitch, Minister for the Interior. The two last-named, having been turned out of office, are now in opposition to the new Government. The third faction comprises the adherents of those Radicals who have come into the new Government with M. Vukitchevitch.

The precise relations between these three groups within the Radical Party are by no means clear as yet. The differences between them are mainly personal and tactical, rather than matters of principle. It is not certain whether they will lead to a definite break-up, or whether the party as a whole will nevertheless remain united, at least to outward showing. The decision will fall within the next few months, i.e., at the forthcoming elections.

The Vukitchevitch Government had no sooner assumed office than it let it be understood that fresh general elections were on the cards. As it had to reckon with the hostility of the greater number of Radical deputies and of course with that of the regular Opposition as well, it could scarcely expect a cordial welcome from a sound majority in the Skupshtina. So the Skupshtina was at once adjourned, and the King prevailed upon to dissolve it, although its legal term does not expire for another two years, and to issue an order for general elections which will take place in September.

The dissolution of the Skupshtina roused no disapproval in Yugoslav public opinion. The late Parliament was by no means popular, because of its remarkable inactivity, and because relations between the parties represented in it were not such as to justify the hope that the future would show groupings which would enhance its working powers. And for this reason many political men have long been demanding its dissolution and fresh elections.

The Electoral Campaign.

The situation at the opening of the electoral campaign is full of interest. The bulk of the Radical Party feels that the tide of the coming struggle is setting strongly against it. So it is a question whether the Radicals will accept battle and take up their stand against the Government and that section of the party which sides with it, or whether they will avoid the issue and seek agreement and co-operation with the Vukitchevitch group.

No party is entering upon the campaign with greater expectations than the Democrats, who hope to increase the number of their mandates considerably, for it is a very long time since the Davidovitch group has been represented in an Election Government.

The Government Radicals and the Democrats hope to emerge from the elections strong enough between them to choose kindred groups among the Croats and Slovenes for allies, and so to establish a sound and workmanlike legislature which will regenerate the internal political life of the country and inaugurate a more fruitful era of parliamentary activity in Yugoslavia. So far the Slovenes are not represented in this Election Government and even the Croats have only one representative, a Davidovitch Democrat. The Vukitchevitch Government, however, enjoys a good deal of sympathy in the Croatian and Slovene parties, for they recognise in it a welcome weapon with which to break the predominance of the old Radical Party, which they blame for ultra-conservatism and other evils in Yugoslav internal politics. Generally speaking, it is hoped and expected that the outcome of the elections will afford an opportunity for a thorough going remodeling of Yugoslavia's internal policy.

One cannot help perceiving that the powerful personality of the veteran Nikola Pashitch is no longer there. The old Radical Party has entered upon a crisis and the political life of the country has reached a transitional stage which must show what is to take the place of the old ruling party. Herein lies the importance of the forthcoming elections. One thing is already noticeable. Among the leading Government men there is so far not one strong personality which might serve as a centre of crystallisation in this new political phase.

THE HIJAZ.

Jidda, June 15.

The Pilgrimage.

The great Pilgrimage of A.H. 1345 is all over, bar the shouting, and there can be little doubt that the shouting will take the form of pæans of praise and gratitude for the King who has arisen in Islam to give peace in our time where peace was never known before. And the 250,000 pilgrims, who stood this year on Arafat and made holiday at Muna, will carry far and wide—to India and far Morocco, to South Africa and Bukhara—the glad tidings that the Cradle of their Faith is at last in good hands, strong and clean. Whether the numbers actually present at this year's ceremony represent a record or not, the Pilgrimage cannot but occupy a prominent place in the

annals of Islam for many reasons, among which may be cited the large development of the use of motor traffic already presaged by last year's small beginnings; the deliberate cancellation of the time-honoured participation of the Mahmal owing to the inability of Egypt to appreciate the simple fact that under the new régime Egyptian soldiers are no longer needed to ensure the safety of Egyptian pilgrims; and last, but not least, the absence of disease in any epidemic form. Death is, of course, a regular attendant on pilgrim crowds anywhere, and the heat, which is beyond the control of mortal man, appears to have taken its usual toll this year—largely, it would seem, because the pilgrims, maddened by thirst, drank inordinately and too greedily when they came again to water after the descent from Arafat. It is the presence rather than the lack of water that causes the trouble, and it has to be remembered that the pilgrimage is largely frequented by the old and infirm, who have put off their duty and ordeal too long. Pilgrims began their return journey to Jidda on June 13, the last day of the Id, and there are over a score of ships waiting to take back the first batches, including many who have been in this country for six months and seen both Mecca and Madina. Of those still remaining for a while many will go to Madina before they finally return to their homes.

Possibilities of Rabigh.

The British community at Jidda spent part of the four-day holiday in an excursion to Rabigh (half-way between Mecca and Madina) by motor-car and thus had an opportunity of testing the desert road from Jidda—some ninety miles, which was accomplished without mishap in an average of five hours each way. In a few days scores of cars will be carrying visitors to Madina by this road, and perhaps in years to come Rabigh, with its excellent harbour and central position between the two holy cities, will develop into the great port which Jidda can never be. Arabia has unquestionably placed its foot firmly on the lowest rungs of the ladder of progress and its development is only a matter of time, but it is essential that it should be left to develop at its own pace and in its own way and independently.

Air Routes in Arabia.

The action of the Persian Government in refusing to grant the necessary facilities for the Cairo-Karachi air-route may, it appears, have an Arabian sequel; and a word of warning will not be out of place at this time to those who think, as some seem to think, that the Arabian coast of the Persian Gulf lies within the orbit of the British Empire. A considerable length of the coast-line forms part of the territories of King Ibn Saoud, and a good deal of the rest, though in treaty relations with Great Britain, is either independent or in a state of chronic anarchy, which that monarch would never tolerate within his dominions. In any case it is to be hoped that no attempt to investigate the possibilities of this alternative route is contemplated except on the basis of Ibn Saoud's co-operation. Such a proceeding would inevitably put the clock back and disturb the harmony resulting from the Clayton negotiations, which

may be regarded as having finally put the seal of British recognition on the independence of the Hijaz and Najd and its dependencies. Similar care will have to be exercised in any scheme of a similar nature involving the communications of Palestine and Iraq.

The Yaman, Asir, and Najd.

About a month ago, at the request of the Imam of the Yaman, King Ibn Saoud dispatched a deputation, consisting of three representatives—two of the Asir area and one of Najd—for the specific purpose of discussing the question of the boundaries of the two countries and all other matters of common concern and interest. This conference has now been sitting for three weeks and the latest advices on its progress, contained in a letter from the Imam himself to the King, warrant the statement that there is no likelihood of any disturbance of the peace in that part of Arabia.

Sofia, June 21.

The Opening of the Sobranye.

The Twenty-second Sobranye, elected on May 29, met in extraordinary session on June 19 to discuss several urgent projects, mainly of a financial character. The fact that the session had to be opened by King Boris had made necessary the imposition of rather exceptional measures for the maintenance of order, especially in view of the fact that a new conspiracy had recently been discovered. Indications had been found that subversive elements were once more at work, having their base of operations in Yugoslavia, whence they frequently passed over to Bulgaria to try to bring off their *coups*. And so the exact hour of opening was not made known until the last moment; and at the entrance to the Sobranye the authorities stopped the deputies of the extreme Left as they arrived—a thing which even in the Near East constitutes an event in parliamentary annals.

The actual inaugural ceremony was effected in the usual manner and with the usual solemnity. Outside, were troops, with flags and bands at their head, moving along between Palace and Parliament; and within, all the Diplomatic Corps in full uniform, and numerous selected members of the public. The appearance of the King would have excited but passing notice had not a small incident broken the harmony. This incident happened after the reading of the Speech from the Throne. Now, as is well known, the Speech is always drawn up by the Government in office, not by the King. But this Speech, which was the work of M. Liaptcheff, after words of welcome to the newly elected members, went on to say that "the full participation of the voters in the legislative elections of last month is evidence of the freedom and order in which the elections were held and of the lively interest taken by the people therein." The King had not finished reading these words when a protest was heard from the benches of the Extreme Left, whence the old Socialist leader, M. Sakazoff, cried:—"That is not true, Sire, the whole nation is indignant at the violence of the Government at the elections. You, like the good Bulgarian that you are, must remember that and not let yourself be deceived." These words, applauded by the Extreme Left, were stifled in the general and prolonged acclamations which they immediately provoked in the benches of the Governmental and Democratic Entente groups, whence were heard:—"A bas l'interrupteur, Vive le Roi!" with such

strength and insistence that the King, visibly taken by surprise, had to signal them to stop, so that he might continue the Speech from the Throne.

The King passed rapidly over the appeal to the deputies to aid the Government in its efforts to establish the financial consolidation of the State, the economic relief of the country, and the improvement in the well-being of the people. He referred to the loyal relations which Bulgaria preserves with foreign countries, relations which have just been crowned by the ending of the control of the Inter-Allied Military Commission; and to the various projects which the Sobranye has to discuss affecting the extraordinary Budget. Amid acclamation the King concluded his Speech and left the Hall.

The incident which I have mentioned caused much excitement among the partisans of the Government. This excitement was still keener when it was learned that the interruption of M. Sakazoff had been agreed upon in advance by the Extreme Left. The action reminded one of Stamboliski's gesture against King Ferdinand at the opening of the Grand Assembly of Parliament at Tirnovo for the revision of the Constitution in 1911. As M. Sakazoff was returning home, he was spat upon by several young people.

ROUMANIA.

Bucharest, June 27.

The New Cabinet.

The last swing of the political pendulum has once more brought a Liberal Government into power. The efforts of Prince Barbu Stirbey to form a Government composed of members both of the Liberal and of the National Peasant Party failed, because the representatives of these two parties could not agree on the policy to be adopted for the conduct of the coming elections. It is well known

that the National Peasant Party are advocates of free elections, whereas the Liberals claim that the electoral campaign already begun shows signs of arousing violent party strife at a time when the critical political situation of the country requires that peace and order should reign. The Liberal members, therefore, resigned from Prince Stirbey's Cabinet, and he was forced to hand in the resignation of the whole Cabinet. Thereupon M. Ion Bratianu was asked to form a Government which he did, and on June 22 his Cabinet was sworn in. [Its constitution was given in our last issue.—Ed.]

The King received the oaths of the new Cabinet at Scrovishte where he is now staying. There is a good deal of pathos in the words he addressed to them, as they show his deep disappointment, that his favourite dream of a Cabinet combined of the National-Peasant and Liberal Parties had not been realised, and he exhorts the Cabinet to carry out their task in a spirit of conciliation. This Cabinet includes two members who have not formerly been identified with the Liberal Party, Dr. Lupu (a former Tsaranist) and M. Argetoianu, and it is curious to see Dr. Lupu, who has been accused of communistic tendencies, in such company. He is known, however, to be an able man, and Labour is his sphere.

The general policy of the Liberals has been too much discussed to require much comment here. One of their main axioms is "everything by ourselves" and it is this, one might say "mania" which, in the opinion at least of a large section of the commercial community, is responsible for the fact that Roumania's economic development since the War has been delayed: e.g., the railways are still lamentably inadequate to cope with the growing traffic, and the leu is not stabilised, though all the internal and external debts have been consolidated. It is hoped, therefore, that, if they are established in power by the coming elections (these begin on July 7), they will see fit to widen their policy in this respect and not frown on all offers of foreign capital to help in the reconstitution of the country's economy.

CYPRUS.

Nicosia, June 21.

The Governor's Visits.

Sir Ronald Storrs continues to visit some of the larger villages. He has recently visited Lapithos, a well-favoured village of the northern Kyrenia District, accompanied by Lady Storrs and Mr. MacDonald, the District Commissioner. An abundance of pure cold water gushes from a spring above the village, enriching the lands below. Here he was received by the Mayor and leading villagers. The address that was made may be regarded as typical of those generally delivered on these occasions. After an expression of gratification of the people for the honour conferred, allusion was made to the general desire of Cypriots that the island portion of the Ottoman Debt (now reduced to £42,000) might no longer be a burden on the Island. Next His Excellency was begged to support the movement for "union with Greece." After these petitions, voiced everywhere, as if by agreement, a statement of local needs followed in due course.

Visits were then made to a factory of earthenware pottery, where Lady Storrs ordered some samples of

work, the overseer being a man of 80, or more, years, whom the Governor addressed, in Greek, as the Nestor of the place. Visits were next made to two cloth factories, where Lady Storrs ordered silk materials, and Sir Ronald cloth for a suit.

On June 14 the Governor visited Larnaca. He lunched with the Greek Consul, M. Sakellariades, and took tea in the Greek Club, visited the bazaars and other places with the Mayor, and dined on board with the Captain of a vessel in the roadstead, the French Consul being one of the guests.

The Charms of Kyrenia.

The district of Kyrenia is a charming one. Several English and Scottish families have recently settled there and built houses, and Mr. G. L. Houston (the Laird of Johnstone Castle, in Scotland) has been settled there for over 40 years. Several hotels have sprung up, and many visitors motor over for sea bathing from Nicosia, which is only sixteen miles distant. Some of the most interesting mediæval remains are among the many attractions of the district.

Colonial Conferences.

There are many reflections in the Press on the proposed periodical conferences, as inaugurated this year in London by Mr. Amery, who, by the way, is regarded by Cypriots as "the most imperialistic of late colonial governors." The view taken is that, unless members of such conferences are truly representative of their Colonies, little, if any, advantage can be derived or hoped for from the meetings. Officials cannot be expected to take more than a fleeting interest in their colony where they serve for, more or less, a few years before being transferred to another. Similarly with regard to the Legislative Council, in which it is proposed that the Governor should be relieved of the duty of presiding, it is argued that the President should be elected, not from the official members, but from the elected, who more truly represent the needs of the people.

The Public Library.

The gift of books by H.M. the Queen is much appreciated. It is hoped that Her Majesty's example will be followed by many libraries, institutes, and public bodies, as well as by private individuals who take an interest in the Colonies and the Empire.

The Visit of King Fuad

His Majesty, King Fuad of Egypt, attended by H.E. Abdel Khalet Sarwat Pasha, Prime Minister and Minister for Foreign Affairs, H.E. Said Zoufekar Pasha, Grand Chamberlain, and a numerous suite, arrived in London at 3 p.m. on Monday, July 4, on a visit to King George and Queen Mary at Buckingham Palace. The T.S.S. Maid of Orleans, on which the Royal party crossed from Calais, was met half-way across the Channel by a naval escort of four destroyers and an air escort of five aeroplanes and escorted into Dover, where King Fuad was met by H.R.H. the Prince of Wales. The Egyptian Minister to the Court of St. James, H.E. Aziz Izzet Pasha, also met His Majesty on board. At 1 p.m. King Fuad was conducted on shore by the Prince of Wales and was received by the Lord Warden of the Cinque Ports, His Majesty's Lieutenant for the County of Kent, the Commander-in-Chief the Nore, the General Officer Commanding 54th (The East Anglian) Division, and the Air Officer Commanding Coastal Area. Guards of honour of the Royal Navy and of the 2nd Battalion Bedfordshire and Hertfordshire Regiment were mounted on the pier. On the station platform, which had been profusely decorated, an address of welcome was presented to the King by the Mayor and Corporation of Dover.

At Victoria Station King Fuad, who was accompanied by the Prince of Wales, was met by King George and members of the Royal Family. There were also present the Prime Minister, the Secretary of State for Foreign Affairs, and the Home Secretary, together with a large company of invited guests. The

King Fuad I. of Egypt.

approaches to the station and the route which was to be taken by the Royal Procession were thronged with spectators. After greetings had been exchanged on the platform, the Royal Party proceeded by carriage to Buckingham Palace. In the first carriage (which was escorted by a Sovereign's escort of the Household Cavalry) were King Fuad, King George, the Prince of Wales and the Duke of York; in the second Sarwat Pasha, Aziz Izzet Pasha, Said Zoufekar Pasha and the Earl of Granard, Master of the Horse. Four other carriages completed the procession.

The streets were lined with troops, and throughout the whole route King Fuad was received with a cordial welcome. Arrived at Buckingham Palace, King Fuad was received by Queen Mary, and His Majesty's Suite were presented.

The programme for the remainder of the day included a visit by King Fuad and his Suite to the Cenotaph and Westminster Abbey, visits to members of the Royal Family, and the presentation at St. James's Palace of Addresses of Welcome from the London County Council and the City of Westminster. In the evening a State Banquet was given in Buckingham Palace in honour of King Fuad.

On Tuesday, July 5, King Fuad received the Members of the Diplomatic Corps at Buckingham Palace, and subsequently paid a visit, accompanied by the Prince of Wales, to the Guildhall, where an Address of Welcome was presented by the Lord Mayor and the Corporation of the City of London. His Majesty was subsequently entertained at Luncheon by the Corporation.

AHMED FUAD PASHA, G.C.B., KING OF EGYPT.

King Fuad, whose visit to England has been inaugurated this week under the happiest auspices, came to the throne as Sultan of Egypt in October 1917. On March 15, 1922, shortly after the declaration of Egyptian Independence, he was proclaimed King. Born on March 3, 1868, Fuad Bey was less than ten years of age when his father, the Khedive Ismail, was deposed and the whole tenor of his life was suddenly changed. The photograph reproduced on the next page represents him as a boy of nine, who was at that time beginning his education in Turkish, Arabic and European languages. In the words of his tutor of those days, Mr. Roland Michell, he was an intelligent and exceedingly charming boy, somewhat delicate and noted for his deep attachment to his mother. If the original scheme for his education had been carried out, he would eventually have come to England; but in

1879 he accompanied his parents to Italy and in consequence did not continue his education in English. When he was suddenly called to the throne of Egypt on the death of his brother, the Sultan Hussein, he was not only confronted with a critical situation in Egyptian affairs, but was also handicapped by the absence of any intimate knowledge of Great Britain and the British character. To his natural cleverness and to the earnestness with which he has applied himself to his duties as Sovereign is due the fact that he has so largely overcome the initial obstacles of his position within the short space of ten years. In that period King Fuad has left his mark on Egypt in the stimulus that he has given to the advancement of learning and of science in different directions. As the founder of the Egyptian University and as the patron of various scientific bodies, he has done much for the extension and broadening of education in Egypt, and it is due in large measure to his interest that the numbers of Egyptian

students, both male and female, who come to England to complete their training have increased so much in recent years. He has encouraged sport, and in England the cause of art has reason to be grateful to him for his generous gift last year to the rebuilding of the Shakespeare Memorial Theatre at Stratford-on-Avon.

In the furtherance of the cause of good relations between Egypt and Great Britain King Fuad will always be associated with the selection of such an imposing residence as Bute House for the Royal Egyptian Legation,

Fuad Bey, aged 9 years.

and with his resolve to bear witness to the reality of Egyptian independence by an official visit to England in his capacity of an independent Sovereign. As a constitutional Monarch, however, he can influence Egyptian policy only within prescribed limits. He has come on the present occasion not to negotiate treaties, but to acquaint himself with Great Britain and British affairs, and haply at the same time to satisfy his subjects that a nation which is prepared to extend a hearty welcome to the King of Egypt should be given credit for meaning well by the Egyptian people as a whole.

A MUNIFICENT GIFT.

In the course of his speech at the Guildhall Luncheon in honour of King Fuad, the Lord Mayor, Sir Rowland Blades, M.P., announced that he had just received from His Majesty the munificent gift of a cheque for £1,000 for the poor of London.

The Anglo-Turkish Mixed Arbitral Tribunal sitting in Constantinople on June 29 declared itself incompetent to deal with cases brought by the ex-Khedive against the British Government, and in the test case brought by Ahmed Emin Bey, the Malta deportee (and former editor of the *Vatan*), against the British Government. The ex-Khedive was ordered to pay the sum of £T500 (about £50) as costs.

Book Reviews

THE MESOPOTAMIAN CAMPAIGN.

"THE OFFICIAL HISTORY OF THE WAR. MESOPOTAMIAN CAMPAIGN, 1914-1918. Volume IV." By Brigadier-General F. J. Moberly, C.B., C.S.I., D.S.O. (H.M. Stationery Office, 15s.)
 "A BRIEF OUTLINE OF THE CAMPAIGN IN MESOPOTAMIA, 1914-1918." By Major R. Evans, M.C. (London: Sifton, Praed & Co., Ltd.)

The narrative of the fourth and final volume of the Official History of the Mesopotamian Campaign opens in May, 1917, when General Maude, having consolidated his position covering Baghdad, was preparing for further fighting in the autumn, anticipating, at the time, that the enemy would make a determined effort to recover the lost Vilayat, for which purpose they were organizing the "Yilderim Group." In September, General Brooking's column was successful in capturing Ramadi and the Turkish Force holding that position; in October, the Third Corps cleared the Baghdad-Kirmanshah road of the enemy; and the First Corps established itself at Tekrit during the first week in November. But, simultaneously with these improvements in our strategic position on the Iraq plain, the general situation in the Middle East underwent a complete change. It became increasingly evident that, for the time being, nothing more than defensive action could be expected of the Russian forces in Persia and the Caucasus; and there were many signs that the threatened Turkish counter-offensive against Baghdad would not materialise. We now know that, at the beginning of September, Enver Pasha had at length been brought to realise that the chief danger to Turkey lay on the Palestine front. The centre of interest soon shifted to the Caucasus.

By the beginning of 1918, the Bolshevik Revolution had taken place, Russo-German peace negotiations were in progress, any Russian military recovery had become improbable, and Moscow had lost effective control over the Caucasus provinces, where the Tartar tribes offered suitable material for Turkish military reserves. In Turkey, Mustapha Kemal had acquired so predominant a position in the pan-Turkish party that he was able to dictate its policy. He insisted that immediate steps should be taken to realise the pan-Turkish aspirations in the Caucasus, north-western Persia and Trans-Caspia whose fulfilment had been promised by Germany as the reward for the entry of Turkey into the War on the side of the Central Powers. Thus, the attention of Turkey became concentrated chiefly on the defence of Syria and the attempt to carry the Pan-Turkish programme into effect. The latter did not meet with the approval of the Germans, who desired to employ the Turks solely to forward their own ambitions in Syria and Arabia, and, having other designs with regard to the future of southern Russia, entered into virtual occupation of the Ukraine and achieved friendly relations with the Government of Georgia; but German influence was no longer paramount in Constantinople.

The rôle of the Mesopotamian Expeditionary Force—establishment of British control over the Baghdad Vilayat and co-operation with the Russian forces advancing on Mosul—required complete revision. It was necessary that we should adopt such means as might be practicable in order to avert, or delay a hostile occupation of the Caucasus, where Baku offered command of the Caspian Sea and was the essential base for enemy activities farther east, besides being of great importance on account of its oil-field. There were two opinions upon the course which should be followed. In more than one quarter it was represented that the Force could be employed most effectively by concentrating its efforts on an advance into the Mosul Vilayat, which, it was asserted, would threaten the right flank and communications of the Turkish Army of the Caucasus and, at the same time, compel the enemy to reinforce their sixth Army by reducing their strength on other fronts. The Government, however, decided upon the dispatch of a Military Mission through Persia to Baku to endeavour to stem the enemy's advance. This decision has been severely criticised; but, although there are many indications that the Imperial General Staff did not appreci-

ate the stupendous difficulties of the task entrusted to General Dunsterville, it is now evident that action on the Mosul front, alone, would not have had an appreciable effect in the Caucasus. A letter from Mustapha Kemal to Enver Pasha, which General Moberly reproduces in full, makes it quite clear that the Pan-Turkish party did not consider Mosul to be of vital importance (it had not then occurred to them that Mosul was a "predominantly Turkish city"); besides which, the extremely mountainous nature of the country to the north of the Mosul Vilayat would have debarred the British forces there from making any further advance.

General Moberly's detailed and lucid account of the operations and political activities of General Dunsterville's Mission in Persia, and of the defence of Baku, throws much new light on those episodes. It is only to be regretted that the narrative ends, necessarily, with Turkey's formal suspension of hostilities.

The maintenance of "Dunster force" entailed a considerable drain on the transport services in Mesopotamia which, together with the excessive heat and Turkey's pre-occupation elsewhere, prevented any important developments on the Mosul front during the summer months of 1918. After the capture of Damascus on October 1, however, it was decided that, as the Turks had been placed in a position of extreme difficulty, it would be advisable to exploit at once General Allenby's success so as to eliminate all Turkish influence south of the Taurus mountains. The victory of General Cobbe's First Corps at the Fat-ha Gorge and the advance of the column from the Third Corps, under General Lewin, to Altun Kupri, opened the road to Mosul, but that city had not been captured when, on October 31, the Armistice came into force. General Moberly does not give the reason for the insistence by the Entente Powers that the Armistice Treaty of Mudros should include the evacuation of Mosul by the Turks—this had been agreed upon by Great Britain, France and Russia during the earlier stages of the War—but it will be remembered that Lord Kitchener had been of the opinion that the crests of the mountains beyond Mosul formed the only suitable frontier for Iraq, and that our pledges to the Sharifian family, as the representatives of the Arab races, compelled us to remove Turkish rule from Arab lands wherever possible.

General Moberly's book, with its remarkable attention to detail, useful appendices, and good illustrations, is an exhaustive source of information on the events in Mesopotamia from 1914 to 1918. His work will be invaluable to students of military strategy and tactics and to all who are interested in Asiatic politics. It should be employed as a model by the historians of our future campaigns.

For those who would prefer to study the history of the War on this front in a shorter form, Major Evans has succeeded in concentrating an outline of the chief events into the small space of 135 pages, by limiting himself to an appreciation of the strategic and administrative factors which governed our progress. He is chiefly concerned in pressing his opinion that an advance should not have been made, at any time, beyond the line Ahwaz-Amarah-Nasiriyah where, he believes, we should have been able to give adequate protection to our interests at the head of the Persian Gulf, including the Anglo-Persian oilfields. The latter, however, he considers to have been of "minor strategic importance." He also suggests that the money and other resources expended in Mesopotamia could have been employed to better purpose on propaganda, and by effecting a higher degree of military preparedness within the frontiers of India, and that the troops should have been dispatched to other theatres of war. This view is not likely to commend itself to those familiar with Oriental psychology and the conditions which obtained in Persia during the War. Moreover, it does not take into consideration the fact that the Force was essentially of Indian origin, operating at a comparatively short distance from its base, which was in India, not in the United Kingdom.

It should also be remembered that, had we not advanced beyond Amarah, it would have been hardly possible for

us to have claimed the Baghdad and Mosul Vilayats at the termination of hostilities. In these circumstances, our occupation of Basrah, without its natural hinterland, after the War, would have been a constant source of friction between the Turks and ourselves, and of irritation to the inhabitants of Iraq.

Major Evan's caustic criticisms of the defective administrative services in the Force, prior to Sir Percy Lake's assumption of the chief command, appear to be based on the findings of the Mesopotamia Commission, published in June, 1917. In this connexion General Moberly says:

... The Commission examined altogether a hundred witnesses; but neither the Quartermaster-General in India nor any of the officers of his branch ... were called upon to give evidence. This omission and other signs from the evidence that the Commission did not always appreciate the true significance of what it learnt, lend force to the criticism, often made, that, generally speaking, the members of the Commission were lacking in the technical and up-to-date knowledge of military operations and military war organisation required in an inquiry of this nature. It is undoubtedly true that, in a military sense, its report was incomplete and in a few cases inaccurate.

NOTES OF THE WEEK

(Continued from page 2.)

Middle Eastern Airways.

In spite of questions in the House of Commons the position in regard to airways in the Middle East has not yet been elucidated. Various explanations for Persia's refusal to allow the India service of Imperial Airways to fly over Persian territory have been offered; but whatever may be the right one, the fact remains that the veto still holds good. In Persia itself the reason is believed—right or wrongly—to be that the Junkers Company has not been accorded permission to extend its service from Teheran into Iraq. The Company would also like to run a service from Teheran via Mosul to Aleppo, but has not yet secured the requisite authority from the Iraq Government. It is certainly the case that at present it is not possible to fly from Teheran to Baghdad. If it is desired to avoid the rather exacting motor journey between these two capitals, a flight can be made to a point some twenty miles from the frontier whence a motor car can be taken to the railhead at Khaniqin. From the traveller's point of view this is a thoroughly unsatisfactory arrangement, and in the interests of the economic development of the two countries a direct air service between Baghdad and Teheran is required. If there are reasons against granting permission to the German Company to fly over Iraq territory, then no time should be lost in arranging a service from Baghdad to the frontier to connect with the service on Persian territory. On the other hand, if the hitch over the India service arises from the desire of the Persian Government to have the route changed to serve certain parts of Persia, then there would seem to be the basis for a compromise that would enable the India service to begin and provide for a general extension of air routes in the Middle East. A mere dog-in-the-manger policy benefits no one.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

THE GREEK CHRISTIANS OF CYPRUS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Before starting on a long-deferred holiday, I must reply, if somewhat hastily, to the letter of Mr. Nic Kl. Lanitis in your issue of June 23.

The Editorial note to that letter quotes the passage in my lecture to which he takes exception. I would like to thank Mr. Lanitis, with whom I have long been on friendly terms, for his assurance that he by no means imputes want of good faith on my part. My feelings towards Cyprus and her people are, I hope, sufficiently well known, to absolve me of any intentional misrepresentation, and I much regret if, quite unwittingly, I have wounded his or their susceptibilities.

The lecture was intended to arouse in my audience a friendly interest in the Island, and touched lightly upon a variety of aspects of the country, scenery, people, resources and trade prospects. One passage, relating to the Greek element of the population, has received an amount of attention and criticism out of all proportion to the importance given to it in the lecture. Had the object of the address been to deal exhaustively with this particular point such criticism as has been made might have been natural and expected. Mr. Lanitis branches off into politics, quotes English and Irish politicians and discusses a plebiscite. Here I do not propose to follow him.

The Cyprus Supplement published with your last issue (June 30) seems in its first section, so fully to substantiate my remarks on the point in question that I scarcely need to take up further space. If, however, Mr. Lanitis will again refer to the Encyclopedia Britannica, which he quotes, he will find the following passages (and others) which, I think, support the view I ventured to put forward:—"Its introduction (iron) was accompanied as in the Ægean, by economic, and probably by political, changes which broke up the high civilization of the Mycenæan colonies, and reduced them to poverty, isolation and comparative barbarism."

In regard to culture and art the same authority says:—"Three distinct foreign influences may be distinguished; they originate in Egypt, in Assyria and in the Ægean." Not merely "influences" (the word I used) but "foreign influences."

In another passage relating to Greek colonization the words "settlement," "suggests" and "legends" are used—which surely afford little ground for controverting my reference to the "general influence of Greece."

In Hall's "Ancient History of the Near East," a serious study on this question, there is much that bears on the point. I will quote only one passage:—"Cyprus had passed automatically to Persia with Egypt. The Cypriots, after an unsuccessful attempt at rebellion in concert with the Ionians, fell back under the Persian dominion from which all the efforts of Athens and the patriotism of Evagoras in later years could never rescue them."

The "Handbook of Cyprus," considered to be a fairly reliable authority, states (p. 37):—"The former (Greek-Christians) are sprung from the earliest inhabitants of the Island, blending with the Ionian colonists from Greece;" and in "Cyprus, a Brief Survey of its History and Development" (Flinn, p. 7) we read: "Of the aboriginal inhabitants few traces remain, although it is fairly clear . . . that the pre-Phœnician inhabitants were Aryans with a language . . . distinct both from Phœnician and Greek," and again, "Greek settlers came in large numbers to Cyprus in those early days and seem to have fused so completely with the Aryan or pre-Aryan Cypriots as to be indistinguishable from them." From this it would appear that the Greek settlers became merged in the original inhabitants and lost their identity as Greeks.

I as little thought that a Cypriot would resent my remarks as I should have expected any average compatriot of mine to be aggrieved at being told that Englishmen were not of pure Saxon, Danish, or Norman descent, but are of mixed descent.—I am, etc.,

W. BEVAN.

THE OUTLOOK IN PERSIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—One expression of opinion in the article, by Sir Arnold Wilson, upon Persia, which you published on June 30, leaves me bewildered: that Persia of to-day holds potentialities which might mean a breakaway from Islam. It appears to me that had Sir Arnold been in closer touch with modern tendencies of political schools in the world of Islam, he could never have credited the idea that Persia is anything but definitely Muslim—Muslim in ideals and aspirations. Not only is there not any breakaway from Islam in Persia to-day, but also the Islamic irradiance of her sons is perceptible to all eyes, and a fact which is often forgotten is that the recent religious attitude of Persia has very materially assisted Islam in recovering a corporate consciousness. Their anti-Wahhabi trend of mind is really beside the question, and the general temper of the country remains steadfast to the standard of the Prophet of Mecca. And if the boycott of the pilgrimage to Mecca by certain Persians be taken into account as symptomatic of a rift, the same idea prevailed amongst certain misguided Sunnis of India who clung to the dictates of the Ali Brothers with passionate superstition.

Moreover, the greatest test to which Islam has been subjected within living memory could justifiably be called that period when the dismantling of Turkey thrilled the East, and the fact that no schism of Persian sentiments occurred at that period can leave no one in doubt on the staunchness of the Shah's people to the banner of Al-Islam. Go even further back into the political and cultural history of the Persians, to the time of Syed Jamaladdin Afghani—the Great Pan-Islamist—it will be seen that Persia never once winced in her support of the solidarity of Islam; indeed, certain political affairs which threatened the Muslim lands within contemporary times actually received Persian help to steady conditions there.

The great wave of liberalism in religion which is being cast at the teeth of the Persians is not an isolated phenomenon. What about the grip that religion is losing in Europe and even in America? Many Muslim observers hold that this liberalism of Persia in the long run will tend to inspissate Islamic ideas amongst the Persian people, and indeed we see it already manifesting itself amongst the Turks.

But Sir Arnold amazes me when he speaks of the absence of any Islamic emblem in the Coronation of the Shah. Is it really necessary to point out here that exhibition of any pictures and the like is strictly prohibited by Islamic laws? Would it enlighten any of your readers to state here that the "widely circulated lithograph of His Majesty (the Shah), supporting his country, and surrounded by the figures of Cyrus, Zoroaster, and other great figures of the past"—as Sir Arnold puts it—could not be supplanted by (God forbid!) the figures of the Prophet Muhammad, and his four Companions? Such a thing is unthinkable. Nor can the lecturer prove that the national greatness of Persia was "arrested rather than developed" by Islam, any more than his contention of the Islamic shrines of to-day being merely Zoroastrian has sufficient reason to make us believe in the "poverty" of Islamic shrines: for what may be said in this regard about the Holy Kaaba itself with its intimate associations with the "Father of the Faithful"?

I feel it my duty to clear up these points lest these omissions in Sir Arnold Wilson's scholarly lecture may set up resentment in the minds of the *religieux* in Asia against what otherwise appears a learned exposition of the Persian conditions to-day.—I am, etc.,

IKBAL ALI SHAH.

PERSONAL AND GENERAL

TO-DAY

July 7, 1927 (New Style).

June 24, 1927 (Old Style).

Muharram 7, 1346 A.H., of the Muslim Calendar.

Tammuz 7, 5687, of the Jewish Calendar.

The Hon. Mr. Horne has arrived at 3, South Eaton Place from Egypt.

The Yuvaraja of Mysore embarked in the Ranpura on July 1 at Marseilles for Bombay.

The Turkish Ambassador and Madame Ferid Bey returned to London on July 1 from Paris.

Lord Russell of Liverpool embarked at Marseilles in the P. and O. s.s. Ranpura for Bombay on July 2.

Colonel Amir Ahmed, Military Secretary to the Nawab of Bhopal, arrived last week at the Grosvenor Hotel.

Mr. and Mrs. Thomas Russell have returned to London from Cairo and their address for the present will be Earle's Hotel, Grosvenor Street.

The annual dinner of the Anglo-Egyptian Association will take place in London this evening (July 7) at the Victoria Hotel.

The Rt. Hon. Lord Lloyd (High Commissioner for Egypt and the Sudan) had an audience of the King at Buckingham Palace on July 3.

General Sir Richard Haking (upon relinquishing his appointment as General Officer Commanding the British Troops in Egypt) was received by the King at Buckingham Palace on June 27.

Lord Lloyd, High Commissioner for Egypt and the Sudan, arrived in London on July 1 from Cairo, and has joined Lady Lloyd at 5, Portland Place.

The King has conferred upon Sarwat Pasha, Egyptian Prime Minister, the Order of Knight Grand Cross of St. Michael and St. George.

Mr. J. M. Furness, formerly headmaster of the Khedivial Secondary School, Cairo, has been appointed Director of the Egyptian Educational Mission in London, in place of Mr. S. C. Hebard.

Shaikh Azzam, formerly Imam at the Egyptian Legation in London, recently returned to London on four months' special leave to sit for an examination at the School of Oriental Languages.

At the annual dinner of the Central Asian Society, which was held yesterday (July 6) at the Hotel Cecil, Field-Marshal Lord Plumer and Sir Francis Aglen were among the principal speakers. Field-Marshal Viscount Allenby, Chairman of the Council, received the guests, and Viscount Peel, President of the Society, presided.

The Maharaja of Kapurthala entertained the King of Spain at dinner at the May Fair Hotel on July 1. The party included the Maharani of Cooch Behar, the Spanish Ambassador and the Marquesa de Merry del Val, the Duke of Miranda, Sir Walter and Lady Gibbons, and the Sardar Jarmani Das.

Among the guests entertained at luncheon on July 1, by Lady Stavridi at 33, Lennox Gardens were M. Michalacopulos, Greek Minister of Foreign Affairs, and M. Kafandaris, Greek Minister of Finance; M. Caclamanos, Greek Minister in London; Lord Ritchie of Dundee, Sir Arthur and Lady Steel-Maitland, Madame Kafandaris, Mr. T. P. O'Connor, Sir Alfred Mond, Mr. J. A. Spender, Sir John Foster Fraser, Mr. Politis, Mr. Boffin, and M. C. P. Zochonis.

M. Titulescu, late Roumanian Minister in London, who has accepted the post of Minister of Foreign Affairs in M. Bratianu's Cabinet, arrived in Bucharest, and was to take the oath of office in presence of the King at Sinaia yesterday (July 6).

Major W. H. Flinn, recently Acting Colonial Secretary in Cyprus, where he has been serving since 1921, has succeeded Mr. William Bevan, a former Director of Agriculture in Cyprus, as Colonial Commissioner for that Island in London at Avenue House, Northumberland Avenue.

M. Constantin Laptew, Counsellor of the Roumanian Legation in London, gave a luncheon at the Ritz Restaurant at which the ex-King and Queen of the Hellenes were present. The other guests included Colonel Radeşcu, Captain Levidis, M. Mishu, M. Michaesco, and M. Beza.

Among the guests entertained at dinner parties on June 28 and 29, by H.E. Monsieur Caclamanos, Greek Minister in London, at 51, Upper Brook Street, were the Polish Minister, the Minister for the Kingdom of the Serbs, Croats and Slovenes, Viscount and Viscountess Burnham, the Roumanian Chargé d'Affairs, the Greek Minister for Foreign Affairs, the Greek Minister for Finance and Mme. Kafandaris, Lady Tyrrell and Miss Tyrrell, Lady Barker, Sir Otto Niemeyer, Mr. Oliphant, Mr. Sargent, Mr. and Mrs. Gaselee, Sir Henry Strakosch, Mr. Wickham Steed, M. Tsouderos, and Mrs. Em. Mond, M. and Mme. Lambrinudi, the Greek Naval Attaché and Mme. Papalexopoulou, M. and Mme. Politis, M. Collas, M. and Mme Romanos.

Mrs. Charles Hancock was at home on June 27 at 125, Queen's Gate. Among those who accepted were the Persian Minister and Mme. Sadri, the Greek Minister, the Bulgarian Minister and Mlle. Hajji-Mischeff, the Afghan Minister, Lord Sinha, Viscountess Dupplin, Sir Henry and Lady Bax-Ironside, Sir Albert and Lady Spicer, Sir Edward and Lady Boyle, Sir Frank and Lady Newnes, the Dowager Lady Boyle, Sir John and Lady Stavridi, and General Sir Henry Mackinnon.

The appointment of Mr. William Hough to be Consul for the Vilayet of Aleppo and the Sanjaks of Alexandretta and Deir-az-Zor has been "gazetted."

The Vice-Chancellor of Oxford University has nominated Margaret Rodger, Somerville College, to the studentship at the British School at Athens offered by the Managing Committee of the School for the session 1927-28.

The Queen has sent a gift of some fifty volumes to the newly-established Public Library at Cyprus, through the Victoria League. The League has, in addition, presented over 200 volumes to the library. The Cyprus Commissioner in London is authorised by the Cyprus Government to receive contributions of books for the public library. They should be sent to him at Avenue House, Northumberland Avenue, W.C.2.

As the result of recent excavations by Mr. W. A. Heurtley, Assistant Director of the British School of Archaeology, assisted by Miss H. Lorimer, of Somerville College, Oxford, and Mr. R. W. Hutchinson, at Boubousta, on the south bank of the Haliakmon, two hours from Lapsista, in the foot-hills of the Pindos range, a settlement, which apparently began in the Mycenaean age (late Helladic III.), and continued into the Geometric period, thus ranging between 1500 and 800 B.C., has been disclosed.

COMMUNAL DIFFERENCES IN INDIA.

It is agreed by all parties in India that the differences between Muslim and Hindu are becoming more acute almost day by day. Hitherto the disturbances arising from this cause have been attributed to ignorant and fanatical adherents of the two religions. But it is now emphatically asserted that the unhappy discord which prevails has been accentuated by the action of educated men who, for their own purposes, are inflaming the passions of the masses. Sardar Jogendra Singh, the Minister for Agriculture in the Punjab, speaking of the recent riots at Lahore, declared that the trouble came from the top and that the educated classes were to blame. Sardar Jogendra Singh is a Sikh, and his contention is supported by both Hindu and Muhammadan observers. A Nationalist politician, Bhagat Ram Kumar, who is a graduate of Oxford, has elaborated this theme in a recent article, in which, after deploring the growing tension between the two great communities, with its concomitants of religious riots and bloodshed all over the country, he goes on to say: "It cannot be pleaded that this is altogether the work of the more ignorant and fanatical section of the population; for it is the educated classes—the politicians and the journalists—who have been at the bottom of the conflagration, and have been using the ignorance of the masses for their own ends. The Reforms have proved a veritable apple of discord, and split us up into hostile camps." Dr. Ansari, a well-known Muhammadan politician, again, has affirmed that the responsibility for the prevalent mutual distrust and communal hatred lies with a new set of communal leaders.

It has long been apparent indeed that the introduction of the Reforms has led to increasing competition between Muslims and Hindus for political power with its accessory of service under Government. The present troubles therefore may largely be attributed to political and economic causes. The Muhammadans, being in a minority, regard the prospect of Hindu dominance with alarm, the Hindus, on their part, claim that under a representative system they are entitled to the rights of a majority. Hindu Swarajist leaders have incessantly asserted that the root of the mischief lies in the institution of separate electorates, which was decided upon for the protection of minorities. That, however, is a superficial view of the case, though it has been supported by plausible arguments.

The recent meeting of the Indian Congress at Bombay, it will be noted, passed a resolution in favour of abolishing this system, and of creating joint electorates instead, with a redistribution of Provinces on a linguistic basis. That decision has met with a mixed reception. On the one hand, it has been acclaimed as a wise and statesman-like step, pregnant with good for the future of India; on the other, it has been denounced by the vernacular Press in Bengal. One influential Hindu journal declares that

by behaving as it did at Bombay the Congress has lost what little claim it had to public respect and confidence; another paper ridicules the idea that the decision will solve the Hindu-Muslim problem, and adds that "the sooner the self-important Congress leaders give up their pact-and-compromise mentality the better for them and the country."

The truth is that the attempts of politicians to put an end to the melancholy condition of affairs involved in communal strife have signally failed in the past, and it has to be remembered that the "All-India Congress" is in no wise representative of India. Nor is it forgotten that the Hindu-Muslim combination over the Khilafat question, which was in reality based on bitter antagonism to the British, was not only transient and unreal, but was followed by violent manifestations of communal hatred. While it existed, the outward and visible signs of unity led to Hindu agitators being permitted to address meetings in mosques, which shocked orthodox Muhammadans. It led also to developments which were disastrous to thousands of unfortunate Indians, and which those who participated in the "pact" would gladly forget. The history of that period indeed forms a black page in the annals of modern India. To-day it is beyond dispute that any man or body of men who could devise an effective solution of the communal problem would be conferring an estimable boon on the Indian people, and would, moreover relieve the Government and its officers of a perennial source of anxiety. But no solution is yet in sight; and the task of providing protection for the law-abiding when communal differences assume a violent form has to be shouldered by the authorities responsible for the maintenance of order in India. The task is onerous enough when it has to be carried out by British officials, who cannot with any semblance of plausibility be accused of communal bias. But it is more onerous still when Hindu or Muhammadan officers are concerned, for experience has shown that where these men have performed their duties with loyalty and impartiality they have been accused by unscrupulous critics of favouring their co-religionists. The anxiety of peaceful citizens on both sides to invoke the aid of British troops in times of acute disturbance affords a striking proof of the estimation in which the British soldier is held in India. This was especially marked in the Rawalpindi riots of last year, when the inhabitants vied with each other in adding to the comforts of the British troops employed for their protection, and protested vigorously when it was considered safe to withdraw them. There are many reasons why India should desire to retain the British connection, but none is of more immediate concern to the people than the safety it ensures to all alike from internal disorder and foreign aggression. This consideration is evident enough even to the anti-British politician in India, though when there is no immediate danger, he refuses to admit the fact. It might with advantage be pondered by certain politicians in this country who, with a superficial and imperfect knowledge of Indian affairs, are ever ready to dogmatise on the problems of India.

CURRENT TOPICS.

India and a Gold Currency.

We publish on another page extracts from a memorandum issued by Sir Basil Blackett to the members of the Joint Committee on the Reserve Bank Bill, in which he cogently states the objections to the introduction of a gold currency in India. It is a curious fact that the idea still lingers in India that a gold currency is a sign of advanced civilization. That view, however, does not prevail in Western countries to-day. What is of serious moment to the world is the manner in which India absorbs gold for non-monetary purposes, and Sir Basil Blackett was on firm ground when he declared that if gold coins were made available for currency purposes they would either be hoarded or melted down. The Finance Member pointed out that the average annual demand for gold in India for non-monetary purposes is not less than 20 to 30 crores of rupees, and in some years rises to twice the larger figure or even more. The process has been in operation for many generations; indeed the latest monthly Review issued by the Midland Bank recalls the estimate that up to roughly a hundred years ago about two-thirds of the world's production of the metal since the discovery of America was absorbed by the East. Figures submitted by Mr. Joseph Kitchin to the Indian Currency Commission, moreover indicated that in the period 1924-26 £97 million out of a total world's output of £224 million was taken for hoarding, principally by India. If only a portion of the gold thus absorbed for non-productive purposes had been utilised intelligently in India for economic development, the country would be incalculably richer to-day. There is no sound justification for the demand for a gold currency, and bankers and others in the West who point to the dangers it would involve are not animated merely by selfish motives.

Local Self-Government.

Following on the resolution of the Government of the United Provinces disclosing a deplorable condition of affairs in municipal administration, comes another depressing pronouncement relating to Bengal. It is stated in the Bengal Government's resolution that the Minister for Local Self-Government observes that while the position of Municipal Commissioner is eagerly sought, there is not in general a similar keenness to work steadily for the public welfare. Excessive party feeling, bad collection, unwillingness to adopt stringent measures for the realisation of municipal demands, with readiness to remit taxes, indifference to audit reports and tax supervision, leading to embezzlements, are unfortunately common characteristics of municipal administration. It is a relief to find after this appalling record, that many of the mill towns are well administered, and that there is much zeal and public spirit in some of the smaller municipalities of a semi-rural type. General elections in a number of cases were hotly contested. These contests, we are told, while indicating that a keen interest is being taken in elections generally, may to a certain extent be attributed, especially in Narayanganj, to the excitement caused by Swarajist attempts to capture most of the elected seats. Civil suits were instituted and were pending during the year in connexion with elections in nine municipalities. The number of these suits and the time taken to dispose of them are, it is pointed out, strong arguments for the establishment of special tribunals with powers of final decision in regard to election disputes. Provisions to that end were inserted in the Bengal Municipal Bill of 1925, but the motion for the introduction of the measure shared the fate of other Government proposals, and was unceremoniously rejected by the old Legislative Council. The Minister hopes to re-introduce this much-needed Bill, in the expectation that it will not receive such ignominious treatment at the hands of the new Council.

The Indian Tea Industry.

The prosperity of the Indian tea industry is a notable example of the achievements of British enterprise. The

annual reports of the sterling companies issued in London during the past few weeks show that, notwithstanding the fall in prices at the tea sales in the latter part of last year, excellent financial results were on the whole secured. Some very interesting evidence on the subject of tea has been given before the Royal Commission on Agriculture in India by Mr. S. T. Carmichael, Chairman of the Indian Tea Association, London, and Major Norman McLeod, the Vice-Chairman of that body, particularly in regard to the efforts made by the Tea Cess Committee to extend consumption in the United States. The sums allotted for this purpose in the years 1924-25 to 1927-28 inclusive totalled £185,500, and the total exports from India to the States, which amounted to 9,610,000 lb. in 1922 aggregated 15,213,000 lb. in 1926. The results in France have not been so good, the exports in 1926 amounting to 387,700 lb. as compared with 181,000 lb. in 1925. As this rate of progress was not considered satisfactory, the work in France has been abandoned, but it is proposed to revive the campaign in Germany, where, before the war promising results were obtained. The exports of Indian tea to Russia have shown expansion in recent months, and if the pre-War rate of consumption in that country were resumed, there would be a very great increase in world consumption.

CALCUTTA LETTER.

(From Our Own Correspondent.)

"Calcutta Must go Dry."

At a recent Rotary Club luncheon, the Rev. Herbert Anderson told the members that Calcutta must go dry. Naturally the response of the Calcutta Europeans was: "Upon what compulsion?" It is worthy of note that the average Indian politician is a teetotaler, and that, should his power increase, one of the first manifestations of that power would be an attempt to suppress the consumption of alcoholic beverages. It is a matter of example, they say, but nothing will ever convince the Indian consumers that total prohibition is desirable. The Excise figures prove that. European Calcutta might go dry, but what about the illicit liquor traffic? The raw materials are at hand in the villages. The toddy palm, the mowha flower, the rice-field. Who can stop their being utilized for distillation? Mr. Anderson sees only one way out of the difficulty; total prohibition. It may be expedient to exempt the Chinese from the rigours of the laws against gambling, when they gamble only among themselves, but, says Mr. Anderson cheerfully, on no condition will the European be allowed to indulge in a half-peg, however strictly he may keep his indulgence from corrupting the Indian's morals. It is easy to imagine how this appeal is being received.

The New Howrah Bridge.

An Indian engineer, Mr. Dey, who lives at present in Kensington, London, and has carried out a large contract entrusted to him by the Glasgow Corporation, has asked to be allowed to prepare the plans and specifications of the proposed new bridge. The Bridge Commissioners have come to the conclusion that, with the money available, it was only possible to build a floating bridge. The idea of having a cantilever bridge has been abandoned, and the consulting engineers to the Government of India will be asked to prepare plans, taking into consideration the local traffic requirements. It is hoped that the Improvement Trust will take the opportunity to make approaches to the bridge more acceptable. They are at present an eye-sore for the new-comer. It is generally thought that the Howrah Bridge will not favourably compare with the new Bally bridge now under construction.

Chandernagore Racecourse.

Several letters have appeared in the Press denying any importance to the public meeting about which I wrote last week, giving the gist of speeches in the course of which

several persons protested vehemently against the establishment of a racecourse in the French Settlement, and resolved to approach the French authorities with a petition. The writers of the letters report that the meeting was convened by a minority, and was attended by very young men from a football meeting. Free speech was suppressed, and any one wishing to speak in favour of the project was hooted and simply howled down, and not permitted to display and explain the advantages of the scheme. All the letters end in the same way, *i.e.*, with the assurance that a great majority of the inhabitants of Chandernagore see with a favourable eye the creation of a racecourse there. The abuse of intoxicating drinks is an evil worse than the racing would be, they declare. They add that the reputation of Chandernagore, as it stands now, could hardly be made worse by the proposed racecourse.

The Early Monsoon.

It has often been said that the topic of the weather is one on which people generally agree, yet the announcement by the official meteorologist two weeks ago, that the monsoon was prematurely bursting in Calcutta, left the layman in doubt. Heavy downpours and steam-bath heat, dense clouds and heavy winds may be the result of a passing storm in the bay. There were cool hours, but there is no joy in seeing the maidan as a vast sheet of water, and in feeling one's pillows mouldy and one's bread spongy. Every year the journalists try to gladden the hearts of the public by announcing the arrival of the monsoon, and they rarely agree with the official prophets in their forecast. So, to be on the safe side, they vaguely declare that it may be normal, or in excess, or in default. At the end one of them always proves to be right.

Here and There.

Dr. Ansari, speaking on the communal differences in India, said that they were eating away the national life of the country. They were ruining trade, and had reduced Indians to a state of brutal barbarism. But communal strife and hatred had a limit. The speaker thought the dawn of sanity was appearing on the horizon.

India is the land of festivals. We had at the same time the Dasahara of the Hindus and the Bakr-Id of the Mahommedans. There was some anxiety regarding possible communal disorders, but fortunately, thanks to effective precautions and elaborate arrangements, mutual toleration attended the three days of mixed celebrations. The second anniversary of the death of Mr. C. R. Das is being celebrated under the auspices of the All-Bengal Young Men's Association. It is hoped that this manifestation will not give rise to any disturbance.

On the motion of Dr. Ansari, the All-India Congress Committee have resolved to send a medical mission to China. A sum of Rs. 55,000 has been collected for the purpose. Mrs. Sarojini Naidu has collected Rs. 10,000 in Bombay. A lakh of rupees has been calculated as the minimum required to enable the Medical Mission to carry out its humanitarian work in China.

Calcutta has a few haunted houses. The latest discovery is the house on the corner of Lower Circular Road and Ballygunge Circular Road, but it is occupied by the Nippon Club. The Japanese will deal with the matter in a fitting way, I am sure.

Lady Mond gave a reception to the British Indian Union on June 30 at 35, Lowndes Square, to meet the members of the Royal Commission on Agriculture in India. The guests included:—Lord Sinha, Viscount and Viscountess Erleigh, the Dowager Lady Cozens-Hardy, Lady Chatterjee, Sir James and Lady Mackenna, the Hon. Justice Sir Shadi Lal, Sir Thomas Middleton, Lady Demetriadi, Sir Edward and Lady Chamier, Professor N. N. Gangulee, Sir Montague Barlow, the Dowager Lady Boyle, Sir Ganendro and Lady Roy and Miss Roy, Dr. Hyder, Lala Lajput Rai, Lady Pinhey, Miss Macdonald, Mr. B. S. Kamat, Mr. Justice Davar, Sir Henry and Lady Burt, Sir Walter and Lady Willson, Mr. F. B. Bradley-Birt, Mr. and Mrs. S. N. Mallik, Mr. W. E. Jardine, Mr. S. Sinha, Mr., Mrs. and the Misses Sen, Mr. J. A. Madan, Lady Hartog, Mr. and Mrs. H. S. Polak, and Mr. W. Coldstream.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, June 17.

The Textile Industry.

Lord Irwin's refusal to meet the Millowners' deputation during his visit to Bombay next month, on the plea that he will only be here for about two hours, has caused considerable disappointment. The preparations meanwhile for the forthcoming All-India Millowners' meeting, which is due to take place on the 20th of this month, are well advanced, and Ahmedabad has already chosen a very strong deputation to represent its interest. It is hoped that the meeting will be productive, not only of a reasoned representation to the Government of India, but also of a decision regarding the policy that is to be adopted to set right the shortcomings inherent in the industry; for thus alone will public sympathy be gained, and public support is going to be a factor in the question. Concrete proposals, not likely to inflict any hardship on the tax-payer, but on the contrary be beneficial to the industry and public generally, would appear to be far more valuable than any excitable spasmodic agitation.

Long Looked For.

It had been expected for a long while that Mr. James Crerar, a Bombay Civilian, would be appointed to the Viceroy's Executive Council, and at last it has been officially announced that he will succeed Sir Alexander Muddiman as Home Member. It is no small task that Mr. Crerar has before him, but that he will make a success of it can reasonably be expected. His experience has been unusually varied, and he has amply demonstrated his avidity for work and his sound commonsense. He goes to his new position with the good wishes of Bombay and Sind as a whole, and with those of Bombay City in particular, and it is to be hoped that their remembrance of him and pride in his achievement will mean that he will keep a tender spot in his heart for the scenes of his earlier endeavours. The appointment should lead to a closer connection between the Government of India and Bombay Presidency.

"The Old Adam."

Have we been fostering a vain hope in our belief that Mr. Gandhi had turned over a new leaf after realising that he had been following the wrong path? To judge by a recent outburst in *Young India* we most certainly have. Writing in his paper Mr. Gandhi opens sensibly enough by condemning the recent compromise reached by the All-India Congress Committee regarding the difference existing between Hindus and Muhammadans; what is wanted is a change of heart, some control over their followers on the part of the leaders. So far so good, but we next come upon the real idea inherent in his mind, for he goes on at considerable length to point out that the rival communities should not seek the assistance of Government to settle their differences, whatever happens, whatever be the extent of the blood-spilling. "If we cannot, after the manner of civilised men, argues Mr. Gandhi, "resort to voluntary arbitration, or, after the manner of brave barbarous races, fight out differences without seeking the intervention of British justice or bayonets, all we may expect to get in the shape of reforms is an increased agent's share in the bureaucratic Government; in other words, an increasing share in the exploitation of the dumb millions." We are thus warned.

Hindu Law.

Opinion seems rather divided as to the ultimate utility of the newest Association to make its appearance. This is the All-India Hindu Law Research and Reform Association, formed at Poona, which aims at promoting the study, and editing and publishing of the original manuscripts of Hindu Law, examining judicial decisions in the light of the principles of the old Hindu system, determined by the interpretation of texts and customs according to the recognised canons of Hindu justice, and proposing new,

legislation which will bring the ancient codes into harmony with the changing times. With its object of preventing travesties of justice through lack of knowledge of ancient customs, or from the point of view of research, no one can find fault, but in a recent utterance Dr. Canganath Jha said, "The times does not seem far off when Hindu Law as administered in our courts will cease to be recognised as distinctly Hindu."

Bombay Police.

Annual reports are usually dry-as-dust documents which arouse little or no interest among the general public. The Bombay Police report must, however, be regarded as an exception to the general rule, for it points out very clearly whatever may be the disabilities of the Presidency and Bombay City, we have something to be really proud of in our police force. More especially is this the case when one studies the chapters dealing with the Bombay City Police, who, despite lack of funds and consequent reduction in numbers, have maintained their efficiency at such a pitch as to show very considerable improvement in crime statistics during the past year. Traffic control is their strong point, as is evidenced by the fact that there were only 77 persons killed in street accidents last year as compared with 115 in 1921, and with the number of vehicles plying in the streets increasing steadily each year. In view of this, it is not surprising that Bombay policemen are loaned to various large cities in India to instruct the local policemen on how to control traffic.

Poona Season.

Poona is already being invaded by the usual seasonal visitors, and the season will be in full swing much earlier than usual this year. Sir Leslie and Lady Wilson returned from Kashmir yesterday, while the Government officials from Mahabaleshwar transferred themselves to more permanent quarters in the "Queen of the Deccan" over a week ago. The racing fraternity also have taken up residence and have started preparing for the meeting which commences next month, while many prominent Indians are already in residence. It looks like being a good season, and those left sweetering in Bombay will envy their more fortunate bretheren.

Monsoon Vagaries.

The break in the monsoon was extremely sudden. Practically without warning Bombay was submitted to a perfect deluge of rain, and in the space of about twelve hours a fall of something like nine inches was registered. The streets were running streams, and most of the traffic facilities were seriously dislocated. From that time there has not been a let-up, and it has rained almost continuously. Inasmuch as the rain has succeeded in reducing the temperature a matter of ten degrees or more it is extremely welcome; but to watch a football match that is played in a steady downpour is far from exhilarating!

Commercial Markets.

Notwithstanding a slight increase in the trade demand the money market continues easy, and it is generally expected that the Bank Rate will be further reduced within the next fortnight. Gilt-edged securities remained steady, more especially as heavy deliveries to the extent of about Rs.90 lakhs in $3\frac{1}{2}$ per cent. paper were successfully financed. With the setting in or the slack season, it is generally believed that the announcement of the Government of India rupee loan will be forthcoming within the next three weeks, and speculation is rife as to the rate at which it will be offered. There was practically nothing doing in exchange, a quiet feeling being engendered by Government purchases at a lower scale. Mill shares were weak almost throughout the week owing to unloading by holders over the Tariff question, but there was a slight firming up at the close. Most of the miscellaneous shares moved in sympathy, but railways showed some slight improvement and banks were steady. The cotton market is steady with a very small demand apparent while piece-goods are reported to be going on satisfactorily. In both the gold and silver markets business is extremely dull.

INDIA AND A GOLD CURRENCY.

Finance Member States the Objections.

In a memorandum issued to the members of the Joint Committee on the Reserve Bank Bill, Sir Blackett sets out in detail the reasons why the provision of a gold currency for India is impracticable under existing conditions.

In the course of his memorandum, the Finance Member says:—

As is well known, there are strong arguments for the view that a gold currency in circulation in any form is a useless extravagance and that the gold bullion standard with no gold coins in circulation in any form is preferable to a gold currency standard. It is not open to question that the trend of currency development in Western countries since the War has, for the time being at least, been away from the use of gold coin in circulation. But this apart, there is one major difficulty in the way of any proposal to give India a full value gold coin in circulation. So long as conditions in India are not radically changed from those which at present exist, a full value gold coin will not in practice remain in circulation for the ordinary purposes of monetary transactions, but will inevitably be withdrawn from circulation for the purpose of being melted down or hoarded, that is locked up for indefinite periods as a store of value. So long as the social customs and habits of the people are not radically modified, there must always be in India a very large demand for the precious metals for non-monetary purposes.

If therefore, now, or at any date in the immediately foreseeable future, the currency authority were to issue a full value gold coin, say a 20-rupee gold mohur containing 169.5024 grains of gold, there will always be a demand for this coin for non-monetary purposes which will prevent its circulation as money, because in almost all circumstances the gold mohur would be the cheapest as well as generally speaking the most convenient form in which gold would be available. The gold required by the goldsmiths for making into gold bangles and ornaments would be obtained by melting down gold mohurs. Even if the fact that gold mohurs were freely available in exchange for legal tender and could be freely changed back into legal tender led to ornaments being made out of strings of gold mohurs, the gold mohur would none the less cease to function as currency. For the purposes of hoarding, gold coins might tend to be preferred to gold bullion, but even so, they would not function. If, therefore, gold coins are to function at all as currency, some solution must be found for this major difficulty.

The average annual demand for gold for non-monetary purposes in India is not less than 20 to 30 crores of rupees worth and in some years rises to twice the larger figure or even higher. If gold coins are to function as currency at all, they (or their equivalent in gold bullion), must be available in quantities sufficient to meet the maximum demand for gold for non-monetary purposes in all circumstances with a surplus over to supply the gold coins which are to remain in gold circulation. It can hardly be doubted that an attempt to supply gold mohurs in such enormous quantities is not a satisfactory solution of the difficulty above-mentioned. In the first place, the accumulation of a reserve sufficient to stand up against the maximum demand will obviously be an operation which would have to spread over a very long period and would be very costly owing to the loss of interest involved. The reserve would have to be big enough not merely to supply the maximum demand but also to ensure that the minimum amount of gold left in the reserve at any time should be sufficient to maintain undiminished the confidence in the stability of the currency.

In addition to the heavy cost due to loss of interest, there would be a large annual charge to the Currency Authority, that is, to the tax-payer, for importing gold. The Currency Authority would get Rs.20 per mohur for each mohur issued, but the cost of importing the gold

would amount to something appreciably more than Rs.20 (approximately Rs.20-4-3). If, for example, the average amount of mohurs issued yearly were 30 crores of rupees worth of gold mohurs and the average rate of exchange were 1s. 6d. per rupee, the loss on importing gold would amount to about Rs.40 lakhs per annum. A small seignorage charge to cover the cost of minting would no doubt be fully justified. But if the gold mohur is to be the standard coin and standard of value for India, it would be clearly impossible to charge a seignorage to cover the cost of importing gold.

In the course of the memorandum, Sir Basil Blackett referred to the view taken of the matter in other countries. The objection that an attempt by India to convert her sterling securities into gold forthwith would damage the monetary interests of Great Britain or of the Western world in general is, he said, often misunderstood. India has not at present the resources required to make it certain that she would obtain the reserve amply to secure against all emergencies if she embarked on the policy of introducing a gold currency standard without delay, and would therefore have to make sure of being able to borrow in England or in the U.S.A. in case of necessity. It is therefore essential to the success of the attempt that she should retain sufficient goodwill in London and New York to make them willing to lend. The inquiries of the Currency Commission are of unqualified assistance in this matter. But it does not follow that these monetary centres are sacrificing India to their own selfish interests. Their attitude is based on the belief that the extra demand upon the gold stocks of the world which India's action would entail would be such as to cause a tremendous dislocation and that even if worse consequences did not ensue as many believe, threatening the stability of the gold value of every currency in the world, one result would inevitably be a very heavy fall in gold prices everywhere. India would not escape this fall, and the dislocation would be very severe, particularly for India's industrial enterprises.

INDIAN MAIL.

Indians as Pilots.

The National Chamber of Commerce recently suggested that with a view to Indianizing the Bengal Pilot Service, the rule which requires previous experience at sea, should be abolished where applicants for entry were Indians. Sir P. C. Roy has taken strong exception to the remarks of the *Statesman* on the proposal which he characterises as "profitless and disparaging ridicule." The *Statesman* thereupon retorts:—"It was pointed out in our columns that if Indians were admitted to the Hooghly pilot service without the training at sea which all pilots have to pass through nobody would entrust ships costing hundreds of thousands of pounds and carrying hundreds of lives to their care. We would add that no sound insurance company in the world would risk an anna on such a venture. That is what Sir P. C. Roy calls "pointless and disparaging ridicule," and an attempt to preserve a remunerative service by the exclusion of Indians. The reply is that no matter what is the race of the pilots the moment the service is filled with men who have had no experience of the control of great steamers at sea Calcutta will cease to be a port to which those steamers will come. A knowledge of navigation does not come by the light of nature but by experience of navigating ships. Nobody has proposed that Indians should be excluded from the pilot service, but simply that if they are to be pilots they must have the same qualifications as an Englishman is bound to possess. That even an Indian requires training for specialized work does not appear to us a ridiculous proposition, but rather as plain sense.

Railway Frauds.

If the dishonest practice of travelling without tickets could be effectively checked there would be a very substantial increase on the revenue of the Indian railways. Dealing with this subject on his annual report, Mr. Hartley, Accountant-General for Railways, expresses the

hope that under the new system now under experiment on the E. I. Railway it will be possible to analyse the collections and locate the places where passengers are in the habit of travelling without tickets. The conditions of booking entrance to platforms and trains, etc., could then be examined to effect improvements. It is mentioned that a surprise check on 15th March, 1926, at Belghuriah station revealed no less than fifteen first class, eleven second class, thirty inter and 160 third class passengers without tickets. Out of these 27 inter and third class were prosecuted under Railway Act. Frauds by the railway booking staff are next dealt with and an ingenious move is brought to light. It was discovered that a large number of third class tickets issued between two adjacent stations by morning trains were found to be usually missing in the collection at the destination, but systematically came to collection by subsequent trains the same day. Travelling Auditors are now instructed to keep this in view.

"The Republican."

The sentence of four years' rigorous imprisonment passed on Avari at Nagpur is none too severe, writes the *Times of India*. The man is more than a buffoon, and if he had been left at large his doctrine of violence might easily have led to disastrous results. Now that he is out of the way, we trust that Nagpur will soon revert to a condition of peace and quiet; but it will not do to tolerate any more displays of "republicanism" by followers of Avari who may still be at large. The misguided men who have sympathised with Avari are chiefly responsible for his fate, for without their encouragement he could hardly have pressed his fatuous campaign as far as he did. They will probably learn from his example and soon forget the displays at which they helped. But, if report is true, some of them were permitted to garland Avari after sentence had been passed on him. Why that action was permitted is incomprehensible, for it is obvious that the majesty of the law will never be upheld if men are allowed to laugh at it by thus doing honour to a convict.

Assam-Bengal Railway.

The Assam-Bengal Railway has undertaken a comprehensive programme of development of new routes opening up new tracts of country hitherto inaccessible by railway. The capital programme, says the *Englishman*, provides for an expenditure of Rs. 99.25 lakhs during the current year, Rs. 60.90 lakhs of which has been allotted for new lines in hand and in contemplation. The prospect of linking up East Bengal with Burma, though remote, is still foreshadowed and may be rendered possible in the near future. Almost all the new lines under construction traverse rich fertile areas of the Province and open up new channels of communication, and the hope is expressed of the new lines becoming remunerative besides being convenient to the people of the area.

Provision has been made in the current year's budget for new lines, aggregating over 238 miles all on metre gauge. It is stated in this connexion that the construction of the Chittagong-Akyab line, a survey of which is being made during the current year, may be expected to begin during the year 1929-30.

Improved Varieties of Wheat.

The introduction of new varieties of wheat by Government scientific experts has been of enormous value to India, and is destined to be of more value in the future. Dealing with this question, the latest Review of Agricultural Operations says:—"One of the greatest successes of the Agricultural Department in India is the isolation of heavy-yielding, rust-resistant wheats of good milling and baking qualities, similar in class to Manitoba wheats and suitable both for home consumption and export. The value of these wheats has been recognized by the cultivator; the area under them now exceeds two million acres. There are no better known Indian varieties of any crop either in this country or abroad than Pusa 4 and Pusa 12. They are to be found in every wheat tract in India. Their fame is spreading to other lands too; during the

year there was a demand for seed from Australia, South Africa, Kenya, Egypt, Iraq, Algeria and Japan. In more recent years a new type called Pusa 52 has been fixed by hybridization, which being an awned wheat is not so open to attack by birds as the older selections. In large scale tests, both on Government farms and private estates, in Bihar, the United Provinces and the Central Provinces, this bearded hybrid has fulfilled the promise of heavy yields held out during the preliminary trials of last year. It has been adopted for seed distribution by the Department of Agriculture in Bihar and Orissa. Another promising new variety is Pusa 80-5 which has given yields up to 22.3 cwt. per acre. Extensive trials with this wheat are projected with a view to deciding its ultimate worth.

MONSOON PROSPECTS.

His Majesty's Senior Trade Commissioner in India informs the Department of Overseas Trade that the Director-General of Observatories states that the monsoon rainfall is likely to be normal or in excess in the Peninsula and North-West India and normal in North-East India. The Trade Commissioner adds that he believes from the wording of the forecast that the prospects are favourable and that another good monsoon may be anticipated with the usual beneficial effects to the economic life of India.

NEWS IN BRIEF.

The Secretary of State in Council has appointed Mr. C. A. Storey, M.A., Assistant Librarian at the India Office, to succeed Dr. Thomas in the post of Librarian. Dr. Thomas has resigned with effect from August 31, 1927, on appointment to the Boden Professorship of Sanskrit in the University of Oxford.

During the month of April 41 companies were registered in India with an aggregate authorised capital of Rs.185 lakhs as against 47 companies with an aggregate authorised capital of Rs.138 lakhs in the preceding month and 28 companies and Rs.65 lakhs in the corresponding month of the preceding year. Bengal accounted for 24 companies with an authorised capital of Rs. 94 lakhs. The largest flotations in April were the East Bengal Jute Mills, Bengal, and the Bombay Steamships, Bombay, with an authorised capital of Rs.50 lakhs each.

The Secretary of State for India has received the following telegram relating to the monsoon:—Rainfall, week ending June 29. Excess: Bay Islands, Assam, Berar, Konkan, Hyderabad, Madras, (South-East), Madras Deccan, and Madras Coast (North). Normal: North-West Frontier Province, Gujarat, Central Provinces (East), and Bombay Deccan. Fair: Burma, Bengal, Orissa, Chota Nagpur, Punjab (South-West), Rajputana (East), and Central Provinces (West). Scanty elsewhere. Monsoon nearly normal.

Mustapha Kemal Pasha, President of the Turkish Republic, arrived in Constantinople on July 1 on his first visit since Angora was made the Turkish capital. He proposes to stay about six weeks.

The new Egyptian Minister to Athens, Sadik Pasha Wahba, on July 1 presented his credentials to Admiral Kondouriotis, the President of the Hellenic Republic.

A Report to the Council of the League of Nations on the Administration of Palestine and Trans-Jordan for 1926 (Colonial, No. 26) is published by the Stationery Office, price 3s. 6d.

The Cairo *Official Journal* announces the appointment of Rear-Admiral George Tomlin, C.M.G., M.V.O., as Director-General, Ports and Lighthouses Administration, in succession to Lewa Philip Streatfeild Pasha, resigned. Rear-Admiral Tomlin, who was navigating officer on the Medina during the visit of King George and Queen Mary to India, 1911-12, retired from the Navy on promotion in 1925.

The Greek Government has requested the Secretary-General of the League of Nations to bring before the Council the dispute which has arisen regarding the contract concluded before the War between the Greek Government and the German Vulcan shipyards for the construction of a battle-cruiser. The question concerns the interpretation of Articles 190 and 192 of the Treaty of Versailles regarding the prohibition of construction by Germany of warships.

It is proposed to have a reunion dinner of the 32nd General Hospital, Mesopotamia, on Saturday, July 30, at the United Nursing Services Club, 34, Cavendish Square, London, W.1. Members who belonged to this hospital wishing to attend should notify the Matron-in-Chief, Q.A.I.M.N.S., War Office, Whitehall, S.W.1, before July 23.

BOOK REVIEW

THE ANALYTIC METHOD.

"KINGSHIP." By A. M. Hocart. (Oxford University Press, 12s. 6d.)

This book is one which it is extraordinarily difficult to do any justice to in a short space. It may briefly be said that it is concerned with the origin of Kingship and with the effects which that origin has had on human society. This is done in a series of most interesting and admirably consecutive chapters, while the reader is saved the confusion of references to countries all over the world by the wise reserve of the author in sticking mainly to those countries where he has been able to study the matter on the spot or where, as, through our knowledge of Vedic literature, facts are easily available. He concludes that there was certainly a time when Kings were looked on as Gods, and that they became ghosts on installation. He does not ask us to believe that the worship of Nature Gods, which this theory pre-supposes, was the "first belief." What that was he does not profess to know, and, indeed, doubts whether any one can ascertain. All he lays down is that there has been a belief in Nature Gods throughout the world, and that the institution of kingship has grown from it. These beliefs still exist in many parts of the world, and, where the belief itself has gone, it has left its indelible impress on many of the existing beliefs and practices in even the most advanced countries.

What we should like to bring out is the great value of this work in illustrating the right ways to look at such phenomena and to study them. These are, shortly, in the first place, never to refuse to treat a people's beliefs seriously, but rather to make sure that the facts which we have collected about them are accurate and as complete as possible. In the second place, it is important that these beliefs should be analysed with care into their separate components. This makes it possible to compare the beliefs and rites of one country with those of another and to follow the important and often difficult process of the subsequent growth of other beliefs and rites on the analogy of the original—a process which creates many and unexpected ramifications. Thus, for instance, Mr. Hocart is, by using this method, easily able to make out a very strong case for marriage rites deriving from the installation ceremony of the King. Lastly, the inquirer should not scruple to make known his provisional conclusions, provided that he is satisfied that they make sense of what he is inquiring into. If his efforts seem crude, "first attempts are always crude." "Let us be careful, but not timorous," and so do what is in us to add to the stock of the world's knowledge.

The book is profoundly interesting, for it takes the reader deep down into the heart of his most cherished beliefs and practices. It is also a model of the way in which such a study should be handled, especially in its careful analytic work and in the use made of it. If the reader, like the reviewer, does not always find it possible to follow the author in all his conclusions, he will bear in mind that Mr. Hocart makes no arrogant claim to infallibility. What he has given us is a careful study founded on unexceptionable methods, and it is for himself and others to push on with it in the light which he has thrown on his subject.

OBITUARY.

MRS. MARGARET BARNES.

Mrs. Margaret Barnes, who died at Oxford on Friday last, in her 99th year, was a resident of the hill station of Kasrauli, near Simla, during the Mutiny. The daughter of Major H. R. Chetwynd Stapylton of the 10th Hussars, she married in 1856 George Carnac Barnes, who was Commissioner of Umballa in 1857 and played an important part in those troublous times. In 1858 Mr. Barnes' eldest son, George Stapylton, was born at Umballa. He was destined, after occupying important positions at the Board of Trade, to become Commerce Minister of the Government of India, a position he occupied from 1916 to 1921. Her younger son, the Right Rev. Monsignor Arthur S. Barnes, was formerly Vicar of St. Ives, Hunts., and is now Domestic Prelate to the Pope.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

The D.O.T.

It appears that, for the time being at any rate, the Department of Overseas Trade has been saved. Obviously it will owe its renewed lease of life to the ceaseless efforts on its behalf put forward by the commercial community. In deciding not to terminate its career the Government will merely be taking a businesslike point of view, and it is to be regretted that this step is apparently to be compromised by a wrong move in another direction, for one of the other two Ministries that were condemned is seemingly to be allowed to continue. Economies there must be in the right direction; and it is to be regretted that so far the Government has shown only the scantiest indication of appreciating the needs of the situation. The swollen Education estimates simply invite the pruning knife, and the only reason they are left untouched is presumably for fear of the inevitable outcry that would arise, and there are many other similar directions which offer scope for economy. That these should have been ignored in favour of the one Department dealing with trade development would be Gilbertian were it not positively tragic.

Kassala Cotton.

The figures quoted at the meeting of the Kassala Cotton Company by the Chairman, the Hon. Arthur M. Asquith, showed very plainly the dependence of the company on the vicissitudes of the Gash flood. The flood of 1925 was small in volume and bad in the manner of its arrival, and the effect on the year's results was such that while the company earned a profit of £21,630 a loss was shown on the year, after meeting the debenture interest, of £8,370 and while the carry forward for 1925 was £24,363 that for 1926 was £15,993. It is very satisfactory that this poor flood was followed in 1926 by the largest on record, and for the 1926-27 season the company had 26,000 acres under cotton as against 11,500 acres, the total crop being 54,128 kantars as compared with 22,500 kantars. That means, of course, that the results for the current year will show a great improvement on those of 1926. The most interesting part of Mr. Asquith's speech was his survey of the general position of the company under its concession in regard to which negotiations are now in progress with the Sudan Government. Mr. Asquith pointed out that there were four factors reducing the effective area for cotton growing, and that the experience of four years had shown that it was impossible to bring under irrigation the large area anticipated at the time of the negotiation of the concession. The first of these factors is that owing to the fluctuations in the flood the proportion of the volume of water that can be used is much less than if it arrived in a steady and regular manner. Then it has been found that the amount of water required is greater than in the case of other irrigated lands in the Sudan. There is further the reduction in the volume of water in Eritrea. Last winter the Italians had 1,800 acres under cotton, and it is reported that they propose to increase the acreage this year to 7,500 acres. In years of very great floods the abstraction would not affect the the company as in average years, but in years of lean flood it might, as Mr. Asquith suggested, be a very serious

matter. The fourth factor is the growing of grain crops on land irrigated by the Gash. "The upshot is," said Mr. Asquith, "that on the basis of such acreage, yields, and cotton prices as we think it reasonable to look for, the company's prospects under the terms of the concession as they stand to-day are bad."

Egyptian Hotels.

At the meeting of the Egyptian Hotels Ltd., Sir William B. Peat, the Chairman, pointed out that while the receipts were not up to the record figures of the previous year the company had again experienced a successful year. The tourist business was satisfactory, but there was a decrease in local business which is no doubt to be attributed to the economic depression arising from the fall in cotton. Mr. Charles Baehler, who also spoke at the meeting, takes an optimistic view of the future of the tourist traffic in Egypt. It is, he remarked, increasing, and no one who realises the enormous attraction that the spell of Egypt exerts on the average tourist can doubt that in future years the traffic will be as it has been in the past one of Egypt's great economic assets. It is interesting to note that in view of the increased demand for hotel accommodation the company is to add to the existing structure of Shepheard's Hotel and is also to build on the recently acquired site adjoining the Semiramis.

Constantinople's New Name.

It would be surprising if the changes in the nomenclature of cities in recent years were not found a little confusing. The former St. Petersburg probably holds the world's record for the rapidity of changes, but no doubt there are other instances which bid fair to rival it. The erstwhile Byzantium has been relatively free from alterations, for only one change of name between the seventh century B.C. and the present day carries with it a suggestion of solidity and stability which ill accords with the vicissitudes of Near Eastern history during that period. Now the turn of Constantinople has come for another change, this time to Mustapha Kemal, or Kemalie, for the reports leave it uncertain as to which is to be the designation, in honour of the Turkish President. How far this will be permanent must remain to be seen, for, as Omar indicated, power is transitory, and it may be that another in future years will desire to have the capital named after him.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866).

Head Office: 123, OLD BROAD STREET,
LONDON, E.C.2.

Branch — 11, CALEA VICTORIEI, BUCAREST.

Directors :

E. W. H. BARRY, Esq.

C. De CERJAT, Esq.

General The Hon. SIR H. A. LAWRENCE, G.C.B.

Lieut-Col. SIR ALBERT STERN, K.B.E., C.M.G.

Bankers :

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.

A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

Vickers, Ltd.

The announcement is made by Messrs. Vickers, Ltd., that Mr. F. Dudley Docker, C.B., the Rt. Hon. R. McKenna, and Sir William Plender, Bart., G.B.E., have notified the Board of Vickers, Ltd., that in their opinion the time has arrived when they can properly relinquish their position as advisers to the Board, which position they were invited to occupy at the request of the Board and with the approval of the shareholders, at the time of the reconstruction of the company. In accepting their resignation, the Board have taken the opportunity of acknowledging, on their own behalf and that of the shareholders, their sincere appreciation of the great services which they have rendered to the company in an honorary capacity. Mr. George R. T. Taylor has been appointed Deputy Chairman of the company.

COMMENTATOR.

THE DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, report as follows for the month ended June 30 :—

Currants.—The market in the early part of the month was more or less influenced by the holidays, but on the resumption of business there were signs of awakening interest, and it looked as if we were in for a period of more activity than previously experienced. Unfortunately the revival was short lived, and a sagging tendency developed with an increased disposition to sell. Business has been on a very poor scale and buyers report progress in the way of booking orders as having proved most disappointing: response from the country being of quite a retail character. The turnover is greatly below normal for the time of the year, as the trade seems to lack confidence in operating beyond their immediate requirements. Sales comprised Amalias, 41s. 6d.; Patras, 42s. 6d. to 43s.; Gulf, 43s.; Zante, 43s. to 43s. 6d.; Vostizza, 43s. to 52s. Quotations, with the exception of Vostizza, show little change. The arrivals per Cypria, Mardinian, and Lesbian were quite insignificant. Quotations:—Amalias and Patras, 4s. 6d. to 43s.; Zante, 43s.; Gulf, 43s. to 44s.; Vostizza, 43s. to 51s.; Vostizza, small, 43s. to 45s.

Sultanias.—The product of Smyrna has been entirely governed by crop reports, and the market shows a rather persistent downward tendency which has been accentuated by some forced selling, prices registering a decline of many shillings at the close. Some excellent fruit has been selling at 53s. 6d. to 56s., showing a sharp drop in values. General range of prices:—Ordinary, 48s. to 50s.; good, 53s. to 56s.; fine, 60s. up to 70s. for choice; Greek, 55s. to 65s., up to 75s. for fine.

Figs.—Some new crop Genuines were sold 22s. to 23s. c.i.f. September shipment. Old crop selling slowly, 25s. 6d. Genuine, 23s. good average.

EXPORT OF GRAPES FROM PALESTINE.

Extensive planting of table grapes in Palestine during the past few years has resulted in the production of a considerable surplus. Accurate statistics on the subject are difficult to obtain but it is estimated that the total production in the country during 1926 was over 13,000 metric tons. It is anticipated that not less than 2,500 tons of table grapes could be made available for export this year. The Government have had this matter under review and are anxious to promote the export trade as far as possible. A special committee to examine and report on suitable measures will be constituted in the near future. More immediate measures are the following:—

(a) Export to Great Britain.—It is proposed to despatch a trial consignment of about 12 tons of early ripening grapes suitable for an overseas market to England in the first half of July. Growers are being asked to supply grapes for this consignment subject to receipt of any proceeds from sale in England after deduction of other than extraordinary costs. The Government are defraying these extraordinary costs, including special arrangements on the railway for the safe conveyance of the consignment to the sea port, and have made arrangements whereby only the ordinary trade commission exclusive of overhead expenses or agency fees will be paid in Great Britain. Grapes for the consignment will be picked, cooled, packed and transported to railway stations in accordance with approved methods prescribed by the Agricultural Department. The Empire Marketing Board in London have undertaken to receive the consignment and to arrange for its examination and disposal.

(b) Egyptian Trade.—Exportation of grapes from Palestine to Egypt appears to decline, and not increase, partly on account of the poor condition of grapes on arrival in Egypt. In order to combat this defect:

(1) The Department of Agriculture and Forests have circulated a leaflet dealing with picking, cooling, packing, and transport of grapes, and have organised demonstrations of these matters by officers of the Department in various centres of grape growing.

(2) The Railway Department are obtaining vans especially designed to carry perishable fruit. These vans will be attached to passenger and goods trains. Specially low freight rates are being introduced on minimum loads of 12 tons and delivery guaranteed within 24 hours at Egyptian destinations.

(3) The Department of Agriculture have been in communication with the competent authorities in Egypt as to the possibility of affording other facilities for the trade.

(4) Endeavours are being made to obtain reliable statistics as to the quantities of grapes available for export at the principal centres of production.

It is reported that widespread damage to the cotton crop of the Lower Egypt plantations has been done by the boll weevil.

Imports into and exports from Egypt during April amounted to £E.3,287,656 and £E.4,137,177. During the first four months of the current year the respective totals were £E.13,957,283 and £E.16,179,065. There was a favourable balance for April of £E.849,521, as against an adverse balance of £E.1,491,938 in April 1926. The chief contributors of imports in April were the United Kingdom, £E.939,986; Belgium, £E.138,265; France, £E.384,359; Germany, £E.230,822; Italy, £E.295,645; Roumania, £E.110,701; and the United States, £E.112,957; while the recipients of Egyptian produce included the United Kingdom, £E.1,403,828; France, £E.518,887; Germany, £E.203,587; Italy, £E.274,651; and the United States, £E.650,430.

NOTES FROM ROUMANIA.

(From Our Own Correspondent.)

Bucharest, June 27.

An American Loan for Railways?

An American engineer named Howard Kelly is at present on a visit to Roumania and is reported to represent a powerful American financial group which is disposed to offer a loan to Roumania for the reconstruction of the railway system. He has been taken to see the new tunnel, constructed by German engineers, at Teliu and the new railway line under construction from Brasov to Nehoias and Buzeu, which will be of great importance as connecting Brasov in Transylvania directly with Moldavia. But there have been so many abortive attempts made to lend Roumania money for the railways that it is difficult to feel hopeful in the success of this one. Should it succeed, however, there will be little hope of orders for railway materials going to Great Britain.

Taxation of Foreign Business Houses.

According to the *Argus* of June 25, in consequence of representations made to the Ministry of Finance by delegates from foreign business houses established in Roumania, it has been decided that, instead of exacting taxes both from the representative of a foreign house and from the firm itself, the following method will be adopted:—

(a) If the representative in Roumania has no shop or stock of goods he alone will pay taxes.

(b) If the foreign firm has a branch in Roumania or a depot of goods and obtains a profit from their sale, the firm will pay taxes.

(c) If the representative alone profits by the sales he will pay the taxes.

Harvest Prospects.

The general situation of the crops is reported to have improved greatly in the course of the last few weeks owing to the rains which have fallen all over the country after a long period of drought, although in some districts a good deal of damage has been done by hail. In Moldavia and Bessarabia the crops are again poor owing to lack of rain, and in Bukovina the late continuance of cold weather has been detrimental, but in Transylvania and the Old Kingdom most of the crops promise a moderate harvest.

It is noteworthy that the droughts that have visited Bessarabia during the last few years are due to the reckless deforestation practised by the peasants as soon as they got the land from the Bolsheviks, when the province was still in Russian hands. The conversion of so rich a granary as was Bessarabia to an impoverished province for which relief funds have had to be raised and seed corn distributed gratis by the Roumanian Government ought to be a lesson to Communists and agrarian reformers.

A similar tendency was observed in Roumania after the Agrarian Reform, but was checked by Government regulations.

COMPANY NOTES AND REPORTS.

P. AND O. BANKING CORPORATION.

The report of the P. and O. Banking Corporation Ltd. for the year ended March 31 last, states that the net profits for the year, after providing for taxation, bad and doubtful debts, and valuing investments at or below market rates, amount to £125,948 which, with £19,042 brought forward from last year, gives an available balance for disposal of £144,990. The directors have placed to contingency reserve the sum of £20,000. Out of the balance of £124,000 they proposed to pay a dividend of 5 per cent. less income tax at 3s. 8.59d., absorbing £105,609; carrying £19,380 to next account.

CHESS.

By "CARO-KANN."

The solution to the end game which I gave in the issue of June 23 is as follows:—1, P—Kt5, K—K2; 2, K—Kt4, P—B4; 3, K—R5, P—B5; 4, P—K4, P—Kt4; 5, P—Kt6, PxP; 6, KxP, and wins.

I give this week another end game. It is Black's move. What is the result?

Hamilton's Concession (Roumania)—cabled advice from Bucharest as follows:—"Production for week ended July 1, 320 tons. Well No. 8, flow increased last two days to 85 tons daily. Well No. 7, reaming through casing. New well No. 9, making preparations for production. New well No. 10, undergoing official water test. New well No. 12, 566 metres deep." (No. 7 well is one of the old wells which is being repaired preparatory to deepening to the oil source which exists a little below the present depth.)

Exports and Imports

To assist its customers, the Westminster Bank has prepared a booklet explaining the many ways in which the commercial man may use the Bank for the furtherance of his business, how he should proceed in order to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and so combine security and caution with progress and enterprise

Copies will be issued on application to the Secretary at Head Office

WESTMINSTER BANK
LIMITED

Head Office: 41 Lothbury, London, E.C.2

THE FOREIGN TRADE OF YUGOSLAVIA.

The current issue of the monthly review of the Anglo-International Bank, Ltd., contains an interesting review of the trade of Yugoslavia. It is pointed out that three impressions are left by a consideration of the statistics—the remarkable growth of the exports, the importance of Italy to Yugoslav trade, and the possibilities of an expanding market for British exports. The article continues:—

With regard to the growth of Yugoslav exports it should be borne in mind that Yugoslav production, especially agricultural production, is still in a primitive state of development. The country has, in addition, large undeveloped resources in the form of timber and minerals. As the Yugoslavs are a virile and ambitious race, it is therefore permissible to assume that, provided the country is not subjected to any political upheaval, the steady increase in exports will continue for many years to come. Yugoslavia, it is true, is suffering at present from the effects of a too drastic deflation of the dinar and also from the evils, common to all the Succession States, resulting from a policy of high tariffs and customs barriers. These drawbacks, it is to be hoped, are only temporary. Their removal will naturally accelerate the process of development, but even their continuance, regrettable as it would be, does not affect the general tendency of exports to increase.

As far as Italy is concerned, the trade returns show clearly what a large part Italy plays in the foreign trade of Yugoslavia. She takes approximately twenty-five per cent. of Yugoslavia's exports and supplies her on an average with about fifteen per cent. of her imports. These figures in themselves are the best argument for friendly relations between Italy and Yugoslavia, and, as amicable co-operation with Italy is essential to the economic development of Yugoslavia, it is to be hoped that the outstanding differences between the two countries will speedily be removed.

It is also obvious that an expansion of Yugoslav exports means an increase of the purchasing power of the population of Yugoslavia. Indeed, the expansion of an undeveloped country like Yugoslavia offers considerable opportunities to British exporters, and the Yugoslav market is one which is well worth studying. In the course of the last two months Yugoslavia has received foreign loans for the State, the State Mortgage Bank, and the City of Belgrade amounting to forty-eight million dollars. Most of these loans are for development purposes, and presumably a considerable part of the money will be spent abroad in orders for machinery and materials. In this development there should be opportunities for British trade and British industry. Before the War Great Britain stood second in the list of countries exporting to Serbia. In 1924 she was fourth in the list of the countries exporting to Yugoslavia. In 1926 she was only fifth; 1926 was a

bad year for British trade, and, in particular, British coal exports suffered a heavy fall. There is, however, a danger that the British exporter is neglecting the Yugoslav market. It would be useless to pretend that Yugoslavia is an easy country in which to do business, and care and discrimination must be used in the selection of agents. It is, above all, a country of which local knowledge is essential.

On the other hand, much has been written in certain sections of the British Press which does not agree with the facts about the so-called critical internal situation. The country is far more compact than one might judge from the frequent political squabbles. It has, too, a far smaller minority population than either Roumania or Czechoslovakia. Because of its primitive state of development and its large undeveloped resources; because, too, of the virility and energy of its people, it is essentially a country which is likely to go ahead very rapidly during the next decade, and the British merchant who is prepared to make a careful study of the market is likely to reap his due reward.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia for Bombay (Birkenhead, July 23). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Media for Calcutta (Birkenhead, July 21).

Bibby Line.—S.s. Oxfordshire for Port Said, Colombo, and Rangoon (Birkenhead, July 13).

British India Line.—S.s. Morvada for Colombo, Madras, and Calcutta (London, July 16); s.s. Gamaria for Bombay and Karachi (London, July 23).

Cunard Line.—S.s. Tyria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement offers (Liverpool, Glasgow and Swansea, July 23); s.s. Sea Victory for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz and Ancona if inducement (Liverpool July 23, Swansea July 26).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 9); s.s. Aviemore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 30).

P. and O. Line.—S.s. Delta for Colombo, Madras, and Calcutta (London, July 9); s.s. Kaisar-i-Hind for Bombay (London, July 15).

Prince Line.—S.s. Soldier Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, July 20); s.s. Korean Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (London, July 27).

Ellerman and Papayanni Lines.—S.s. Gerano for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume* (Liverpool July 9, Swansea July 14); s.s. Lesbian for Algiers*, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, July 16); s.s. Mardinian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, July 29). * Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

Spinks Pasha, Inspector-General of the Egyptian Army, on June 29 received the rank of Field-Marshal of the Egyptian Army.

Turkey's imports of iron, steel, and rolled and manufactured products amounted in 1925 to 128,240,445 kilos, of the value of £T21,556,081.

On his arrival in Paris on June 29 King Fuad was officially received by General Lasso, representing the President of the Republic, M. Becq de Fouquières, Director of Diplomatic Ceremonial, representing the Minister for Foreign Affairs, and General Gouraud, the Military Governor of Paris. Morcos Pasha Hanna, Egyptian Minister for Foreign Affairs, Husein Pasha Rushdi, President of the Egyptian Senate, and the staff of the Egyptian Legation in Paris were also present. Mahmud Pasha Fakhry, Egyptian Minister in Paris, had travelled with the King (his father-in-law) from Toulon, and drove with him to the Legation, where King Fuad was his guest during His Majesty's stay in Paris.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, July 5.

The week has been rather unsatisfactory in the City. Public financial policy has been in the limelight in an unfortunate way, for the super-tax clauses of the Finance Bill have aroused considerable apprehensions, not to say disgust, while a discrepancy of view between banking circles and the Treasury was suggested by the controversy between Mr. Churchill and Mr. McKenna. Gilt-edged stocks have been showing a fairly firm front. But a sensation was caused in certain sections by the sudden death of Mr. James White, the big financier, to which special reference is made in a subsequent paragraph. The immediate and direct effect of this tragedy concerns only a few special shares. But the indirect effect must, for the time being, be wide. In a case like this, some time must elapse before it is possible to see how extensive will be the ramifications of effect. Nervousness is not confined merely to those shares in which the late Mr. White was particularly interested. The point to be considered is how many people and interests are in one way or another involved or affected by Mr. White's collapse, and what securities they will be compelled to throw on the market in order to redeem their positions. Clearly, therefore, mild anxiety of a somewhat widespread nature will beset the markets until the position becomes clearer. One or two serious failures would shake many positions which appear sound to-day. Mr. White's death has, indeed, cast shadows over a Stock Exchange account which had opened in a promising fashion. But investors in general, and even holders of those shares which Mr. White was manipulating, would be better advised to watch events than to resort to panic selling.

Home Railway Dividend Prospects.

The market for Home Railway stocks has not attracted much attention on the part of the ordinary investor during the past six months, and prices have moved fitfully without any definite tendency. Indeed, prospects in regard to interim dividends are more than usually difficult to gauge. In comparison with the first half of 1926 gross traffic receipts in 1927 show a substantial

increase, but this, of course, is due to the losses of the general strike period and the subsequent coal stoppage last year. A comparison with the corresponding period of 1925, however, also shows an increase for three of the four railways, the Southern alone recording a slight decrease. But this does not mean that investors can rely upon receiving the same rates of interim dividend as were paid at Midsummer, 1925. Indeed, such a pleasant surprise is extremely unlikely, for apart from the heavy losses actually sustained in 1926, the companies have had to pay high prices for coal bought on long contracts at the end of last year, and although allowance was made for this in some cases in the 1926 accounts, the financial position of the companies was so weakened by the industrial disasters of 1926 that the directors are likely to adopt a very conservative dividend policy at the present juncture. In any case no interim dividends are paid on Southern Deferred and London and North Eastern Deferred, and it will probably be found that the boards are less inclined to make heavy drafts on reserves for dividend payments than has been the case in the past two years.

Building Society Investments.

The Finance Bill has given rise to much discussion regarding the troubles of the super-tax payer, but those who are assessable to income-tax are not always free from anxieties. It is, therefore, surprising that more is not known concerning the advantages of the shares of building societies in this connexion. They can be taken up and realised without the expenses incidental to the purchase and sale of Stock Exchange securities, while there is no danger of capital depreciation. Moreover, they generally receive a good deal of interest—frequently 5 per cent.; and a great part of the merit of this investment lies in the fact that the interest—on sums not exceeding £5,000—is free of income-tax. Needless to say, they are eminently suitable for those whose income is below the exemption limit.

Deposits are also accepted and these are divided into two main classes—"ordinary deposits" and "fixed deposits." The former are withdrawable at short notice, but the latter, as their name implies, are deposited for fairly long periods. In some cases as much as 5 per cent. interest is payable on "fixed deposits"; taking deposits as a whole, the rate of interest varies between 3 per cent. and 5 per cent. We strongly advise the investor to be discriminating and to compare the facilities offered by the various societies in the light of his special needs. The larger societies, such as the Abbey Road, the Woolwich Equitable, and the Halifax Equitable, occupy positions of great strength and have an impressive record.

The Death of Mr. White: A Moral.

The death of Mr. James White, as briefly noted above, had a marked effect upon the Stock Markets, which was most pronounced in the case of the shares of British Controlled Oilfields, in which he was known to be extremely interested. The Deferred fell at one time by 5s. 4½d. to 8s. and the Common by 1s. 9d. to 4s. 6d., though strong recovery subsequently set in. Several leading industrial societies, including Dunlops and Courtaulds, were also slightly affected. Naturally the decline in the shares of British Controlled Oilfields is disturbing to shareholders. The incident, however, concerns a wider public, for it points an important moral for the average investor. He should have nothing to do with shares of which the prices are largely subject to the activities of big professional operators. In other words, he should confine his attention to stocks which are quoted at prices which are justified by intrinsic merits; though there may still be considerable price movements, he can for the most part view these with equanimity; he knows that over a period of time the Stock Exchange will more often justly value them than not. The average investor should, in the main, be content with the role of investor and should not attempt to match his brains against those of the big

professional speculator. The latter wins nine times out of ten, for he "knows the ropes" and is immensely better equipped all round. This does not deny the value of the big speculator; indeed, he has been described as an "indispensable adjunct to Stock Exchange dealings as we know them to-day"—but the investor should not go out of his way to discharge his indebtedness to him.

NEAR EASTERN PRESS.

The Roumanian Oil Industry.

L'Indépendance Roumaine, after pointing out that the oil industry has gained an advantage in the reduction of the transport tariff, says:—

The difficulty in satisfying the demands, moreover entirely justified, of the petrol industry has been in granting the reduction demanded without upsetting the Railway budget. It has been necessary, therefore, to reduce on one side the demands of the petrol industry and to persuade, on the other, the directors of the railways to sacrifice something in favour of the petrol industry. Finally, it has been decided that the reduction in the price of transport of petrol for export purposes will exceed that destined for home markets, so as to encourage the export of this product.

This week the petrol market has remained in a state of stagnation, and the price has been low. For this reason, transactions have been few and of little importance. . . . Owing to the low price, the industry is suffering severely and numbers of companies have dismissed some of their workers and officials.

Near East Railways.

Both Turkey and Yugoslavia have plans for the construction of new railways. The opening of the Angora-Caesarea line has been hailed in Turkey as an outstanding event. The *Vakit*, as reported in *La République*, says:—

The inauguration of the Angora-Caesarea railway constitutes the most important event of the day. Yesterday journalists anxiously awaited the telegram announcing the arrival of the first convoy at Caesarea. At half-past five in the evening news came through announcing that the first train from Angora had arrived at Caesarea at 3 o'clock.

The distance between Angora and Caesarea which was normally a journey of six or seven days by car, had been covered in 15 hours. It must also be taken into consideration that the rails are newly laid, and the train was therefore unable to go at full speed.

Before the construction of the line Angora and Caesarea, although big towns of the same State, were practically isolated and communicated but little with each other. To-day the distance has become insignificant, and commerce will increase proportionately between them. This result is certainly one of the greatest victories of the Turkish Republic, and our Prime Minister, Ismet Pasha, can be rightly proud of it, for he has contributed largely to its success.

Under the old régime there were men who understood the importance of railways, but not one of them succeeded in realising his object without foreign help.

Ismet Pasha has succeeded in finishing this railway while appealing to none but Turkish workers, engineers, and capitalists. Nevertheless, Ismet Pasha is far from objecting to the employment of foreign capital in Turkey.

A proof of this is the concessions made to various foreign groups for the construction of numerous new railways. In five years' time all the principle centres of Anatolia will be joined up by rail.

La République comments:—

. . . Our railroad policy is not limited to the Angora-Caesarea

line. It goes in all directions and wends its way to Sivas from several sides. The line which has just reached Caesarea will continue its way in the direction of Caesarea-Oulou-Kishla and will pass on simultaneously to the Oulou-Kishla-Sivas section. This line, of which a portion was inaugurated some time ago, is called by its own name, Angora-Sivas.

As for the line which leads from Samsoun to Sivas, it has already reached Turhal, whereas the section Turhal-Sivas has been dealt with separately. This portion will be finished in two and a half years at the latest. The Government has also under consideration the line, Sivas-Erzindjan, and it will not be long before the construction will be begun. But this is not all. The Angora-Eregli line and that of Kutahia-Tavshanli will also be laid.

We shall not only be able to reach the Mediterranean from Mersina, but also from another route further west.

M. J. A.

THE LATE LORD ORANMORE AND BROWNE.

We regret to announce the death on June 30 of Lord Oranmore and Browne at his seat, Mereworth Castle, Kent, at the age of 66. He had been ill since the motor accident on June 7, in which his wife was killed and he was injured about the legs. Born in 1861, he was educated at Trinity College, Cambridge and succeeded to the title in 1900. In 1906 he resumed the name of Browne in place of Guthrie, which his father had taken. He was created a Knight of St. Patrick in 1918, and was also a Knight of Grace of the Order of St. John and a Grand Officer of the Order of the Crown of Roumania. He married, in January, 1901, Lady Olwen Verena Ponsonby, the eldest daughter of the late Lord Bessborough. Lord Oranmore and Browne, who took an active interest in business affairs, was a director of the Bank of Roumania and a member of the London Committee of the Ottoman Bank.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.)

EGYPT.

Uniform Clothing.—The Egyptian Customs Administration invites tenders for the supply and delivery of uniform clothing required for the year 1927-28, the principal items of which are 665 dark blue serge uniforms for guards and 712 dark blue serge uniforms for hors cadre personnel. August 9. (D.O.T.)

Air Ejectors.—The Main Drainage Department of the Ministry of Public Works, Cairo, invites tenders for the supply of ejectors and accessories for Station No. 1. The contract comprises the supply of four 250 gallons (liquid capacity) ejectors for Station No. 1 and for the supply of ejectors and all accessories including platforms, platform girders and ladders inside the tubbing, and exhaust air piping silencer and ventilation column, piping 12 inches diameter outside the tubbing up to valve chamber No. 1 of the 9 inches diameter rising main to be laid under contract No. 1 and for air inlet piping 6 feet clear of the outside of the tubbing. July 20. (D.O.T.)

BULGARIA.

Surgical Dressings, Etc.—The Head Direction of Public Health invites tenders for the supply of surgical dressings, etc. July 18.

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

Sofia, June 16.

The Rate of Interest.

A law published in the *Journal Officiel* of April 30 limits the rates of interest for advances to 6 per cent. above the discount rate of the National Bank of Bulgaria. The bank's present discount rate is 10 per cent., so that the rate of interest is limited to 16 per cent. The same law provides that the legal interest which up to then was 8 per cent. shall be raised to 12 per cent.

It may be pointed out that, speaking broadly, it is useless to limit the rates of interest on advances by legislative action. The rates, in fact, have not ceased to fall for a year past; this movement, perfectly normal on account of the stabilisation of the currency, has been accelerated by the abundance of money, due to the slackness of business and the influx at lower and lower rates of foreign capital.

This question of the limitation of the rates of interest draws attention to a peculiarity of the market of this country; when everywhere else, in the period of monetary stabilisation, the fall in the rates of interest has affected at once the interest on credits, in Bulgaria, on the other hand, while the rates of interest on advances fell, the rates granted on deposits remained at the high levels reached in a period of instability. It is interesting to note that the deposits in the bank benefit even now by 8 to 9 per cent. interest, when the currency has been stabilised for some four years. In France, where stabilisation has only existed for a few months, the rates on deposits have already returned to the pre-War level. One wonders if the banks will be able to continue for long to permit such high rates on credits. In expectation of a fall many depositors are now turning their attention to investments hitherto completely neglected: State and municipal loans, and banking, industrial, and insurance shares. In recent weeks number of these securities have shown a very considerable rise.

The Agricultural Bank of Bulgaria.

By the execution of the law of November last for the reorganisation of the National Bank of Bulgaria that institution is unable to continue the support which it had hitherto accorded to the Agricultural Bank. This bank finds it necessary to seek foreign co-operation. Negotiations have been entered into with several groups, but it is as yet impossible to forecast their issue. It can be foreseen, however, that if a foreign group agrees to grant to the second State bank support of the necessary importance it will probably desire that the bank should be reorganised as the National Bank has been and that its activities should be subject to definite regulations.

The Grain Trade.

During May export business has been very important. Besides the usual transactions in maize, business has also taken place in the new barley crop. This is an exceedingly rare event in the annals of Bulgaria's export trade, for normally such transactions do not take place before the first half of July, and it shows conclusively that the outlook for the new crop is very good and causes no anxiety.

Wheat.—At Bourgas 1,000 tons of soft wheat has been purchased at between 7.10 and 8.05 leva and about 300 tons of hard wheat at 8.15 to 8.85 leva. The greater part of these wheats has been purchased as usual by the local mill and also for export to Greece. As a result of measures taken by the Greek Government with regard to bread-making the export of Bulgarian flour is handicapped. At Varna 1,000 tons has been sold at 7.30—40 leva for consumption.

Rye.—Transactions have totalled 5 wagons at 6.50 leva.

Vetches.—Export being again permitted, a little business has been done at 7.20—40 leva.

Barley.—There is hardly anything left of the old crop, but, as indicated above, there have been numerous dealings in the new crop for August-September delivery. At Bourgas and Varna more than 1,800 tons have already been sold round about 5 leva. At the ports of the Danube the transactions have been more important. They are estimated at about 3,500 tons. Dealings commenced at 4 leva, and the price reached by the end of the month 4.65—.70 leva. It may be anticipated that next month business will be much more important, especially if the trend in foreign markets permits the payment of remunerative prices to producers.

Maize.—Contrary to the general expectation the Argentine, while continuing to sell very important quantities, has not so far by its large offers brought about the heavy fall anticipated. As there are some needs to be covered, a general hardening has resulted. Bulgarian maize has profited like other descriptions, and after a sharp set-back the prices of the previous month have not only been maintained but have improved by 12 to 15 stotinki. The rise has been more marked in the case of white maize as a result of the demand for France and Italy. The price has risen from 3.90 to 4.40 leva, which represents a new advance of nearly 15 per cent.

Yugoslavia's exports in April amounted to 352,375 tons, of the value of 42,728,487 gold dinars. For the first four months of this year the exports totalled 1,414,380 tons, of the value of 184,025,896 gold dinars, as compared with 1,649,521 tons, of the value of 235,622,316 gold dinars for the corresponding period of 1926.

In the House of Commons last week, in answer to Mr. Riley, who asked the Chancellor of the Exchequer if there was any outstanding loan or debt owing to this country by the Government of Persia, either for money advanced or work done for or material supplied to the Government of Persia, Mr. Churchill said:—In April, 1925, His Majesty's Government agreed to reduce their claim in respect of various loans made to the Persian Government from over £4,500,000 to £2,000,000, and to accept repayment by means of 25 annuities of £180,000 each, to begin in 1926-27. The Persian Government accepted this offer in March, 1926, and promised to submit it for ratification by the Persian Legislature. This has not yet been done, and accordingly representations were made to the Persian Government on May 10 last, urging that the agreement should be submitted for ratification without further delay.

Company Meeting.

KASSALA COTTON COMPANY.

A Difficult Position.

Negotiations With the Sudan Government.

The fourth ordinary general meeting of the Kassala Cotton Company, Ltd., was held on June 28 at Winchester House, Old Broad Street, E.C. The Hon. Arthur M. Asquith, D.S.O. (the chairman), presided.

The Secretary (Mr. W. O. Simms) having read the notice convening the meeting and the auditors' report,

The Chairman said:—Gentlemen,—I presume you will agree to take the balance-sheet and accounts as read. (Agreed.)

If you will turn to the balance-sheet you will see that a call of 2s. 6d. was made on the preference shares during the year, making them 7s. 6d. paid up. A further call of 2s. 6d. has since been made. On the liabilities side there is otherwise little change.

On the assets side, under the heading "balance of expenditure in the Sudan" there has been an increase from £206,146 1s. 10d. to £242,470 4s.

This increase is mainly due to expenditure incurred in the extension of our canal system by 24 kilometres and on works designed to improve supplies of drinking water. Under concession account you will see an addition of £6,076 8s. 10d. I have explained in past years that under our concession agreement, as part of the cost of our concession, we are liable to pay one-half of any deficit on the operation of the Kassala Railway, and that any payments on this account by the company have to be added to the concession account. Any payments by us under this guarantee in excess of a total of £50,000 are eventually recoverable by us from any surplus railway or cotton profits received by the Government during the concession period.

In passing I should like to express the pleasure with which my colleagues and I observed in the recent honours list the recognition of the long and arduous services of Sir Edward Midwinter. As a subaltern of the Royal Engineers he took a hand in building the desert railway south from Wady Halfa for Lord Kitchener's expedition, and the Sudan Government Railways system has probably owed more to him than to any other single individual. The Kassala line was the last addition made to that system under his direction.

Debtors, Sudan Office, stand at £37,441. Of this some £26,000—a higher figure than last year—is advances to our tenants to finance them in the growing of the larger 1926-27 crop. Our tenants numbered 3,700, as against 2,000 in the previous year. These advances we recover from the proceeds of the crop. Of the balances nearly £9,000 represents the company's share of that part of the 1925-26 crop in respect of which cash had not been received by December 31, 1926. British Government securities are reduced to £21,000, owing to expenditure on development and canalisation and to the financing of our tenants in the growing and marketing of our increased crop. So much for the balance-sheet.

Result for 1926.

Turning to the profit and loss account, there is some slight reduction in general expenses due to the smaller 1925-26 crop. We ask you to approve a bonus to our Sudan staff of £850 in this lean year, as against £1,600 for the year 1925. I feel sure that you will be inclined to back the directors in this token of recognition to Mr. Fleming and his staff for the fine uphill work which they put into making the most of a miserable flood.

Before meeting debenture interest, we show a profit for the year of £21,630, and, after meeting debenture interest, we show a loss for the year of £8,370. Having come into the year 1926 with a carry-forward of £24,362 11s. 4d., we go out of it with a carry-forward of £15,992 18s. 6d.

This disappointing result was due to a Gash flood small in volume and bad in the manner of its arrival. It is some consolation that one of the worst floods—that of 1925, of which the result is reflected in the accounts now before you—was succeeded in 1926 by the largest flood of which record exists. You will have been glad to read in the report that during the season 1926-27 we have had 26,000 acres under cotton, as against 11,500 acres in the season dealt with in the accounts before you. Picking from this increased acreage finished this month, and our total crop amounts to 54,128 kantars of seed cotton of excellent quality, as against about 22,500 kantars picked last season—a very satisfactory result.

The yield per acre and the percentage of first and second grade cotton are both rather better this season than last, and you will be pleased to hear that we have already disposed of more than two-thirds of the lint and all the seed at satisfactory prices.

Factors Reducing Effective Area.

Now I want to direct your attention to the less cheerful aspect of our report. I expressed in my speech last year our misgivings as to the annual average acreage which we may prove to be able to irrigate for cotton. We have also informed you in previous reports and speeches of the Sudan Government's water agreement with Eritrea, and of the fact that this is likely to affect unfavourably our company's revenue. But, in order to satisfy the Sudan Government and ourselves that average earnings which may be anticipated to accrue from our operations under existing terms cannot be in pro-

portion to the company heavy's capital load—and this load includes, you will remember, £300,000 to £350,000, paid to enable the railway to be built, which brings in no revenue to our company—we have been collecting data, based upon facts ascertained by practical experience, regarding irrigation and cultivation, so that reasoned conclusions could be arrived at. This has required time, and time has also been required to throw more light on uncertainties as to the effect of the Italians' project in Eritrea, and as to the Sudan Government's policy regarding the growing of grain crops upon our concession area.

The experience of three years of irrigation and cultivation—including one flood of almost minimum and one flood of maximum volume—has now made it clear that it is impossible to bring under irrigation the large area anticipated at the time of the negotiation of the concession. The four main factors which restrict cotton acreage are:—

First, owing to the extreme fluctuations in the flow of the Gash from day to day the proportion of the total volume of which effective use can be made for irrigation is much less than would be the case if the water arrived in a steady and regular manner, or than was estimated when we obtained our concession.

There is clearly a limit beyond which it is not economic to make works designed to use exceptional floods. There is also clearly a limit to the elasticity of the local population in their ability to take up and cultivate areas varying greatly in extent from year to year.

Secondly, the amount of water which the land requires to carry a cotton crop to maturity has proved to be greater than the experience of other irrigated lands in the Sudan had suggested.

A Serious Matter for Kassala.

Thirdly, there is the reduction of acreage to be anticipated as a result of abstraction of water in Eritrea. While in Kassala this winter I visited the Italian irrigation works in Eritrea. They had some 1,800 acres under cotton which looked like giving a fair crop. They were reported to be proposing to increase this acreage this year to 7,500 acres. You will understand from this that we have not yet experienced the effects of abstraction by them of the full volume of water allowed for by their agreement with the Sudan Government.

In certain years of exceptionally high flood, such as 1926, such abstraction would probably not affect us to the same extent as in average years. But year in and year out—and particularly in years of low flood—it may be a serious matter for Kassala. The continuous low flow would be reduced, and the flushes arriving in Kassala would often be too short-lived to be distributed for effective irrigation. Fluctuations in irrigable acreage from year to year would be more pronounced, and the disappointment of would-be tenants in the lean years would increase the difficulty of obtaining enough tenants in the years of good flood.

The fourth factor of reduction of cotton acreage is the growing of grain crops on land irrigated by the Gash, and which would otherwise be available for cotton.

At the Sudan Government's instance, and as a temporary measure pending an all-round settlement, we have agreed to our tenants growing two acres of grain free of all payment to the company for every ten acres of cotton. This means, in effect, a serious reduction of our potential cotton area, and, whatever may be the rights or wrongs of the grain-growing question, it is a concession which we cannot afford to continue to make. Briefly, the position is that the soil is all right, our irrigation works are all right, the local population are glad to grow cotton, and the cotton is of first-rate quality; but water is the trouble—not so much its volume as the way in which it arrives. The upshot is that, on the basis of such acreage, yields, and cotton prices as we think it reasonable to look for, the company's prospects under the terms of the concession as they stand to-day are bad. I have thought it best to put these facts plainly before you.

Negotiations in Progress.

We are at present negotiating with the Sudan Government, and I must be careful to avoid saying anything which might prejudice our negotiations. The Sudan Government are fellow sufferers with us. If we suffer from the failure to realise original expectations, they also suffer loss of expected revenue; while, on the other hand, our participation in this enterprise has enabled them to realise the construction of the Kassala railway and has helped them in their policy of bringing development and a higher standard of life to this remote province. In giving consideration to proposals or some modification of present arrangements, we trust that they will bear this aspect of the situation in mind, and we look with confidence to receiving at their hands that fair treatment to which we are accustomed. That is all that I think it advisable to say at present about our negotiations.

Before I sit down I should like to pay a tribute to the work of our supervisors of cultivation and of our engineers. They have had a very difficult task. Our engineers, in designing irrigation works, have had to make provision for a flood extremely variable in volume and in the manner of its arrival such as is rarely met with in irrigation schemes. There is always the danger that works designed to make the most of a bad flood may be ineffective in years of bumper floods and *vice versa*. The works designed by Mr. MacIntyre and Mr. Telford have stood the test of practice and have been economically carried out. Our supervisors of cultivation also

have had a most difficult task. Before the flood arrives it is impossible for them to know whether they will have 11,500 acres, as in 1925, or less, or 26,000 acres, as in 1926, or more, to allot for cultivation. The punctual presence of the tenant on the land before it has dried up is essential to economic cultivation. The native tenant is not always perfection in the matter of punctuality, and the whole countryside at the time of the scramble to get on to the land and start planting is a sea of mud and water. It is very much to the credit of Mr. Fleming, our local manager, and of his assistants that in these difficult circumstances he has popularised cotton-growing and managed to cultivate such a large area and to produce so fine a crop.

The Chairman concluded by moving the adoption of the report and accounts.

Mr. F. Eckstein seconded the motion, which was carried unanimously.

The retiring directors (Sir William Himbury and the Right. Hon. Sir Frederick Lugard) were re-elected, and the auditors (Messrs. Cooper Brothers and Co.) were reappointed.

The proceedings then terminated.

EGYPTIAN HOTELS.

A Successful Year.

Increase of Capital Authorised.

The thirtieth annual general meeting of the Egyptian Hotels, Ltd., was held on June 30 at 11, Ironmonger Lane, E.C.

Sir William B. Peat (Chairman of the company), who presided, in moving the adoption of the report and accounts, said: The director's report and accounts for the year to April 30, 1927, have been circulated, and therefore I presume you will agree to take them as read. The company has again experienced a successful year. The profit for the year of £99,318 is a highly satisfactory figure, although it falls short of the profit of last year by about £6,014. Business generally throughout the season has been good, although the receipts have not been up to the record figures of last year. The tourist business, although a little irregular, has been satisfactory, but there was less local business, possibly attributable to the cotton situation. The Sheppard's Hotel, the Semiramis Hotel, as well as the several hotels leased from Les Grands Hotels d'Egypte, continue to show satisfactory results.

In the directors' report reference is made to the resolution which is before this meeting to authorise an increase in capital by an addition of 25,000 ordinary shares of £1 each, which, if and when issued, it is intended to issue at a premium. As mentioned in the report, it is considered advisable to obtain this facility for raising capital moneys, in view of the large capital expenditure which is now receiving the consideration of the local Board. It is proposed, in respect of the past year, to pay a preference dividend of 5 per cent. and an ordinary dividend of 35 per cent. plus a bonus of 4s. per share, which is the same dividend and bonus as that declared in the preceding year. It is also proposed to carry a sum of £20,000 to special reserve, which, together with the profit on the sale of the company's holding in Egyptian Government securities of £11,348, makes a total reservation for the year of £31,348. After payment of the dividends and bonus, and the appropriation of £20,000 to special reserve, there will remain a balance of £6,904 16s. 9d. to be carried forward to next year's accounts.

The Balance-sheet.

I now propose to deal with such of the items in the balance-sheet as require comment. It will be noted that during the year additions to freehold land and buildings have amounted to £36,410 5s. 1d. This represents the purchase of land adjoining the Semiramis Hotel, which has been made in view of the contemplated enlargement of

that hotel. The additions to plant, fixtures and furniture of £4,102 11s. 3d. represent the cost of fitting new baths and running water, etc., which has greatly improved the comfort of visitors to the hotels. It is satisfactory to be able to state that nearly all the bedrooms throughout Sheppard's Hotel, Semiramis Hotel, and the Continental Hotel are now fitted with hot and cold water and lavatory accommodation. The stock on hand is at a somewhat higher figure than that of the preceding year, and the sundry debtors and creditors also show an increase. These items are bound to fluctuate in the ordinary course of business.

It will be observed that the company has made advances to the Société Suisse Egyptienne for the purpose of redeeming the outstanding first mortgage debentures of that company, including those held by our company. When these debentures have been extinguished our company will hold in addition to the whole of the share capital of the Société Suisse Egyptienne des Hôtels the only debentures issued by that company, which are for the sum of Fcs.1,000,000, and which appear in our balance-sheet at £40,000. The local Board have arranged that the Société Suisse Egyptienne shall be liquidated, and when the liquidation is completed the undertaking and assets of that company will be incorporated in the balance-sheet of the Egyptian Hotels Company.

It will be observed that a loan of £32,281 9s. 10d. has been obtained from the company's bankers, which was for the purpose of making the advance to the Société Suisse Egyptienne des Hôtels already mentioned. The amount of this loan has been reduced since the date of the balance-sheet to approximately £6,600.

Tribute to Manager and Staff.

In conclusion, I wish to express to the local Board in Egypt and the managerial and other staffs of the several hotels our appreciation of their services. I must also place on record our great indebtedness to Mr. Baehler, whose administrative ability has so largely contributed to the satisfactory results we have been able to place before you. I now beg to move: "That the directors' reports and accounts of April 30, 1927, as submitted to the shareholders, be received and adopted."

Mr. H. M. Snow seconded the resolution, which was carried unanimously.

The Chairman moved: "That a dividend of 5 per cent. on the preference shares, and a dividend of 35 per cent. together with a bonus of 4s. per share on the ordinary shares, for the year ended April 30, 1927, be and the same are hereby declared payable on and after July 15, 1927."

Mr. Charles Baehler seconded the resolution, which was unanimously carried.

Mr. Baehler moved: "That the capital of the company be increased to £265,000 by the creation of 25,000 additional ordinary shares of £1 each, ranking for dividend and in all other respects *pari passu* with the existing ordinary shares of the company."

This was seconded by Mr. Snow, and carried unanimously.

On the motion of Mr. Baehler, seconded by the Chairman, Mr. Snow was re-elected a director, while the auditors (Messrs. Turquand, Youngs and Co.) were reappointed.

Tourist Business Increasing.

Mr. Charles Baehler, referring to the large dividends which the company had been able to pay during the last few years, said he wished to emphasise the fact that the company's ability to pay those dividends was due mainly to the increased number of visitors at the hotels, and specially to the sound financial policy of the Board during the last twenty years in steadily diminishing the debentures. They now had no debentures, and while the capital had been as high as £700,000, it now stood at the reduced figure of £240,000. The lease of the four hotels of the Grand Hotel Company of Egypt had resulted in a substantial profit accruing to the company. In addition substantial economies had been effected by centralisation of management and administration. The tourist business in Egypt was increasing, as it had done in recent years, and the company had very good prospects for next year. In order to meet the increased demands for hotel accommodation during the tourist season the local Board had decided to enlarge its hotel accommodation by adding to the existing structure of the Sheppard's Hotel and by building on the recently acquired site adjoining Semiramis.

A vote of thanks to the Chairman for presiding concluded the proceedings.

JOHNSTON LINE

A circular has been issued by the Roumanian Ministry of Finance drawing attention to the conditions which must be fulfilled when foreign limited companies establish branches or representative companies in Roumania. They must, *inter alia*, declare the capital with which it is proposed to undertake operations, as this figure is required by the Roumanian authorities for estimating the amount of the supplementary tax on branches of foreign limited companies with head offices outside Roumania, and in its absence the profits are assessed at the maximum figure of 500 per cent.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended June 29:—

Egyptian Futures.—Sakel Contract: Quiet and featureless markets have been the general rule during the past week. Trading has only been of a light character, and, with fluctuations throughout only on a minor scale, we close to-night with values showing little change, near positions being advanced seven points and more distant months 1 to 2 points decline.

At the moment, the market appears very evenly balanced; on the one hand, trade and speculative support are sufficiently in evidence to prevent the undertone becoming heavy, per contra, holders of stocks are quite willing to let their cotton go on any advances and, perhaps more important still, Sudans are offering in quantity at a fixed price, and as soon as Novembers approach 16.75d. spinners take the opportunity of securing their cotton on a very favourable "on call" basis. The selling of contracts from the above source cannot be termed large, and in active markets would not have a pronounced effect, but under present conditions it is sufficient to exercise a decided restraining influence on values.

Manchester reports continue to show a generally satisfactory turnover in fine counts, and, whilst it is claimed that margins give little in hand, the producers' position has certainly improved latterly. The marketing of the Sudan crop has been mainly instrumental in keeping values on an equitable and steady basis, and had it not been for the competition of this variety, there is little doubt that spinners would have been asked and have had to pay very high premiums for the Good to Fine grades of Egyptian Sakels.

The Alexandria market has fluctuated closely with the movements at this side, and is apparently passing through a similarly featureless phase as the local contract. For the immediate future we do not anticipate any change from the ruling restricted tendency. However, for a long view we still consider that values are likely to show appreciation during the summer months.

Upper Contract.—Only isolated transactions have taken place in this contract during most of the sessions, and the undertone has not been quite so steady as hitherto. Trade support has been rather disappointing, and with only a moderate spot business in evidence, the basis has been inclined to ease. Crop reports continue to be most satisfactory. Competitive outsiders remain both dear and scarce, and this neutralises to a great extent the present lull in trade operations:

Egyptian Spot.—The inquiry for spot Egyptian has been rather quieter during the past week, a fact for which the Bolton Mill holidays have no doubt been largely responsible. Nevertheless, the daily sales average has shown little change from that of the preceding week, and it is satisfactory to be able to record that interest in Egyptian Sakel has again shown some slight improvement, chiefly for the strictly Fully Good Fair to Good quality. Low Sakel 8½d. to 10.00d. has continued in fair request. Prices have been steady. Uppers, at from 12½d. to 13.00d. have continued to figure largely in the inquiry, and latterly rather more interest has been displayed in the Good to Fine cotton, with staple as the main objective. Upper values have been inclined to ease, but, barring any unforeseen decline in the American markets, we do not think that the decline will extend much further.

Pilion has been in merely retail request at from 12½d. to 14½d., and other Egyptian growths have been neglected. A revival in the demand for "inferior" and "scarto" cotton has been seen, but very little of it appears to have resulted in actual business. A good trade has been done in Sudan Sakel at steady rates. The medium qualities have predominated in the enquiry, but all the standard marks have received attention from time to time, and generally speaking, interest in this cotton

continues to grow. White Sudan has been freely asked for, at from 150 to 325 on, but buyers continue difficult to satisfy. C.i.f. business has shown some slight improvement, in spite of the fact that reports from Manchester have recently indicated that business at that end had eased off considerably. Forwardings to spinners for the week ending 24th inst., were returned as 6,270 bales Egypt, and 2,950 bales Sudan. Estimated sales for the week 1,600 Egypt and 7,500 bales Sudan.

Quotations of Sakellaridis remain unchanged on the week, those of Uppers are 20 points lower. F.G.F. Sakel to-day 17.00d. F.G.F. Upper to-day 13.20d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended June 23, state:—

Since our last report the futures market has been very quiet, but the tendency has been firm. The week's summary of price movements is as follows:—Sakellaridis: July, 32.91 dollars, 0.33 dollars up; November, 33.50 dollars, 0.25 dollars up; January, 33.50 dollars, 0.35 dollars up. Ashmouni: August, 24.38 dollars, 0.18 dollars up; October, 25 dollars, 0.15 dollars up; December, 25.22 dollars, 0.22 dollars up; February, 25.37 dollars, 0.18 dollars up.

Sakel.—The market for this variety has not been very active this week, this being especially the case for July old crop. November new crop has been relatively fairly active, this being due to straddle operations effected for Liverpool account. The difference between July and November has narrowed somewhat, which is only natural as, owing to the very poor selection of Sakel at present in stock, holders who are sellers of July being unable to tender are obliged to transfer their hedges into November. The demand from abroad continues to be very moderate and the turnover at Minet el Bassal has been rather poor.

Uppers.—The Uppers market has also been very quiet but the tone keeps firm. The firmness of the New York market has contributed to the strength of our market, as well as the continued fairly satisfactory demand from spinners, which demand keeps far greater than for Sakel.

At the third June tender—to-day—11,500 kantars were issued, but the market was not unfavourably influenced; the total dockets issued for June amount to 41,500 kantars, and the tenders have consisted chiefly of grades above Fully Good Fair and Pilion, cottons which for the time being are not very much sought after on the spot market at Minet el Bassal.

The stock in Alexandria to-day stands at 2,854,640 kantars, and we estimate that between now and the end of August another 100,000 kantars will come down from the villages; this will make the total available supply up to the end of the season 2,954,640 kantars. Allowing that exports from now to the end of August will be the same as the exports for the corresponding period last year, i.e., 869,300 kantars, we will have at the close of August a stock in Alexandria of some 2,085,340 kantars, against 1,100,500 at August 31, 1926. This is a big difference which will serve to counter-balance, at least in part, the reduction in the yield this year resulting from the law

BULGARIAN SIX PER CENT. LOAN, 1892.—NOTICE TO BONDHOLDERS.

NOTICE IS HEREBY GIVEN that coupons due 14th July, 1927, will be payable on and after that date at the rate of 37 per cent. of their nominal amount in Pounds Sterling, at the Coupon Office of the Ottoman Bank, 123, Old Broad Street, E.C.2.

BARRED Coupons due as above will be payable in Tchechoslovakian Crowns at the rate of 0.952 Crowns for 1 Franc Nominal, converted into Sterling at the rate of the day.

5th July, 1927.

restricting the acreage. The week's receipts amount to 29,410 kantars against exports 142,772 kantars; the stock in Alexandria stands at 2,854,642 kantars.

The official figures of arrivals and exports for the period September 1, 1926, to June 16, 1927, are as follows:—Arrivals: Lower Egypt, 5,110,000 kantars; Upper Egypt, 3,145,000 kantars; total, 8,255,000 kantars. Exports: Sakel, 2,776,692 kantars; Ashmouni, 3,435,316 kantars; various, 446,797 kantars; total, 6,658,805 kantars.

Spot: The market was closed on Saturday last and will remain closed on Saturdays until further notice. Total sales during the week amount to about 7,900 bales, of which we estimate 3,200 bales Sakellaridis, 4,400 bales Ashmouni and Zagora, and 300 bales Pilion.

Sakellaridis: The good grades are still almost entirely neglected; buyers are always in the market for the medium grades but find great difficulty in fulfilling their requirements owing to the poor style of cotton showing. A fair business has been done in low grade cotton. Spot differences, with the exception of the low grades, have somewhat hardened.

Ashmouni and Zagora: All grades below Fully Good Fair to Good have been in demand. A small business has been done in good grades at rather higher premiums. Spot differences for the other qualities have also stiffened up.

Pilion: There has been a small demand for Fully Good Fair to Good, and business has been done without much change in the spot differences.

Up-Country: Everything is very quiet in the villages. There is very little new crop business; growers are not at all anxious to sell, and when they are approached their ideas of prices show little relation to the prices which the commercial houses are willing to pay.

Crop, 1927: The crop continues to progress satisfactorily, particularly in Upper Egypt, from where the reports are excellent. Leafworm attack continues, but this pest is being effectively controlled. Irrigation is normal, but complaints of shortage of water are increasing in number; in some cases, these complaints appear to be justified.

The traffic receipts of the South Indian Railway Company for the week ended June 4 amounted to Rs.10,30,462, making the total from April 1 Rs.98,17,063.

A Polish shipping line is about to be established between Gdynia and Italian ports and the Near East. The Polish Government has granted a subsidy to the Polish Steamship Company, which will run the line. The ports of call will include Naples, Messina, Catania, the Piræus, and Constantinople. The promoters of the new line aim at developing the importation of Polish coal into Italy, Greece, and Turkey.

SUDAN

A PERFECT WINTER RESORT

KHARTOUM, a modern town at 1,200 feet above sea-level, enjoys an ideal winter climate, constant sunshine tempered by invigorating breezes. The Grand Hotel is under the management of the Sudan Government Railways and Steamers.

OMDURMAN, the wonderful African Metropolis, lies near by, stretching for seven miles along the shores of the Nile.

BIG GAME SHOOTING.

The Sudan is one of the most easily accessible countries in which Big Game abounds, and its large territory offers a most varied choice of shooting grounds.

Express Steamer and Dining and Sleeping Car Service between Cairo and Khartoum.

Notes of the Week.

The Roumanian Elections.

As parliamentary elections in the Balkans are conducted according to a system perfectly well understood and accepted in the countries themselves, it matters little whether the system is found intelligible or not in other parts of the world. The Government that "holds" the elections sweeps the board, and it is left to the Opposition to circulate the intelligence abroad that it was assured of a majority, if its electors had not been kept forcibly away from the polling stations and its candidates arrested. In countries where elections are conducted with a view to ascertain the free opinion of the electorate and are consequently as fair and impartial as the umpiring of a friendly encounter on a sports field, the value of elections carried out by any other method appears problematical, and it might be thought that considerable expense and some bitterness of feeling could be avoided by dispensing with elections, and by allowing the Government and the Opposition to share the seats in Parliament on a pre-arranged basis of, say, three or four to one. In the recent elections in Roumania the results have conformed with expectations. The National Liberal Government has been returned with an overwhelming majority, and reports of the manner in which they were conducted vary according to the source of the information. As the Liberals have a firm political and economic hold on the greater part of the Kingdom, their return to power makes for political stability in Roumania, and they have had ample time during the short period in which they have been out of office to decide where their former policy has called for modification, if any. Although General Averescu owed his position as Prime Minister to his nomination by M. Ion Bratianu, whose policy he was expected to follow in general outline, he had shown sufficient independence in some of his economic and financial measures to cause the Liberal Party considerable anxiety lest the economic structure that they had built

up during the previous four years should be seriously undermined. The presence of M. Titulescu in the Government is a guarantee that there will be not too violent a swing of the pendulum. The very size of the Government majority, which, in ordinary circumstances should give them another four years' power, may help to bring about a coalition with the National Peasant Party, and so enable the country to respond to King Ferdinand's earnest desire to see political peace established in the new State.

New Turkey.

On the occasion of his visit to Constantinople Ghazi Mustapha Kemal Pasha has made handsome amends for his long neglect of that once important centre. "Your town," he declared to a Constantinople audience, "is the ornament of the Turkish fatherland, placed at the junction of two great worlds. Constantinople is the glory of Turkey's history, and the apple of the eye of the Turkish nation, and on this account it occupies a pre-eminent place in the heart of all our compatriots." Dolma Baghtche Palace is no longer "the haunt of a Lernaean hydra, of a terrible, sacrosanct and supernatural power," it belongs no longer to the "Shadow of God," but has become "the palace of the nation, which is not a shadow but a reality"; and the President expressed his happiness at being in it as a simple member of the nation, as that nation's guest and nothing else. If the spirit in which Mustapha Kemal Pasha has undertaken the heavy task of regenerating Turkey can be made to permeate the whole nation, there can be no cause for pessimism in regard to the future of the Republic. It remains to be proved, however, whether he stands alone, head and shoulders above his generation, or whether there is a nucleus of the Turkish nation endowed with his vision, his independence of character and personal courage.

"Slaves and Parasites."

In the Turkish press, it is to be feared, the President finds little to encourage him in his great work of lifting the nation out of the old rut. The sycophancy that attends his every word and movement must be exceedingly distasteful to a man of his masterful personality. One of the leading newspapers, *Jumhouriet*, over the signature of Yunus Nady Bey, pours scorn on the past of Dolma Baghtche Palace, with its throne, "before which a horde of wretches and a swarm of slaves and parasites stood in adoration," yet it continues: "We can assure our Great Guide and our august Liberator that this or that Palace is far from being worthy to receive him. The whole nation is ready to offer him its heart as his residence." On the eve of his arrival, Constantinople is thus apostrophised: "Rejoice, hymn the glory and the triumph of your hero. Happy City, you are indeed to be envied." Even when due allowance is made for oriental hyperbole, it may be inferred that from quarters where such adulation can proceed there is as little change from the adoration to which Abdul Hamid was subjected, as there is likelihood of that careful and critical analysis to which each step in the rebuilding of Turkey should be subjected by those who wish to help the Ghazi in his work. Constantinople had good reason to welcome the arrival of the President—his first visit since the establishment of the Republic four years ago—but it is to be hoped that for the well-being of Turkey its leading citizens will have the courage to discuss with him the future of the town on the basis of practical business and not be content merely with flowers of speech. To the President's credit it must be pointed out that they were given a clear lead by him. He insisted upon the urgency for hard work, and on the need for combining sentiment and religious beliefs with the facts of science and the arts, in order to secure the true well-being and happiness of the people. If among the facts of science the President includes the all-important question of finance, his diagnosis is essentially sound. It is in the financial aspect of the regeneration of Turkey that Constantinople is primarily interested, but on this point the press finds little room for airing its views, owing to the panegyrics which, it has decided, must alone attend mention of the President's name and moments.

The Corfu Achilleion.

The Greek Government in recent years, it is understood, has received many offers or suggestions for the conversion into a casino of the Achilleion—the villa a few miles out of Corfu town, originally built for the Empress

Elizabeth of Austria, and purchased by the German Emperor—but has hitherto rejected them all. There is a chance now, if report be true, of such a scheme being carried into effect. The proposal this time is not to use the Achilleion itself as a casino, but to convert it into a museum, and to build near it a hotel and casino. A group of foreign capitalists, including German hotel proprietors, is said to be behind the scheme, which is to include the construction of an asphalt road from Corfu to the Achilleion and the installation of electric light and power on the island. Although in the past the Greek Government's rejection of similar proposals has been supposed to be based on moral grounds, the submission of an attractive offer may be responsible for a change of view. The opening of a casino at Yildiz Kiosk may also bear some responsibility in the matter; for if the latter should ever attain the vogue of Monte Carlo, there would be the danger of Greek money being taken out of the country for a purpose which Corfu would be able to provide. Whether the Corfiots will relish the idea of suffering from any drawbacks connected with the establishment of a casino on the island, while being prevented by law from patronising the institution themselves, as is proposed, remains to be seen.

Great Britain and the Yaman.

Speaking in the House of Lords on July 5, Lord Lovat, Under-Secretary for Dominion Affairs, stated that the British position in regard to the Yaman had remained unchanged since the failure, eighteen months or so ago, of Sir Gilbert Clayton to persuade the Imam Yahya to see and to accept the official British point of view. Lord Lovat further explained that there need be no apprehension of any danger to British interests consequent upon the later successful collaboration of the Yamanis with the Fascisti. And he implied that nothing, for the present, at any rate, will be done from this side to arrange an agreement with the Imam. This official statement appears greatly to have pleased the Italians, but it seems hardly likely to comfort either independent British observers of Arabian affairs or the Imam himself, who is, in Lord Lovat's words, still "anxious to come to terms with us." Now it would be idle to assert that the British Government is not within its legal rights in adopting a rigid attitude over the question of the Aden Protectorate and of the Imam's encroachment thereon, but in Arabia legal facts have but poor chance of prevailing against actual facts. If the Imam were a weak man; if there were manifest chances of his sway's decreasing; if ever Great Britain contemplated the forceful re-occupation of the Protectorate; if, even, a recognition of the Imam's position in the Yaman were to prejudice British relations with King Ibn Saud—then one could more easily comprehend the unbendable policy of the British Government in the present situation, which it admits to be "unsatisfactory from almost every point of view." As things are, however, it has to be lamented that more light has not been officially thrown upon the obscurity of British intentions towards "Arabia Felix." Great Britain has what is perhaps an unprecedented opportunity of taking the moral lead in Arabia. That opportunity she has already seized in the Hijaz and the Najd, through the admirable medium of Sir Gilbert Clayton. Is it conceivable that she will wholly fail to extend her conciliatoriness to the South-West of the Peninsula?

Iraq and the League of Nations.

Although to outward appearance the recent political crisis in Baghdad was solved by the postponement of the issue of conscription until the meeting of the Majlis next autumn, there is possibly more under the surface than would appear from the laconic and too infrequent telegrams published from Iraq. Chronic crises are, admittedly, a not wholly distasteful concomitant of the life of some politicians, but the problem which is now exercising Baghdad appears to be something much more than a rumpus caused by the ambitions of any particular clique. It may be recalled that Jaafar Pasha offered his resigna-

THURSDAY, JULY 14, 1927.

THE VISIT OF KING FUAD.

Brief as was the "State" portion of King Fuad's visit to England—the three days during which he remained at Buckingham Palace—it was long enough to constitute a landmark in the history of Anglo-Egyptian relations. From the moment when the King stepped ashore at Dover it was evident that the British public had made up its mind that his welcome was to be a national one, as whole-hearted as it was spontaneous. Even in the details of the official reception, so apt to become stereotyped by convention, there was a note of unaffected sincerity which, it is understood, immediately impressed the Royal visitor, and which received its full expression in the cordial atmosphere of good-fellowship in which the King found himself in the Palace. On the following day, when His Majesty was the guest of the City of London at the Guildhall, there was the same warmth of greeting that British crowds, usually sparing of demonstrative indulgence, reserve for those to whom they feel closely linked by friendly ties. King Fuad cannot have failed to realise from these widespread manifestations that they were at once a tribute to him personally as an Allied Sovereign and a message of good will to the Egyptian people. If there was anything lacking in connexion with the visit it was that a larger section of the Egyptian nation could not be present in London to gauge the popular feeling towards their country. Those who were here showed very clearly that they had caught something of the spirit themselves, when the large groups of students outside Victoria Station greeted King George as warmly as they greeted their own Sovereign and broke into cries of "Long live England." This greeting was so far a departure from the attitude with which Egyptian students have frequently identified themselves in the past that it was perhaps the most welcome feature connected with King Fuad's arrival. For His Majesty himself it must at least have been a gratifying endorsement of the policy, for which he is personally responsible, underlying the visit. If in Egypt what are regarded as limitations on the country's independence have loomed large in the public eye, they are, as far as the British people are concerned, mere technical points, which in no way invalidate the standing of Egypt and should not be allowed to detract from the friendliness on close and equal terms that should subsist between the two peoples.

Sarwat Pasha, Prime Minister of Egypt, has rightly emphasised the absence of any particular political object in King Fuad's visit, and points out that he himself has not come to London to discuss anything in the nature of a political agreement or to talk about special problems. It is essential that no attempt should be made to commit the two countries to any undertaking for which public

opinion in Egypt is not yet ripe. The Royal visit would seem to have been admirably timed to mark a transition stage in the Egyptian attitude towards Great Britain. A year ago it would have been premature, in so far as it must have failed in the desired effect. During the interval there has been a gradual change in the general outlook in Egypt on international affairs. The passionate desire for independence, freed even from technical restrictions, is still there; but there is a tendency at last to look at such restrictions in their proper perspective. For a long time no attention was paid to the official assurances of the British Government that it desired Egyptian independence to be as complete as international conditions allowed, and it was believed that the references to independence were merely a cloak for riveting British fetters more tightly on Egypt. The stern logic of events in the course of the two Administrations of Adly Pasha and Sarwat Pasha has weakened this belief, and now at the psychological moment King Fuad's visit to England has provided a commentary on Great Britain's attitude towards Egypt too striking to be lost on Egyptian public opinion or, it may be hoped, to leave room for further misunderstanding. This opinion is shared by no less an authority than Sarwat Pasha. "I have every confidence," the Egyptian Prime Minister has declared, "that King Fuad's visit, in which he has been most royally and warmly received by the King and Queen, as well as by the British Government and people—and this has deeply touched His Majesty—is bound to produce the happiest results in bringing about more cordial relations between the two nations."

King Fuad's visit, therefore, will have amply served its purpose if the impression that it has left on His Majesty's mind regarding the attitude of Great Britain towards Egypt can be conveyed in whole or in part to the Egyptian people. Only when the latter has satisfied itself that, with good will on both sides where hitherto it has existed only on one, present difficulties are susceptible of comparatively easy solution, will it be possible to inaugurate with any chance of success negotiations for a treaty of alliance between the two nations. The principle of co-operation has been accepted for the regulation of the Nile water without derogation to either party, for the reason that the interests of both in the question are mutually recognised. It is conceivable that this principle should be extended with equally satisfactory results to other spheres, and that the military problem, which recently gave rise to a temporary crisis as a result of attempted unilateral action, may find its permanent solution in a joint defence force, which will obviate the retention of an Army of Occupation as a separate entity, under a different Commanding Officer from the British Officer in command of the Egyptian Army. To this end there must be definite steps on the part of those whose outlook on Anglo-Egyptian relations has been widened as a result of King Fuad's visit to spread their own beliefs among the people of Egypt. In particular the numerous community of Egyptian students in England has a special duty in this matter, to bring about a better understanding among those of their class who have remained in Egypt and have hitherto been so unwilling to credit the British even with honourable motives, still less with good will. It is fitting that Young Egypt should leave its own impress on the new landmark in the history of the relations between Egypt and Great Britain.

The Near and Middle East*

From Our Own Correspondents.

IRAQ.

Baghdad, June 30.

Death of the Naqib.

The Naqib al Ashraf, Sir Abdul Rahman Effendi al Gailani, died at Baghdad on June 12, at the age of 86. A convinced friend of Great Britain, he took a leading part in the setting up of the constitutional government of Iraq under British auspices, and was the first President of the Council of State, an office which at the earnest request of Sir Percy Cox, then High Commissioner, he was prevailed upon to accept in spite of his advanced age; on the accession of King Faisal he became the first Prime Minister. In the negotiations for the Anglo-Iraq Treaty he acted as Plenipotentiary of the King of Iraq, signing the treaty with Sir Percy Cox on October 10, 1922. Since his resignation of the Premiership in the following month for reasons of health, the Naqib lived in retirement, but the dignity and integrity of his public life had a lasting effect on his country.

The Naqib, who was educated in Baghdad, was revered throughout the Muslim world for his piety and learning. Many messages of respect and sympathy have been received by his family from India and Afghanistan; condolences were also cabled by Mr. Amery and by Sir Percy Cox. The funeral was attended by the High Commissioner, by the Amir Ali, representing King Faisal, and by the Cabinet Ministers of Iraq with the Presidents of both Houses and all the notables and officials of Baghdad, including Christians and Jewish religious leaders. Mounted troops and police lined the streets, the band of the Iraq Army played laments, and a salute of eleven guns was fired as the coffin was lowered into the grave.

Sir Abdul Rahman Effendi is succeeded as Naqib by his son, Saiyid Mahmoud Effendi.

A Frontier Raid.

On June 6 a band of Howaitat raiders crossed the frontier from Transjordan, and attacked two Syrian tribes which were camped for pasture in the Wadi Fuhāimi, near the Euphrates; they succeeded in driving off a number of camels. Armoured cars and aeroplanes were at once sent out to Rutbah, and the raiders were located from the air; on June 9 they were rounded up by armoured cars and surrendered without resistance. Two hundred armed men were captured, with 250 looted camels; the leaders were detained, their followers disarmed and released. This very prompt and efficient dealing has amply demonstrated the vigilance and long arm of the Government, and should be more effective than a mere punitive raid in discouraging further trans-frontier adventures.

Sulaimani.

Shaikh Mahmoud, the Kurdish leader who for the past seven years has been in intermittent rebellion against the

British and Iraqi Governments, has now come to terms. The principal conditions were as follows:—

(1) Shaikh Mahmoud and certain specified relatives should not enter Iraq territory without permission.

(2) He should undertake not to interfere, or encourage others to interfere, in any way with the administration of the Iraq Government in Sulaimani or elsewhere in Iraq.

(3) He should send his second son, Baba Ali, to be educated in Baghdad.

Shaikh Mahmoud's political pardon is not to affect the right of individuals to take action in the Courts against him. In return for his submission, Government is to restore his sequestered lands, which are to be administered by an agent acceptable to it; most of his followers are to be pardoned.

These terms, which were offered in October 1926 at a meeting between Shaikh Mahmoud and the Adviser to the Ministry of Interior were then neither rejected nor accepted, Shaikh Mahmoud attempting to prolong the negotiations. In April of this year Panjwin was occupied by two columns of the Iraq Army and Iraq Levies, supported by the Royal Air Force, and the building of a serai, police station, and police posts was begun. Upon this Shaikh Mahmoud sent in his son to Baghdad with a copy of the terms duly signed, and on June 17 himself came in to Panjwin under safe conduct to meet the Mutasarrif, when arrangements were completed. Thus may a day of prosperity and peace at last dawn for Sulaimani.

Communication with the West.

Baghdad's importance as one of the principal air ports of the world is becoming abundantly clear. Every flight from Europe to the East must make the capital of Iraq a port of call, whether for rest, for fuel, or for repairs, and the arrival in Baghdad of one pioneer after another is eagerly greeted. Imperial Airways is now carrying passengers and mail with a clock-like regularity never achieved by the trans-desert motor service; the first independent air tourist—a wealthy American named Van Lear Black—has just spent two days here on his way from Holland to Batavia in his eight-seater Fokker; the King of Iraq, when he wished to visit Basrah, reserved the whole of the accommodation of the Imperial Airways liner City of Cairo.

Thus faced with the competition of the air, the motor desert services are busy making the 700 mile journey to Beyrout both less expensive and more comfortable. The pioneer company, the Nairn Transport, has imported a great six-wheeler saloon which is reported to reduce vibration and jolting to a minimum, and has reduced its prices to £20 in this arm-chair luxury, or £13 in the

normal touring car. The six-wheeler, which made the journey from Damascus in 24 hours' running time, was named Babylon by King Faisal at a ceremony of inauguration. The Rutbah-Damascus route is now guarded on two days a week by French troops, and the northern route by Homs on one day a week.

A fillip to the development of mechanical transport has been given by the reduction, as a result of the opening of the new refinery at Khanaqin, of the price of petrol and kerosine. The latter, it may be noted, can now be obtained in Iraq more cheaply than in any other country in the world. Three petrol supply posts for motorists have been erected by the Khanaqin Oil Company—a further touch of modernity for Baghdad.

End of Parliamentary Session.

The close of the Parliamentary Session was celebrated on June 6 by a banquet at the Royal Palace; the High Commissioner and the Air Officer Commanding were present, as well as ex-King Ali, members of the Cabinet, senators and deputies, and senior officials both Iraqi and British.

The King, in thanking the deputies for their work during the past session, congratulated them on their competency in ratifying measures which were beneficial to the country and criticising such measures as had little merit. He then addressed the High Commissioner, thanking him for his valued co-operation; the relations of this country with Great Britain remained "as clear as the sky of Iraq." It could not be denied that differences of opinion had arisen, but the world should know that these difficulties were like "pauses which a person may make in order to ascertain the best and simplest way to walk ahead with perfect tranquillity, and to consider carefully the best measures for strengthening a mutual friendship." The King thanked Sir Henry Dobbs for the invaluable helping hand which Iraq's great Ally had extended to her in critical moments, and expressed his appreciation of the assistance of the Officer Commanding the British Forces in Iraq, and of the efforts made by the British Advisory Staff for the benefit of Iraq.

The High Commissioner thanked King Faisal for his re-assertion of the friendly co-operation between the two States, and agreed that any differences would only be differences between friends, to be adjusted by mutual concessions in a spirit of true friendship, leaving no sore feeling behind. The principles which from the first had guided Great Britain in her relations with Iraq, communicated to him by command of H.M. King George on his succeeding Sir Percy Cox nearly five years ago as High Commissioner, were as follows: "The basic principle underlying the relations between the two Governments is co-operation towards a common end, namely the progressive establishment of an independent Government of Iraq, friendly to and bound by gratitude and obligation to His Britannic Majesty's Government. There is no question of His Britannic Majesty's Government pursuing a policy with any other object in view." The King and people of Iraq were the best judges how far Great Britain had observed these principles.

Sir Henry went on to say that he could see on all hands proofs of the progressive establishment of an independent government of Iraq. Her frontiers were now fixed, her warring tribes at peace, her forces were undertaking every year a larger share of responsibility for the maintenance of internal security. She had secured the recognition of almost all the Great Powers, her resources and means of communication were being developed, her revenues were slowly rising, her ministers and officials each year gaining in experience and capacity. If only the leading men of Iraq would exercise a wise patience, they had now within their grasp everything for which the friends of Iraq had hoped. For his happy state of things the largest share of credit rested with King Faisal, and a large share with the brave, and kindly people of Iraq.

The High Commissioner ended with a tribute to the members of the British Advisory Staff, who, he said, had

become more Iraqi in their views than the Iraqis themselves.

G.C.M.G. for King Faisal.

On May 10 the High Commissioner, on behalf of King George, conferred on the King of Iraq the insignia of Honorary Knight Grand Cross of the Most Distinguished Order of St. Michael and St. George. About 200 guests, both British and Iraqi, were present in the grounds of the Palace, where the ceremony took place. Music was provided by the band of the Iraq Army, and a guard of honour by the King's bodyguard.

Cairo, July 3.

Departure of the English.

Annually, at this time of summer, the remark is heard, "I never remember a time when Cairo has been so empty as now." This year the observation certainly has justification, so far as the British Community of Cairo is concerned. "Everybody" seems to be away. The lounge of the Turf Club usually provides a rough guide to the number of Englishmen who have *not* gone, and of late this meeting place has been each evening deserted save for two or three grass bachelors, whose wives have left for cooler climates. In connexion with the Turf Club, it is interesting to note how this extremely British institution is rapidly changing its character. Formerly, it was essentially a club for senior British officials of the Egyptian Government. Since 1922 three-quarters of the older officials have retired, and the club has lost a large proportion of its more senior members. The new British officials who have joined the service during the last two or three years are nearly all serving on short-term—two or three years—contracts, and for various good reasons do not want to join social clubs. In the first place, so comparatively short a stay in Egypt hardly justifies a heavy outlay in entrance fees and subscriptions; while, on the other hand, an official who is to spend only three years in Egypt will probably find more profit and amusement in seeing the country's places of interest and getting to know the people, than in mixing, in his leisure hours, with his own kind. So Gezira Sporting Club provides all that most of the new men need in the way of a social club, as well as opportunities for games, while the new membership of the Turf Club consists more and more predominantly of business men.

An Unpleasant Summer.

Residents who have been able to get away this summer have been fortunate, for we have had and are having an unpleasant time. Following a May during which a temperature "record" was equalled, we have had a June which has been damp and sticky, although the shade maxima have not been exceptionally high. The relative humidity has been consistently great, and there seems to be no doubt that Cairo, which used to be so noted for its dry climate, is getting each year damper and damper. Why this should be so is not precisely known. The extension of the area of irrigated lands has not been sufficiently great in recent years to make any considerable difference to the climate, but there are many people who believe that the steady raising of the level of the subsoil water may have a good deal to do with the dampness, as well as being responsible for other more serious ills.

In a recent letter I referred to Sir William Willcocks' views on this subject, as given in a recent lecture to the Institut d'Egypte: since then I have heard many expressions of opinion, by men whose views carry weight, that there is room for extensive research into the relation between irrigation and parasitic diseases of the types so prevalent in Egypt.

Another circumstance which has made the present summer so unpleasant in Cairo has been the presence of vast swarms of little green "midges," very similar to the little insects which are such a pest to motorists or cyclists on English country roads on sultry summer evenings. Every year at about the beginning of June, when the Nile branches in the Lower Delta are dammed up so as to conserve every possible drop of water for irrigation, we are pestered with these midges, whose presence is apparently due to the fact that the river is almost stagnant, permitting the growth and development of insect and plant life which is normally impossible. Usually the "midges" are a serious nuisance only to inhabitants of Gezira and other riverside suburbs. But this summer they have risen in clouds from the Nile and, carried by the wind, have infested the whole city, particularly, in the evenings, the brightly lighted business centres. The numbers of these insects and the little heaps of them which have rapidly formed beneath every bright light have been almost incredible, unless seen. Cairenes have had to choose between dining in unbearably stuffy rooms, with closed windows, or in darkness, for to show the least glimmer of light, with a window open, has meant invasion by insect hordes. Heliopolis, being several miles from the Nile, has escaped the nuisance, and as a result the many open-air restaurants and cafés of the sunny suburb have done roaring business right through the month of June.

Eclipse and Earthquake.

Egypt has had an eclipse and an earthquake. this week. Both were so slight as to pass almost unnoticed. But even the suggestion of an earthquake makes Cairenes nervous, for they have not forgotten the "quake" at the end of June last year, which frightened many people and did an amount of damage, the full extent of which was not discovered for some considerable time afterwards, when buildings began to show alarming signs of impending collapse, thus necessitating expert examination which frequently showed that serious flaws had developed. At least a dozen large buildings in the centre of Cairo have had to be demolished as a result of the 1926 earthquake, while it is impossible to estimate the amount of damage done in the poorer districts. The reinforced concrete buildings which are now being erected everywhere would probably stand as much seismic strain as any form of structure, but although the business part of the city has been almost entirely rebuilt in ferro-concrete since 1920, there still remains a large number of older blocks in other quarters which would probably suffer severely from another earthquake as severe as that of last year.

The Retiring American Minister.

Dr. Morton Howell, the retiring American Minister, whose statements a few weeks ago caused much astonishment, has broken out again and, in a speech to the Egyptian Temperance Association, has practically accused Great Britain and foreign Powers generally of using their influence in Egypt "to force opium and whisky down the throats of Egyptians." Nobody seems to take these valedictory ravings very seriously, although the *Egyptian Gazette*, in a leading article, trounces the departing Anglophobe diplomatist in a fashion that can seldom have been used by a British newspaper towards the representative of a friendly Power. But, in truth, everybody is more than a little tired of Dr. Howell and his eccentricities, and his departure this week is being looked forward to with unfeigned relief, especially by his fellow-countrymen here. Mr. North Winship, U.S. Consul in Cairo, is returning to-morrow from leave in America to act as *Chargé d'affaires* until Dr. Howell's successor has been nominated.

THE HIJAZ.

Jidda, June 6.

Pilgrims and Motor-Cars.

Jidda without pilgrims is a strange phenomenon after six months of the pilgrim-flood, which incidentally appears to be the biggest on record. At least I can find no record of anything exceeding it in volume so far as arrivals from overseas are concerned, which must be in the neighbourhood of 130,000. The latest published figures show 125,913 pilgrims as having arrived up to the end of May, being distributed among the nations as follows: Java, 64,133; India, 24,871; Egypt, 14,782; Afghanistan 4,836; Bukhara, 2,261; Persia, 1,466; Morocco, 2,270; Syria, 1,362; Yaman, 1,189; Sudan, 1,589; and the rest from miscellaneous sources. It will be seen that the Dutch East Indies easily lead the field with 50 per cent. of the total, while India has run into second place with 20 per cent. and Egypt is a fair third with 12 per cent. As far as the two last-named are concerned the organised opposition to this year's Pilgrimage has had its answer, complete and crushing; and there can be little doubt that the coming years will record figures far in advance of anything yet dreamed of. Islam will not lightly forgo the duty and privilege of performing the annual pilgrimage, and the established security of the routes will encourage Muslims to come in ever-increasing numbers; and, coming, they will find travel-facilities which their predecessors never knew. The demand for motor-cars has been extraordinary during the last few weeks, and there must be at least 200 cars in the country at the present moment. There is no telling how many there may be twelve months hence, or what further developments of the transport problem may have taken place. And it is of interest to place on record that fact that the chief ecclesiastical authority of the Wahhabi Dual Monarchy has recently returned to Mecca from a protracted tour embraced Hail and the Qasim, no mean achievement for a single car in a completely roadless country.

The environs of Mecca and Madina have had the unusual experience of a deluge of rain during the last few days, and the torrents have been in spate between Arafat and the Capital, where the heat has been excessive and has been the cause of a number of deaths. Otherwise the health of the Hijaz has been good.

The King's Birthday.

His Britannic Majesty's birthday was duly celebrated on June 3rd, when the British community (eight persons in all, including one lady) dined with the Agent and Consul, who earlier in the day received the notables and diplomatic representatives desirous of paying their respects on the occasion.

Wickets and Winds.

More than a score of ships are now at anchor in the harbour waiting for the return of the pilgrims. Advantage was taken of this fact to arrange a cricket match, in which after a most enjoyable game the s.s. *Dara* of the Mogul Line defeated Jidda by two wickets, the latter's team being reinforced by volunteers from various other ships. The climate has repented of its bad beginning, and a steady breeze from the North, sometimes approaching the dimensions of a gale, makes Jidda quite a pleasant summer-resort at any rate for the moment. But the cool wind of Jidda becomes the desert-blown *Simum* of Mecca and the pilgrims must be having a warm time.

SHELL

KING FUAD IN ENGLAND.

On Wednesday, July 6, the State visit of King Fuad to the King and Queen came to an end, and his Majesty left Buckingham Palace in the morning to take up his residence at Claridge's Hotel. Bute House was found not to be large enough for the King and his numerous suite, and Sarwat Pasha alone of those in attendance, is staying there. In the evening of July 6 King Fuad entertained at dinner at Bute House King George, the Duke of York and Prince Henry. The other guests on this occasion were:—

Viscount Cave, the Marquess of Salisbury, the Marquess of Anglesey, the Earls of Shaftesbury, Granard, Cromer, Derby, and Birkenhead, Lord Eustace Percy, Viscount Hampden, Viscount Allenby, Viscount Inchcape, Lord Herschell, Lord Stamfordham, Lord Lloyd.

Sir Austen Chamberlain, Sir Laming Worthington-Evans, Sir William Joynson-Hicks, Sir Samuel Hoare, the Hon. Sir Derek Keppel, Sir Frederick Ponsonby, General Sir John Maxwell, Sir Philip Cunliffe-Lister, Sir William Tyrrell, Major-General Sir John Hanbury-Williams, General Sir Richard Haking, Sir Ian Malcolm, Sir Victor Wellesley, Sir John Percival, Sir Hubert Montgomery, Captain Sir Bryan Godfrey-Fausset, R.N., Lord Claud Hamilton, Captain Basil W. Brooke, Sir Henry Floyd, Mr. W. H. M. Selby, Mr. J. B. Monck, Mr. John Murray, Mr. C. Mark Patrick.

Abdel Khalek Sarwat Pasha, Aziz Izzet Pasha, Egyptian Minister in London, Said Zoufkar Pasha, Dr. Mohamed Chahine Pasha, Amin Anis Pasha, Ahmed Mohamed Hassanein Bey, Miralai A. Gordon Ingram Bey, and Sesostri Sidarouss Bey.

The programme for King Fuad's stay in England promises to be a very crowded one. Before His Majesty leaves for the North he will have paid visits to the Marquess of Salisbury at Hatfield, and to the Prime Minister at Chequers; he will have been entertained at dinner by Lady Cunard, by Mrs. Ronald Greville, and by Major the Hon. J. J. and Lady Violet Astor, and will have attended a reception at the Royal Geographical Society. On Saturday evening King Fuad attended the performance of *Princess Charming* at the Palace Theatre.

On Sunday, July 10, King Fuad visited the Egyptian Club, which is situated at 71 Baker Street. This club, which was formally opened early in 1925, owes its formation to the initiative of the Egyptian Minister, Aziz Izzet Pasha, and to the generous support of King Fuad, its President, who gave £500 to its funds. The proceedings on Sunday were memorable for the keen personal interest that the King displayed in the Club, its premises and its members. His Majesty, attended by Abdul Khalek Sarwat Pasha, Aziz Izzet Pasha, Egyptian Minister and Chairman of the Club, and Ahmed Hassanein Bey, was received by the Club Committee. Loyal addresses were then presented by different groups of students, classified according to the nature of their studies and including women students. After inspecting the Club, King Fuad signed the Visitors' Book, and intimated to the Committee that further financial help would be forthcoming, if it were needed.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

SUGGESTIONS FOR PERSIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I have not the good fortune generally to see eye to eye with THE NEAR EAST AND INDIA. Latterly, however, I notice with great pleasure your inclination fully to sympathise with the aspirations of young Persia. What you have stated regarding the Capitulations and the friendly tone in which it has been couched, encourage us to trust that after all the British public will ultimately prove less harsh towards the struggling remnant of an ancient people than from the Curzonian policy of coquetting with imperialistic Russia they appeared to be. It is unnecessary to accentuate the fact, from many

points of view, that events in Persia have an interest for the whole of the Middle East and India. Unfortunately, however, there is hardly a newspaper in the country, the information in which can be regarded as anything but the opinion of the individual expressing it. Moreover, by the time the newspapers reach us in India, the events give place to altered and new occurrences. As Persia is situated to-day, it is perhaps too much to expect the appearance of a newspaper which aims more at disseminating facts and events than propagating the views of a group or of individuals. On the other hand, owing mainly to the American Finance Mission, it is obvious that the English language is making more rapid progress in Persia than French or Russian. It would, therefore, be more desirable if the publication of a weekly—we cannot hope a daily—paper, were undertaken by some enterprising American or English publicist of liberal views in Teheran.

Another suggestion that I would make through your journal is that early steps be taken to moderate the telegraphic rate between Persia and India. It is impossible for ordinary people to correspond by wire with Persia, as we do, for instance, with Kabul, which has a very reasonable telegraphic rate. Our difficulty will be appreciated by an illustration. Some days ago it was stated in Bombay that certain juvenile Zoroastrians in Kerman were induced to embrace Islam. Although we wired to our friends in Kerman some four days ago, we have had no news in reply, and we can understand the difficulty of our correspondents who probably find it impossible to convey correctly the state of affairs there in telegram. Hence my twofold suggestion that the well-meaning and sympathetic among the Anglo-Saxon peoples should inaugurate a periodical, and secondly see to it, as far as international relations permit, that Persia has all reasonable facilities of allowing correct information regarding her internal situation to be known abroad by cable. I am, etc.,

G. K. NARIMAN.

3, Victoria Cross Road,
Mazagon, Bombay.

NOTES OF THE WEEK

(Continued from page 34.)

tion to King Faisal, on the grounds, it is understood, that his Cabinet whole-heartedly (but vainly) supported the proposals made by Major-General Daly, who had just left the country, and that it was definitely in favour of conscription; or, speaking generally, that it protested against the failure on the part of Great Britain to achieve positive revision of the military and financial clauses contained in the Anglo-Iraqi Treaty. However, on the guarantee, it is said, that new decisions should forthwith be taken upon these matters, the Cabinet of Jaafar Pasha consented to remain in office. In the meantime the desire is imputed to King Faisal that Iraq should become a member of the League of Nations next year, that is, at the end of the first four years stipulated in the Treaty as being a term when the question of application might fitly be raised. But the crux of the whole affair lies in this provision of the Anglo-Iraqi Treaty: "that Iraq shall accept as soon as possible, and in any case not later than 1928, full military and financial responsibility for the preservation of internal order and for the defence of Iraq against foreign aggression." It is essentially from that clause, implying, to Arab minds at least, the evacuation of Iraq by British troops next year, that the impulse has arisen to demand a conscript army for Iraq, and so save both the British and the Iraqi tax-payer.

The High Commissioner's Return.

Now it is fortunate that Sir Henry Dobbs, High Commissioner for Iraq (who will be in England by the time that these lines are in print) will have the opportunity of consulting the Secretary of State for the Dominions and Colonies before Mr. Amery leaves this country on his Imperial tour. Sir Henry re-stated recently in Baghdad the bases of Anglo-Iraqi relations, but this statement, although both ample and accurate, hardly seemed to cover the precise points raised by Iraq's demand to enter the League of Nations next year and to attempt to raise a conscript Army. It is well that the High Commissioner should be able to carry back to Baghdad the exact ideas of the British Cabinet upon these essential details in the career of the most advanced of the mandatory States. If the British Government decide that this demand of Iraq to be represented at Geneva is premature, it is to be hoped that full and frank reasons for such a decision will be supplied; and equally if the consensus of British advice is against the desirability of imposing conscription upon the tribes of Iraq, open-hearted explanation is desirable. That intrigue and pettiness may exist in Baghdad politics is beside the point; for, as Sir Henry Dobbs recently hinted, the relations as between the British and the Iraqi people are now on a sufficient basis of sincerity for honest and disinterested advice to be preferred to the Arab people without any hint of "Imperialist" or "superior" tinge. There should be no place for suspicion of purpose on either side. Some compromise, it would seem, as between the hopes of Iraqis, built on their interpretation of the terms of the Treaty, and the British judgment of the necessities, or rather, the practicabilities of the situation, may have to be reached, but it is to be hoped that the possibility of inserting in such a compromise a definite promise, as opposed to an indefinite provision, will be realised. There is ample good-will on both British and Iraqi sides, and a conceivable failure to see eye to eye on all points is no possible justification for the adoption of a tooth to tooth attitude.

A Riot at Kadhimain.

In the best of circumstances the month of Muharram in Shiah cities is a time when extraneous factors are rigorously kept out of things, and on the tenth day of this month, when the murdered Hosain is commemorated, feelings commonly become fanatical. Even so, it is a matter for surprise that last Sunday at the Kadhimain Mosque, which is but a few miles from Baghdad, a riot should have broken out between civilian mourners and Shiah soldiers of the Iraq Army. Whether the action against the soldiers was premeditated or whether it was the result of a quarrel between an individual soldier and a civilian is as yet uncertain, but the mob, numbering, it is said, 100,000, appears to have frenziedly attacked the military. A few casualties were suffered on either side, but the soldiers contrived to withdraw from the Mosque, and the situation was later quelled by the police. It is possible that what political significance this unfortunate affair may possess is derived from the largely Sunni proposal to introduce Conscription into Iraq. That suggestion, however, is not very feasible, and it is probably wiser to ascribe the dispute to the ageless fanaticism which is manifestly still the possession of a considerable section of the population of Iraq. You cannot make a people tolerant by Act of Parliament, and although there are Western institutions in the East, it is well to remember that they have been imposed and may take time before they become an essential and illuminating accretion of the more backward Oriental character.

THE PROBLEMS OF ALBANIA.

The Near and Middle East Association will meet on July 18, at 8.30 p.m., at 55, Harrington Gardens, South Kensington (by kind permission of Mrs. Bruce Dick), to discuss "The Problems of Albania." Lord Henry Cavendish-Bentinck, M.P., will preside and the speakers are to include Sir Harry Eyres, K.C.M.G., Mr. J. M. N. Jeffries, and the Hon. Mrs. Aubrey Herbert (who will speak on the Albanian Refugees).

THE ANGLO-PALESTINIAN CLUB.

At a meeting of the Anglo-Palestinian Club, held at Maison Lyons, Shaftesbury Avenue, W.1, on July 3, a letter to the Editor of this "living newspaper" was read from Lt.-Gen. Sir Aylmer Hunter-Weston, K.C.B., M.P., who had recently returned from Palestine. Sir Aylmer remarked on the improved relations everywhere visible between the races and creeds of that country. Another letter was read from Mr. Wellesley Aaron, of the Gymnasium at Tel Aviv, describing the cordial hospitality extended to him on a visit to a near-by village, where he had been the guest of a Shaikh.

Professor D. Sorbernheim, of Berlin, read a paper on his impressions gained during five visits paid to Palestine in a period of over 30 years. He made his first visit in 1894, and in his opinion there was no great improvement in regard to the lack of roads between the various colonies until a quite recent date. He paid his second visit in 1897, when there existed little friendship or sympathy between the Sephardic officials and the Askenazic colonists. In 1905 he journeyed via Syria and Arabia, and noticed great differences. The Hebrew language was beginning to make great progress. Ben Yahuda and his wife had undertaken the task of spreading Hebrew, which had begun to take root as the medium of instruction in the schools. On his 1913 visit he was impressed with the rapid development which had taken place at Petach Tikvah and Jaffa. In 1925, the year of the opening of the University at Jerusalem, he was able to appreciate the railway connecting Palestine with Egypt. He stated that Germans had resumed their interest in Palestine and both Jews and Christians took a great interest in the Hebrew University. He urged the establishment of a pro-Palestine Committee in London, to be formed from members of the Anglo-Palestinian Club. Pro-Palestine Committees already existed in Berlin, Paris, and Rome.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.
Founded in 1911 to study all questions of common interest to Great Britain and Persia.
Subscription £1 per annum.
 Further particulars may be obtained of
E. H. Keeling,
 Hon. Sec.
 74, Grosvenor Street, W.1.

Mr. C. Leonard Woolley gave a lecture (illustrated by lantern slides) on the excavations conducted from 1926-1927 at Ur of the Chaldees on July 11 in the Roman Gallery of the British Museum. The exhibits from Ur were on view in the Assyrian basement.

PERSONAL AND GENERAL

TO-DAY

July 14, 1927 (New Style).

July 1, 1927 (Old Style).

Muharram 14, 1346 A.H., of the Muslim Calendar.

Tammuz, 14, 5687, of the Jewish Calendar.

The Marchioness of Reading has returned to 32, Curzon Street, from Switzerland.

Colonel Y. Yovanovitch, Consul-General for Yugoslavia, has returned to London from Belgrade.

Lord Beauchamp has been elected Chairman of the Anglo-Hellenic League for the coming year.

Judge Bernard A. Platt, of His Britannic Majesty's Supreme Court in Egypt, has returned to England on leave of absence.

Commander E. M. Palmer, O.B.E., R. N., Acting Port Officer, Port Sudan, has been appointed, as from September 7, Port Officer.

Colonel Amir Ahmed, Military Secretary to the Nawab of Bhopal, left the Grosvenor Hotel at the end of last week for Paris.

The "Hollar" Society of Czech Graphic Art are this month holding an exhibition at the Galleries of the Royal Institute, 195, Piccadilly.

Lord Abinger and Major-General Sir Charles MacWatt arrived at Marseilles on July 8 in the P. and O. s.s. *Naldera* from Bombay.

Sir Henry Dobbs, High Commissioner for Iraq, left Baghdad by air on July 6, and was due in London yesterday (Wednesday).

Sir John Campbell, former Vice-President of the Refugee Settlement Committee in Greece, has been appointed Expert Adviser to the National Bank of Greece.

The Earl of Lytton, G.C.S.I., G.C.I.E., of Knebworth House, Knebworth, in the County of Hertford, has been appointed a deputy lieutenant for the County of Hertford.

The appointment of Lieut.-Colonel F. C. C. Balfour, C.I.E., M.C., Deputy Governor, Red Sea Province, Sudan, to date from May 11, 1927, has been gazetted.

The Amir Ghazi, accompanied by his tutor, Mr. K. Dojaily, is leaving England for Baghdad on July 24. He will sail for Marseilles for Egypt on July 26, and is flying from Cairo on August 3.

The Countess of Lytton had the honour of being received by the King at Buckingham Palace on July 5, when His Majesty invested her with the Insignia of the Imperial Order of the Crown of India.

Field-Marshal Lord Plumer and Lady Plumer on July 7 visited the Garden Fête at 35, Porchester Terrace, the residence of Sir Herbert and Lady Samuel, in aid of women's and children's welfare work in Palestine.

Sir Jagadis and Lady Bose left on July 6 for Geneva to attend the meeting of the Committee of the League of Nations on Intellectual Co-operation, and will not return to this country before embarking for India. On August 6 Sir Jagadis will give an address before the International Conference on Education at Locarno.

Sir Davison Dalziel, Bt., upon whom the King recently conferred the honour of a peerage, has assumed the title of Lord Dalziel of Wooller. Lord Dalziel took his seat in the House of Lords to-day, supported by Lord Daryngton and Lord Queensborough.

The King has given to Mr. Theophilus Arthur Frederick Critchley, Manager of the Ottoman Bank at Alexandria, authority to wear the insignia of the Second Class of the Order of the Nile, conferred on him by the King of Egypt, in recognition of valuable services.

NEAR AND MIDDLE EAST ASSOCIATION.

The following address together with a floral tribute has been presented by the Near and Middle East Association to His Majesty King Fuad:—

"To His Majesty the King of Egypt a respectful and cordial welcome is extended by the members of the Near and Middle East Association, a Society which has ever placed among its principal aims the maintenance of good will and co-operation between the Governments and peoples of Great Britain and Egypt.—Henry Bentinck, President; Lamington, Vice-President; E. N. Bennett, Chairman; Emily L. Cobham, Ernest H. Griffin, Joint Hon. Secretaries; Ameer Ali, Constance Boyle, C. F. Dixon-Johnson, John Foster Fraser, John Prescott Hewett, E. Denison Ross, Executive Committee."

NEWS IN BRIEF.

During excavations in the village of Kosyericth (in Yugoslavia) the remains of a Roman colony were discovered.

General Lupesco, Chief of the Roumanian General Staff, has resigned, the resignation to take effect as from July 15.

M. Michalakopoulos, Greek Foreign Minister, and M. Kafandaris, Minister of Finance, arrived in Rome on July 10.

The Yugoslav Government is reported to have granted a credit of £360,000 to finance the erection of a coal distillator plant near Belgrade.

A joint session of the Egyptian Senate and Chamber on July 7 passed the credit of ££8,000 for the enlarging of the road between Cairo and the Pyramids by 139 votes to 90.

In the course of excavations in connexion with a new road at Bihatch (Bosnia) the workmen found the fossil remains of a mammoth. Work on the road was stopped at that point pending the arrival of experts to superintend the removal of the skeleton.

The death is reported from Cairo of Dr. Yacub Sarruf, founder and for 51 years editor of *Al Moktataf*, the oldest Arabic monthly review, and co-founder of *Al Mokattam*, the second oldest Arabic newspaper in Egypt.

The air route from Cairo to the Cape, which has been used by Royal Air Force machines for the past two years, is to become now an annual service exercise carried out by the units stationed in Egypt.

The Persian Majliss has passed a decree according to which Cabinet Ministers, Under-Secretaries and heads of Government Departments during their term of office will in future be debarred from election to the Majliss. Members of the Majliss are also debarred from holding portfolios.

A memorial window in memory of Lieutenant-General Sir Stanley Maude will be unveiled in Eton Chapel to-day (July 14) at 2.45. The memorial, which has been subscribed for by all ranks of General Maude's Army in Mesopotamia, will be unveiled by Lieutenant-General Sir William Marshall, and dedicated by the Chaplain-General to the Forces, the Rev. A. C. E. Jarvis.

THE CENTRAL ASIAN SOCIETY.

Annual Dinner.

Over two hundred members and guests attended this year's annual dinner of the Central Asian Society, which was held at the Hotel Cecil on July 6, with the Viscount Peel in the Chair. Lord Allenby, Chairman of the Society, was unable to be present. The chief guests were Field-Marshal Lord Plumer, High Commissioner for Palestine, and Sir Francis Aglen, Inspector-General of the Chinese Maritime Customs. Among others present were:—

Lady Plumer, Lady Allenby, Lord Thomson, Lord and Lady Forester, Field-Marshal Sir Claud and Lady Jacob, Lt.-Gen. Sir Aylmer and Lady Hunter-Weston, Major-Gen. Sir Neill and Lady Malcolm, Brig.-Gen. Sir Gilbert and Lady Clayton, Lt.-Gen. Sir Raleigh Egerton, Lady Aglen, Sir Michael and Lady O'Dwyer, Brig.-Gen. Sir Percy Sykes, Sir Hugh Barnes, Maj.-Gen. Sir William and Lady Beynon, the Hon. Mrs. Blacker, Maj.-Gen. Sir Claud Bray, Brig.-Gen. Byrne, Lady Cunynghame, Sir Edward Every, Sir George and Lady Forbes, Admiral Sir Sydney Fremantle and Lt.-Col. F. E. Fremantle, M.P., Sir Wolseley Haig, Vice-Admiral Sir Robert Hill, Lady Holland, Sir Henry Bax-Ironside, Maj.-Gen. A. Le G. Jacob, Maj.-Gen. Sir Alfred Knox, M.P., Sir Henry Lawrence, Major and the Lady Margaret Macrae, General and Mrs. Monkhouse, Brig.-Gen. C. M. Paul, Sir Edward Penton, Lady Robson, Lady Roxburgh, Col. Picot, Sir Newton Stabb, Brig.-Gen. Spencer Weston, Brig.-Gen. Willoughby, Mr. A. T. Waugh, Mr. A. C. Wratislaw, and Lt.-Col. and Mrs. A. C. Yate.

Field-Marshal Lord Plumer, proposing the toast of the Society, said that he was glad to have the opportunity to express appreciation of the work it was doing in making people better acquainted with what was happening in the countries coming within its circle—and that circle he understood was very wide. A speaker holding the responsible position he had the honour to occupy was naturally expected to say something of Palestine and Transjordan; but honestly he did not think he could tell them more than they all knew, namely, that both countries had made satisfactory progress under British administration. But he would like to pay his tribute to the admirable way in which the administration had been conducted by British officials since the time Great Britain took over the responsibilities of the Mandate. In Palestine progress had been very rapid, and in the last few years abnormally so. We had now come to one of those periods when it was necessary to take stock of the situation, to review what had been done and to consolidate the progress made as a means to further advance in the future. In Transjordan the progress had been necessarily somewhat slower; but it had been steady and he hoped that it would be continuous. Certainly it would be continuous, provided that it was firmly established on the basis of public security. But, because he could speak quite freely of the progress that had been made, it did not follow that those who were connected with the administration were so unseeing or so self-satisfied as to imagine that they did not desire or need help. They did need help of a kind he was going to ask the Society to give, namely, to support the younger members of the Administration. He was sure that all who had reached his time of life or were approaching it would agree with him when he said that the best way in which they could serve the country was by endeavouring to train the younger men, not merely to follow their footsteps, but to do better work than they had ever been able to do. In his opinion the best method of getting the best out of these young men was not by criticism but by encouragement. Criticism was quite good for all who were on the top, or at the head of departments: it was always stimulating and frequently helpful. Most of them at the top drew salaries which were apparently rather liberal, and must expect that the taxpayer would feel at liberty to express doubts whether he was getting value for his money; and they must not complain if at times they were called upon to play the part of the image in the game known as Aunt Sally; they must regard liability to such knocks as covered by the entertainment allowance attached to their salaries. (Laughter.) But the younger men did not draw salaries which could be called excessive, and they had no entertainment allow-

ance. He knew that at times they were apt to be discouraged. They were young men and not infrequently they had very young wives. He had no hesitation in saying that this was a great advantage, not only to the officials themselves, but also to the country they served. No one knew better than he did what an asset an English lady could be in Eastern countries. These young men and women naturally looked to enjoy the society of their contemporaries and the recreations and amusements suitable to their age; but many of them were living in localities where there were few, if any, opportunities of so doing, and very little chance for the amusements they wished to take. When they saw that the older men and some of their contemporaries were having a good time under more favourable conditions they were apt to feel doubts whether they had chosen wisely in adopting careers which kept them in so much isolation.

He hoped the members of the Society would help in this matter. He spoke in the presence of men whose names were household words in the East, whose utterances were read with respect and attention, men who generally counted. Some of them visited countries such as Palestine and Transjordan, and the more who went there the better pleased he and his colleagues would be. They would naturally discuss the situation, the problems of the country and the conditions of life with those who were at the head of the Administration. He would ask them, however, to go further afield and to make a point of becoming acquainted with the younger officials, especially those who were in outlying districts away from the seat of Government. He would ask the visitors to discuss with these young officers their problems and conditions of life, to show that they realised the difficulties with which they were faced and the discomforts they were bearing, and to make them feel that they were doing work for Government of real importance. (Cheers.)

He would ask further that when these young people came home on leave, members of the Society would endeavour to show them some hospitality. He did not mean public functions but private entertainments, such as week-ends in the country, joining shooting and fishing parties, and dinners in London with a play to follow. Such entertainment would be talked about for months when they went back, and they would feel that some of those to whose opinions they attach great weight were interested in them and saw that they were doing their part in sustaining the Empire. (Cheers.) He hoped the members would not think that in making this appeal he was abusing his privilege in being asked to propose the toast of this Society. He felt that they all ought to realise at this juncture of our history that it was of the utmost importance that they should leave no stone unturned to attract to the Government service, especially to service overseas, young men of high character and ability and that when we had got them we should do our utmost to retain them. With Lord Peel as President and with Lord Allenby as their new Chairman, the Society, he was confident, would continue to do well. They were particularly grateful to Lord Peel for the successful efforts he had made to bring into closer touch members of both Houses of Parliament with those who were working for the Empire overseas. His service in this respect was invaluable. (Cheers.)

Lord Peel, in replying to the toast, paid tribute to the work of Lord Plumer in discharging the very great task in Palestine of bringing together and uniting two great branches of the Semitic races, the Arab and the Jew. Describing the Society as "The Light of Asia," Lord Peel said that he had sometimes regretted that there was no corresponding society established in Asia itself for the purpose of studying the affairs and peoples of Europe, an opposite number with whom they might exchange information and intelligence. The Society was a clearing house for all information that came from Asia, and it gleaned it from various sources—from soldiers, administrators, travellers, officials and men of business who studied in the

course of their work the social, economic, religious and political aspects of the various countries of Asia. Englishmen were sometimes charged by foreign publicists with being an insular people. He had never understood how that charge had been evolved, unless it was by way of paradox, seeing how large were our commitments abroad and how deeply interested we were in the affairs of other countries. No one now believed in the doctrine of "the unchanging East." The East was changing rapidly, and he submitted that there was nothing so dangerous in practical affairs as the man with very strong opinions and wholly obsolete information. He proposed the toast of the Guests, and it was supported by Major-General Sir Neill Malcolm, who spoke of the problems presented by the large amount of Chinese immigration into Borneo and Malaya.

In replying for the guests, Sir Francis Aglen gave an interesting speech on the position in China and Lord Thomson spoke of the work of the Empire in Asia.

NEAR EASTERN PRESS.

Turkey and the Balkans.

With the ebb and flow of the Albano-Yugoslav situation, Balkans fears have been allayed or raised. Underneath all that has been said has been the feeling that there could be no war. The outlook of an anxious neighbouring spectator of Balkan affairs is interesting, which *La République* (Turkey) states as follows:—

... Can there be any cause for anxiety owing to the broken off relations of Yugoslavia and Albania? This, it would seem, is the question which should be put in Italian and Albanian official circles, for it is they who can give the most exact answers to this question.

Italian authorities consider that peace cannot be threatened by this incident. On the other hand, Belgrade circles are rather sceptical, without, however, showing too great an anxiety. The long *communiqué* suddenly published by the Albanian Government is sufficiently clear and throws enough light on the question. The Albanian Republic draws attention to the two following points:—

1. Jurashkovitch, the so-called dragoman of the Yugoslav Legation at Tirana, is above all an Albanian subject and the Albanian Government had received no confirmation of this man's official capacity in the Yugoslav Legation.

2. The search carried out in the house on which suspicion had fallen has brought about the discovery of compromising documents.

The *communiqué* of the Minister for Foreign Affairs of the Albanian Republic, having pointed out these two facts, gives an account of the efforts displayed by the Republican Government to prevent the departure of the *Chargé d'Affaires* of the Yugoslav Legation. It refers to the intervention of the President of the Republic, Ahmed Zogu, who applied officially to the Ministry for Foreign Affairs in Belgrade begging them to prevent the breaking off of negotiations between the two countries, but this had no effect. Is one then to conclude from this state of affairs that we are on the eve of a catastrophe?

As far as we are concerned, the failure of these praiseworthy efforts of the Albanian Government weighs so little in the balance, where one takes into consideration, as we have stated before, the fact that war or the maintenance of peace depends entirely upon the Government circles of Rome and Belgrade. If peace is threatened, one or other of these Governments must have resolved to use the recent incidents at Tirana as a protest for launching an attack. Yet, according to all appearances, Italy is in no way concerned in the matter. Nevertheless, we know well that Yugoslavia would never dare attack Albania without making sure of the attitude which Italy would take. We can, therefore, expect with reason an amicable settlement of the recent incident.

There are also other reasons which prevent Yugoslavia from pushing matters to a state of armed conflict: (1) Whatever the importance of ex-territorial privileges, no subject of any country can have the power to act to the prejudice of the interests of the State which he represents. Not only would such conduct be entirely unjustifiable from a patriotic point of view, but also it is difficult to believe that a citizen who acted from purely patriotic motives would escape the law which governs the country. Ex-territorial privileges apply to certain determined places or to specially stated personages, chiefly of foreign extraction. Now, Jurashkovitch is an Albanian subject.

The search took place outside the Legation buildings in his own house and brought about the discovery of compromising documents. No Legation or Embassy has the right to give to the subjects of the State to which it is accredited work which may prove to be against the interests of the said State. ...

The article closes with an assurance that peace will be maintained; failing this, appeal would be made to the Great Powers and the League of Nations.

The New Roumanian Government.

The new Government of Roumania will have much to do in the matter of reconstruction and reorganisation in order to deal with the economic crisis. The non-co-operation on the part of the National Peasant Party has been a disappointment and is considered to be a great mistake for both sides. *L'Indépendance Roumaine* states that the foreign policy of the new Government will be identical with the old, that is to say, the maintenance of the *status quo* in Europe, and continues:—

The accession to power of the Bratianu Cabinet constituted the best solution to the political crisis. We should certainly have wished for the collaboration of the National Peasant Party, which would have facilitated the task for years to come. But that has not been possible. ...

There was only one thing to be done in view of the refusal of M. Maniu, to proceed as quickly as possible to realise the only combination which would put an end to all uncertainty: the constitution of a Ministry uniform in its conceptions and strong in means to realise its object.

It is not a purely Liberal Cabinet. The presence of MM. Lupu, Argetoianu and Stelian Popescu proves that honest and patriotic men have understood that they must give their help to those who have taken such a heavy responsibility upon their shoulders. A large number of M. Iorga's adherents having identified themselves with the Liberal Party, the Opposition consists but of those for whom power represents the success of personal interests or more or less demagogical aspirations. ...

Another article continues:—

... Without referring any more to the past, it is sufficient to say that the National Peasant Party have given the slip to the coalition parties, after having conformed to the general feeling of the country which demanded the collaboration of all Opposition forces in the Stirbey Government. And this change took place just at the decisive moment when the National Peasants were called upon to decide the situation created by making an agreement with the Liberal Party.

The National Peasant Party in these circumstances made a great mistake for many reasons which it is easy to determine.

If M. Maniu had realised the co-operation which the public demanded and expected, he would have arranged for his group to form part of the Government.

The National Peasants are raising now on all sides the question of sacrifices demanded of them and also of the concessions which they have not been granted. They ignore the fact that these rights are only acquired through immense sacrifices and that the only thing that counts in politics is the final result.

M. J. A.

A BULGARIAN MILLENARY.

The Municipality of Sofia has fixed the three days, May 22, 23 and 24, 1928, for the celebrations in connexion with the thousandth anniversary of the death of the Bulgarian Tzar Simeon (893-927) and the fiftieth anniversary of Bulgarian independence achieved as a result of the Russo-Turkish War of 1877-1878.

The King of Egypt visited Lord's Cricket Ground on July 8 for the Eton and Harrow match.

In the election for the Chamber of Deputies, which were held in Bucharest on July 7, the Bratianu Government obtained approximately 70 per cent. of the total votes and the National Peasant Party approximately 25 per cent. The residue is divided amongst the Averescu People's Party, the National Party, led by Professor Jorga, and the League of Christian National Defence, Professor Cuza's party.

Seventy-five tons of money reached Jerusalem on July 9 under strong military escort. The coin was packed in 1,500 cases and consisted of £P430,000 in silver, nickel, and bronze, the first instalment of the new currency. (The Palestinian pound is equivalent in value to the pound sterling.)

An earthquake occurred in Palestine and Transjordan on July 11. In Jerusalem 26 killed and 30 injured have already been reported; at Nablus 30 are said to have been killed; and shocks were experienced at Amman. Damage was caused to the Katholicon in the Holy Sepulchre, and people were killed on the Mount of Olives and at Jericho. The earthquake is said to have been the worst since 1837, when 4,000 people suffered death.

According to a Copenhagen message, Dr. Ditlef Nielsen, who has just returned to Denmark from Egypt, Palestine, Transjordan, and Arabia, has obtained valuable scientific results. He believes that he is able to prove that he discovered Mount Sinai, where Moses promulgated the Ten Commandments. According to him Mount Sinai is not on the Sinai Peninsula, but in the mountains of Edom, south of the Dead Sea. The British Government afforded great help to Dr. Nielsen's researches in Northern Arabia.

Book Reviews

SOLOMON AND BALKIS.

"SOLOMON AND BALKIS." By John Freeman. (London: MacMillan and Co. 5s. net.)

Mr. John Freeman is already known as an austere but genuine English poet. He works on a wider canvass than do the majority of his contemporaries; and so is less popular. To connoisseurs, however, his very considerable merits, particularly in narrative verse, are known, and even those who disclaim wide knowledge of hodiernal English verse turn with relief from the ubiquitous miniature to the larger poem. Not long ago Mr. Freeman settled on the Bible as source of subject for his extensive gifts: the result was his play "Prince Absalom." And now, for this narrative poem, he has once more culled the flowers of Scripture and of legend.

The poem opens well, with marching stateliness, with the birth, to King David's Queen, of Prince Solomon. This event brought laughter to the earth again. But the young Prince meets trouble early, and his death is averted only by his staying in the forests, learning of nomads, for five years. Returning to his home, he sits by his father's side, and gives judgment to the people. Yet the spell of the forest life is still strong on him, and he leaves the fretful King for a while. The subsequent death and sepulchre of David, and the apparition of the Angel Gabriel are finely described:—

The long rites done, King David was forgot
Except by Solomon whose inmost thought
Pondered times past, as in his father's stead
The diadem of Kingship on his head
He set, and in his hand the Prophet's Rod.
Then he beheld the Messenger of God,
Gabriel, with face severe.

The inner and outer life of Solomon is cunningly etched—how he prayed the help of the Angel Gabriel against

the Jinns, who are all subdued except their chief, Prince Iblis, how he journeyed on his Magic Carpet, how he lusted after women, and how, for all these things, he yearns to build the Temple.

Then, suddenly, mysteriously, comes the inspiration of his love for Balkis, Queen of Sheba. He heard a song:—

There is a long sighing in Arabia,
In Sheba a King's daughter sits and reigns
Companionless, unloved, unhusbanded,
And pours her dreams and eyes upon the plains.

Hereabouts the poem takes on a singular beauty, and the journey of Solomon to Arabia, the anxious attraction of Balkis, and the meeting of these two immortal lovers are depicted in restrained lines that are remarkable for their simplicity and dignity. King Solomon woos the Queen, and with immemorial rites the conquest and surrender are made:—

Then Solomon turning let the hangings fall
And darkness fell
Where the light had been.
Without, the Janissaries mute, unseen,
Watched, until day crept back,
The black gigantic shadows of their black
Gigantic shapes pillowing the roof's great span
Lit by tapers wan.

Menelik was born, Menelik, "father of Kings unto this day of David's line, in Ethiopia." But Balkis was summoned by Death's Monitor, and grief lay heavy on the King. He jaded his senses, so that when Death at last summoned him, his pleading were in vain that his life might be spared for the Temple's sake. In death the two lovers once more united, Balkis now "paler, remoter, yet lovelier." Solomon implores the Queen to plead with Heaven "that the manifold fond infidelities forgotten be"; and the poem ends thus:—

Then Balkis:—By His Holy Name
I will entreat, that or in Heaven or Hell
With thee I may abide. Farewell!

—Farewell!

She parted. Then the Angel too,—Farewell,
Cried; stronger pleading none could make,
Who thus for love renewed would Heaven forsake;
Farewell. He stepped or winged away. Then flew
The trembling Hoopoe near the King, and through
The dusky silence poured her song like silver dew.

"Solomon and Balkis" is, we think, a beautiful work, fashioned by a masterly and reverent hand. To those who may look upon it with antiquarian as well as with literary eye, it may be added that the author has taken many stories and episodes from St. J. D. Seymour's "Tales of King Solomon," the translation of "The Queen of Sheba and Her Only Son Menelik" (with Sir E. A. Wallis Budge's Introduction), and "The Queen of Sheba," which has been put into French by Dr. J. C. Mardrus and into English by E. Powys Mathers.

TIBET.

"TIBET, PAST AND PRESENT." By Sir Charles Bell, K.C.I.E., C.M.G. (London: Oxford University Press. Cheap Edition, 10s. net.)

We are glad to see that Sir Charles Bell's delightful book on Tibet has been received with the appreciation which it deserves. It will be remembered that we reviewed this book on its first appearance in 1924. This is the third edition, and has been issued at a more popular price. We trust that in its new shape it will have a large sale.

A CORRECTION.

In line 13 of the review of Mr. A. M. Hocart's book on "Kingship," contained on page 20 of our last issue, the word "ghosts" was misprinted for "Gods." The line should be: "Kings . . . became Gods on installation."

A History of The Campaign in MESOPOTAMIA

BY

Brig.-Gen. F. J. Moberley, C.B., C.S.I., D.S.O., p.s.c.

This History of a very stirring episode of the War has been generally acclaimed as one of the most valuable additions to military literature made within recent years. Alike for the fascination of the subject matter and the skill and literary excellence of the narrative Gen. Moberley's work is destined to rank as a military classic of high order.

To those who helped to make the History which is recounted in these volumes, few books can possess greater interest.

"A fine piece of military history."—MANCHESTER GUARDIAN.

"Will certainly become a classic on the subject with which it deals."—The late Col. Repington in the DAILY TELEGRAPH.

Uniformly bound in scarlet cloth. 8vo.
Illustrated with maps and plans.

Vol. I. 1914—Oct. 1915 ... Out of print.
Vol. II. Oct. 1915—April 1916 15s.
Vol. III. April 1916—April 1917 15s.
Vol. IV. Concluding vol. Now Ready 15s.

Postage 9d. extra on each volume.

HIS MAJESTY'S STATIONERY OFFICE

May be obtained from the Sale Offices of the Department at—LONDON: Adastral House, Kingsway, W.C.2. MANCHESTER: York Street. EDINBURGH: 120 George Street. CARDIFF: 1 St. Andrew's Crescent. BELFAST: 15 Donegall Square, W., or through any bookseller.

THE COMMONS AND INDIA.

Apart from Lord Winterton's exhaustive exposition of the material progress that has been made in India, the debate in the House of Commons on Friday did not contribute very largely to the general knowledge of conditions and opinion in that country. The more strenuous critics of British administration in India are, almost invariably, more moderate in their denunciations when confronted with authorities on the subject possessing the right of reply. Hence it is, as we have noted on previous occasions, that wholesale condemnations of British rule, though frequent enough on political platforms, seldom find emphatic expression on the floor of the House. The incident which led to the termination of Friday's debate in an atmosphere of heated personal controversy was symptomatic of a development which is giving rise to apprehension among those who desire the maintenance of the traditions of Parliamentary life. It had its origin in the account given by Mr. Shaw, the Labour Member for Preston, of an assault which he said was committed in his presence by a British officer on an Indian servant at Madras. Whether Mr. Shaw's recollection of the circumstances is to be relied upon is immaterial to the issue. He took no action at the time, though his intervention would probably have led to serious consequences for the perpetrator of the alleged assault. What purpose then could be served by Mr. Shaw's narration of the incident in the publicity afforded by a Parliamentary debate six months after it occurred? There are people in this country who are only too ready to lend credence to anything that seems to cast discredit on their countrymen in India, and persons of this type will probably seize on Mr. Shaw's statement as bearing out the preposterous theory that Indians are systematically ill-treated by Europeans. The Member for Preston seems to have been shocked by the spectacle of "six perspiring men carrying a piano on their heads in Bombay," and he declared that it was no credit to us that this state of things should exist. What the British have to do with the immemorial custom of Indian coolies of carrying burdens on their heads did not appear, but the fact that it was considered necessary to describe the incident in the House of Commons suggests a paucity of material for more serious criticism.

Coming to matters of greater importance, it was clearly shown by Lord Winterton that the material condition of the Indian people is making rapid and gratifying progress. The facts recited are familiar enough to those possessing a real acquaintance with India. But they are not so familiar to the public here as they ought to be, and therefore the Under-Secretary of State performed a valuable service by presenting to the House his very lucid survey of the position. Lord Winterton once more pointed out the fallacy underlying comparisons between India and the West. The high death rate prevalent in that country is frequently cited as a discredit to the Government. But every enlightened observer in India knows full well that if the customs prevalent there were followed in England the mortality here would be infinitely

higher than it is to-day. Lord Winterton pertinently cited Mr. Gandhi as a witness to the terrible effects of child marriages on the physical condition of the Hindu community. That system, it was shown, was sapping the vitality of thousands of promising boys and girls; it was bringing into existence every year thousands of weaklings, who were born of immature parents; it was a fruitful source of the appalling child mortality and the numerous still births that were witnessed in India. The purdah system, by which millions of Indian women are secluded from their birth, is another fruitful source of disease.

When the House turned to the political aspect of the Indian problem the inevitable air of unreality at once asserted itself. One of the gravest obstacles to political progress is found in the prevailing communal differences, which, according to the testimony of Hindus and Muslims alike, have been accentuated by the introduction of a quasi-democratic system of Government. But the existence of this deplorable tension appears to have been almost ignored in the debate. That genial and erratic politician, Colonel Josiah Wedgwood, affirmed that "all thinking India was waiting as one man" for an announcement by the Government "as to the appointment of the Royal Commission to inquire into the working of the Reforms, what it would be like, whether it would be something from which hope would come, or if it was to be asked to preserve things as they are." The influential Indians who are doubtful as to the wisdom of the sudden adoption of a system based on Western political ideas would presumably under Colonel Wedgwood's method of classification be given a place in the ranks of the unthinking. No British Government, moreover, will be entitled to dictate to the Royal Commission in advance what its findings shall be. It will be the duty of that body when it is appointed—as it must be in the near future—to perform the functions allotted to it by the Government of India Act. Its task will be to inquire into "the working of the system of government, the growth of education and the development of representative institutions in British India, and matters connected therewith," and to report "as to whether and to what extent it is desirable to establish the principle of responsible government, or to extend, modify, or restrict the degree of responsible government then existing therein . . ." Further, the preamble to the Act explicitly laid down that the action of Parliament in these matters must be guided by the co-operation received from those on whom new opportunities of service were being conferred, and by the extent to which confidence can be reposed in their sense of responsibility. Many educated Indians have gladly availed themselves of the opportunities of service offered to them by the Reforms; others have been stimulated merely to the formulation of fresh demands, and have almost consistently sought to embarrass a Government in which their fellow countrymen have now a direct share. The European non-official community in India have through their accredited representatives in the Legislative Assembly consistently sought to make the best of the Reforms and have co-operated

loyally and amicably with the Indians who have shown their readiness to participate in constructive work. They will therefore, have an unassailable right to offer, with other communities in India, their views of the manner in which the Constitution has functioned and their opinion as to the policy to be adopted in the future. The task to be entrusted to the Royal Commission will be one of tremendous responsibility. A Labour member who spoke in Friday's debate joined Colonel Wedgewood in urging His Majesty's Government to instruct the Commission to "take large views." The underlying idea embodied in these injunctions is based on a wholly erroneous idea of the duties of a body whose decisions must depend on the evidence laid before it and not on the pre-conceived notions of any British political party. It is a curious fact that the problem of India with its manifold complexities seems to be regarded as an open book by members of the House of Commons whose real knowledge of Indian affairs is about as comprehensive as their acquaintance with social conditions in Mars.

CURRENT TOPICS.

Company and Insurance Legislation.

It is understood that the Government of India will shortly bring forward Bills to amend the Companies Act and the Life Insurance Act of 1912. These measures have been in abeyance pending the introduction of similar legislation in this country and will be largely on the lines of the Companies Bill now before Parliament and the Insurance Bill resulting from the prolonged deliberations of the English Committee. The grave abuses which led to the passing of the Indian Act of 1912 tended to discredit life insurance amongst Indians, but a great change for the better has since been witnessed, though it is recognised that further legislation is desirable. It may be hoped, however, that in following the example of the British Government in regard to commercial matters the Government of India will avoid proposals relating to taxation of the character embodied in certain sections of Mr. Churchill's Finance Bill.

Communal Troubles Again.

Although the Bakr-Id passed without widespread communal disturbances, thanks to the police and military precautions, the telegrams from India show that rioting has since occurred in Bengal and that the situation in the Punjab is far from satisfactory. The published accounts of the measures adopted to prevent outbreaks in some of the leading cities during the Bakr-Id deserve the serious consideration of those politicians in this country who, without any real knowledge of Indian conditions, pose as informed authorities on Indian affairs. In Calcutta the strenuous efforts of the police under the direction of Sir Charles Tegart prevented any outbreak, though at more than one stage the situation became critical. The services of armoured cars were requisitioned, and the knowledge that the authorities were fully prepared to cope with disorder had a very salutary effect. In Dinapore, owing to the objection of the Hindus to the sacrificing of cows, trouble arose which rendered it necessary for the police to fire on the mob. Delhi is always a potential source of communal disorder, and here British troops were held in readiness and the streets were patrolled by cavalry and armoured cars. In Lahore elaborate precautions were also considered necessary, while in Amritsar a squadron of cavalry rode through the city and troops requisitioned specially for the occasion were in readiness in the Govindgarh fort. The fact that such measures should have been necessary is deplorable and it shows very clearly that "unity" has yet to be attained in India.

Taxation of Indian Tea Companies.

Sir Basil Blackett has not abandoned his proposal to double the assessment of tea companies' profits to income-

tax, and will move a resolution on the subject at the forthcoming session of the Legislative Assembly in Simla. It may be recalled that in his Budget speech this year the Finance Member announced that he had decided to abolish the export duty on tea which, he said, brought in approximately Rs.50 lakhs annually. There was, indeed, no justification for the continuance of this tax. It was imposed as a War measure, and the Fiscal Commission had recommended its abolition. With the increasing competition of Java, the case for the removal of the impost had become a very strong one, as the tax acted to some extent as a handicap to Indian tea in markets where this competition was keen. Sir Basil Blackett, however, stated in his speech that the finances of the Government of India would not permit of the abolition of the tax unless some means of compensating for the loss of revenue were devised. The tea companies, he pointed out, were now assessed to income-tax on 25 per cent. of their total profits, the balance being regarded as agricultural income and therefore exempt. But he went on to say that the proportion of 25 per cent. was based on imperfect data, and later inquiries showed that the non-agricultural profits of the tea companies amounted to at least 50 per cent. of the whole. The Government therefore proposed that the assessment should be raised to 50 per cent., subject to the proviso that where there was a market for green tea and the non-agricultural profits could be exactly ascertained, income-tax should be assessed on the total of such non-agricultural profits. The Finance Member expected that the increase to 50 per cent. would bring in Rs.45 lakhs in 1927-28, rising to Rs.50 lakhs in 1928-29. The interests affected naturally objected to this change. Formerly the companies were regarded as deriving their profits from agriculture alone, but Sir William Meyer, when Finance Member, resolved to tax what he considered to be their manufacturing profits, and after some discussion between Sir William and the tea growers, 25 per cent. was decided upon as a reasonable figure. Sir Basil Blackett's proposal to double this proportion was regarded as unjustifiable, and it was abandoned for the time being. But, according to advices from India, he has given notice of a resolution for amending the income-tax rules which will have the effect of carrying out his original intention. It is understood, however, that representations are being made to the Government of India which may result in a modification of the proposal.

Prayer and Litigation.

Indian judges often have to decide strange cases, but an appeal recently made to the Allahabad High Court is believed to be unique. The plaintiff in the case in question sought to enforce a contract under which he had agreed to perform a "puja" in order to cause the defendant in the present action to be successful in his suit pending before a Court. In the event of success being achieved, the present plaintiff was to share in the decree money. Their lordships of Allahabad took the view that the contract was opposed to public policy, and there was humour, conscious or unconscious, in their judgment, in the course of which they said that the circumstances of this case distinguished it from one in which a person should merely have undertaken to pray to a righteous deity for the success of another's suit, for in such a case the deity, being righteous, would be understood to exercise only an influence in a just cause. In the present action the intention evidently was that the plaintiff should exercise some influence unauthorised by law on the mind of the Court, whether righteous or the reverse, and whether through any particular deity or not, with the object of bringing about the success of the defendant. That being so, the appeal was dismissed.

It is considered probable that before the Legislative Assembly meets at Simla the Government of India's views on the report of the Sken Committee will be embodied in a dispatch and sent to the Secretary of State.

CALCUTTA LETTER.*(From Our Own Correspondent.)**Calcutta, June 23.***Indian Princes and the Reforms.**

It is reported from Simla that Mr. C. C. Watson, Agent to the Governor-General, Rajputana States, has just arrived there, in view of the forthcoming Conference. Lord Irwin will have an opportunity of hearing what the Agents and Agents-General have to say on the question of the status and privileges of the Indian States. This conference means more than is apparent, coming as it does just on the heels of the Indian Princes' Conference, and in advance of the Statutory Commission. It means that the relations of the Sovereign Power with the Indian States is a question of vital interest. No official information regarding the proposed Conference is available at present.

Prohibition in Calcutta.

Following the Rev. Herbert Anderson's efforts towards wholesale prohibition, Colonel Barnardo, Principal of the Medical College, addressed the Rotary Club on the subject, quoting Matthew Arnold's view that alcohol, used in moderation, adds much to the agreeableness of life. He thinks that over-eating and tobacco smoking are as bad as excessive alcohol drinking. Yet, he admits that there is little defence for the habit in India. The opium habit would be more rational, he says, than alcohol drinking, for here are Colonel Barnardo's ten commandments: (1) No smokes before lunch, no drinks before dinner. (2) Drink no alcohol, unless you are depressed in body or mind. (3) Drink medicinal doses of it; $\frac{1}{4}$ peg, no more, and no less than two hours' interval between the drinks. (4) Don't drink it neat, but well diluted, on account of the subsequent damage to the stomach. (5) Don't drink, except at meals. (6) Don't drink till after the day's work is done. (7) Don't drink when you are seedy, thinking it will make you well. (8) Don't try to drink as much as your friend. (9) No daily ration. (10) If you drink, drink the best.

Broadcasting in India.

The establishment of the Calcutta Broadcasting Station is progressing slowly but surely. A step forward has been the appointment of a Programme Advisory Committee. The honorary membership vouches for a keen sense of civic duty, but what an ungrateful task awaits the group of men who will cater for the public. Half of the enthusiasts provided with up-to-date equipments will find the programmes too serious. The other half will praise the good taste and the refined selection of the Advisory Board. Here, in the broadcasting, is a chance for the local Kreislers and Melbas, and there are many of them. They live in poverty, wrapped in their art, dreaming of expressing themselves before the public. The Indian Broadcasting Co.'s Studio is called the Magic House of Music. An Englishwoman has been appointed as announcer, also as compiler of the European programmes. It is hoped that she will realize the responsibility of broadcasting lectures and music.

Bengal National Bank's Failure.

It seems evident that a great deal of difference of opinion exists with regard to the projected revival of the Bengal National Bank. A meeting of the shareholders took place recently, but Press representatives were excluded from the meeting. The following resolution, after much discussion, was passed: "That a committee be formed for the purpose of scrutinizing various reconstruction schemes already submitted, or which may be hereafter submitted, and that the Directors be requested to give full facilities and information for ascertaining the present financial position of the bank, with a view to reconstruction." Some of the shareholders opposed the resolution; they wanted a sifting inquiry into the affairs of the bank, with a view to finding out who was responsible for its collapse.

Here and There.

It is reported that the form of slavery existing in the Naga Districts has practically ceased. Also the human sacrifices. Over 4,000 slaves have been released in Burma. Another lot will be liberated next cold season. This delay has for an object to punish the tribe which treacherously attacked Captain West's party. In reply to Mr. Barnard's report, H.E., the Viceroy, has cabled the following message: "I am very glad to have your encouraging report about slavery. Please convey my congratulations to all concerned." As the result of the last expedition, 3,445 slaves had been released.

A new form of amusement has been introduced in the shape of joy-rides in the "Moth" aeroplane in which Captain Vetch and Mr. Widdicombe arrived unexpectedly in Calcutta on Monday. The airmen will charge Rs. 20 for a ten-minute ride round Calcutta. There will be joy-rides in the morning from 7 to 9, and in the evening from 5 to 7. Some years back the Handley Page aero-bus had tried joy-rides as a business proposition, but it probably did not pay.

BOMBAY LETTER.*(From Our Own Correspondent.)**Bombay, June 24.***Millowners' Memorial.**

Sir George Rainey, Commerce Member of the Government of India, who will visit Bombay next week to discuss the situation in the textile industry with the millowners, is faced with none too pleasant a task. For this week a representative all-India gathering of millowners was held, and it drew up a reasoned representation to Government. The strongest point made refers to the Government's admission that Japan holds a ten per cent. advantage over Indian mills. The reply to this in the Government resolution on the Tariff Board's report is the statement that the ten per cent. is more than covered by the existing eleven per cent. import duty. But if this is really Government's idea, and if they have held this idea all along, why, it is asked, was the inquiry instituted? The industry would be well advised to avoid violent language. Fortunately there was not much of this at the meeting, but there was some. Nothing is more likely than violence to lose them the public support they need.

Kathiawar Ports.

Sir Basil Blackett has called a conference of the Maritime States of Kathiawar at Mount Abu next week to consider the trade rights of their ports. Things cannot go on as they are at present, and with the recently expressed views of British Indian merchants who waited on him in deputation during his visit to Bombay, Sir Basil ought to be able to make out a very strong case at Mount Abu. Fortunately for the merchants, Sir Basil admits that the situation is "intolerable for all concerned," and not the least concerned is the Government of India, which is being deprived of quite a respectable sum in the way of Customs revenue. To endeavour to reimpose the Viramgam line now would lead to considerable trouble, but it should not be impossible to reach some agreement whereby a more equitable imposition of duty is imposed.

Road Hogging.

Speeding on Bombay roads, though it has been considerably reduced as a result of the vigilance of the police, is not yet eliminated, and an interesting object lesson to those adventurous spirits who like to "step on the gas" will be provided by the judgment of the Second Presidency Magistrate in the Pedder Road smash case. In this instance a young and wealthy Parsi, was returning from a dinner party in the suburbs with a car-load of friends when he dashed into a tree, and the result was the death of Mr. Kanga, a well-known cricketer, the side of whose head was crushed. The case was tried at con-

siderable length, and the defendant was finally awarded a day's simple imprisonment, a fine of Rs.1,000 and the suspension of his licence for one year.

Battle of the Times.

Bombay time or Standard time? was the question involved in a motion for the adoption of Standard time for municipal clocks. This is a hardy annual, and once again the City Fathers successfully opposed any such change. The Corporation's repeated rejection of the proposal to introduce a uniform time for Bombay is astonishing. It arose at first as a sort of boycott of the Government, who at the instance of a former Viceroy, none too popular with a certain section of local politicians, introduced Standard time in Bombay. The public itself was more or less in favour of it; but those times now belong to the dim and forgotten past—at least so far as the public is concerned. The humour of the decision lay in the fact that the Municipal Councillors who voted against the measure were themselves carrying watches that certainly did not record the time they so ardently desired to retain.

Poona Races.

Barely a month now remains for the start of the Poona racing season, and that things are well under way is indicated by a recent issue of the *Racing Calendar*, which, besides publishing the dates and all the usual information regarding races and entries, also announces the list of Stewards of the Western Indian Turf Club for the current year. The stewards include Messrs. G. C. R. Coleridge, A. Geddis, Sir Leslie Hudson, Major H. G. Vaux, and C. N. Wadia. Major Vaux fills the vacancy caused by Mr. Langley falling out, and racing will be all the better for his presence in this capacity. He gingered things up considerably when a steward in 1925, and general regret was expressed at his resignation on personal grounds. Dangerous riding is one of his abominations, and he manages to reduce it to the minimum by severe measures.

Going Dry!

An interesting little experiment, from the point of view of the Excise Minister, is likely to take place at Versova, the small seaside suburb of Bombay, which appears likely to go "dry" very shortly. The decision was taken at a recent meeting of the inhabitants, who have applied to the Excise Commissioner for the removal of the solitary liquor shop there as it is "a nuisance to the peaceful citizens of the place." In view of the fact, however, that the decision to go dry arose out of a boycott of the liquor shop owing to what was considered an excessive charge for toddy, it might prove to be only a comic opera experiment with someone making a small fortune in "bootleg."

Mr. C. C. Watson.

Bombay has been further honoured by Simla in the selection of Mr. C. C. Watson, Agent-General in the Western India States, to succeed Sir John Thompson in the Political Secretaryship. No better selection could have been made, for he knows many of the States with which he will have to deal extremely well. Most of his service has been in Kathiawar and Rajputana, and he is most widely known for his judgment in the dispute between the Jains and the Palitana Durbar. But Mr. Watson is also remembered, at least in Bombay, for his three years' service as Private Secretary to Lord Sydenham when the latter was Governor of Bombay, and for the few months in which he served Lord Willingdon in a similar capacity. Those were memorable times at Government House, and he is probably the only one of the staff then in attendance who is still in India.

Commercial Markets.

The reduction in the Bank rate to 5 per cent. is generally regarded as an indication of the forthcoming Government loan, but nevertheless it has caused a decline in the call rate from $4\frac{1}{2}$ to 4 per cent. Sterling exchange steadied considerably on the further contraction of Rs.2 crores

currency by Government, whose call for tenders has been meeting with a remarkably good response. Gold and silver were both active, the former opening steady but declining, while the latter was largely dealt in owing to the settlement, a fair amount of carry-over business also being done. Government securities kept steady with an advance towards the close of the week following the reduction in the Bank rate. Mill shares were weak throughout in the absence of buyers, while Tata Iron and Steel moved up a few points as a result of information regarding a favourable report. Cements were weak and banks and railways steady. Cotton, after a fall of Rs.4 on the break of the monsoon, has soon returned to parity, while piece-goods are moving very slowly with no demand of any importance.

CORRESPONDENCE

BANK RATE IN INDIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—The reports received from those who are bearing the "heat and burden of the day" in India, indicate that they are not happy about banking facilities out there—and the discussion about to be commenced on the question of a Reserve Bank is adding to their qualms. Perhaps you will in the columns of your admirable journal put before us "quai-hai's" at Home, the significance of the recent Finance Commission's recommendations in its bearing on the above point? So that we may the more intelligently follow the discussions.

At present the lot of the company or individual in India, who in the ordinary course of business turns to a bank for finance is not a happy one. The Bank Rate is said to have averaged last year approximately $6\frac{1}{2}$ per cent. This year it has been in January $5\frac{1}{2}$ per cent.; February 6 per cent.; March 7 per cent.; April 7 per cent.; May 7 per cent.; June 7 per cent.; and is to-day 5 per cent.

On the one hand, one hears of surplus Budgets from Sir Basil Blackett, on the other hand a general slump in trade in India, and on the Bombay side, acute depression. The Imperial Bank receives from the Government of India, ample funds at the low rate of 2 or $2\frac{1}{2}$ per cent. for the express purpose, so it is said, of aiding industry. To the layman it would seem that there is a catch somewhere. Can you of your kindness tell me why with a flourishing Government Budget, and ample funds at low rates lodged with the Imperial Bank, the hard-hit industrialist should be called upon to pay such a high price for his finance? Is the proposed Reserve Bank likely to improve the position or worsen it?—I am, etc.

London, July 9.

AN INDIAN TRADER.

COMMUNAL DIFFERENCES IN INDIA.

To the Editor of THE NEAR EAST AND INDIA.

Dear Sir,—I entirely agree with you when you say (in your article under the above heading published in THE NEAR EAST AND INDIA dated July 7) that: "There are many reasons why India should desire to retain the British connection, but none is of more immediate concern to the people than the safety it ensures to all alike from internal disorder and foreign aggression." And it is also a fact that "the differences between Muslims and Hindus are becoming more acute almost day by day."

May I venture to say further that communal differences have always been potentially acute in India. The East is really more intensely religious than a Westerner can ever understand. Though communities clash there now and then on account of some political or social differences also; yet I think it is the religious differences that are really at the root of all disturbances. The Sikhs, for instance, regard it a religious duty to wear Kirpans (swords) and the Muslims justly resent it. The bloody character of the recent riots at Lahore owed all its heinousness to the Sikhs wearing Kirpans. And the disturbances reported now owe their origin also to religion.

A Hindu published a book (one of several others) called

the "Rangila Rasul" containing references to the Holy Founder of Islam, which the High Court described as scandalous and malicious. The book should have been treated as a writing which promoted feelings of enmity and hatred between different classes as when the Allahabad High Court punished an offender for a strikingly similar publication. But when the case came up for decision in the Punjab High Court the honourable judge, Kanwar Dalip Singh, admitting that the book was a satire on the Founder of Islam, declared that there was no law to penalise such writings in the penal code of India. The Governor of the Punjab was very much concerned at this judgment; "for it seemed to us," he says, "that if this type of religious controversy could be carried on with impunity, there was a vista of endless trouble before the public." Muslims can put up with anything, but never with disgrace heaped upon their blessed Prophet. The result, therefore, was that the "Muslim Outlook," the only Muslim journal in English in the Province, wrote a leader along with others strongly protesting against the judgment. Its indignation was quite justified and was shared by all Muslims. But the Editor must have expressed his feelings in a bitter tone which proved objectionable, and the poor Muslim became a victim of the clutches of the Court and might now lead to "endless trouble" as the Governor of the Province had rightly anticipated.

Anyhow, my object in writing these few lines is to emphasise the fact that the presence of the British in India is and has been the only guarantee of the maintenance of law and order through the country. But it is a pity that some visionary idealists of the days gone by like Mr. Gandhi still write:—"It is a sign of weakness not of fitness for Swaraj to go to the foreign ruling Power to arbitrate between us or to enforce the peace between us at the point of the bayonet." Recent events have repeatedly disabused the minds of many anti-British agitators of their vain idealism and it is really time that all should learn the lesson of co-operating with the British in establishing perfect peace in the whole country.

A. R. DARD, M.A.

Imam of The London Mosque.

63, Melrose Road, S. W. 18. July 10.

RECRUITS FOR INDIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Will you allow me to ask, through the medium of your journal, whether we should accept with equanimity, the implications of Earl Winterton that all is well with recruitment for India; or, with misgivings, the reiterations in the British Press of India that shortage in the supply of the right stamp of British Officer, both Civil and Military, is still at danger point? It would be interesting to learn from those Governors of Provinces who have passed their days in India, what they think—not so much of the numbers—but of the quality of those British recruits now joining the I.C.S. Would they say that there is any sign of a return to the standard that prevailed in pre-Reform days?

As for the recruit for the Indian Army: with the Bolshevik net being gradually drawn more closely round India's land frontiers, there would seem to be greater need than ever for attracting the best of our youth—but the cry for Indianisation (from outside the Army apparently the real pressure is being applied) the disgraceful cut in pensions, and the ill-conceived Skeen Report, seem to the soldierman sufficiently uninviting, when he has to discuss with his son the prospects of a military career in India. Under the circumstances, as I know them, a corroboration of the claims made either by the Under-Secretary of State for India—or by the Press in India would be much appreciated?—I am, etc.,

Cheltenham, July 7,

MILES.

At the twentieth session of the East Godavari Conference, which met at Amalapuram on June 12 under the presidency of Mr. B. G. Horniman, Mr. Horniman "fervently exhorted the delegates and leaders to go back to the non-co-operation days of 1921."

INDIAN MAIL.

Watered Cotton.

The practice of watering cotton has again become rife in India, notably in the Central Provinces and Berar. The Secretary of the Indian Central Cotton Committee has accordingly issued a statement in which he directs the attention of cotton growers to a series of tests conducted in the United States to ascertain the effect of compressing cotton to different densities. In the course of his statement he says:—"The three scientific investigations confirm the experience of experienced merchants and practical spinners. It is well recognised in Bombay that when cotton has been wetted before or during pressing the "leaf" turns black and the appearance of the cotton is adversely affected, and it is common knowledge that wetted cotton is apt to deteriorate in storage. Another point of practical importance which is not dealt with in the above investigations is that watered cotton becomes "wadded" in the bale and "opens" badly, and trouble is experienced in the mill on this account as well as from the actual deterioration of the fibre. The Central Cotton Committee during the past three years has sent a number of bales of Indian stapled cottons for spinning trial in Lancashire. One of the general comments on these trials has been that Indian cottons for export to Europe should be baled as dry as possible and that this is particularly important in view of the high density of the Indian bale.

Scientific investigation, actual spinning tests and commercial experience all go to show that the watering of cotton is harmful, being definitely prejudicial to its keeping and spinning qualities. The microscopic study of the cotton fibre indicates that even slight damping is harmful and should be avoided. The Central Cotton Committee desire to bring these facts to general notice, for, if the intrinsic value of Indian cotton is reduced by faulty handling or by malpractices the inevitable result is a general economic loss to the cotton grower.

The Air Force on the Frontier.

A Peshawar correspondent of the *Pioneer* states that the Mohmand situation has vastly improved. The trouble was mainly due to the activities of the Haji of Turangzai who, some weeks ago, brought down a lashkar into the Gundoo Valley, south of the Nahakki, to burn the houses of certain friendly tribes, and of the energy of the Faqir Sahib of Ilanger, a rival of the Haji and anxious to secure a share in the Frontier limelight. The latter preached jihad in the Upper Mohmand country and collected a lashkar about 1,500 strong, including men of the Bazzar and Khwaezai Khel living on the borderland of India and Afghanistan, north of the Kabul River. This lashkar moved with the object of attacking Shabkadr and, crossing the Frontier on June 6, exchanged shots with friendly tribesmen holding the towers between Shabkadr and Michni. In the afternoon nineteen machines of the Royal Air Force went up with orders to attack any hostile concentration. They repeated the performance on the next day and also during the night of June 7 and 8. On the 6th about 30 casualties were inflicted, but on the 7th the targets were not as good owing to the dispersal of the enemy. Altogether the airmen, who all returned with their machines safely, inflicted about 50 casualties and created an excellent moral effect. The fierce heat prevailing enhanced the merits of a magnificent achievement on the part of the Royal Air Force. Other frontier reports announce that the King of Afghanistan is expected to return to Kabul in the middle of the month from his tour of Afghan Turkestan. He must have had an interesting trip which is likely to have done much to counteract Russian intrigue in that area.

Ideas of Efficiency.

Efficiency, one is forced to conclude, is not a Bengalee ideal, writes the Calcutta Correspondent of the *Times of India*. The label is welcomed, but not the labour. The past week has brought two illustrations of this curious trait. I may refer, first, to the savage attack made by

the Swarajist journal on the Vice-Chancellor in the belief that Professor Sarkar had issued instructions directed to making the University examinations a more exacting test of ability than in the preceding year. A Calcutta degree, mainly because it is so easy to obtain, has little market value at present, except socially, but any attempt to raise the standard evidently fills the Bengalee mind with horror. My second illustration is the suggestion of the Indian Chamber of Commerce that as Indian applicants for the Bengal pilot service find it difficult to secure sea-going experience, this vital qualification, in their case should be dispensed with! English objections to this lowering of the standard were ascribed at once to racial prejudice. On the other hand, in answering Muhammadan pleas for the same leniency in respect of Government service, it is amusing to find the Hindu *Amrita Bazar Patrika* insisting sternly that there "must be a minimum qualification for every public service" and that the "loud cries (of Muhammadans) for *Chakri* on every available opportunity have been simply nauseating!"

Shortage of British Officers.

The shortage of British officers for the Indian Army has been the subject of a lively discussion in the columns of the *Pioneer*. The real reason of the shortage is generally agreed to be economic, and it is maintained that the remedy lies in improving the conditions of service. Another cause suggested is found in the recommendations of the Skeen Committee, in so far as these recommendations "suggest the development of Indianisation as a political expedient rather than as a means of assisting the right type of Indian gentleman to serve as a King's Commissioned Officer. There is no reason, says the *Pioneer*, why the middle-class Indian, if educated and trained in the right lines, and if of the requisite character, should not make a good officer. But there are also young Indians of noble family in the Indian States. Many of them are believed to be unaware of the career open to them in the Indian Army nowadays. They are often at a loss to know what to do for a livelihood. They have not enough money to make them accept with equanimity a life of idleness. They have the habit of command and leadership. From them material of the requisite kind might be found, if not enough to justify the extravagance of the Skeen Committee's arithmetic, at least sufficient to place Indianisation on a surer basis than it would be were the Skeen proposals adopted.

A Futile Proposal.

The proposal is made by the President of the Congress that a boycott of foreign goods should be started as a protest against the Government's decision on the Textile Report. The folly of such an operation, also its futility, has been demonstrated more than once, says the *Pioneer*, and it may be assumed that no such attempt will be made even by so discredited a body as that over which Mr. Srinavasa Iyengar nominally presides. The account of the opening of the advertising Exhibition at Olympia gives Indian business men a far more useful hint than that thrown out by Mr. Iyengar. "Buy British Goods" is the motto adopted at Olympia—and by British is meant Empire, which therefore includes "Indian goods." If the advantages of purchasing goods made in Indian mills were pressed upon public notice in the manner attempted at Olympia something really constructive would be done to hearten a depressed industry. A boycott can only be destructive and therefore is a thankless weapon from the practical point of view.

India and Prohibition.

The contention of a temperance advocate that "Calcutta must go dry," has elicited some interesting statements destructive of the absurd doctrine that intoxicating liquors were introduced in India from the West. For instance, Bepin Chandra Pal writing in the *Englishman* says:—"We are apt to fancy that indulgence in various kinds of wines

and liquors is a peculiarly European vice. But those who have the most superficial acquaintance with the history of Buddhistic India know that during the hey-day of India's material prosperity and imperial expansion, the upper classes of Indians, living in cities in the midst of the splendours of a highly refined, and exceedingly affluent civilisation, were as much used to wines and liquors as the modern European. We read, thus, in the *Kama-Sutra*, attributed to the sage Batsyana, who is believed to have lived during the domination of the Nanda dynasty, that decanters and teapots formed essential parts of the household furniture of respectable citizens, and it is enjoined as an obligatory wifely duty that as soon as the husband returns home after his day's work in court or camp or mart, the wife must meet him at the door of the reception-room with a goblet of wine in her hand. Decanters filled with sweet-scented liquors are mentioned as part of the furnishing of every high-class home. The picture of luxury and the general enjoyment of the flesh, though certainly of a highly artistic character, in this old record is really not much different from the picture of social or domestic life of modern Europe, I would say, of the Victorian era. The later emphasis on monkish asceticism had not as yet entirely captured Indian life and culture. And from this evidence one can easily infer that India never was so ascetic as we are inclined to fancy from later reactions.

NEWS IN BRIEF.

It is announced that pending the introduction of a complete scheme for the provision of passage facilities for Indian officers of the I.M.S. on study leave, the Government of India have decided that an officer of the I.M.S. of Asiatic domicile, whether in military or civil employ, who has already attained the rank of Major, or who is likely to attain that rank before the full scheme is brought into force, will be allowed one free return passage to the United Kingdom when granted study leave.

The following official telegram has been received by the Secretary of State for India:—Rainfall, week ending July 6. Normal: Lower Burma, Orissa, United Provinces (East), Punjab (East and North), North-West Frontier Province, Central India (West), and Hyderabad (North). Fair: Upper Burma, Bengal, Chota Nagpur, United Provinces (West), Gujarat and Central Provinces (East). Scanty: Bay Islands, Behar, Punjab (South-West), Kashmir, Baluchistan, Rajputana (West), and Central India (East). Excess elsewhere. Monsoon fairly active.

The third annual dinner of the 8th Punjab Regiment was held at the New Criterion Restaurant on July 6. Lieutenant-Colonel Sir H. D'U. Keary presided, and the following officers were present:—Major-General E. S. Hastings; Brigadier-General S. Geoghegan; Colonels G. Oldfield and W. S. Prentis; Lieutenant-Colonels N. C. Taylor and W. S. Scruby; Majors J. C. Brewer, W. Lovat-Fraser, W. L. B. Chapman, and C. E. Fox-Male; Captains Southern, Trevelyan, D. L. Lalor, M. H. A. Campbell, A. J. Bourke, and A. F. Russell; and Messrs. J. S. Garrett, G. H. Cooke, J. A. Andrews, J. H. Rigg, and H. Sandys Pemberton.

The High Commissioner for India has placed with the British Thomson-Houston Co., Ltd., the order for the complete sub-station and track sectioning equipment for the electrification of the main lines of the Indian State Railways from Bombay to Igatpuri and from Bombay to Poona, which is being carried out to the plans of Messrs. Merz and McLellan.

The result of the spinning and weaving in Indian cotton mills in March last, issued by the Department of Commercial Intelligence, shows that the total quantity of yarn spun amounted to 70 million pounds and that of woven goods to 45 million pounds, as compared with 66 million and 42 million pounds, respectively, in the corresponding month of the preceding year, which is an increase of 6 per cent. in the case of yarn, and 9.6 per cent. in the case of woven goods.

OBITUARY.

MR. E. B. ALEXANDER.

Mr. Ernest Bruce Alexander, late of the Indian Civil Service, died at Limsfield on July 2. Mr. Alexander, who was the youngest son of Mr. William Stuart Alexander, a former Bengal Civilian, arrived in India in 1871. He served in the United Provinces, where he became a Commissioner in 1896, and he was for a time Secretary in the Judicial Department. Mr. Alexander retired from India in 1903.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

Egypt and Lancashire.

A few months ago Egypt was the scene of the International Cotton Congress, and King Fuad's visit to Lancashire will afford the cotton county an opportunity of returning the hospitality which was so generously shown to its representatives in Egypt. The visit is important as emphasising the intimate link which exists between the chief producing country of the Sakellarides cotton and the principal consuming centre of it. At the time of the Congress the cotton position generally was under a cloud, but since then conditions have undergone a marked change, and various factors have combined to produce a more healthy situation with the result that the demand for cotton is now much more substantial and prices are now considerably higher than they were a few months ago. The change means much to Egypt just as the improved demand for cotton goods does to Lancashire—a demand which, it may be added, is much in evidence for the Egyptian market among other outlets—so that King Fuad's visit will be made at a fortunate time when the outlook both for Egypt and Lancashire is brighter than it has been for a very considerable period.

Roumanian Railway Reorganisation.

It is probable that there is an inadequate realisation of the difficulties with which Roumania has been faced in the reorganisation of the railways since the Armistice. A brief statement I have recently received on the position is, I think, worth summarising. The situation of railways in the country at the conclusion of hostilities, it is pointed out, may be judged by the fact that of all the locomotives numbering 1,653 only 381 were effective. The permanent way was so derelict that the maximum speed in many cases was reduced to 10 kilometres an hour, while the rolling stock consisted of a heterogeneous collection of trucks from neighbouring states. In addition to this, the existing lines of the newly acquired provinces did not in many cases connect with the main systems, and were of different gauges. The last seven years have seen considerable progress. Material has been standardized; the number of types of rails have been reduced from 48 to 4. The broad gauge of the Bessarabian lines has been reduced to normal, thus abolishing three transshipment points. Defence works against floods have been erected; tunnels, embankments and bridges strengthened. The old timber sleepers have been replaced, the number of sleepers used on the whole system rising from 150,000 in 1919, to 1,461,000 in 1926. Five new lines have been constructed connecting the new provinces in the Old Kingdom. The stations destroyed by the War have been rebuilt, and other existing stations enlarged. The locomotives now number 4,320, of which 2,073 are in use including electrical machines for the electrified portions of the system. The staff which consisted of 74,547 in 1920 numbered 120,716 in 1926, and an interesting feature in the new organisation is the adoption of a bonus scheme depending on the improvement of traffic, payable to all employees. This short description serves to show the difficulties encountered and the results achieved. More confidence would be felt, however, if the traffic returns for the last few years had shown a consistent tendency to improve, but as a matter of fact the figures for 1926 were, taken as a whole, inferior to those of the two previous years. It must obviously be the first task of the new Government to speed up the process of reconstruction.

Phoenix Oil and Transport.

A great improvement in results is shown in the report of the Phoenix Oil and Transport Company. The profits for the year ended December 31 last were £428,719 as compared with £284,231 for the previous year, and including the balance brought forward the available total is £624,558. This total obviously would have justified an increased distribution under normal conditions, but the directors, in view of the existing world oil situation, prudently decided on a conservative policy. In addition to the provisions for depreciation in the accounts of allied companies, it is proposed to transfer £100,000 to an investment reserve account, and a final dividend is recommended of 6d. per share on the £1 shares, and of 3.4654446d. per share on the 1s. shares, leaving £208,213 to be carried forward. The production figures of the Phoenix group are most impressive. For 1926 the output was 360,231 tons, against 262,300 for 1925; 187,904 for 1924; 105,259 for 1923. and 42,106 for 1922. For the first six months of the current year the production was 200,718 tons, as against 161,478 for the first half of 1926, so that it is evident that the figures for 1927 will show a further substantial advance. The outlook for the company is evidently bright, especially as in the present year it will benefit by the substantial reductions in the Roumanian export taxes and railway freights, and when the turn in oil prices comes shareholders may anticipate distributions on a much larger scale.

Conditions in Persia.

A very interesting review of the past year in Persia was given by Sir Hugh Barnes at the general meeting of the Imperial Bank of Persia in the course of which he paid a tribute to the Shah's gifts as a statesman and administrator. One of the developments for which the Shah has been responsible is the improvement of the roads which has been followed, needless to say, by a great increase in motor traffic. Only a little time ago, as a writer in these columns showed, a journey by motor in Persia was a distinct adventure, and the change that is coming over the scene is indicated by the fact that there are now motor 'buses in Teheran. Another interesting development to which reference was made is a survey that is being carried out by American engineers for a railway line from Teheran to Khur Musa on the Persian Gulf not far from Mohammerah. If such a railway is possible it will mean, Sir Hugh Barnes pointed out, that goods can be landed in Persian territory. The route, however, lies across the

BANK OF ROUMANIA LIMITED

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.

A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

hilly Luristan country so that the cost of the line will be considerable and while Persia's revenues are steadily increasing it is obvious that the necessary expenditure would have to be met by a loan, the prospects for which would naturally depend on the outlook for such an undertaking.

The Position in Turkey.

The report of the Ottoman Bank is of special interest because the results are to some extent a reflexion of the conditions ruling in Turkey. For the past year the bank made a profit of £242,613, and it is now resuming the payment of dividends after an interval of six years with a distribution of 5s. per share or $2\frac{1}{2}$ per cent. Of the surplus £100,000 is allocated as provision for contingencies, leaving £27,653 to be carried forward as against £10,000. At the meeting Sir Herbert Lawrence devoted considerable attention to the position in Turkey. During the past year, he pointed out, the country has maintained the steady effort towards economic development to which the new regime has from the first devoted itself. The Government has rightly concentrated on the encouragement of agriculture as being the foundation of the country's economics, and whereas in 1925 Turkey imported 77,000 tons of wheat the imports in 1926 were only 10,000 tons. The areas sown were again increased in 1926, but the harvest was somewhat below the yield of 1925 owing to a persistent drought. The monetary policy of the Government received a well deserved eulogy. "The Government of the Turkish Republic," said Sir Herbert Lawrence, "has continued to adhere to the monetary policy which it has laid down, and even during the time of its greatest difficulties it has refrained from the expedient of increasing the fiduciary circulation." It is to be regretted that the authorities have not been equally circumspect in their debt policy, and it can only be hoped that the negotiations which continue in progress will at long last result in satisfaction for the bondholders.

COMMENTATOR.

The second International Fair of Salonika is to be held from September 18 to October 3. The fair is being organised by the Greek Ministry of National Economy, with the support of the Municipality of Salonika, and the Chambers of Commerce of Salonika, Athens and Piræus, etc. Machinery textiles and leather goods will be among the principal exhibits.

The preliminary statement of the Imperial Bank of India for the half-year to June 30, 1927, shows a net profit of Rs. 76,15,200, as compared with Rs. 74,27,300 for the first half of 1926. With Rs. 9,49,600 brought in there is available Rs. 85,64,800. The Governors have declared a dividend at 16 per cent. per annum, tax free, which again absorbs Rs. 45,00,000, and have transferred to the reserve fund Rs. 7,50,000, against Rs. 10,00,000. After placing Rs. 3,00,000 to the pension fund the carry-forward is Rs. 30,14,800.

NEAR EAST MARKET REPORTS.

The current issue of the monthly review of Barclays Bank Ltd. contains the following reports:—

The Sudan.

Khartoum, June 28.—The market for cotton piece-goods is dull and though stocks are dwindling, demand is slack. Business in other imports is also quiet and no improvement is expected until after the rains. Coffee shows a further decline to 330 piastres per kantar and the new crop is expected to open at 300 piastres. The gum market shows improvement. Arrivals are slackening and buyers abroad are offering better prices, although demand is not strong. Present prices are 39s. 6d. natural Kordofan, 41s. 6d. cleaned, per cwt. c.i.f. United Kingdom. Cotton picked to the end of May amounted to 141,000 bales Sakel and 15,000 bales American. The general situation is unchanged since last month.

Egypt.

Alexandria, June 15.—The cotton futures market is fluctuating, but both in spot and futures little interest is shown by traders. At the moment, Sudan Sakellarides seems to be preferred to the Egyptian variety. Stocks amount to 2,900,000 kantars, against 1,800,000 kantars last year. The local consumption of cottonseed has increased considerably, and local mills are shipping more oil and cakes than in previous years. The demand for cotton goods has slightly improved, owing to native holidays. The flour market is very weak and consumption has decreased.

Palestine.

Jerusalem, June 29.—Business conditions remain quiet and show little change from one month to another. The sugar market lacks activity, whilst the tone of the coffee market is distinctly dull. In the flour market, business is restricted.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia for Bombay (Birkenhead, July 23). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Media for Calcutta (Birkenhead, July 21).

Bibby Line.—S.s. Lancashire for Port Said, Colombo, and Rangoon (Birkenhead, July 27).

British India Line.—S.s. Morvada for Colombo, Madras, and Calcutta (London, July 16); s.s. Gamaria for Bombay and Karachi (London, July 23).

Cunard Line.—S.s. Tyria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement offers (Liverpool, Glasgow and Swansea, July 23); s.s. Sea Victory for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz and Ancona if inducement (Liverpool July 23, Swansea July 26).

Johnston Line.—S.s. Aviemore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 30); s.s. Jessmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 3).

P. and O. Line.—S.s. Kaisar-i-Hind for Bombay (London, July 15).

Prince Line.—S.s. Soldier Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, July 20); s.s. Korean Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (London, July 27).

Ellerman and Papayanni Lines.—S.s. Lesbian for Algiers*, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, July 16); s.s. Mardinian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, July 29). * Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek out-ports via Piræus or other convenient port; Fiume via Trieste.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended June 20 amounted to £E6,932, making the total for the year £E58,743.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, July 12.

The Commonwealth of Australia £7 millions loan, to which further reference is made below, came as a surprise to the Stock Exchange, and is responsible for the slight setback which occurred in the prices of gilt-edged securities. In recent weeks the gilt-edged market has faced with equanimity the competition of a stream of new capital issues, and has remained quite firm despite the less favourable outlook in regard to monetary conditions. But last week witnessed a distinctly weaker tendency, which spread to first-class investment stocks generally. Speculative markets in the Stock Exchange have been under the influence of the disturbance caused by the recent slump in British Controlled Oilfields preferred shares, but well-informed observers on the Stock Exchange are of opinion that no serious effects are likely to make themselves felt. In the meantime, however, the uncertainty has produced a general slackness in markets which will no doubt soon become accentuated by the approach of the holiday season. A feature of the new issue market has been the rapid over-subscription of the City of Berlin loan for £31 millions, allotments of which are understood to be on a very small scale.

Australia's Borrowing.

The Australian loan issued last week is of exceptional interest, for it is the first to be raised by the Commonwealth as the central borrower. It is true there has previously been co-operation between the Commonwealth and certain States in borrowing in London. But this week's issue is the first to be made under a recently-formulated scheme of co-ordinated borrowing which should be welcomed by the British investor. In this country there has been a tendency to regard with some alarm the volume of Australian borrowing, while it is held that adequate measures have not been taken to ensure the redemption of the debt. The new scheme of borrowing has been framed with a view to meeting these criticisms. In future all borrowing on behalf of the Commonwealth and the States will be subject to the approval of a co-ordinating body—namely, the Loan Council—which consists of one Minister of each State. A particularly hopeful feature is that New

South Wales has decided to co-operate with the other States. Provision is to be made for sinking funds. The Commonwealth will take over the State debts and will establish a sinking fund sufficient to redeem them in fifty-eight years. With the future loans it is proposed that there shall be a sinking fund of half per cent. Mr. Bruce attaches great importance to the scheme and believes that it will raise Australia's credit in the financial centres of the world. In this country it is hoped that it will promote judicious borrowing and wise methods of debt redemption.

Rubber.

The persistent weakness in the price of rubber, the commodity, is a development which is puzzling even to the experts. During the past three weeks stocks in London have been reduced by 3,500 tons, a fact which should have helped to stiffen the selling price. But at the moment there is no definite direction of increased consumption and until that is forthcoming the present uncertain and hesitant movements in the price of the commodity must be expected to continue. In the meantime it is estimated that effective unused coupons in Malaya will probably have been exhausted by the end of the current restriction quarter, i.e., the end of this month, while the recent cut to 60 per cent. in the exportable allowances should soon begin to produce a more tangible effect on the statistical position. On the other hand, the figures of exports of rubber from the Dutch East Indies for the first four months of 1927 show an increase of 21,000 in comparison with the same period of 1926, a development which was unexpected. The share market may be said to be marking time, pending the development of a definite tendency in the raw material, and holders of good-class rubber shares must exercise patience.

The Discount Companies Shares.

The discount companies have made no changes in their interim dividends. It is true that the past half-year, owing to the somewhat disturbed conditions obtaining in the Money Market, has not been exceptionally profitable. But it is not the practice of the discount companies to distribute up to the hilt, although they have substantial reserve funds. Moreover, it seems likely that the next half-year will prove to be distinctly more profitable. The investment merits of the shares of the discount companies are less widely known than they deserve to be. These institutions, which carry on a highly specialised business, form an integral part of the London Money Market; and in view of the fact that London is expected to retain—at least for some time—its pre-eminence in this field of activity, the discount companies appear to be assured of a future.

The National Discount Company has for some years distributed 10 per cent. The ordinary shares, in denominations of £2½ fully paid, give a return of £5 12s. per cent. The Union Discount Company has paid an ordinary dividend of 20 per cent. in recent years. A yield of £5 12s. per cent. is obtainable on the ordinary shares—in denominations of £5 with £2½ paid. Alexanders Discount Company has also distributed 20 per cent. to ordinary shareholders. These shares, however, carry a heavier capital liability, being in denominations of £10, with £5 paid and this is reflected in the higher yield of £6 5s. per cent. The uncalled capital liability on these shares need not be a deterrent and the shares should be good for moderate capital appreciation.

Col. the Hon. Sidney Cornwallis Peel, D.S.O., has been appointed a director of the Westminster Bank Ltd.

The Eastern Telegraph Company's cable ship *Levant* has just arrived at Constantinople in connexion with the restoration of submarine telegraphic communication with Turkey. Since the War Turkey's submarine cable communications have been shut off. A concession has just been ratified for thirty years by the Turkish Parliament, and very shortly Constantinople will again be linked up to the Eastern system—which means the world.

THE BULGARIAN TOBACCO TRADE.

(From Our Sofia Correspondent.)

The tobacco trade in Bulgaria to-day is suffering from the effects of a crisis resulting from numerous factors. The most important of these are the unduly rapid increase in production not only in Bulgaria but also in neighbouring countries, the economic and financial crisis which prevails in some of the consuming countries (Germany and Poland) who have had to restrict their imports, and finally the poor quality of certain crops, notably in 1924.

These developments have had two results. In the first place considerable stocks have been accumulated in this country and abroad, and this has had a pronounced influence on production and on the purchase of tobaccos of the new crop. Secondly, tobaccos of an inferior quality, produced in the plains of Philippopolis, Haskovo, Stara-Zagora, and North Bulgaria, have been less and less in demand because they are subject to very severe competition by the similar products of other countries (especially America and China), which are thrown in abundance and at low prices on the foreign markets. On the other hand, the tobaccos of good quality, which possess particular characteristics and cannot be easily replaced, have continued to meet with a considerable demand and have been practically unaffected by the present crisis.

As regards the 1926 crop, estimated at 24 million kg., the attention of buyers has consequently been chiefly directed to the superior tobaccos of the regions of Bulgarian Macedonia (Gorna Djumaya, Nevrokop, Melnik, and Petritch), of Doupnitza, Philippopolis, and Bulgarian Thrace (Kirdjali and Kouchoukavak). It can be said that the greater part of these tobaccos has been sold and at prices which have given every satisfaction to the cultivators, and which in certain regions even, as in Thrace (for the "Basma Djebel") and in Macedonia (at Melnik), the prices have much exceeded those of recent years.

On the other hand, as regards the inferior tobaccos, produced in the plains, the crisis is manifested in an intense manner, and large quantities of the tobaccos still remain in the hands of the cultivators. Prices have been

ruling which have not given satisfaction, and it is probable that the cultivation of these tobaccos will be restricted.

As regards the disposal of Bulgarian tobaccos, some important sales have been transacted in recent months which have improved the situation a little. Among the most important transactions may be cited the purchase by the Austrian Régie of about 3 million kg., of the Polish Régie of a million kg., and of the Italian Régie of more than a million kg. These sales are almost wholly of tobaccos of the best types, of which the price has appeared to be stabilised for some time. The results are now being awaited of the adjudication of tobaccos in Czechoslovakia, whose needs of Eastern tobaccos amount annually to about 10 million kg.

It may be foreseen that the demand for tobaccos of good quality will continue to be keen, especially as the crop of 1926 is of an exceptional quality. The disposal of the inferior tobaccos will, however, be difficult for the reasons already mentioned.

CHESS.

By "CARO-KANN."

The solution to last week's end-game is as follows:—
1 . . . R—K6 (ch); 2, K—B2, RxP; 3, P—Kt 6, R—R; 4, P—Kt7, R—Kt; 5, P—R6, B—Q5; 6, K—Q3, B—R and the game must be drawn for the pawn at Kt7 will fall and the Bishop will prevent the rook's pawn from queening.

Black to play. What result?

The end of this week will see the end of the close season in the chess world for a couple of weeks, for the international tournament begins at the Central Hall, Westminster, on Monday next, to say nothing of many other tournaments. In my view the British team has as good a chance of success as any, but if the teams were at least ten a side I think victory for us would be a certainty.

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Company, Bucharest, for June was 51,240 tons, bringing the total production for the half-year to 250,451 tons as compared with 173,011 tons for the corresponding period of 1926.

The directors of the Westminster Bank Ltd. have declared an interim dividend of 10 per cent. for the half-year ended June 30 on the £20 shares, and the maximum dividend of 6½ per cent. on the £1 shares for the same period. The dividends, 10s. per share and 1s. 3d. per share, respectively (both less income tax), will be payable on August 2.

The Yugoslav Minister of Communications has been granted a credit of 150,000,000 dinars (about £546,000) for the construction of the second section of the railway which is to link Belgrade with the Adriatic—namely, the section Prishtina-Drejenitsa (says a Reuter message). Work has already begun.

Company Meetings.

IMPERIAL BANK OF PERSIA.

Trade Conditions in Persia.

Sir Hugh Barnes' Speech.

The thirty-eighth ordinary general meeting of the Imperial Bank of Persia was held on July 6 at Cannon Street Hotel, E.C. Sir Hugh S. Barnes, K.C.S.I., K.C.V.O. (chairman), presided.

The Manager (Mr. Sydney Rogers) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Gentlemen,—I do not think I need occupy your time for very long to-day, for our recommendation of a bonus or 1s. a share in addition to a dividend equal to that which we declared last year has, no doubt, assured you that all is well with the bank. But before I discuss this and the report and accounts, which I assume I may take as read, I will, as usual, refer very briefly to the outlook in Persia during the past 12 months. Not that there is much to tell you, for, apart from the Coronation of his Majesty the Shah, which was solemnised with much pomp, ceremony, and enthusiasm in April, 1926, the past year, with one or two exceptions, has not been marked by any very important occurrences.

It was hardly to be expected that the first year of the new dynasty would pass without some challenge, and in July last disturbances broke out among the troops in the neighbourhood of Meshed, which, at the time, gave rise to much anxiety in Teheran. But with his usual courage and promptitude the Shah proceeded in person to Meshed, and, with the arrest of the Army Commander, order was soon restored.

There were also rumours of similar trouble in Azerbaijan owing to the pay of the troops being in arrears, but here also the Shah's personal influence was successfully exercised, and the bank, I am glad to say, was able to be of some assistance by advancing to the Army Department the money temporarily required. In other directions, also, the Shah has continued to display unusual gifts as a statesman and administrator. He has insisted on the improvement of the roads, with the result that there has been a remarkable increase in the use of motor transport throughout the country.

It is also reported that a German company has obtained a concession for an aeroplane service between Teheran and Baku; and a party of American engineers are carrying out a survey for a railway to Teheran from a place called Khur Musa on the Persian Gulf, a small port, or rather a site for a port, not far from Mohammerah, which is said to be capable of development. If this development proves to be possible it would mean that imports by sea could be landed in Persian territory at railhead without entering the Shatt-el-Arab or passing through Iraq territory. The cost of the railway proposed will be considerable, as the Luristan country through which it will pass is a jumble of hills, and unless the Persian Government propose to wait until they have accumulated sufficient money out of revenue, it is difficult to see how funds for its construction can be found otherwise than by raising a loan. Persian revenues, however, have been steadily improving under the management of the American advisers.

A Satisfactory Harvest.

It is pleasant to record that the harvest during the past year has proved to be a satisfactory one, and the prospect for Persian trade would be favourable if it were not for the embargo imposed by the Soviet Government on imports from Persia into Russia, to which I alluded last year. As the dispute about the fishery rights on the Caspian shore is still undecided, the embargo has been maintained.

The trade figures for the past financial year are not quite so good as in the previous year. Imports total tomans 79,000,000 against tomans 88,000,000 in 1925-26, a reduction of Ts.9,000,000. The export figures are Ts.110,000,000, against Ts.104,000,000 in the previous year. The increase of Ts.6,000,000 is due to the larger export of oil products: exports of other commodities have fallen by Ts.6,000,000 owing no doubt to the embargo imposed by the Russians.

From the point of view of the foreigner, the most startling event of the past year has been the announcement by the Persian Government of their intention to abolish the so-called capitulations, under which civil and criminal cases in which foreigners are concerned are tried before an official representing the Persian Foreign Office in each district, who is known as the Karguzar, with the foreign Consul concerned sitting as assessor. The Persian Government propose to effect their object by giving notice of the termination at the end of a year of their various treaties with the United States and the European Powers, when the Karguzari Courts will be abolished, and all cases will come before new civil and criminal courts established by the Government.

Every one will sympathise with the desire of the Persian Government to prove that they are not behind other nations in their power to establish a system of law and courts of justice under which foreigners may be confident that cases in which they are concerned will receive a fair and impartial trial; but I think you will agree that, obviously, the proof will require time.

It is probably not advisable that I should say more at present. The matter is certainly engaging the careful attention of our Foreign Office, and, with good will on both sides, a satisfactory settlement will no doubt be arrived at.

If you will now turn to the balance-sheet, the most noticeable

figure to which I would draw your attention is the increase in the total to £12,358,907 18s. 3d., as against £9,682,404 last year. This indicates a very satisfactory increase in the bank's business, and I do not think the changes in the other figures need much further explanation. The chief alterations are a rise of £1,640,668 in the total of the deposits, and an increase of no less than £1,820,847 under the head of bills discounted. The increase under bank premises, despite our having written off £30,000 in the past year, is owing to the extensive building operations which we have recently been compelled to undertake. Our Teheran house—an old Persian palace which was formerly in the occupation of the Oriental Bank—has served us fairly well during the past 38 years, but is now quite unfitted for the requirements of our chief office. The necessity has arisen to demolish the old building and erect up-to-date banking premises more worthy of our position as the State Bank, and of the exceptionally fine site which we possess.

Increased Net Profit.

The profit and loss account needs no explanation. The net profit amounts to £135,366 18s. 2d., an increase of £5,965 over last year's figure of £129,401, and after the allocation of £50,000 to the reserve and £30,000 to bank premises account, we propose to pay you a final dividend of 6s. a share, making 10s. per share for the year, free of tax, and also to distribute a bonus of 1s. a share, free of tax, which will absorb £5,000. Our carry forward, if these proposals are approved, will be £34,334 12s. 3d., against £33,967 14s. 1d. I hope you will consider this satisfactory. (Hear, hear.)

In conclusion I would like to express, and to ask you to join me in expressing, the board's appreciation of the work of the management and staff, both here and in Persia. Mr. Wilkinson, our new chief manager in Teheran, has fully justified his appointment; and I feel sure you will note with interest and approval that in consideration of his long and useful service in the bank we have appointed our London manager, Mr. Rogers, to a seat on the board. (Hear, hear.) We propose, with your consent, to grant to the staff the usual annual bonus of 10 per cent. on their salaries.

I now beg to move:—"That the report and accounts as rendered to March 20, 1927, be adopted, and that the final dividend of 6s., plus 1s. bonus, per share, payable free of tax, be and they are hereby confirmed." I will ask Mr. Hawkins to second that.

Mr. V. A. Caesar Hawkins seconded the resolution.

The Chairman: Before I put the proposition to the meeting I will ask whether anybody desires to put any questions.

Mr. Wilson said he was sure that all the shareholders had listened with great interest to the chairman's speech, and that they would join with him in congratulating the board, the management, and the staff, both at home and abroad, for the way in which they had handled the company's affairs during the 12 months under review. He was also sure that the shareholders would cordially confirm the bonus which had been granted to the staff. At the general meetings kindly things were usually said about the chairman and directors, but he thought the time had come when they should go a step further and in fact translate words into deeds. He had been making inquiries lately and found that when the bank was started the board controlled a small head office in the City and 10 branches abroad. To-day the board controlled a fine head office in the City and 28 branches abroad. He also found that at the inception of the bank the remuneration of the board was a lump sum of £5,000, less income-tax at about 1s. 2d. in the £. To-day the remuneration remained at £5,000 but the income-tax deducted was 4s. in the £. In view of the good report presented and the satisfactory dividend which the shareholders were receiving, he proposed that, in addition to giving the directors a cordial vote of thanks, their remuneration should be increased from £5,000 a year, less tax, to £7,500 a year, less tax, the increase to begin with the commencement of the current year.

Mr. Fulton said he would like very much to second the proposal put forward by Mr. Wilson.

A Loyal and Efficient Staff.

The Chairman remarked that he was very much obliged to Mr. Wilson, both on behalf of his colleagues and himself, for his very kind reference to the board, for which they were very grateful, and also for what he had said about the staff. The staff was one of the most loyal and efficient possible, and he knew that it was a very great pleasure to them to feel that the shareholders, at these annual meetings, appreciated the work they had done. With regard to the suggested increase in the fees of the directors, that was naturally not displeasing to them, but he was afraid that on this occasion any proposal of that kind was out of order because no notice had been given. It would require notice to the shareholders.

Mr. Joseph Nissim said he hoped the proposal would be carried out, because the shareholders wished to express in a practical form their appreciation of the splendid services of the board during the last 30 odd years. It was obvious to anybody that the balance-sheet was one of the strongest and soundest that it had yet been the good fortune of the board to submit, and it was all the more satisfactory because the record figures of last year were easily exceeded this year. There was a growth in every item of importance, as the chairman had pointed out—in the notes in circulation, the deposits, and the facilities offered to the bank's clients. Judged by every test, the balance-sheet was one for which the shareholders felt exceedingly grateful, and it was peculiarly appropriate that on an occasion such as this their able London manager, after 10 years of hard work, should have been given a seat on the board.

The Chairman said he was much obliged to Mr. Nissim for his kind remarks, and he desired to thank Mr. Wilson for having so kindly brought the matter forward. The board would certainly give notice of the proposal for the next meeting.

The resolution was then put to the meeting and carried unanimously.

Colonel Sir A. Henry McMahon, G.C.M.G., G.C.V.O., K.C.I.E., moved the re-election of the retiring directors, Mr. V. Caesar Hawkins and Mr. E. A. Chettle.

Mr. D. Gubbay seconded the motion, which was unanimously agreed to.

Mr. Fulton moved the reappointment of the auditors, Messrs. Kemp, Chatteris, Nichols, Sendell and Co.

Mr. E. C. Dalton seconded the resolution, which was carried unanimously, and the proceedings terminated.

THE P. AND O. BANKING CORPORATION.

Trade Conditions in the East.

Lord Inchcape's Speech.

The seventh ordinary meeting of the P. and O. Banking Corporation, Limited, was held on July 8 at 122, Leadenhall Street, E.C. The Right Hon. the Viscount Inchcape, G.C.S.I., G.C.M.G., K.C.I.E. (chairman of the corporation), presided.

The Secretary (Mr. Charles Selbie) having read the notice convening the meeting and the report of the auditors,

The Incidence of Exchange Rates.

The Chairman, examining the figures of the balance-sheet, said that the changes in the rates at which they had converted into sterling their assets and liabilities at their Indian and China branches rendered it difficult to compare this year's figures with previous years'. These rates of exchange applied mainly to such items as current and deposit accounts and to loans and overdrafts at those branches. Those in rupee currency they had valued this year at 1s. 6d. instead of 2s. as in previous years, bringing their rate for the rupee into line with the rupee's new statutory rating. For their assets and liabilities at Shanghai and Hongkong branches they had adopted 2s. 6d. and 2s. respectively, instead of 3s. 4d. and 2s. 4d. as in previous years, but their investment in the Allahabad Bank remained at 1s. 5½d., the rate they paid to remit sterling for the purchase of their holding in that Bank.

The adoption of these new rates, of course, reduced the sterling equivalent of the items to which they applied. For instance, their current accounts and deposits would have stood, if converted at last year's rates, a million higher than the figure appearing in the balance-sheet, so that shareholders would see that good progress had been made in that branch of the bank's business. Against this liability they had, in cash or with their bankers, in money at call and short notice, or in bullion, £1,655,344, representing a liquid position of 10 per cent. of liabilities at call or on deposit. Loans payable against security, at £3,833,419 showed a decrease, but

their acceptances and endorsements had increased from £667,859 to £1,074,825. Bills for collection showed a decrease at £459,564.

Conditions of Eastern Trade.

On the assets side, bills in their portfolio stood at £4,309,304, a slight increase on the previous year. Their investments had increased from £1,613,324 to £2,297,568. Their holdings were all in first-class investments, mostly Indian Government securities and Port Trust debentures. Conditions in India during the year had favoured a larger investment of banking funds in first-class securities. The movement of banking funds towards the security market in India to which he had referred last year had continued, not only because of the improved conditions of the Indian Government finances, which had resulted in a sensible appreciation of all their stocks, but also largely because trade requirements for bank advances had been affected by the fall in prices of many of the leading Indian commodities. This same cause explained the falling off in their advances to customers.

Bank premises at £182,372 showed a considerable increase. They had completed the purchase of their premises in Bombay which stood in their books at less than cost.

Steady Progress of the Bank.

They had made good and quiet progress during the year, despite the general strike and the coal strike and the chaotic conditions in China. The Board felt, however, that it was prudent, in view of the uncertainty in the Far East, to make provision for contingencies, and for this reason they had transferred £20,000 from this year's profits to Contingency Reserve. He hoped that when they next met a clearing up of the uncertainties in China would have justified the transference of this amount to their reserve.

Trade in India, in spite of the good monsoon, had not been active. Prices of commodities fell heavily in the early part of the year under review, particularly jute and cotton, and the accommodation required by the trading community had not been on the scale anticipated. In the Straits the fall in the price of rubber had been accompanied by a smaller demand for bank accommodation. Generally, there had been a marked decline in the turnover of bills remitted home from the East, partly attributable to the lower prices ruling for commodities produced there. Eastern banks had placed a smaller number of commercial bills on the London market, and the decline in the amount had been prominently commented upon on more than one occasion in the last year.

Thanks to the Staff.

He was sure that they, the shareholders, would wish their thanks to be conveyed to those at home and abroad entrusted with the management of their affairs. The year had been a year of difficulty, calling for prudence and constant effort, and the Board were indebted to their staff in London and the East for the care and attention they had given to the bank's business.

The Allahabad Bank.

He was glad to add that the Allahabad Bank, Ltd., was making quiet and satisfactory progress. They had sustained a heavy loss in the death of their General Manager, Mr. Alexander Bowie, but he felt sure that Mr. Bowie's successors would maintain the policy of sagacious development which he initiated during his tenure of office.

Conservative Policy.

Continuing, his lordship said their motto throughout was "Safety first," and this was adopted by all their managers both at home and abroad. The bank had been in existence now for seven years. They had paid away in dividends, including that now recommended, over £714,000; they had placed £180,000 to reserve, excluding the £20,000 now proposed to be carried to Contingency Account. Their current accounts in London and abroad totalled over 6,000, which was not bad, starting as they had done from zero. Their endeavour was to be accommodating to those who did business with them, and so far as they could see, the P. and O. Banking Corporation had a future before it if the conservative policy of the Board was supported by the proprietors, as he was satisfied it would be. At the same time he would like to warn the shareholders that they must not expect any increase in the dividend now recommended for some years to come. The Board's disposition was to build up their reserves and to look to the future.

The Chairman concluded by moving: "That the directors' report and statement of accounts for the 12 months ended March 31, 1927, be, and the same are hereby adopted."

The Rt. Hon. The Earl of Selborne, K.G., G.C.M.G., seconded the resolution, and it was carried unanimously.

The Chairman then moved: "That a dividend of 5 per cent. per annum, less income-tax at 3s. 8.50d., on 249,416 shares be and the same is hereby declared payable on July 15, 1927, to the members who were on the London and Bombay registers of the corporation respectively on July 1, 1927."

Mr. Alastair Campbell (the Deputy-Chairman) seconded the motion, and it was unanimously approved.

Mr. F. A. Johnston said he was privileged to move the next

resolution, which was the re-election of the directors who retired by rotation in the ordinary way. The pleasure he felt in doing so was increased as the names included that of their respected chairman. He moved: "That the retiring directors—namely, the Rt. Hon. the Viscount Inchcape, G.C.S.I., G.C.M.G., K.C.I.E., Sir Montagu Cornish Turner, and Sir Alexander Kemp Wright, K.B.E., D.L., be and the same are hereby re-elected directors of the corporation."

Mr. W. O. Grazebrook seconded the resolution, and it was carried unanimously.

The Chairman returned thanks on behalf of his colleagues and himself.

On the motion of Mr. F. Ritchie, seconded by Mr. W. Langridge, the auditors, Messrs. Peat, Marwick, Mitchell, and Co., were reappointed.

Vote of Thanks.

Mr. E. T. Hargraves said it was with very great pleasure indeed that he rose to propose that a hearty vote of thanks be given to their distinguished friend in the chair for his services now and for his services during the year they had just gone through. He listened with a great deal of interest to the remarks he made, and he was very pleased indeed to note the conservative tone with which he dealt with the matter. So far as he was personally concerned, he should be quite ready to receive 5 per cent. for several years more with the idea that his shares would appreciate in value during the time those dividends were being paid. When he was older than he was now—and he was old enough already (laughter)—he would yet have something which, if it did not come to him, would come in enhanced value to those who came after him. He could only say that all the traditions connected with the P. and O. Company, since his distinguished friend had been its chairman, had been carried on by the Banking Corporation—the traditions of courtesy were being carried on by the Banking Corporation. He had had certain relations with this bank, and they had certainly been satisfactory to himself. He was perfectly satisfied, after what he had heard from the chairman, that after the seventh year they had reached a position which they could not have expected to reach but for that connexion. He had, therefore, very great pleasure in proposing a hearty vote of thanks to the Chairman for occupying the chair to-day and for his very great services to the company during the period they had just gone through.

Mr. J. L. Nissen seconded the vote, and it was unanimously accorded.

The Chairman: Mr. Hargraves.—I have presided at a good many meetings in my time, and I do not think I have ever heard such an extremely agreeable and nice speech as you have made to-day. I am extremely obliged to you, and I am sure all my colleagues and all those concerned with the bank will feel the same. I thank you all for your attendance.

The proceedings then terminated.

OTTOMAN BANK.

Turkey's Economic Development.

The annual general meeting of the Ottoman Bank was held on July 11 at Winchester House, Old Broad Street, London E.C. General the Hon. Sir Herbert A. Lawrence, G.C.B., presided.

The Secretary (Mr. Charles E. L. Corthorn) having read the notice convening the meeting,

The Chairman, in moving the adoption of the report and accounts, said that during the course of the past year Turkey had maintained the steady effort towards economic development to which the new régime had devoted itself from the beginning. The Government, with a true understanding of the structure and resources of the nation, had made the encouragement of agriculture its chief task. There was no doubt that the suppression of the tithe in 1925, followed in 1926 by the suppression of the tax on products of the soil, which at first replaced it, had contributed to the constant increase in areas sown and to the improved yield of the last harvests.

During the agricultural campaign the Ottoman Bank, both directly and through the Agricultural Bank in accordance with their Concession, furnished to cultivators every assistance commensurate with the liquid employment of their deposits.

Judging from statistics at present available, areas sown had again increased in 1926, especially in the productive regions of Adrianople, the Ægean and Marmora coasts, and the Anatolian plateaux of Angora and Sivas. Unfortunately a persistent drought, which lasted until the end of June, interfered with the growth of various cereals. The yield was seriously affected and fell 15 per cent. below the harvest of 1925, which harvest, however, was exceptional and 40 per cent. higher than the average of the preceding years.

Naturally the abundance of the 1925 harvest had a beneficial influence on the general economy of the country; whereas in 1925 Turkey imported for its own consumption 77,000 tons of foreign wheat, in 1926 the imports only amounted to 10,000 tons.

Owing to the unfortunate atmospheric conditions, the crop of Turkish tobacco fell below 40,000,000 kg., whereas in 1924, as a result of the immigration of Mussulman growers from Kayalla and

Seres, it had reached 60,000,000 kg., and more than 50,000,000 in 1825.

The hinterland of Smyrna produced its normal amount of cotton—about 40,000 bales—but Cilicia shows a considerable shortage. Taken in conjunction with the general fall in prices, this local deficit had the effect of aggravating the crisis from which the growers of Adana and Djihan had been suffering for the past three years.

There had been abundant crops of raisins and figs, estimated at the exceptional figures of 40,000 tons and 30,000 tons respectively. The nut harvest on the shores of the Black Sea and the olives in the region of Broussa had both suffered from the temperature. Live stock had at last been reconstituted after the ravages of the War. The figures given in the latest official returns approached those for the year 1913.

Progress had been made in the execution of the railway programme of the Government. The line Angora-Cesarea was recently opened, and the work on the line Samsoun-Sivas was going forward. The Government proposed to prolong the former of these lines to Sivas, and, apart from connexions with the principal systems, it contemplated a line Angora-Heraclea, which was destined to open the markets of the interior to the coal of Heraclea.

As in previous years, the Budget had had to provide from its normal resources a part of the extraordinary expenses which this programme had involved.

The Customs statistics showed that the value of exports rose from 158 millions of Turkish pounds in 1924 to more than 193 millions in 1925, while imports rose from 194 million Turkish pounds to 242 millions.

For 1926 the figures so far published by the Customs administration related only to the first six months. They showed exports at 92 millions of Turkish pounds as against 84 millions for the corresponding period of 1925, and imports at only 107 millions of Turkish pounds as against 118 millions.

Thus exports represented about 46 per cent. of the whole commercial movement, whereas before the War this proportion was estimated at 36 per cent. In other words, it might be said that the deficit of the commercial balance appeared to be continuously reduced. That improvement was partly due to an increase in exports. Last year, for instance, the sale of mohair, which had found interesting markets in the United States, was remarkable, and business had been very active in opium and tobacco in spite of exchange fluctuations.

The Government of the Turkish Republic had continued to adhere to the monetary policy which it had laid down, and even during the time of its greatest difficulties it had refrained from the expedient of increasing the fiduciary circulation. Having decided to replace the old notes issued during the War by new, the Government appointed a Commission, composed of representatives of the principal banks, to draw up the conditions for this exchange. Their establishment, by virtue of its position, had been entrusted with the execution of this operation.

The report was unanimously adopted.

COMPANY NOTES AND REPORTS.

LAKE COPAIS.

The report of the Lake Copais Company, Ltd., for the year ended December 31, 1926, states that the net profit in Greece for the year is £13,217 compared with £7,811 in the previous year. The gross revenue in drachmæ was greater than that of the preceding year, but the continued depreciation in exchange again adversely affected the profits when converted into sterling. The expenses in Greece also were higher than those for the year 1925, due principally to the larger area of land broken up by the Development Department and to the increased cost of labour resulting from the reduction in the purchasing power of the drachma. After transferring £1,500 from reserves, and providing for the interest on the "A" Debenture Stock issued, the balance at the debit of the profit and loss account is £2,629, 8s. 4d. The sum required for the payment of interest at the rate of 5 per cent. per

annum on the "A" Debenture Stock to December 31, 1926, is £12,687. This interest (less income tax) will be payable in fully-paid 5 per cent. "A" Debenture Stock of the company at par, in accordance with the scheme approved by the Debenture stockholders on July 28, 1922.

The principal climatic features affecting cultivation during the year 1926 were the exceptionally dry spring and cool summer, which seriously affected early crop results. The total rainfall for the year was only 22.36 inches, compared with an average of 27.87 inches for the last twenty years. The area of land cultivated was 34,514 acres, being 2,975 acres more than in the previous year. The crops on 3,801 acres failed, due to the drought in the spring and to a shortage of water for irrigation purposes during the summer months. The area from which produce was harvested was thus reduced to 30,713 acres, which compared with an area of 28,003 acres harvested in the year 1925. The prices obtained for produce, with the exception of cotton and maize, compared favourably with those obtained in the previous year. The yields, excepting that of wheat, were even less than those of the poor crop year of 1925. The dry autumn, however, favoured the cotton harvest, and where this crop received adequate irrigation the yields were satisfactory, both in quantity and quality.

The operations in connection with the excavation and ancillary works designed to provide the estate with gravitation drainage were progressing normally and satisfactorily until June 24, 1927, when a serious fall of rock occurred in the outlet tunnel at Karditza. Immediate steps to shore up the damaged arch and to remove the debris were taken. Mr. Halcrow, of Messrs. Meik and Buchanan, the company's consulting engineers is, at the request of the board, leaving immediately for Greece to inspect the tunnel and other works. The capital expenditure during the year amounted to £22,861 15s. 10d., principally in connection with the gravitation drainage scheme. The first option to purchase certain lands granted, under the terms of the Arbitration Award, in favour of the State, expired on July 16, 1926, without being exercised. The second option in favour of local agricultural associations is now running and will expire on July 17, 1928.

The Commission, appointed in the terms of the award to formulate the conditions appertaining to the hydro-electric concession granted to the company, was duly constituted, and issued a decision on November 10, 1926, but this decision has not yet been promulgated by the Greek Government. The Chairman, Mr. W. Sandford Poole, visited Greece in May of the present year for the purpose of inspecting the estate and discussing with the General Manager various important matters concerning the business of the company. The General Manager in Greece reports that, although the area under cultivation is rather less than that of last year, crop prospects are promising.

EGYPTIAN DELTA LIGHT RAILWAYS.

The report of the Egyptian Delta Light Railways for the year ended March 31, 1927 shows gross receipts totalling £342,605, against £369,335. The number of passengers carried was 8,473,992, as compared with 7,968,584. The gross receipts under this head were £209,017, as compared with £231,595. The gross receipts from the goods traffic were £124,871, as compared with £129,247, the tonnage lifted being 565,092 tons, as compared with 582,158. The working expenses amounted to £247,081, as compared with £265,192. The balance carried to net revenue account is £68,523, compared with £104,143, which with interest earned, amounting to £6,649, and with the balance brought forward of £40,245, gives £115,418. After providing for interest on Debentures and for all fixed charges, and making provision for the proportion of the profits due to the Egyptian Government, the balance of £65,019 remains. The board has decided to transfer to the general reserve £10,000 towards capital expenditure, to which the company is committed and recommend the dividend of 2½ per cent. on the Preference shares for the year leaving £29,000 to be carried forward.

Engineering Topics.

A Producer Gas Driven Tractor.

Recently at Greenford, near Ealing, before a number of officials representing various Empire Governments, representatives from overseas of the cultivating groups and others interested in the subject of economical mobile power, a demonstration of the practicability of using, and the efficiency of, common charcoal fuel was given on a Peterbro-Parker producer gas driven tractor.

The tractor had been in the open field throughout the previous night, during cold rainy weather, but, punctually at the appointed time, was started by a single quarter swing of the starting handle. In about twelve minutes the tractor was running on gas, and started ploughing with a Howard three 9 in. furrow plough to a depth of 8 in. to 9 in. on unbroken heavy ground. Ploughing speeds were entirely at the direction of the ploughman, who directed the driver. It may be said that the ploughman had never seen a producer gas tractor before, and the driver had only operated the producer plant on one occasion previously, which speaks volumes for the simplicity of operating producer gas. Ploughing was perfect and the speed normal.

A striking feature was the remarkably quiet regular beat of the engine. Furrow after furrow was ploughed in regular style without the slightest hitch, and except for the lower engine beat and the presence of the generator, no one would have imagined that the work was not being performed on paraffin or petrol.

Subsequently the tractor was raced, and without any effort performed precisely the same work at 5 miles per hour. Ploughing, of course, suffered somewhat at that speed, but the depth remained a constant 9 in., proving the reserve power of the engine. After about two hours' running, the engine was stopped and the generator and scrubbing attachments were opened up and exhibited. In the last chamber not a vestige of dust could be seen, proving the highly satisfactory scrubbing system of the apparatus. Common commercial charcoal only was used: it was not picked or chosen in any way. It was, however, well screened free from dust.

The Peterbro Tractor is the product of Peter Brotherhood, Ltd., of Peterborough, the well-known firm of agricultural engineers, and the producer plant is manufactured by the Parker Producer Gas Plant Company, of London, a firm which has specialised in portable producer plants for transport and tractor work, the gas tractor being the result of collaboration between the two firms. The engine of the Peterbro Tractor is specially designed for heavy duty tractor work with high compression for producer gas. The four cylinders have $4\frac{1}{2}$ bore x $5\frac{1}{2}$ stroke and 25/30 B.H.P. is developed at 900/1,000 revolutions per minute. Cylinder heads are detachable and overhead valves are fitted. All working parts are enclosed and dirt and sand cannot enter—a specially important point for overseas work in sandy areas. Ploughing speeds are 2 and 3 miles per hour at normal engine speed with margin for increase if desired. The sustained drawbar pull, when ploughing, is 1,730 lb. on high gear and 2,600 lb. on low gear. The total weight of the tractor with producer plant is 2 tons 10 cwt. 3 qrs.; of this the

producer plant weighs 3 cwt. 3 qrs., the hopper or generator portion accounting for 2 cwt. The plant weights are, of course, distributed.

The Parker producer gas plant is constructed of welded steel and consists of a hopper, generator, dust box, filter and fan. The hopper, or fuel container, is a gas-tight cylinder, with sloping base, and an aperture which admits fuel into the generator situated immediately underneath. The generator is of simple design, a special feature of it being the refractory lining which has intense heat resisting qualities. The grate and ashpan are also of simple yet highly efficient construction, the former being made of special high resistance steel. The water tank is fitted, when convenient, to the hopper, or it may be fitted at any other suitable place. The drip feed cock is of standard make. The preheater is a specially constructed device which, by means of the newly produced gas passing through, heats the incoming air and also vapourises the water coming from the water tank, via the drip feed cock. The incoming air at the same time cools the gas passing through the preheater. The fan is of standard design and it provides an efficient and rapid method of drawing up the fire.

Briefly, the method of starting is to light a small fire in the generator, with dry charcoal, and draw it up by means of the fan. More charcoal is added until a good blaze has been obtained, and then the hopper is filled with dry charcoal, the air regulator is adjusted and the fan is revolved for a few minutes. Gas will soon issue from the air valve, when the engine can be started. Water regulation is then necessary. Starting on gas takes several minutes, but this time can be shortened considerably by starting the engine on petrol and switching over to gas when ready. No delay other than that occasioned by lighting the fire (a very few minutes) need take place if it is necessary to move off quickly.

EUROPEAN COMMISSION OF THE DANUBE.

The Foreign Office have received from the British Commissioner on the European Commission of the Danube a detailed statement of the financial situation of the Commission on December 31, 1926. The following is a summary of the figures:—

		French francs (paper).
Receipts during 1926	...	35,589,546
Balance from 1925	...	4,990,622
		40,580,168
Expenditure	...	34,806,166
Balance at end of 1926	...	5,774,002
		40,580,168

The receipts, which were considerably in excess of the estimates owing to an increase in the shipping using the river and to currency fluctuations, include the sum of 954,833 francs received from the Bulgarian Government on account of reparations. The expenditure includes 6,887,897 francs for the prolongation and strengthening of the embankments at Sulina, 632,480 francs as the balance in respect of the purchase of a survey boat, and 3,206,504 francs for repayment of the French, Italian, and Roumanian portions of the loan raised by the Commission in 1924. A further 2,000,000 francs will be taken from the balance of 5,774,002 francs for the repayment of advances made by the British, French, and Italian Governments.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended July 6:—

Egyptian Futures.—Sakel Contract.—Increased activity has been evidenced by the trading in this contract during the past week, and reported damage to the crop by leaf worm, combined with improving trade reports, can be accounted mainly responsible for the rise of 49 to 65 points for near and 48 to 56 points for distant months since our last report.

With regard to the crop reports, we understand from conservative sources that the damage so far is insignificant, but, at the same time, these engender a certain amount of short covering. Whilst not altogether indicated by the official trade reports, producers of fine counts latterly have undoubtedly experienced a much more satisfactory business, and this is reflected in the increased demand for actual. Sudan Sakels have again been particularly favoured and with the basis of these being raised a certain amount of weight has been lifted from the futures market. The tenderable grades of Egyptian Sakels during the past week have enhanced their premium with contract; this tendency has been more accentuated in Alexandria than at this side, consequently, spinners are paying more attention to the local stock, and, as soon as a greater portion of the Sudan crop is disposed of, it would appear probable that our new crop options will go to a premium with Alexandria. Even paying due regard to the advance that has taken place during the past few days, we still consider that, with reactions, the probability is for prices to show a further appreciation during the coming months.

Upper Contract.—This contract has shown a much improved tone during the session under review, and prices have advanced 15 to 23 points for near and 17 to 21 points for distant positions. More trade support has been in evidence, and it has been reported that some extensive lines of c.i.f. cotton have been placed. We are inclined to anticipate a consistent demand from both local, Continental and U.S. spinners during the summer months for old and new crop cotton.

Egyptian Spot.—There has been rather a better tone about the inquiry during the past week and the resultant business has been well up to the average recently experienced. Sakel cotton, grading in the neighbourhood of Fully Good Fair, has figured prominently in the demand, spinners finding the local spot selection more satisfactory and considerably cheaper than shipment cotton. Uppers, ranging from Fully Good Fair to Good, have enlisted a certain amount of business, and premiums have the appearance of hardening again. A very large business has taken place in Sudan Sakel, and as the basis of practically all Egyptian Sakels has firmed up considerably latterly, this cotton, in spite of prices being advanced 25 points during the past few days, appears more reasonable than ever to spinners of fine counts. Forwardings for the week amount to 6,024 bales Egyptian and 2,781 bales Sudan. Estimated spot sales for the week amount to 1,400 bales Egyptian and 13,300 bales Sudan. Quotations for all grades of Sakels are raised 55 points and Uppers 30 points.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended June 30, state:—

Since our last report the futures market has again been quiet, the tendency being slightly weaker. The week's summary of price movements is as follows:—Sakellaridis: July, 33.72 dollars, 0.19 dollars down; November, 33.45 dollars, 0.05 dollars down; January, 33.27 dollars, 0.03 dollars down. Ashmouni: August, 24.15 dollars, 0.23 dollars down; October, 24.75 dollars, 0.25 dollars down;

December, 25 dollars, 0.22 dollars down; February, 25.17 dollars, 0.20 dollars down.

Sakel.—The turnover of business continues to be restricted; there has been, nevertheless, a considerable amount of liquidating of bull positions; the sales were, however, fairly easily absorbed. A feature of the week has been the regular purchases effected by agencies working chiefly for account of the trade. We do not think these purchases have been put through against fresh business with spinners as the demand from the latter has been again rather small for prompt shipment and nil or almost so for new crop shipments. For the time being we do not look for any big fluctuations in prices. We think that our market will, more or less, be governed by the fluctuations of the New York market, where the tendency has been of late for a stabilisation of October new crop at round about 17 cents.

Uppers.—The market for this variety has fluctuated very little, and at the close to-day prices showed a slight reaction due to some local speculative selling. The demand from abroad has been moderate; we might perhaps have seen a better demand if export houses were more liberal in their offers. The qualities in which spinners generally are showing interest are now rather scarce on the spot market, and exporters are reserved in their offers.

The week's receipts amount to 20,114 kantars against exports 158,819 kantars; the stock in Alexandria stands at 2,715,937 kantars.

The official figures of arrivals and exports for the period September 1, 1926, to June 23, 1927, are as follows:—Arrivals: Lower Egypt, 5,122,000 kantars; Upper Egypt, 3,158,000 kantars; total, 8,280,000 kantars. Exports: Sakel, 2,833,489 kantars; Ashmouni, 3,520,025 kantars; Various, 456,675; total, 6,810,189 kantars.

GROWERS AND SHIPPERS SHOULD
SEND THEIR COTTON TO LIVERPOOL.

All information may be obtained from the Secretary.

Spot : We have only had four business day this week, the market now being closed on Saturdays and also to-day—Thursday—for the Muslim New Year. Total sales during the week amount to about 6,700 bales, of which we estimate 2,600 bales Sakellaridis, 3,900 bales Ashmouni and Zagora, and 200 bales Pilon.

Sakellaridis : The top grades were very much in demand towards the end of the week ; higher premiums were paid for good staple cotton. The demand for the medium grades has been on about the same basis as last week.

Ashmouni and Zagora : The demand still continues on Fully Good Fair and below ; low grades are very scarce and good prices are being paid.

Pilon : A few lots of about Fully Good Fair to Good and Good have changed hands at about last week's premiums.

Crop, 1927 : Climatic conditions have been good and the progress of the crop continues to be normal. In some districts, especially in the Central and South Delta, leaf worm attacks have increased and some damage has resulted to the plants. It is difficult at the moment to determine the extent of the damage caused, but we do not think it is to be considered serious. The question of the water supply also is causing some anxiety, particularly in the fields of the Northern Delta districts ; cases of

shortage are reported, but the Irrigation Service is doing its best to overcome the difficulty. On the 25th inst. the discharge at Assouan was 1,102 cubic metres per second against 1,322 at the same time in 1926. This difference explains sufficiently the difficulties to which we refer.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.)

EGYPT.

Bridge Work.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of materials and works connected with the replacement of the superstructures of Mansourieh bridge and the adaptation of the pier and abutments to the new superstructures. August 15.

Waggon Covers.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 1,000 impermeable wagon covers. August 16.

Diesel Engines.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection at site of Abul Menaga Pumping and Power Station of four internal combustion Diesel groups with flywheel alternators, three pumps and accessories, required for the Public Works Ministry. September 3.

Notes of the Week.

King Fuad's Visit.

While King Fuad continues to win golden opinions wherever he goes, alike for the manifest interest that he takes in all that he is shown and for the atmosphere of cordial friendliness with which every visit is invested, the Egyptian Prime Minister is losing no opportunity of exchanging views with British officials and business men on matters which are of vital interest to Egypt and Great Britain. As has already been stated, there can be no question of any definite compact having been reached during the Royal visit; but it is safe to assume that the ground leading up to a treaty of alliance will have been carefully explored, and Sarwat Pasha should be in a position to satisfy his fellow-countrymen that his personal efforts have resulted in the abandonment by Great Britain of all stipulations that cannot be shown to be essential to Anglo-Egyptian co-operation and the maintenance of Egypt's independent position in the world. When once the principle of the identity of the interests of the two countries in regard to the more vital aspects of the national existence of both has been recognised, the particular methods by which effect is to be given to the spirit of co-operation in one sphere or another should be arranged without difficulty. There is, therefore, every reason to hope that Zaghoul Pasha, whose name will always remain identified with Egyptian independence, will have the satisfaction of seeing in his lifetime the finishing touches placed on his great work, instead of leaving—as seemed probable only a short time ago—his country in chaos and his mission unfulfilled.

Iraq and Great Britain.

The remarks which we made last week upon the opportuneness of the visit to London of the High Commissioner for Iraq, Sir Henry Dobbs, and upon the certainty that feelings of friendship as between Iraq and Great Britain would mould a settlement of the differences that have arisen between the two countries, appear to be well in the way of justification. Quite obviously the visit of the High Commissioner has made a good impression on Iraqis, and discussions seem to be proceeding in London in an atmosphere that augurs well for the future. It is the more to be regretted, therefore, that false colour should be lent to the scene by certain of the telegrams

coming from British newspaper correspondents in Iraq. Common-sense alone, one would have thought, would inhibit the reception of the story *in toto* that the Shiah community in Iraq had now started an uncompromising demand for more seats in the Cabinet of Jaafar Pasha. Naturally, there may be in Iraq, as elsewhere, a politician or two who thinks that his country is in peril because he himself is not included in the Cabinet. But to suppose that the Shiahs as a community in Iraq are making a political demand which they might have made almost at any time since Iraq became a State, is rather naive. It is too early yet to state how the particular issue of Conscription will be solved, but if negotiations are pursued in the same welcome air of friendliness as is now noticeable on all sides, a workable solution will surely be found. It will be surprising indeed if, as a result of Sir Henry Dobbs' visit, the ties between Great Britain and Iraq do not prove to have been knit even more closely than before.

Greece and General Pangalos.

As nearly a year has passed since General Pangalos was overthrown, during which period he has remained in prison or under arrest without trial, the two Greek Governments which have followed the Dictatorship have only themselves to blame if Greece is being subjected to frequent scares regarding attempts to secure his release. One of the first acts of a constitutional Government, it would have been thought, would be to bring the ex-Dictator to trial and to deal with him according to the law of the land. Neither General Kondylis nor M. Zaimis, however, has displayed the least alacrity to take a course prompted alike by humanity and common sense. Their remissness in this respect encourages misguided enthusiasts to plot attempts for General Pangalos's release, and at the same time gives rise to rumours that by the strict letter of the law there is no serious case against the ex-Dictator, but that his enemies hope to have a handle against him presented to them by attempted rescues. With the precedent of the fate of M. Gounaris and his fellow Ministers before them, there are probably many people in Greece who do not welcome any more judicial murders and would like to see General Pangalos escape, not from

any sense of devotion to him, but in order that Greece should avoid further ills from the adoption of extreme measures against a man who was bold enough to say that politicians have been the curse of Greece, but lacked the ability to govern the country wisely without them. Thanks to the present Coalition Government Greece is being steadily rehabilitated in the eyes of Europe, but the deliberate encouragement given to further unrest by the failure to liquidate the Pangalos affair may have the effect of retarding Greece's recovery.

Greco-Italian Relations.

On their return from England M. Michalakopoulos and M. Kaphandaris, Greek Minister for Foreign Affairs and Finance respectively, made a short stay in Rome and were received by Signor Mussolini. The visit led the Fascist Press, with a unanimity which will not have been lost upon the Yugoslavs, to anticipate an early alliance between Italy and Greece. This belief has been dissipated by the Greek Minister for Foreign Affairs, who has very wisely pointed that, while Greece would be prepared, or indeed is anxious, to enter into close economic relations with Italy, she is by no means minded to restrict her liberty of action by political commitments. In present circumstances a political treaty with Italy, however unexceptional its terms, could not fail to cause umbrage in Yugoslavia and must render ultimate agreement with her northern neighbour more difficult for Greece. An improvement in Greco-Italian relations is to be welcomed, but there can be no questions between the two calling for a political treaty that are not adequately covered by joint membership in the League of Nations. Between Greece and Yugoslavia, on the other hand, there are certain definite points at issue which await adjustment, apart from the desirability of the ultimate close co-operation between the States of the Balkan Peninsula that will render them independent of outside entanglements. Negotiations between the Greek and Yugoslav Governments for a reconsideration of the position created by the unratified agreements of the Pangalos régime are understood to have made a favourable start, and it would be courting failure at this stage for Greece to make a political pact with Italy before complete harmony is established between the latter and Yugoslavia.

Abyssinia in Trouble.

The hunting expedition in Abyssinia organised by the Maharao of Kutch, who is accompanied by Sir Geoffrey Archer, formerly Governor-General of the Sudan, has been the victim of lawlessness that is all too prevalent in Abyssinia at any great distance from the capital. As a correspondent announced in our issue of June 9, the Maharao was undertaking a hunting expedition in the forests of the Hawash basin, intending to work his way to British Somaliland. He had been to Addis Ababa, where he was received in State both by the Empress and by the Regent, Ras Taffari, and left for Modjo on May 9. A few weeks ago a camel caravan which had crossed the frontier from Somaliland, in order to bring supplies to the hunting party, was attacked by Abyssinian troops well within the border in the Harar province and a large number of the escort is reported to have been killed. Inevitably there will be recriminations between the central and the local Government, each seeking to cast the blame on the other, and the measure of success achieved by the former in bringing the latter to book will reflect the condition of the Regent's authority at the present time. The occurrence of such an outrage in Abyssinia occasions no surprise among those who are aware of conditions in the country; the anomaly consists in the fact that Abyssinia is a member of the League of Nations—a monument to the disinterestedness and wisdom of French statesmanship. It is conceivable that the incident can be turned to good account, if the amends which Abyssinia will have to make take a practical form. The country's only hope at the present time appears to lie in Ras Taffari, who is thwarted at every turn by a number of reactionary chiefs and leaders. The latter are responsible not only for

general opposition to all measures of reform, but also for the blocking of practical schemes of development, which, if carried out, would help to raise Abyssinia out of the rut to which poverty and ignorance condemn her. The inauguration of the Lake Tana barrage scheme would not improve conditions in the Eastern provinces, but it would introduce much-needed money into the country and in this way possibly strengthen the Regent's hands in the task of introducing reforms.

Turkish Westernization.

The Westernization of the Turkish Nationalist Republic proceeds apace; the rapidity of the movement in the Kemalist State, indeed, easily outstrips similar but more sluggish aspirations elsewhere visible in Islam. The Kemalist Government, it is announced from Constantinople, has just issued a decree permitting all persons who have attained their majority to change their religion. This step, which a Westerner might have thought was one of the first essentials of the success of the Turkish revolution, has presumably been delayed until the psychological moment. In any case, it was inevitable if the Ghazi's intention of creating in Anatolia a thoroughly Occidental State were to be realised. More Western people than the Turks would, doubtless, have effected this change earlier, but it is to be assumed that Mustapha Kemal Pasha knows his own countrymen best, and is more intimately aware than his admirers in Europe and America of the dangers of a premature allowance of apostasy. European observers, however, should hesitate before supposing that the granting of religious freedom in Turkey implies a positive reaction from Islam to Christianity. In all probability it means nothing of the sort, but simply a theoretical reaction from the alleged trammels of the religion of Mussulmans. But a reaction towards what? The trend of Republican Turkey is, of course, on the model of professedly "Christian" States, but the new liberty in Turkey probably springs, as, if it exists, it springs in Bolshevik Russia, from free-thinking and from disgust with the past. It is a mistake which has been made by greater men than are many of the Turkish Nationalists to assume that the foundation of a State can be laid firmly in anything else than religion; religion indeed guides men and shapes institutions in a way of which its very agents are sometimes unaware. But the Nationalists of Turkey, having learned a little, still have much to learn. That fact, however, should by no means check one's sympathy with and admiration of many of the reforms which the Ghazi and his supporters are carrying through with such persistence. The eyes of the whole world, particularly of the Islamic world, are upon Turkey in her efforts to fashion a finer State than was the old Ottoman Empire. Her sloughing process is indeed a spectacle. How far it implies a change of heart is still a problem. Will she, for instance, now that she enjoys religious liberty, still restrict the wives of her representatives abroad to Muslims; or will she abolish this singular anomaly?

Palestine Earthquake.

Those countries in the Middle East for the upbringing of which Great Britain has made herself or been made responsible cannot be said to have the best of luck in the matter of external and unforeseeable visitations. Iraq had its Tigris floods, and now Palestine and Transjordan have an earthquake. Every sympathy must be felt for the native population in this terrifying experience on July 11, of which the precise details are even yet not available. It appears that the districts of Jerusalem, Nazareth, Nablus, Ramallah, and Ramleh suffered most severely, together with certain places in Transjordan. Nablus, in particular, with its Samaritan community, felt the shock previously. So far, 192 killed and 356 seriously injured, have been reported from Palestine; and 68 killed and 102 seriously injured from Transjordan. Both the Mount of Olives and Mount Scopus were affected, and Government House and the buildings of the Hebrew University were damaged. From the accounts so far to hand, it would appear that the Arab community has been the

hardest hit, and since to their more simple minds the experience has been all the more stunning, assistance should more readily be forthcoming. To some intelligences, and to more instincts, this earthquake in Palestine and Transjordan will have seemed literally to be a manifestation of "God's anger," and we cannot doubt that for the relief of so reverent a folk financial help will be sent from this country, as from other countries which yet hold in esteem the Holy Land. We therefore commend to all the Earthquake Relief Fund which has been opened by Lieutenant-Colonel G. S. Symes, Chief Secretary of the Palestine Government, at the offices of the Jerusalem Administration. In the meantime, one notices the characteristic action of the High Commissioner in curtailing his leave and returning to his stricken charge. From the scientific point of view, it may be of interest to record that earthquake shocks in several parts of Persia, particularly in North-West Persia, have been reported.

Its Effect on the Inhabitants.

It is interesting to note how the various communities in Palestine reacted to this seismic shock. Broadly speaking, the effect produced seems to have been similar to that caused by the unusual snowfall of 1920. Again, it was the British element which at once attempted to clear up the mess. Rescue work was performed by the personnel of Government officials, the Royal Air Force, and the British gendarmerie. The native population were too amazed and terrified to move, and, according to one account, the male population at Nablus had to be compelled, after the police had worked unceasingly for twelve hours, to remove the debris and try to repair the *suq*. The Jewish population seem to have been the least affected, but Tel Aviv immediately sent a consignment of 1,200 loaves and, from its unemployed, some volunteers to help Nablus. Mr. Nathan Straus, who is a genuine philanthropist for Palestine, immediately telegraphed £5,000. It is not so pleasant to read in *The Times*, however, that at Nablus, which is the centre of the soap and tobacco industries (these constitute, roughly, half Palestine's exports), "it has been found necessary to apply the Ottoman law for the purpose of preventing attempts at profiteering and cornering supplies." The men who can so take advantage of other peoples' extremity deserve very ill of the country that they are in, and we are glad to note that the vigilant Jerusalem Administration has stepped in before the bitterness which would surely be created by profiteering had reached unforgettable limits.

A Panacea for Palestine?

It is a curious form of intelligence which can link up the disaster that has just befallen the Holy Land with, first, the economic distress of the Zionist immigrants, and, secondly, the policy of the British Government. We say curious; others might call it discreditable of the *Daily Express*, which deliberately seeks to identify the apparent "failure" of the Zionists to make good in Palestine with a failure on the part of Great Britain in the Holy Land. This sensational daily journal has, admittedly, been constant in its attack on the Zionist policy in Palestine. We say nothing of that; but what may rightly be objected to is the inclination, reiterated last week, on the part of the *Daily Express*, to assume that the cause of Great Britain in Palestine is bound up with the success or failure of the Zionist movement. Does it not realise that had Britain's only purpose in Palestine been the retention and prosperity therein of Jews, the policy pursued since the War would have been very different? Has it never reflected upon the Imperial significance of the land upon the eastern bank of the Suez Canal? One can imagine the acrid comments of the *Express*, if, after the Nile had failed two or three times, and the fellahen of Egypt were reduced to bankruptcy, someone were to suggest that Great Britain should forthwith dissociate herself with Egypt. No, the evacuation of Palestine by the British is not the panacea for the Holy Land. The *Daily Express*, moreover, must know well that the Palestine Government shows a surplus,

despite the straits of the Zionists, although it never suggests the possession of such knowledge; it must know that the "doles" now being paid to needy Zionists in Palestine are being paid for by voluntary contribution on the part of Jewry—it is disingenuous to assert that the lot of the Jewish immigrants is "semi-starvation eked out by a dole for which the taxpayers of this country will be asked to find the money." Whatever Zionists may do—and at the moment we are not discussing the policy of the Zionists—Great Britain is certainly not going "to throw good money after bad." The Zionists know well that their economic salvation lies in the hands of themselves, and of no one else: how many more times is the false assumption to be exposed that, although the future of the Jews in Palestine is inevitably bound up with Great Britain, the future of Great Britain in Palestine is by no means inevitably bound up with the Jews?

The Conversion of Yamanis.

Arabs have perhaps ever been unusually susceptible to the influence of great personalities, but the converting zeal of Signor Mussolini can seldom have achieved such astounding submission as that which the Yamani mission to Italy, which left for Hudaïda on July 14, made before departing from the shores of the Yamani's new Ally. The Yamanis assured the Italians that they were now "confirmed Fascisti," and that they looked upon the Duce as "a magician and a fascinator who subjugates with a glance, conquers with a smile, and stupifies by the profundity and rapidity of his thought." This is truly affecting, and we only hope that the memories of what they have seen and heard in Italy will not have grown thin by the time that this Yamani Mission reaches Sanaa and breathes the same air (less intoxicating than they found in Italy) as inspires the Imam Yahia and his advisers, who have not tasted the heady pleasaunces of Europe. In converting its Fascist beliefs into practice in the Yaman, this mission would, we imagine, have considerable difficulty; for Fascism, which is increasingly to be seen as a kind of inverted Socialism, could have but a poor chance of growth among a race of such passionate individualists as are the Arabs. That, however, is possibly of little moment; what is important, judged in the long aspect, is the unceasing penetration, as manifested in this last visit of the Yamanis to Italy, of Arabia by Occidental ideas. It would seem that this process is in time bound to disrupt the forces that have for so long held and are still holding together the more primitive peoples of Arabia. Who would suppose that the Yaman, when the resources of Western scientific civilization are brought to bear upon its material development, will remain a theocratic autocracy?

THURSDAY, JULY 21, 1927.

THE NEW GOVERNMENT IN ROUMANIA.

Although the violence with which the political pendulum in Roumania swings at each general election is apt to have a bewildering effect upon opinion outside the country, there is no need to suppose that this phenomenon is incompatible with a certain amount of political stability. How completely the rules of the game are understood and appreciated in the country itself is shown by the fact that no surprise was caused last year, when the People's Party under General Averescu, with an exiguous representation in the previous Parliament, was able, by the mere fact of being responsible for the elections, to be returned to power with more than sixty per cent. of the total number of votes polled. A year later this same party, being in opposition, is unable to obtain even two per cent. of the votes, and will in consequence be unrepresented in the Chamber of Deputies. On the other hand, the Liberal Party, which polled seven or eight per cent. of the total number of votes in March, 1926, is able this year, when in control of the elections, to secure a majority of nearly seventy per cent. In these circumstances it is necessary to look outside mere parliamentary strength for political stability. General Averescu's majority, it may be inferred, deceived no one, least of all its titular head. Although he made a resolute effort to stamp his own personality on the régime which bore his name—he broke away from the fiscal policy of his predecessors and had to his credit Italy's ratification of the Powers' Convention regarding Bessarabia—the abruptness with which he allowed himself to be superseded in spite of his following in the Chamber indicated that he recognised the precariousness of his tenure of office. The Liberal Party, on the other hand, showed through its leaders that its restricted representation in Parliament entailed little or no weakening of the hold that it claimed to have on the country as a whole. Its sweeping victory at the elections may follow as a natural result of its being in power; but in other ways the nation receives the impression that the Liberals are in reality coming into what is for the time being their own, and for this reason it is prepared to accept the result of the general election as a token that Roumania is once again entering upon a period of political stability.

This factor of stability is so important to the well-being of the country that the return to power of the Liberals may be welcomed as a valuable asset at a critical period, the more so as, under the personal instigation of King Ferdinand, an attempt is being made to widen the basis of the Government by including representatives of other parties. In another vital respect the present Ministry of M. Ion Bratianu is in a stronger position than his last, which was in power for its full term of years until the beginning of 1926; it includes at the head of the Ministry

of Foreign Affairs M. Titulescu, whose presence in the Cabinet supplies a definite guarantee to the Roumanian people that there will no longer be any risk that a Bratianu Cabinet implies in the eyes of the world at large a more or less anti-foreign policy. The charge was never wholly deserved, although it is not difficult to understand why it was incurred. The strong man in the Liberal Party and in the last Liberal Cabinet was the Prime Minister's brother, M. Vintila Bratianu; his anxiety to impose upon the country a hard-and-fast economic and fiscal policy caused him to underrate the importance of international relationships and of Roumania's dependence—in common with the majority of other countries—on international reciprocity for her complete rehabilitation. Accordingly in the last Bratianu Cabinet the country stood committed to a Procrustean domestic policy, and foreign interests desirous of sharing Roumanian hospitality were required to adjust themselves to a particular standard. Before the Cabinet's term of office came to an end the weaknesses of this policy had already been revealed, and certain modifications had been introduced. The damage to Roumanian credit abroad, however, had been done, and, as often happens, could not be undone as rapidly as changes could be made in the policy. The Averescu régime, however, facilitated the process of re-establishing Roumania's name in business circles abroad. M. Vintila Bratianu returns to the Ministry of Finance with the advantage of experience that he lacked in 1922, and with a colleague at the Ministry of Foreign Affairs whose knowledge of European affairs, political and economic, cannot help being useful to Roumania at this stage. Even in such an important matter as the relative merits of monetary deflation and the stabilisation of the leu M. Vintila Bratianu is understood to have changed his attitude and to have become now an advocate of the latter in addition to having abandoned the view that Roumania could win through to complete rehabilitation by means of her own unaided efforts.

In these circumstances it is hoped that the new Roumanian Government will be able, when it asks for financial help, to count upon a more favourable response in business circles in Great Britain than any of its immediate predecessors. The principle that economic content is an important factor in the elimination of political unrest holds good in South-Eastern Europe with particular force. The disabilities from which the various nations in this part of the world have suffered since the War are not always appreciated abroad, where errors in fiscal policies are apt to be judged harshly and forgiven very reluctantly. In the face of the slow recovery of the world from the devastating effects of the War Great Britain cannot afford to ignore the potentialities of the Balkan markets. Assistance given to any one of these countries plays a useful part in the building up of the whole Peninsula as an important section in the economy of Europe. With monetary stabilisation, the improvement of communications and capital for wise development the material progress of each State will be very considerable in the near future. It is true that in many respects their standards fall short of what prolonged experience has enjoined in Western countries; but allowance has to be made for the inexperience and sensitiveness of new States. In the case of Roumania the harshness of the conditions that it was sought to impose on loans and business co-operation led in part to the mistaken policy of trying to dispense with foreign aid altogether and to what were regarded as reprisals on existing foreign interests. If, however, it is now found that this stage has been passed, there need be no undue delay in according the new Liberal Government a clean slate with which to make a fresh start. For it is certain that, unless British interests take advantage of the openings that an expanding market in Roumania offers, other nations will, to the detriment of British industry.

The Near and Middle East*

From Our Own Correspondents.

Cairo, July 10.

Publicity for the Royal Visit.

King Fuad's presence in London and the series of functions it has entailed have almost monopolised the attention of Press and public in Egypt during the past week. The Arabic newspapers have shown remarkable enterprise and the courage to incur heavy expenditure in giving their readers the fullest possible accounts of His Majesty's doings. The leading journals, such as *Al Ahram*, *Al Mokattam*, and *Al Siyasa*, have frequently published in a single day more than a whole page—say, 5,000 words—of matter specially cabled from London by these newspapers' special correspondents, in addition to the fairly full service maintained by Reuter's Agency and the long official *communiqués* telegraphed by the official attached to King Fuad's suite for this purpose. Not only has every least detail of what His Majesty has worn, said and done been immediately telegraphed to Cairo, but the Egyptian public have also been able to follow the comments of the entire British Press, down to even weekly country journals, on the Egyptian royal visit. It is inconceivable that this lavish expenditure on cable tolls can be financially remunerative for the three Arabic newspapers named, but, on the other hand, there is no doubt of the avidity with which all these details are read and discussed by the public here.

Each speech and interview made and given in London has been minutely examined and commented on by Egyptian leading article writers. As was to have been expected, there has been nothing like unanimity of opinion concerning the proceedings in the British capital. The organs of the Unionist and Liberal Constitutional parties have been uniformly enthusiastic, seeing in the warm welcome given to Egypt's ruler an augury for an early amicable settlement of questions outstanding between Great Britain and Egypt. The *Wafd Press*, while also well pleased with the visit as a whole, has found opportunities for criticism, even going so far as to complain that the speech of King George at the State banquet at Buckingham Palace "contained expressions which should not be used to the ruler of an independent country." The organ of the *Hisb el Watani* has, it goes without saying, found little to praise in the exchange of friendly sentiments, regarding the whole business with the deepest suspicion as being probably one more link in the chain with which Great Britain means to bind Egypt and to destroy her independence. Happily, these carpings are almost inaudible amid the much louder expressions of satisfaction and appreciation, and it is safe to say that the hospitality accorded Egypt's King in London has had an excellent effect in improving the atmosphere in Cairo and in erasing memories of recent political tension.

*Under this heading appear weekly or at regular intervals, communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

Dr. Morton Howell's Departure.

Dr. Morton Howell has gone and not only the Egyptians have regretted his departure. Here, where the European and especially the British Press, must always be discreet to the point of dullness, occasion very seldom comes to shed restraint and to speak out boldly in frank criticism of anyone occupying so important a post as Minister Plenipotentiary of a great and friendly Power. So, when Dr. Howell started his recent campaign of violent speeches and was most palpably "asking for it," he got it in full measure—"it" being a very unvarnished opinion of his views and activities. Leading article writers revelled in the unwonted licence and a pretty exchange of what was sometimes very near to abuse ensued. But, excepting the scribes amongst them, the European communities have regarded his departure with small regret. Dr. Howell has been, as the *Egyptian Gazette* described him, "an unabsorbable irritant." However great may be his abilities in certain directions, it would seem that Nature never intended him for a diplomatic career. Right up to the last moment he maintained his reputation for the commission of malapropisms. Taking a farewell at the Alexandria quayside from members of the Egyptian Temperance Association, whose president, Prince Omar Toussoun, was present, the retiring American Minister said:—"I have often heard derogatory statements made in regard to other members of the Egyptian royal family, but never anything derogatory about Prince Omar Toussoun, who has always stood for morality, liberality, fair justice, and fair dealing." Dr. Howell left his hearers to deduce for themselves what those "other members of the Egyptian royal family" stood for. Few diplomats leaving the countries to which they have been accredited can have said anything more remarkable than this!

The Road to the Pyramids.

An interesting feature of the past week's Parliamentary proceedings was a joint session of the Senate and the Chamber, arising out of inability to agree regarding a credit of £18,000 odd in the budget of the Ministry of Public Works. This sum was intended as a first instalment towards the cost of the long-overdue work of widening and improving the road to the Pyramids of Giza and draining the stagnant, mosquito-breeding ponds which border the highway. The Chamber rejected the credit by a majority of one. The Senate, by a large majority, reinstated the amount in the Budget. The Chamber again threw it out, by three votes, whereupon the Senate, by a larger majority than before, put it back a second time. The Constitution provides that, in such cases, a royal decree shall be issued, summoning the two chambers to sit in joint session, to debate the point in dispute and finally settle it by ballot. The Prime Minister was, therefore, communicated with by cable, King Fuad signed the necessary decree, and on Wednesday evening the joint session was held, resulting in a substantial majority for the credit which had been the cause of the disagreement. This result has given great satisfaction to Cairenes, who have long regarded the state of the Pyramids road as a reproach.

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

Agricultural Co-operative Societies.

Parliament has passed the long-discussed law regulating agricultural co-operative societies. This is the third ordinance of the kind enacted during the last few years, and it is to be hoped that the new law will not prove as useless as its predecessors. There is a good deal of vague and uninformed enthusiasm for agricultural co-operation in Egypt, but with the exception of one or two keen and capable officials there is an almost complete lack of the personnel necessary to set the movement on a firm basis. Moreover, agricultural co-operation has been a political toy for successive Ministers of Agriculture, some of whom have even considered it important chiefly as a means whereby political enthusiasms could conveniently be aroused in the provinces. As a result, although there has frequently been much talk of the wonderful things which a new Government would do in the sphere of promoting co-operation, very little has actually been achieved. The fact that the Co-operative Department has been regarded as a convenient place to which to send incapable or objectionable officials, on the grounds that there, at any rate, they could do little harm, has not exactly helped on the cause, nor has the practice of each new Minister of making a clean sweep of the department and refilling it with officials whose ignorance of co-operative principles and practice has been equalled only by their entire indifference to the movement. In view of all these facts, it is not surprising that co-operation has made little headway, or that the fellaheen regard it simply as one more of the many ways, such as conscription, taxation and administration generally, in which Governments choose to worry defenceless countryfolk. But now Parliament has approved the allocation of a million pounds to be loaned at low interest to approved co-operative societies, while a capable official who has had much experience of co-operation in England and Europe is in charge of the department. So something may be achieved. But it will be wise not to be too sanguine about the fellaheen rushing to adopt a system of which they are, not unnaturally, a little suspicious.

ROUMANIA.

Bucharest, July 14.

The "Elections."

The elections held on July 7 and the following days have returned the Liberal Government with an enormous majority. It must be remembered, however, in talk of elections in this country, that these are really only elections in name, as the Government party invariably brings itself into power by the simple process of preventing the

adherents of the other parties from voting.

This time the party of General Averescu, which came into power with a good majority about a year ago, has not been able to return a single member, and voters on that side were advised by friendly police officials to go away, as they would not be allowed to get near the polls. The word "election" is, therefore, a contradiction in terms, and the only excuse for it is that the majority of the voters (for universal suffrage has been granted in this country) are illiterate peasants, utterly unable to form any real political opinions. It is felt no doubt that it was a mistake to grant universal suffrage so soon, that is, before universal education had been introduced and enforced, and the only way to counteract this is to *make* the elections to suit one's own party.

It is difficult to give an opinion on the general feeling regarding the return of the Liberal Government. On the one hand there is a good deal of feeling amongst the partisans of the Opposition parties against the Bratianu brothers, who appear to have the Government of the country practically in their own hands, and this has given rise to the suggestion that the only way to oust them would be to bring back Prince Carol.

On the other hand, there is no doubt that M. Ion Bratianu is a clever politician, and it is difficult to believe that he would have made the *faux pas* of giving an opportunity for such an attitude to take hold of the minds of the National Peasants Party. One is inclined to believe, therefore, that he has, up his sleeve, so to speak, some kind of understanding with the leaders of this section of the Opposition. It is known that he was in daily touch with M. Maniu for some time before the elections took place.

As mentioned in a previous letter, the professed aim of the Liberals is to achieve a certain continuity of policy in the government of the country, irrespective of party. They have begun their term of office this time, nevertheless, with a promise of certain fairly drastic changes in the legislation passed by their predecessors. The import Customs Tariff is once more to be revised. It only came into force in April last.

Question of a Loan.

The main preoccupation of all patriotic economists at the present time, however, is directed towards the stabilisation of the currency and towards obtaining a foreign loan to help in the reconstruction of the railways and the extension of their carrying capacity.

At the present moment an important American delegation is in Bucharest and the Governor of the National Bank has stated publicly (in the Press) that negotiations have already reached an advanced stage. Offers are said to have been received from other countries also, and it is not known which will be favoured, though to the man in the street the Americans would appear to be carrying the day.

Customs Tariff.

With regard to the revision of the Customs Tariff the Government justify this step by the statement that the reclamations for abatement of the tariff have been received in great numbers, and many of them would appear to be justified; and it is the desire of the Government to retain a high tariff only where it is in the interests of the national industries that this should be done.

Visit of Americans.

A number of American University professors and graduates of both sexes are at present on a visit to Roumania. They appear to have been given the possibility to visit this country by the Carnegie Foundation, and they are said to have come in the interests of international peace. Professor Mannings of Columbia University, is represented as the leader of the party. They were given a very cordial reception in the splendid new building of the Roumanian Commercial Academy, where they were received by Dr. Mrazec, Roumanian Minister of Finance, by a number of other distinguished Roumanians and by the American Minister, Mr. Culbertson, who is exceedingly popular in Roumania.

Index Numbers of Cost of Living.

In spite of the rise in the value of the leu, which has now reached 800, prices continue to rise, and the index numbers for prices in Bucharest has reached 5123, that is to say, prices are 51.23 times higher than in August, 1916. The most ruinous item of private accounts in Bucharest is rent. House rents here are higher than in London. Thus for a small flat of five rooms, bathroom, kitchen and tiny servant's room a rent of 1,400 lei is asked (and this is considered cheap) making about £170.

Weather and Harvests.

The weather continues to be very hot. A temperature of 104 degrees Fahrenheit in the shade was registered ten days ago, which was a record figure at least over a long number of years.

The harvest prospects are said to be satisfactory in most parts of the country, but Bessarabia and northern Moldavia have again suffered from drought and crops are poor. The wheat crop is reported to be good, oats rather poor, but maize excellent.

CYPRUS.

Nicosia, July 4.

The Public Library.

On July 1 took place the ceremony of inauguration of the Public Library, the foundation of which is due to the Governor, Sir Ronald Storrs. Sir Ronald and Lady Storrs met a large company, including the Greek Archbishop, the Chief Kadi, ex-King Hussein, heads of Government Departments, and representatives of all the Island communities. The Governor delivered a speech, copies of which, in English, Greek, and Turkish were delivered to those present. The Library was then declared open for public use. Further gifts of books have been received, and more will be welcomed.

Ex-King Hussein Honoured.

At the close of the proceedings in the Library, His Excellency announced that H.M. the King had been pleased to confer on Ex-King Hussein the Order of the Grand Commander of the Most Noble Order of the Bath. He proceeded to bestow the insignia on him in the presence of those assembled.

Excavations in the Papho District.

Successful work is being carried out at the village of Poli Chrisokhon in the west of the Island. A number of objects, especially of pottery belonging to different epochs have been unearthed, and are of considerable value, historical and archaeological. It is hoped that these excavations will be continued, and that a sum will be voted annually for carrying out work in this and other sites, for the enrichment of the Cyprus Museum. The Governor is strongly in favour of these undertakings, and it is certain that much still remains to be discovered in various parts of the Island, including some which have only been partly explored.

The Legislative Council.

The Council continues to sit, and several measures have been passed. In discussing the vote for expenses of the British Empire Exhibition at Wembley, it was stated that £1,799 had been spent. Some of the elected members held that Cyprus had been led into a trap, and that little advantage had been gained through the Exhibition. The Governor remarked that the loss to Palestine had been far greater, and that he had personally incurred a loss of £500 in connexion with the guarantee fund for the costs of the Exhibition.

District Tours.

The Governor has recently visited the Papho District. He is exhorted by the Press to inspect villages in the large centre, cereal growing, plain called the Mesaoria, where he may become acquainted with the critical condition of the agricultural classes. There are, of course, villages and villages; and there is much more hardship in some areas than in others. A correspondent of the Nicosia paper the *Voice of Cyprus*, in the important village of Upper Lefkara (Larnaca District), referring to an expected visit of the Agricultural Commission of Inquiry, says, "According to my idea the inquiry is made by the Government for justificatory purposes (to show) that the economic crisis does not proceed from the many and heavy taxes so much as from ourselves—from our lazy and costly way of living. The Commission may inquire what marriage portions our farmers give their daughters, how many days they work on their properties in the year, and how many days they spend in the village coffee houses, drinking and playing, what each one owes to the village *cafegi*, and when they will pay him. We pray for good results, but we fear that the only good which these many-named commissions will bring will be an addition to the estimates for their expenses, and nothing more."

ORIENTALISTS' CONGRESS AT OXFORD.

Arrangements are being made to hold the 17th International Congress of Orientalists at Oxford in the week beginning August 27, 1928. The constitution of the congress has been arranged as follows:—

President.—Lord Chalmers, G.C.B., LL.D., D.Litt.

General Committee.—The members of the Board of the Faculty of Oriental Languages at Oxford.

Organising Committee.—Professor F. W. Thomas, Boden Professor of Sanskrit (chairman), Professor D. S. Margoliouth, Professor W. E. Soothill, Professor S. H. Langdon, Professor F. L. Griffith, Mr. G. R. Driver (treasurer), Mr. C. N. Seddon (secretary).

Sections have been constituted provisionally as follow:—

i) General (anthropology, ethnography, pre-historic archaeology, comparative mythology, and folklore). (ii) Assyriology, and kindred subjects; Ancient Mesopotamia and Asia Minor. (iii) Egypt and Africa. (iv) Central and Northern Asia, with Tibet. (v) The Far East; Indo-China, Malaysia, Polynesia. (vi) India and Iran; Indo-European languages of Asia. (vii) The Old Testament; Hebrew and Aramaic. (viii) Language, literature, etc., of Islam. (ix) Oriental Art.

All inquiries and correspondence (other than applications for membership, which should go to the treasurer) should be addressed to the Secretary, International Congress of Orientalists, Indian Institute, Oxford.

KING FUAD IN ENGLAND.

King Fuad's visit has been marked by another busy week. On July 12 His Majesty visited the Royal Free Hospital in Gray's Inn Road. Attended by Aziz Izzet Pasha, Egyptian Minister in London, Hassanein Bey, and other members of his suite, the King was received by Lord Riddell, president of the Hospital, Sir Francis Layland-Barratt, Bt., Sir Hamar and Lady Greenwood, Mr. Albert Levy, honorary treasurer of the Hospital, Lady (Trevor) Dawson, Dame Mary Scharlieb, M.D., Dr. Phear, senior physician, Mr. Joseph Cuning, senior surgeon, Sir Alfred Robbins, vice-president, and other members of the committee of management and the honorary staff. Among the presentations made to His Majesty were those of six Egyptian ladies who are studying medicine at the Royal Free Hospital with the object of promoting maternity and infant welfare work in Egypt. His Majesty made a tour of the wards, and showed much interest in the arrangements provided for the treatment of children in the Riddell wards and in the maternity work under the charge of Professor Louise McIlroy, M.D. King Fuad signed the visitors' book and presented a gift of £400 for the endowment of a bed, which will bear his name. Subsequently his Majesty and his suite was entertained to tea in the Board-room. Lord Riddell presented his Majesty with a gold-mounted walking stick with an inscription gratefully acknowledging the honour conferred upon the Hospital by his visit.

On the evening of July 12 the King honoured the Hon. Mrs. Ronald Greville with his company at dinner at 16, Charles Street. The guests invited to meet the King at dinner included Sarwat Pasha, Said Zoufkar Pasha, the Egyptian Minister, the Duchess of Roxburghe, Captain the Hon. Alexander and Lady Patricia Ramsay, the Marquess and Marchioness of Carisbrooke, the Marquess and Marchioness of Dufferin and Ava, the Marquess of Reading, the Earl and Countess of Cavan, the Earl and Countess of Shaftesbury, Earl Beatty, the Countess of Craven, the Countess of Lytton, the Earl of Middleton, Viscount and Viscountess Maidstone, Viscountess Curzon, Sir Austen and Lady Chamberlain, Lady Moyra Cavendish, Lady Beatrice Pole-Carew, the Hon. Mrs. Maguire, Mr. and Mrs. Hugh Thomas, M. and Mme. Thierry, Lord Blanesburgh, Sir William Tyrrel, Mr. Richard Tobin, and Hassanein Bey.

At the reception which followed the dinner a cabaret entertainment was provided and among those present were:—

Prince and Princess Arthur of Connaught, Lady Maud Carnegie, the Maharanee of Cooch Behar, the American Ambassador and Mrs. Houghton, the Spanish Ambassador and the Marquesa de Merry de Val, the French Ambassador and Mlle. de Fleuriau, the Argentine Minister and Mme. and Mlle. de Urburu, the Brazilian Ambassador, the Italian Ambassador, the Swiss Minister and Mme. Paravicini, the Bolivian Minister and Mme. de Aranyo, the Austrian Minister, the Polish Minister, the Czechoslovak Minister, the Duke and Duchess of Abercorn and Lady Katherine Hamilton, the Duke and Duchess of Northumberland, the Duchess of Montrose and the Marquess of Graham, the Duke of Alba, Earl and Countess Beauchamp and Lady Lettice Lygon, Lord and Lady Lloyd, Field-Marshal Viscount Allenby and Viscountess Allenby, Mrs. Baldwin, Mr. and Mrs. Churchill, Mr. and Mrs. Philip Snowden, Sir Samuel and Lady Maude Hoare, the Lord Mayor of London and the Lady Mayoress, Lord Hardinge of Penshurst, Lord Ivor Spencer-Churchill, Mr. and Mrs. Amery, and Mr. and Mrs. Reginald McKenna.

On Wednesday, July 13, King Fuad honoured Viscount Burnham with his company at lunch at the Ritz Hotel. The guests invited to meet King Fuad were: Hassanein Bey, Lord Riddell, vice-chairman of the Newspaper Proprietors' Association; Sir William Berry (*Sunday Times*), Dr. Harold Williams (the *Times*), Mr. H. Warner Allen, (*Morning Post*), Mr. W. Fish (*Daily Mail*), Mr. R. D. Blumenfeld (*Daily Express*), Mr. E. R. Thompson (*Evening Standard*), Mr. Barrington Ward (*Observer*), Mr.

E. A. Perris (*Daily Chronicle*), Mr. H. T. Cadbury (*Daily News*), Major Wrench (*Spectator*), and Mr. J. B. Hobman (*Westminster Gazette*).

In the afternoon of July 13, the King of Egypt visited Windsor Castle and Eton College. He was officially received at the State entrance to the Castle, and then saw the Royal apartments and other places of interest. His Majesty afterwards went to St. George's Chapel. Here he placed two wreaths on the tomb of King Edward and Queen Alexandra. King Fuad afterwards drove to the Royal Mausoleum, Frogmore, where he laid a wreath on the tomb of Queen Victoria.

At Eton College the King of Egypt was received by the Provost, Dr. M. R. James, the Vice-Provost, Mr. Hugh Macnaghten, the Headmaster, Dr. Alington, and the Lower Master, Mr. C. H. K. Marten. A guard of honour of the Eton College Officers' Training Corps was drawn up at the main entrance to the School, and the drums and fifes of the 2nd Battalion Grenadier Guards played the Egyptian National Anthem on the arrival of his Majesty. The boys of the school were drawn up in the school yard, and King Fuad, accompanied by the college authorities, proceeded through the avenue formed by them to King Henry VI's statue. Here a halt was made while the Captain of the school, F. A. Kendrick, K.S., read an address of welcome. King Fuad briefly returned thanks, and three cheers were then enthusiastically given by the boys. After tea with the Provost his Majesty was shown over some of the school buildings.

On Wednesday evening King Fuad honoured Major the Hon. John Astor, M.P., and Lady Violet Astor with his presence at dinner at 18, Carlton House Terrace. The guests invited to meet his Majesty included:—Said Zoufkar Pasha, the Egyptian Minister (Aziz Izzet Pasha), Hassanein Bey, the Duke and Duchess of Portland, Marchioness Curzon of Kedleston, the Earl and Countess of Stradbroke, the Countess of Gosford, the Dowager-Countess of Antrim, Viscount Burnham, Lord and Lady Lloyd, Lord and Lady Francis Scott, Sir Leonard and Lady Violet Brassey, the Hon. George and Lady Cynthia Colville, Sir Ian and Lady Malcolm, Lady Worsley, the Right Hon. L. S. and Mrs. Amery, Mr. and Mrs. Lloyd Thomas, and Mrs. Margesson.

Saturday, July 16, was devoted to a visit to the training ship Worcester at Greenhithe, where a number of Egyptian students are in training. King Fuad and his suite travelled by car from London, and, accompanied by Lord Inchcape and the Hon. Elsie Mackay, were rowed out to the Worcester, which, with other ships in the vicinity, was dressed in rainbow fashion in honour of the occasion, the yards being manned by the cadets. The visitors were received by Lord Ritchie, of Dundee, Captain Sayer, in command of the Worcester, and the officers of the ship.

The cadets were afterwards assembled on deck, and, together with several "old boys" from ships on which they are now serving, were inspected by the King. An address of welcome to the King was read by one of the Worcester cadets.

The King, in reply, thanked the cadets for their warm welcome, and expressed the hope that the Egyptians would always strive to do their utmost to maintain a high reputation among their English colleagues. The King and his suite lunched in company with Lord Inchcape, Miss Mackay, Lord Ritchie, Captain and Mrs. Sayer, and Mr. Frederick H. Stafford. After luncheon King Fuad was photographed in front of a group of cadets, with the Egyptian cadets seated on the deck before him. When he left, the yards were manned afresh, and the cadets gave rousing cheers for the Royal visitor. King Fuad and his suite boarded the Port of London Authority's yacht, and, escorted by Lord Ritchie, made a tour of inspection of King George V. Dock on their way back to London.

On Sunday afternoon King Fuad paid a visit to the Zoological Gardens.

On Monday, July 18, King Fuad journeyed North. That night he was the guest of Lord Derby at Knowsley.

On Tuesday he was due to arrive at the boundary of Manchester with his suite—Said Zoufekar Pasha, Grand Chamberlain; Dr. Mohammed Shaheen Pasha, Private Physician to the King; Amin Anis Pasha, Vice-Director of the Royal Cabinet; Ahmed Mohamed Hassanein Bey, First Chamberlain; Achille Sekaly Bey, aide-de-camp; Lieutenant Colonel Khairy Bey, aide-de-camp; and M. Ilias Ismail, Egyptian Consul at Liverpool. His Manchester programme, which is being carried out as we go to Press, was as follows:—

On Tuesday, the Chief Constable of Manchester (Mr. John Maxwell) and a detachment of mounted police met the party on the city boundary, and escorted them to the Town Hall via All Saints', Oxford Road, Oxford Street, Peter Street, Mount Street, and Albert Square, arriving at the Town Hall at 4-55.

At the Town Hall King Fuad was received by the Lord Mayor (Alderman J. H. Swales), the Deputy-Mayor (Alderman Miles Mitchell), and the Reception Committee, consisting of Alderman Fox, Derwent Simpson, and Robert Turner.

At 7 p.m. there was a presentation of an address of welcome in the Council Chamber, and at 7-30 a banquet in the Town Hall.

Wednesday's programme was:—

10-15: Visit to Manchester University, where King Fuad and his suite were to be received by the Vice-Chancellor and members of the Court.

11-30: The party would proceed to the John Rylands Library and then to the Town Hall via Deansgate, Peter Street, Mount Street and Albert Square.

1 p.m.: Lunch with Lord Mayor.

2-0: Visit to the Royal Exchange, where the party would be received by the directors.

3-0: Arrive at Musgrave Spinning Mills, Bolton.

4-0: Leave for Messrs. Mather and Company's Fancy Weaving Mill, Bolton.

4-30: Return to Manchester.

7-0: Banquet at Bolton Town Hall.

Thursday—

9-45 a.m.: Visit to Metro-Vickers Works at Trafford Park via Mount Street, Peter Street, Deansgate, Chester Road and Derbyshire Lane.

11-0: Arrive at the Trafford Wharf of the Ship Canal, where the party were to embark on a steamer for an inspection of part of the Canal and Docks.

12-45 p.m.: Return to Manchester Town Hall for lunch.

3-30 p.m.: Departure for London.

On Saturday evening (July 23), King Fuad will hold an official reception at Bute House.

NEAR EASTERN PRESS.

Intervention in the Balkans.

The fear of Italian expansion has again manifested itself in the Balkan Press. Roumania looks with concern on an Italian *rapprochement* with Hungary, lest the understanding should reinforce Count Bethlen's policy. Yugoslavia again is suspicious of Italian support in the Albanian political crisis, and is anxious to limit her powers. *L'Indépendance Roumaine* writes:—

The relentless campaign of the Hungarian Government and its foreign acolytes for the revision of the Treaty of Trianon has had one result, in proving the solidarity of those who defend the peace of Europe.

Indeed, at the first signal the Little Entente closed its ranks and showed once more that she was prepared to respond to any attack. The offensive of Budapest is destined to be broken on the wall formed by the three allied States.

Nor have our French friends remained silent. All newspapers without exception have condemned the attitude of Count Bethlen and have pointed out the danger of allowing a state of mind to develop such as is manifested in Hungary to-day. . . .

There is but one of the conquering nations who has not these principles of solidarity, such as form the basis of all peace, and who has not joined with other voices in protesting as she should.

This country is Italy, and Roumanian public opinion has not failed to draw conclusions from the silence of the Fascist journalists,

unfavourable to Italian friendship as sanctioned by a recent treaty. How is it that the Press, quite semi-official, under the régime of Signor Mussolini, should not have found one word of disapproval to say concerning these agitations which are not only a menace to peace but which also aim at altering the position of frontiers formally guaranteed by a treaty of friendship? Perhaps this shows that Italy intends to abandon the road she has mapped out in order to make her end coincide with aims of a Magyar policy?

We think, nevertheless, that such conclusions may be hasty and do not in reality correspond with facts. Our Italian friends are too clever and delicate in their policy not to realise two essential truths: first, that the greatness of their country cannot be founded on the denial of treaties, and secondly, that Italy could not remain the Great Power she is if she were to become the instrument of a policy which aims at re-establishing a situation from which Italy would equally suffer. . . .

Yugoslav Relations with Italy.

An article in the *Morgenblatt* (Yugoslavia) declares:—

The disagreement with Albania might in early times have been the subject of any operette, but it conceals the germ of a tragic conflict. . . . It is difficult to imagine how Albania could be tactless enough to ignore the steps taken by the four Great Powers and thereby greatly damage the prestige of these Powers. Albania has done this without penalty, and she must, therefore, have felt sure of herself and convinced that nothing could happen to her. The prestige of the Great Powers has thereby suffered a severe blow and what is worse, the fact shows that, in spite of the League of Nations and the Locarno Treaty, the Great Powers are ever unable to prevent the outbreak of a warlike conflict between any States. Unfortunately one must feel entirely free in this respect, or in other words one must at all times be ready and prepared for all things. A great difference of opinion on their actual policy must exist amongst the Great Powers if their combined measures are to be disregarded by a small and entirely dependent State. Albania is doubtless working in close understanding with Italy by whom she is incited and supported in these proceedings. Therein lies the great danger for the peace of Europe. Italy is to-day the only prominent country in which militant nationalism reigns and which is seeking realisation in a reckless national expansion. The Italian people are above all peace-loving and only desire economic progress and unimpeded national development. Under these conditions there can be no misunderstanding between Italy and Yugoslavia. . . . If the peace of Europe is to be protected, means must be found to limit the dangerous expansion of Fascism. Yugoslavia is in the front line of fire; therefore it is certain that a conflagration, once started, could hardly be localised. For this reason the Great Powers should bring all their influence to bear on this aim of an understanding between Italy and Yugoslavia, who would be ready to meet any advances half way. The conflict with Albania is but an episode; therefore it should sound the alarm for the threatening of the peace.

The Radical Party in Yugoslavia.

With the dissolution of the Skupshtina and the ensuing elections, the position of the Radical Party is made clearer. The party has divided into two portions—that of the Radicals in the Government Party and that of the partisans of M. Pashitch. The *Morgenblatt* gives the following account:—

. . . The Radicals are divided to-day in two parties; one forms the so-called Pashitch following and the second are the adherents of the Government. Under the leadership of the Government comes the Liuba Yovanovitch group which also follows the Prime Minister, M. Vukitchevitch and the Centre, with M. Ouzoundvitch, M. Maksimovitch and Dr. Srshkitch at the head. The Radicals in the Government intend to elect a head committee of the party. The Minister for Justice, Dr. Dushan Subotitch, was proposed to-day by a deputation of the Sombor Radicals for the Sombor constituency. Dr. Subotitch has accepted the candidature. The representative of the Radical Party for the Sombor constituency was hitherto the President of the Skupshtina, M. Trifkovitch. The Minister for Finance, Dr. Markovitch, will be the representative of the Government Radical party in the Panchievo-Bela Crkva constituency. The followers of Pashitch threaten thereupon to vote for the candidates of the Independent Democrats, in Belgrade as in other places. In this case the Independent Democratic Party would gain 4,000 votes in Belgrade, in which both members of the Davidovitch Democrats were taking part. In the Varazdin constituency the candidate of the combined Radical Democratic and Radical dissenter parties will be Dr. Milivoj Yambirshak. Dr. Yambirshak will also represent a Croat constituency in Syrmia as a member of the Government Radical Party.

M. J. A.

The Turkish Government has issued a decree permitting all who have attained their majority to adopt whatever religion they please. In future complete religious freedom will prevail in Turkey. Among other reforms which Mustapha Kemal Pasha has ordained are the abolition of polygamy, the enforced registration of marriages, new civil and criminal codes of law, and the suppression of slavery and the fez.

AN EGYPTIAN DOCTOR.

BY DAVID GOITEIN.

"Khalil, I take it, is a born liar. Even the boast that he is a hajji may or may not be true. Moussa Shaikh once told me, very confidentially, that Khalil was in fact in prison when he was supposed to have been on pilgrimage. That is just the kind of lie you would expect Khalil to tell. He is a bit of a sceptic and nothing could please him more than to "pull the leg" of the orthodox. When, therefore, Khalil told me that there was to be a great miracle performed that afternoon which I was not to miss for anything, for a doctor, who had been trained in London and Paris and who knew seventy languages, was going to remove and put back the eye of Khalil's nephew, aged six, I treated the information *cum grano salis*!

"You will come and see the miracle?" said Khalil.

"Yes, if I have nothing else to do," said I, non-committally.

"No English doctor could do such a thing."

"I am sure."

"This afternoon—I will fetch you."

"Thanks, but I—"

"Shoshie" (he called all Europeans "Georgie"—a name he had picked up during the War), "you will be grateful to me for ever and for all times and for eternity, if you will come."

"I will see." And we parted, I to lunch, he to palaver. He was fond of talking.

At half-past three Ali grinned his way into my room. There were four grinning little ruffians who answered to the name of Ali. One once told me that the four of them were brothers!

"Arab man—he ask see you," grinned Ali.

"I am out," said I, but not in time to prevent Khalil coming in.

"Shoshie, it will happen." He preferred the dramatic way of speaking. "It will come to pass—at once. Now, do not delay. Come with me."

After raising many objections, which were overruled, I went with him. I discovered that there were more *sharias* than I had ever dreamed of and more smells—human and otherwise—than I had ever conceived of. Khalil seemed to take the smells as a matter of course. I had frequent recourse to a handkerchief. A gas mask might have been more to the point.

We came to a small court with squat houses on either side of it. But opposite to the entrance there was a large mansion which obviously, many centuries ago, had belonged to some wealthy merchant—or bandit. It was to this mansion that I was taken. As soon as I arrived the place began to swarm with children. Some clung to my legs, some yelled "baktheeth," and some just screamed. Although this was not the miracle I had bargained for, it was clearly a miracle that so many children should so suddenly appear from nowhere. And the aroma!

Then I came to the room, after trampling innumerable innocents underfoot, where the miracle was to occur. There were some thirty men present, most of them of the lower class. That is to say, they did not wear European costume and tarboush, but cloaks and turbans. Doubtless on the films they would have looked most romantic. Unfortunately cloak and turbans were excessively dirty. The Arabs were for the most part seated and smoking. My entrance called for no comment. Khalil introduced me to the doctor. He was a young man who wore his tarbush at a very jaunty angle but otherwise dressed as a European. Not quite so sprucely as doubtless he dressed in London, but well enough.

"You have come to the performance?" he said in English, with a smile.

"Yes. Rather, I have been brought."

"To see the miracle?"

"Well—not exactly."

"The miracle will take place all right, if you have enough faith. It is simply a slight operation that I am going to perform; if the cataract isn't removed the child will lose the sight of the right eye, perhaps of both of them."

"Who started the story of the miracle?"

"I did."

"For professional purposes?"

"You do not understand my compatriots. They are no more ignorant, sir, than thousands of Englishmen and even the great Mr. Bernard Shaw who do not believe in vaccination. Well, my compatriots do not believe, as a rule, in operations. What can I do? I must tell them a story. They believe it. That is good for me and it is good for them. Supposing the operation goes wrong, they will still be satisfied. For they will see that the eye is where it was before; they will think I have taken it out and put it back again. If the operation goes all right—and why should it not?—I have the highest diplomas—I am a Licentiate of the Royal College of Surgeons, London—so, if it goes right, the child will see and I will get paid either way. You follow me?" Then he turned to Khalil and spoke in Arabic. "How much do you give me if—Allah willing—I perform the miracle?"

"I am a poor man, a very poor man," said Khalil.

"No money, no miracle."

"Of course there will be money—but only a little. I am a poor man, a very poor man." He was whining.

"Five hundred piastres," said the doctor, taking a cigarette out of a silver case for effect, offering me one at the same time.

"W'Allah!" from Khalil, horrified.

"I must eat," said the doctor, to my mind irrelevantly.

"One hundred piastres. I am a poor man," reiterated Khalil.

"Not a grush less than 450 piastres."

"One hundred. I can't give more."

It was somewhat amusing, if a little undignified, to listen to the doctor bargaining over his fee, as his wife might bargain over a pair of slippers in the suq. Let it be said at once, to the Egyptian it is not undignified to bargain. Far from it. It is part of the game of life and both sides to every transaction must "play the game." The only place where you can't bargain is the booking office of the railway station; but even there there is a chance of bargaining over the luggage! The hammer fell at 200! The doctor said to his friends that Khalil was a miser and Khalil to his that the doctor was a shark. (In parenthesis, I would add that for many weeks after the

event Khalil boasted to all and sundry that he had paid the doctor 600 piastres.)

The doctor was now ready to perform the—miracle. He opened his bag and took out a white apron. Till then there had been a good deal of conversation and noise. Now all eyes watched every movement of the doctor. He told Khalil—the master of the ceremonies—to bring the bench forward. The bench—a low table—had been specially procured for the performance.

"Bring the boy."

There were shouts of "Walad" and "Ooseph" and at length a frightened little urchin, screaming and kicking, was produced. The doctor next took from his bag a piece of sticky *halwa*. This had the desired effect of soothing the child's nerves. He sucked and was quiet.

The doctor was his own anæsthetist and in spite of the fact that the child kicked and protested he very soon "went under." Except for the regular heavy breathing of the excited audience, the room was hushed.

"You will watch," said the doctor. "Stand back!" He asked me to stand at the other side of the head of the child and hold it. This I did. He performed the operation with rapidity and with splendid skill. So far everything was as it should be. The operation might have been taking place at Bart's. Then came the miracle. He put his hand over the child's eye and held up—to the eagerly waiting and excited audience—an eye. The eye! A glass eye! The silence was broken by cheering and hurrying and all kinds of commendation.

"Silence!" said the doctor, still keeping his hand over the child's eyes. "I put the eye back. Watch!"

All necks were strained, but as the doctor was one side of the head and bending over it and I was the other, they could see very little however much they watched. But the eye was put back as had been promised—the miracle was complete. The doctor himself carried the child into another room and put him in "bed"—a board covered with a mountain of clothes and rugs.

When he returned the scene was pandemonium. Some of the men were actually in tears (I had never seen an Arab cry before), some were kissing each other, others were God-blessing the doctor because their eyes had seen such a wonder. He was very meek and claimed that whatever little power he had came from Allah who could balance the whole world on a hair (which orthodox sentiment was cheered to the echo) and that if he—the doctor—were ever wanted to cure any of the pious present, they knew one and all where he lived, and he was not expensive and he was—modestly speaking—very learned.

He turned to Khalil, asked for his money—who haggled again but finally paid—and walked out.

I told Khalil I must go. And Khalil laughed. Why had I come under his roof, if not to partake of his hospitality? We ate and smoked and smoked and talked and talked and ate for many hours.

Poor Ooseph was mightily sick upstairs. Four days later I was talking to an English official.

"I can't make these fellows out," he said. "These native doctors certainly do things that our chaps just couldn't do if they tried. There's a fellow here—Kolleel's his name—I heard him day before yesterday telling the other boys how he had had a doctor for his son who—he says—removed the kid's eye and put it back again. Look here, old man, it's all very well to laugh, but since yesterday I've heard the same thing from a whole crowd of gypoes who were there and saw the whole thing."

"I was there, too," said I, "and I, too, saw the whole thing."

The Persian Minister to the United States, Davoud Khan Meftah, and four other persons in a motor-car with him, were injured on July 10 when the car skidded on a wet road near Atlantic City and overturned.

Count Joseph Degenfeld, Moderator of the Reformed Church, who died in Budapest on July 14 at the age of 80, was an uncle of Count Stephan Tiza, who at a Cabinet meeting in Vienna in 1914 opposed the declaration of war against Serbia, and was afterwards murdered during the Communist régime.

PALESTINE AND TRANSJORDAN IN 1926.

The "Report by His Britannic Majesty's Government to the Council of the League of Nations of the Administration of Palestine and Transjordan for the year 1926" has been published by the Stationery Office (Colonial No. 26. Price 3s. 6d.)

Generally speaking, the economic condition of Palestine was less prosperous in 1926 than in 1925, for two reasons:—(1) Unsatisfactory distribution of rainfall and cattle plague; (2) Unsatisfactory financial situation of the Jewish part of the local population. But there was no disturbance of public security; in fact the complete re-organisation, on more economical lines, of the public security forces was effected. Numerous public works were carried out, including an improvement of the port at Jaffa and the (temporary) installation of a more adequate water-supply for Jerusalem. Tourist traffic showed development.

Upon the question of Jewish settlement, the Report refers to the distress among Jewish immigrants, and states that "it will be some years before increased production, mainly agricultural, can support a much larger Jewish population in the country."

The section devoted to Legal, Health, and Education matters show that development has been made in accordance with the needs of the population.

Of Transjordan, the Report states that steady progress has been made in almost every branch of the administration. The system of recording selected officers from Palestine for service with the Transjordan Government has proved beneficial. Public security in the interior of the country was well maintained, although in July there was a small disturbance in the Wadi Musa, and the situation on the northern frontier, by which the Druses used to try to take refuge, caused anxiety. Many refugees from Syria settled in Transjordan.

The financial situation of the people and of the Government was adversely affected by the failure of late winter rains and a period of parching east winds, which caused great damage to the crops; also by the outbreak of cattle plague which raged through Syria and Transjordan.

NEAR AND MIDDLE EAST ASSOCIATION.

The following letter has been received from King Fuad's First Chamberlain:—

"LEGATION ROYALE D'EGYPTE A LONDRES.

July 11, 1927.

"Sir,—I am commanded by His Majesty the King to express to you and all the members of the Near and Middle East Association, his thanks and appreciation for the cordial welcome addressed to him, and for the beautiful flowers which accompanied it.

I am, Sir,

Your obedient servant,

(Signed) AHMAD HASSANEIN.

The First Chamberlain to His Majesty the King of Egypt.

The Lord Henry Bentinck, President,
Near and Middle East Association,
7, St. James's Terrace, N.W."

The measures taken by the Greek Government against the Pangalist conspirators are reported to have had a calming effect. Reassuring reports were last week received from the Army. Admiral Typaldos, chief of the Naval Staff, has resigned in consequence of the dismissal of suspected officers. The Government ascertained that only 30 ex-officers of the Army and Navy under ex-General Othonaios and ex-Captain Kolialaxis were prepared to overthrow the Government, and, therefore, the attempt was not serious.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.
Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Book Review

A NOVEL ON IRAQ.

"THE HOUSE OF THE TALISMAN." By Helen Halyburton Ross
(London: Thornton Butterworth. 7s. 6d. net.)

English novels which have Arabia as their theme are published with sufficient infrequency for their appearance to be greeted in a journal which deals specifically with that part of the world. Of what is commonly pronounced "sheek" stuff, readers of THE NEAR EAST AND INDIA will probably be well aware, even if they are not familiar with it. In this book, however, is to be noted an inversion of the paying theme of love in the desert, for it is the Arab, at least the Iraqi Arab, who is the villain of the piece, and the young Englishman, the right-hand man of the High Commissioner at Baghdad, who is its hero.

Vanessa Lovell in her youth had loved Etienne Chalfont. In maturer years, however, yet still prematurely, she married Sir Ralph Gaynor, "the great Pro-Consul controlling the destinies of Iraq." Arrived at Baghdad, she meets Etienne Chalfont, the British officer who knows everything to be known by an Intelligence officer, and yet is given to quoting whole passages from Flecker's "Golden Journey." This infallible young man's magnetism is sufficient to draw the wife of the High Commissioner to his side in a motor-car, wherein they drive about Baghdad. After explaining the mysteries of the *suq*, Etienne takes her to the House of the Talisman, a supposedly haunted and derelict house in Baghdad. To his surprise he finds the House prepared for somebody's arrival. Later he finds out that this house is the abode of one Count de Leroux, alias de Kalb, a Soviet spy. Here de Kalb plots with one Meshid Bey, an Arab trader, and Ibn Rashid, a religious fanatic, to overthrow the British in Iraq. But their plotting is rudely interrupted one night by the appearance in the House of the Talisman of the ghost of the Shiah who was murdered therein by Sunnis. This ghost, of course, is Etienne in disguise; there is no limit to the impersonations of this versatile young man.

A little later, Her Excellency is caught in a Moharram procession, and is rescued only in the nick of time by a young Arab, who seizes the steering-wheel of Lady Gaynor's motor-car, and silently and furiously drives her back in safety to the Residency. This saviour, of course, is Etienne in disguise.

Later, at a dance at the Residency, Etienne, still going about quoting Flecker, meets Lady Gaynor again. He is too busy to dance, but has time to sit out once. Quickly she becomes "Van" to him, he "Etienne" to her. He calls her "My Beautiful" (just as the Arab did to his steed). Their love burns up in a few amazing kisses. This lover, of course, is Etienne out of his disguise. Unfortunately, however, they have been seen, and by Vanessa's husband himself.

Up to this point the novel has moved in the conventional, extravagant way: a little scandal, a little love, a little of the sinister—in fact, most of the ingredients of the successful hodiernal publication have been put in. But hereabouts the author loses grip of the decencies and of the probabilities. She actually makes the British High Commissioner, who knows Etienne Chalfont's unique service to the British, but who also has seen

him kissing his wife, send Chalfont on a mission which he anticipates is certain death. He orders Chalfont to take a message to Ibn Musaid, a Wahhabi chief, whom he can reach only by travelling through the disaffected areas of the Muntafiq. This is rot, and rot of a disgusting kind.

Before he departs to the West, Chalfont is able (1) to rob Meshid Bey of a silk document, and (2) to see Lady Gaynor in his house not far from the Residency. Once among the Muntafiq, Chalfont practises his extraordinary art of impersonation, and is on the point of persuading them to delay rising against the British, when he is recognised and denounced by Meshid Bey. This ugly Arab abjures "the whole race of the Nasrany," and wishes to crucify Chalfont.

From such a fate he is preserved by Dhari Ibn Tawula, Chief of the Dhafur tribe, whose son he once had served. And so he leaves the Muntafiq and safely delivers his message to the Wahhabis.

In the meantime the rising of the Arabs against the British has materialised. All the aeroplanes at Hinaidi but six have been blown up through the agency of an Armenian in the pay of de Kalb, and the writ of the British is reduced to the Citadel of Baghdad, or the "Ark." Things are getting absolutely desperate when—a host of Wahhabis are noticed advancing from the West. These warriors succeed in penetrating Baghdad, and a handful of them, under (of course) Chalfont, pierce the House of the Talisman, and there find the Soviet spy and his accomplice, Meshid Bey. That particular score being paid off, Chalfont leads his Wahhabis against the rebel Iraqi tribes, and (of course) utterly routs them. Chalfont's name is on the lips of everyone, except of the High Commissioner. For he, who had been so imperturbable at Chalfont's repeated warnings of the Arab rising, is made to commit suicide on learning of the young Political Officer's success. (Presumably there was no other way in the author's mind of subsequently getting her hero and heroine married to each other.) The end is at hand. "Van" and Etienne are joined in more lasting company than they could enjoy in Baghdad. . . . And the book concludes with an expression of a desire on the part of "Van" that the young heir shall be called after both his father and the dead High Commissioner.

That is not the real conclusion, however. For after that comes a glossary, in which we are told that *Haj* means "Pilgrim to Mecca, entitled to wear green turban" (Miss Ross makes this irritating mistake throughout the book, and seems to think, moreover, that in Iraq the wearing of the green turban is confined to *Hajjis*). Even more original than that is the meaning given of *Wahhabis*: "Arab tribe from the Province of Nefjd [*sic*]"—descended from a religious sect formed a century ago by a pious Sheikh, Aled-el-Wahhah [*sic*]."

It seems only fair to say that the author states that "both situation and characters are entirely fictitious. Iraq has been chosen as the setting for purposes of romance only." No confession, for those who know Arabia, could have been more naïvely superfluous.

Of its kind, however, and for its kind, the novel is readable, in that it has the supreme merit of movement.

Lieutenant I. C. Vallange, XIV. Field Brigade, R.A., has died as the result of injuries received through a fall from his pony while playing polo at Quetta.

The Bishop of Sofia left Bulgaria at the end of last week for England, where he will represent the Bulgarian Church at the International Conference of Practical Christianity to be held at Winchester.

News has been received in London of an attack on a British camel caravan in Abyssinia in June. The caravan was taking supplies to the party of the Maharao of Kutch, who was travelling in Abyssinia accompanied by Sir Geoffrey Archer, after they had been the guests of Ras Taffari Makonnen, Regent of Abyssinia. The caravan came from British Somaliland and was 50 miles inside Abyssinia in territory under the Chief of Jigjiga. About 4 o'clock in the morning it was attacked by Abyssinian soldiers and about a dozen British Somalis were killed. The caravan was looted, and the head man was shot and his body mutilated.

PERSONAL AND GENERAL

TO-DAY

July 21, 1927 (New Style).

July 8, 1927 (Old Style).

Muharram 21, 1346 A.H., of the Muslim Calendar.

Tammuz 21, 5687, of the Jewish Calendar.

The Marchioness of Reading left 32, Curzon Street, on July 13 for Deal Castle.

The Bulgarian Minister left London on July 16 with his daughter, Mlle. Hajji-Mischeff, for Bulgaria, on leave.

Lord Plumer has made arrangements to curtail his leave in consequence of the earthquake in Palestine, and will leave for Jerusalem on July 29.

The Jam of Nawanagar arrived on July 15 at Marseilles in the P. and O. s.s. Rajputana from Bombay, in which General Sir A. S. Cobbe, V.C., and Sir John and Lady Kerr were also passengers.

Mr. P. J. Hannon, M.P., entertained Sarwat Pasha, Prime Minister of Egypt, at dinner at the House of Commons on July 13. The other guests were: Sir Edward Manville, Sir Arthur Shirley Benn, M.P., Sir Hugo Hirst, Mr. Samuel Samuel, M.P., Sir George Armstrong, Fikry Bey, and Sir Philip Dawson, M.P.

Sir Eric Geddes gave a luncheon on July 14 at the Carlton Restaurant, at which the guests included the Egyptian Minister, Aziz Izzet Pasha, Abdul Khalek Sarwat Pasha, Sarwat Bey, Viscount Inchape, Sir Hamar Greenwood, Bt., M.P., Major Woods Humphrey, and Mr. Szarasy.

The Duke of Connaught presided at a luncheon given by the British Indian Union at the Hotel Cecil yesterday in honour of distinguished visitors from India. Invitations to the luncheon were accepted by the Maharani of Cooch Behar, the Rajah and Ranis of Tehri-Gharwal, the Maharajah of Burdwan, the Marquess of Reading, Lord Ronaldshay, Lord Sinha, Sir Shadi Lal, Sir Padamji and Lady Ginwala, and Sir Maneckji and Lady Dadabhoy.

WYCLIFFE HALL AND PALESTINE.

A Valedictory Service for the members of Wycliffe Hall, Oxford, who are spending the Summer Vacation term of six weeks in Jerusalem, as a part of the jubilee celebrations of the Hall, was held at St. Paul's Church, Onslow Square, on July 17. The party left Victoria the same evening, and spent part of the next day in Paris, embarking at Marseilles for Alexandria. They propose to spend 48 hours in Cairo, where arrangements are being made for them to see the Pyramids and the Sphinx, the Al Ahzar University, and one or two mosques, and the C.M.S. Hospital in Old Cairo. Their boat, the General Metzinger, will take them to Jaffa, whence the party will go by train to the outskirts of Jerusalem, and will walk into the Sacred City. A special service will be held at the Cathedral by the Bishop on their arrival.

The party numbers 31. They will be quartered at the English College and St. George's Hostel at Jerusalem, and will use the Cathedral for their daily services. In preparation for this tour, lectures were given last term on Jerusalem, by the lecturer in Rabbinic Hebrew; on the Church in Palestine, by the Secretary of the Jerusalem and the East Mission; on Egyptology, by Professor Griffith; and on Zionism, by the International Secretary of the Zionist Organisation.

The Bishop of the Church of England in Jerusalem has drawn up a programme so that the best use may be made of the six weeks to be spent in Palestine. Visits will be made to all the important places in and around the city, a long week-end will be spent in Galilee, and there will be motor tours in Transjordan. Most mornings and evenings will be devoted to lectures and reading. In addition to those provided by the staff lectures will be given by the Bishop himself and members of the Chapter, by the Director of the British School of Archaeology in Jerusalem, by the (Orthodox) Archbishop of Jordan, by the Principal of the Hebrew University, and others. The students are due back in London on September 16.

The King of Spain on July 15 visited the factory of Messrs. Bradbury, Wilkinson, and Co., Ltd., at New Malden.

BRITISH MUSEUM ACQUISITIONS.

The Times states that recent acquisitions by the British Museum include an interesting collection of Egyptian antiquities, among which are Ushabti figures of unusual design; ivory implements used in the "dance of the gods" to which magical properties were attributed; a wooden head-rest with a pillar carved in the form of a lion-headed monster devouring a gazelle, and a grey granite stele, in relief, of a boy offering flowers to his dead mother (18th Dynasty).

A chemical experiment which has been made on an inscribed Egyptian leather roll has led to a useful result. This roll, which was found with the Rhind mathematical papyrus, was in so brittle a condition that it could not be unrolled, but, after treatment in the Museum laboratory, it was softened so that it could be spread out and the writing deciphered. It was found to be a school roll, containing a number of sums in addition of fractions, but its intrinsic value is unimportant compared with the fact that apparently hopelessly desiccated leather can now be made flexible.

Among additions to the manuscript rooms may be mentioned an unusually complete series of manorial court rolls of Lopham, Norfolk, 1399-1655; a late 13th century collection of alchemical tracts in prose and verse; an autograph song by Saint-Saëns; and two series of Indian Mutiny letters and papers from the collection of the late Sir George Forrest. There is also an Oriental MS., the only known copy (except for some fragments at Paris) of the Arabic lexicon of Abu Ali Isma'il, called al-Kali, written beautifully in the 10th or 11th century; and a volume containing 16 sections of the Kitab al Mudawwanah, a manual of law, in a fine Maghribi script, dated 344 A.H. (955 A.D.).

MEMORIAL TO SIR STANLEY MAUDE.

Lieutenant-General Sir William Marshall unveiled a memorial window in Eton College Chapel on July 14 to Lieutenant-General Sir Stanley Maude, whom he succeeded in the command of the forces in Mesopotamia during the War. Dr. A. C. E. Jarvis, Chaplain-General to the Forces, who dedicated the memorial, was with General Maude when he died, and he officiated at the burial service at Baghdad. The Rev. W. Elwell, rector of Clewer, Windsor, who took part in the service, was also a chaplain in the Mesopotamia Forces. Among others present were the Provost of Eton (Dr. M. R. James), the Vice-Provost (Mr. Hugh Macnaghten), the Headmaster (Dr. Alington), the Lower Master, Mr. C. H. K. Marten, Lady Maude and Miss Maude, Lady Methuen, Major-General Sir George MacMunn, Brigadier-General Hopwood, Brigadier-General Holdsworth, and Mrs. Skevington Smythe. The following is the inscription on the memorial:—"This window has been presented by his army in loving memory of their commander, Lieutenant-General Sir Frederick Stanley Maude, K.C.B., C.M.G., D.S.O., General Officer Command-in-Chief, Mesopotamia Expeditionary Force, died 18th November, 1917, aged 53 years." The window is the work of Mr. J. C. Bewsey.

A YEAR OF BENGAL.

An illuminating record of communal bitterness and political futility is found in the Bengal Administration Report for 1926. The General Summary by which the Report is prefaced deserves a wider circle of readers than it is likely to obtain, for it depicts a condition of affairs which is very imperfectly appreciated outside India. In the period under review an intensity of communal feeling was manifest such as never before had been experienced in the Province. The Khilafat agitation had fostered sectarian passions and created a hostile sentiment towards law and order which, while the agitation lasted, were directed against the Government. Upon the abolition of the Khilafat the "communal self-consciousness," which still remained, turned upon the rival community, while the implication of the Reformed Constitution tended to increase the estrangement of Muslim and Hindu. The fear that a system of popular government will ultimately lead to the establishment of a Hindu tyranny is evident in all parts of India. This sentiment has been accentuated by the organisation of the Suddhi and Sangathan movements by the Hindus which led to the creation of counter-organisations by the alarmed Mussulmans. In Bengal the bitterness of communal rivalry was bad enough in itself, and "an extremely strident and irresponsible Press helped to diffuse dissatisfaction and by constant incitement greatly to intensify it." The long tale of riots and looting of property which marked the year 1926 in Bengal provides melancholy proof of the difficulties which beset the authorities. In April a fracas concerning the playing of drums before a Calcutta mosque led to disturbances over a wide area. No fewer than 151 incendiary fires were caused within four days. Attacks on temples and mosques were a feature of the outbreak while the casualties reported were 44 dead and 564 injured. After a week's interval the riots were renewed and on twelve occasions it was found necessary to fire on the mobs. Again a long list of casualties was reported comprising 66 deaths and hundreds of wounded. At Kharagpur and Pabna also serious outbreaks were experienced, while later in the year Calcutta was once more the scene of a minor disturbance, and at Dacca a riot resulted in the death of 8 persons and injuries to 72 others.

Efforts have been made by the authorities in many parts of India to secure the co-operation of the leaders of the two religious communities in preserving the peace. But it is easier to inflame the passions of the populace than to calm them when once they have been aroused, and nothing was more conspicuous during the Calcutta riots than the total inability of the "popular leaders" to restrain their respective communities. Communal fanaticism was so strong that to show moderation was to incur the risk of unpopularity, and no leader could be found with sufficient strength or courage to rise to the occasion. A joint manifesto was indeed issued in April signed by the Swarajist leader and a Muhammadan politician, but it is averred that the apparent object of this move was to distribute blame in such a way as to defeat the argument that the

riots indicated any difficulty in the path of Swaraj. The presence of the British soldier has been welcomed in times of communal outbreaks both in Northern and Southern India. In Calcutta the European element in the police comprise the only section of the force who inspired confidence. The demands for posting sergeants in quarters where feeling ran high was insistent. The number available was, however, small, and as it was found impossible to augment their strength by ordinary methods of recruitment, the Army authorities came to the rescue and arranged to lend 100 men from British regiments, who were temporarily enrolled as sergeants. These men rendered valuable service, and their advent led to a permanent increase in the Calcutta police of 50 European sergeants and 6 European inspectors. It would be superfluous to dwell on the obvious moral of these significant facts.

It was inevitable that the Press should play its part in the events that have been described; and its influence unfortunately developed mainly on communal lines. There were some notable exceptions, but the general tendency of the newspapers was to exacerbate communal feeling. By publishing exaggerated and partisan accounts of disturbances, imputing sinister motives to the authorities and denouncing recklessly all the measures they took to suppress rioting, the papers, it is declared, encouraged a spirit of lawlessness and incited their readers to retaliatory action. A conference between a member of the Government and the editors had little effect, nor did the deterrent influence of Press prosecutions prove of long duration. The outlook of the Indian political Press is so amazing as to create bewilderment among newcomers to the country. There are newspapers who see something sinister and Machiavellian in every action of Government. Thus, one journal in Bengal found in the creation of an Indian Navy a device to relieve British warships "operating in the Indian Ocean and Persian Gulf," and to assist the British taxpayer at the expense of India. Another journal, commenting on the appointment of the Royal Commission on Agriculture, asserted that the demand for Swaraj had become "so acute and unavoidable" that it had been found necessary to divert the minds of the people from political matters to something else. A third maintained that the Commission was intended to solve Britain's unemployment problem by increasing the purchasing power of the Indian. Puerile as these dissertations may appear, there is no question as to their object and intention, which is to render the task of Government more difficult. But of graver moment is the open sympathy of Bengali newspapers towards revolutionary activities—a sympathy which continued unabated throughout the year. By idealising the terrorists as martyrs for their country's cause, these journals not only gave encouragement to revolutionaries, but incited impressionable youths to follow their example. Considering the number of immature lads who have met death on the scaffold owing to the poisonous teachings of older men who have themselves kept carefully in the background, it is astonishing that public opinion in Bengal tolerates such writings as have been quoted. But no effective protest is made, and when two

of the men found guilty of participation in the dastardly murder of an Indian police officer in the Alipore Jail were executed, a Bengali paper was moved to declare that, "on the gallows departed two patriotic souls, leaving a void in the breast of conquered Bengal." An essential to India's prosperity is internal peace, but the grim record we have cited convincingly shows that men who pose as the exponents of a lofty patriotism are engaged in promoting movements which tend to the perpetuation of discord and strife.

CURRENT TOPICS.

A Remedy for Communal Troubles.

Mr. Gandhi once offered to pacify the turbulent tribesmen of the North-West Frontier by teaching them the use of the spinning wheel. The fact that he is still an active member of society is sufficient proof that his offer was not accepted. Mr. Gandhi is now expressing his dissatisfaction at the willingness of his fellow countrymen to allow the authorities to preserve the peace during periods of communal tension. "It is unmanly," he says, "to ask or expect the Government to ensure peace between rival parties, or to defend our women against ourselves, and while we remain so unmanly it is hopeless to expect Swaraj." In the absence of arbitrators who would give wise and impartial decisions, or if the protagonists are too unruly to accept arbitration, Mr. Gandhi's view is that "we must fight till we are exhausted and come to our senses." The Government he says, will no doubt, always intervene to keep the public peace, but it will be better, in his opinion, if the rival factions courageously and straightforwardly refrain from courting the protection or assistance of the authorities. The tribesmen of the border are as likely to abandon their traditional customs and turn to the spinning wheel as are the law-abiding of Mr. Gandhi's countrymen to welcome the idea of asking the police and military to stand aside and allow the militant members of the communities to fight to a finish.

The Statutory Commission.

The question of the personnel of the Royal Commission to be appointed to inquire into the working of the Reformed Constitution is giving rise to considerable discussion in India. Sir Tej Bahadur Sapru is among those who think that the best interests of the Empire would be served by appointing men with no previous association with India. Sir Tej Bahadur considers, however, that the present Lord Chief Justice of England would make an ideal President. But perhaps, he goes on to say, Lord Hewart's early career as Editor of *India*, the organ of the Indian National Congress in London, would rule him out if the test of previous association with India were applied. "I imagine, however," Sir Tej Bahadur adds, "that a separation of a quarter of a century from early associations is a sufficiently long period to cure a man of his youthful predilections." It is clear that the gentlemen who are nominating members of the Commission are beating the air, though the discussion that is going on is in a sense instructive. If the Indian politicians whose names are being put forward by their respective advocates were to be appointed to the Commission, it would not require great perspicacity to say beforehand what their recommendations would be.

The Indian States.

Dr. L. F. Rushbrook Williams and Colonel K. N. Haksar, who have been visiting London as a deputation from the Chamber of Princes, are now on their way back to India. Their mission here was to consult leading lawyers in regard to constitutional points affecting the position of the Indian Princes, in view of the Statutory Commission which is to be appointed to investigate the working of the Reformed Constitution. This question is one of profound importance, though it has too often been overlooked in the discussions relating to the future of India. The Princes, it is understood, object to reference of their affairs to the Statutory Commission and emphasise

that, as they are entirely independent within their own States, they are not subject to control by the British Parliament, which will be the source of the legislation under which the Commission will act. The deputation's report will come before the Standing Committee of the Chamber of Princes, after which an announcement of the position taken up by the States will no doubt be made.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, June 30.

The Statutory Commission.

It has been suggested that a Board of Assessors should assist the Statutory Commission in its inquiry into the future of the Reforms in India. Sir Hubert Carr and Mr. Langford James, leading members of the non-official European community, both strongly support the suggestion. The opinion of men belonging to different Indian political parties indicates a general demand for a mixed Commission. But Sir Hubert Carr thinks that such a Commission would be practically impossible to form, for it would be too large if it had to represent the views of the various communities in India. All that would emerge would be a series of dissents representing the grievances, real or alleged, of particular interests. The ideal Commission, in Sir Hubert Carr's view, would consist of not more than five members, whose object would be to base their decisions on the fullest evidence of all that has been found good and all that has been proved faulty in the Reforms as they stand, and in the best interests of India's security and the happiness of her people. Mr. Langford James cannot conceive any selection of Indian representatives that would satisfy Indian political opinion. A Board of Assessors working ahead of the Commission and submitting evidence would seem to be the better alternative. If the Commission is going to be predominantly European, the Indian leaders think that it would be preferable for them not to have any responsibility as to the Report.

Medical Mission to China.

Dr. Hardikar, Secretary of the Hindustani Seva Dal, has made a statement to the Press regarding the proposed Medical Mission to China. More than 250 applications have been received from medical graduates and engineers, certified compounders and medical undergraduates. Even women, and with good educational qualifications, have offered their services. All of them have been thanked for their willingness to serve, but their applications cannot be considered, the Committee not finding it possible to include women in so risky a mission. The first selection has given 60 candidates. A second selection, which will be final, will take place shortly. Some of the candidates are willing to pay their own passage expenses both ways.

Aviation in Calcutta.

Mr. Leete, owner of the "Moth" aeroplane, and Mr. Widdicombe, who is flying the machine to afford air trips lasting ten minutes to a select few, are on a visit to this city on business. They propose to float a limited company. The object of their daily flight is probably to acquaint people with the idea of flying from Calcutta to Karachi, via Delhi, when that air route becomes an established fact. In the meantime they survey the ground over which they fly, take kinema views and all sorts of data for use in the great project. Calcutta has no aerodrome, yet it may be called upon to play the part of an important relay in the air trips, such as the Amsterdam-Batavia venture which has just passed here, coming from Karachi, on its way to Rangoon, whence it will go to Batavia, via Bangkok and Singapore. Mr. Van Learblack, who is flying from Amsterdam to Batavia in a Fokker Seven Monoplane with a Jupiter engine, is described as a millionaire. He has with him a valet, a senior pilot, a junior pilot, and a

mechanic. There are also a few paying passengers on board, and this flight may be a forerunner of a regular commercial service between Holland and Java. The party did not seem to understand what the "monsoon" meant, but they complained of the heat. For all of them it is a first trip to the East. It is sure to be fraught with surprises. The proposed regular Amsterdam-Batavia service would cover the distance in eight days. The average speed is 100 miles an hour, but it could be reduced or augmented whenever necessary. Rain and damp atmosphere generally play havoc with wooden propellers, but Mr. Van Learblack's monoplane is fitted with a metal propeller, and that makes all the difference.

Capital Rivalries.

Just as Bengal will never see the change of capital to Delhi with a kind eye, so the United Provinces resent deeply the transfer of Government branches and other privileges to Lucknow. A memorial on the subject has been circulated throughout the United Provinces for signature. It is addressed to His Excellency the Viceroy, and it protests against the gradual removal of the capital from Allahabad. It is a fact that most departments have been permanently removed to Lucknow, and that the provincial Council Chamber is being built there. The Secretariat must necessarily follow suit. It has been suggested that if Allahabad does not remain the capital of the United Provinces, it ought at least to be the chief city of a new Province. Allahabad could be the capital of the Province of Agra, but then Agra itself might claim the title over the head of Allahabad.

Broadcasting in India.

The Bengal Chamber of Commerce have for some time studied the questions arising from the agreement, drawn in 1926, between the Secretary of State for India and the Indian Broadcasting Co., Ltd. It must be explained that the importation of wireless apparatus into India is permitted only under a special licence, granted by the Director-General of Posts and Telegraphs, and the licences, according to the agreement, can be granted only to members of the Broadcasting Co. To become a member, and thus eligible for a licence, one must enter into a subsidiary agreement with the company. The charge to be paid is ten per cent. *ad valorem* on the apparatus imported. There was one flaw in the agreement: no provision had been made for apparatus that might be manufactured in India, but the Committee has now suggested that Indian makes of apparatus should be in the same position as imported ones.

Bengal Industries.

In a resolution of the Government of Bengal, reviewing the work of the Department of Industries of that Province in 1926, we read: "With the headquarters staff brought up to full strength, and with the completion of the Industrial Research Laboratory, which has been the most important event of the year, the department is in a position to make full use of its opportunities and, it is hoped, should be on the threshold of a period of increased and useful activity." In the meantime India sends her raw materials to Europe which manufactures a finished product that India re-purchases. This country is the place for soap-making, oil-pressing, tanning and weaving, yet huge imports of the corresponding commodities are seen on the lists. The State Aid to Industries, says the report mentioned above, has not, for a variety of the reasons, reached the age at which it can be put before the Council, but in time it will no doubt make further progress possible.

Here and There.

His Excellency the Governor of Bengal is due in Calcutta on July 1. The arrival will be private.

It is not welcome news for the Indian Extremists that Lord Yytton, the Maharaja of Kapurthala and Sir C. P. Ramaswami Aiyar have been chosen to be the representa-

tives of India at the September session of the League of Nations.

A witty chronicler writes: "The news that Serajgunge is to be shifted a mile to the South to prevent its being destroyed by the Brahmaputra will arouse envy in Calcutta. How much pleasanter if this city could be removed nearer the sea-breezes. But there is yet hope. An earthquake, a few years ago, was credited with having shifted the city a quarter of an inch from her moorings. There are many inches in a mile, it is true, but there is no saying what a few really powerful shocks might do."

It is said that opium is taken either to lull the pangs of hunger, or as a pick-me-up to allow the poor workers to tackle their day's work with more alacrity. It is also said that the women who work in the mills administer opium to their babies to keep them quiet while they are at work. The reformers who try to do away with opium altogether received in answer to their questionnaires, the saddening information that millhands use opium as a sort of panacea to all their ills and troubles. The children who are given the drug in the cradle, naturally develop a craving for it. The Bengal Chamber of Commerce cannot suggest any practical measures to reduce its excessive consumption. It is suggested that a trained nurse should be appointed for each group of mills, and the children cared for while the mothers are at work.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, July 2.

Kathiawar Ports.

To-day's mail boat is probably carrying a long and confidential despatch to the Secretary of State from the Government of India with reference to the drastic action taken by them to stop the diversion of trade from Bombay to the ports in Kathiawar States and the consequent loss in the Customs revenues of British India. Government convened during the week a conference of the Maritime States of Kathiawar at Mount Abu with a view to see whether an amicable settlement of the problem was possible or not. After deliberating for three days behind closed doors the conference broke down and the Government of India promptly reimposed the Viramgam land Customs line abolished by mutual agreement in 1917. Although commercial circles in Bombay, or rather those sections of it which have nothing to do with Kathiawar, are naturally pleased, such drastic action was not expected by the general public because it was known that an alternative proposal was made to the Kathiawar States at the Conference at Mount Abu this week, and it was reasonable to suppose that, in spite of the sudden break-up of the conference, the proposal would remain open for consideration and negotiation for a few weeks at least. But what was not generally realised was that this proposal made at the Conference was an alternative—to be promptly accepted or rejected—to the immediate reimposition of the land Customs line. The arguments for and against the reimposition of the land Customs line are the same now as they were at any time earlier in the year—it will protect the revenue of British India, but it will impose great hardship on certain traders and certain States, chiefly Jamnagar.

Agreement of 1917.

Newspapers in Bombay, both Nationalist and Anglo-Indian, have taken up the cudgels on behalf of the Kathiawar States, and it cannot be that everyone of them is subsidized by one or the other of the Kathiawar Princes. There can be no doubt that the Agreement of 1917 empowers the Government of India to act as they have done, to reconsider the situation owing to the magnitude of the fiscal interests involved, and to reimpose the Viramgam line. But the agreement does not stand alone. There is the interpretation of that very proviso which was

made by Sir Evan Maconochie, on behalf of the Bombay Government and the States concerned and it is suggested that the Government of India have chosen to ignore or repudiate the interpretation.

The last word on the controversy has certainly not been said. Although the threat of an appeal to the League of Nations made by one of the Kathiawar representatives to a newspaper correspondent soon after the breakdown of the Abu Conference should not be taken seriously, it is likely that an immediate appeal will be lodged with the Secretary of State in London. Indeed it is one of the objects with which the Jamsaheb of Nawanagar is sailing for England by to-day's mail.

Government and Millowners.

Apart from the Government of India's victory in the first round of the fight connected with the Kathiawar ports, Bombay has evinced deep interest in the Commerce Members' Conference with the millowners. No official statement of the discussion has been issued, but it is known that Sir George Rainy, who specially came down from Simla stressed the viewpoint of the Government of India in no uncertain manner. The millowners, however, refused to be impressed by his arguments in support of Government's denial of protection to the industry and their committee is soon meeting to give shape to the propaganda campaign against Government.

The Statutory Commission.

The political atmosphere has been remarkably calm of late in the Western Presidency, although considerable interest is evinced in the discussions connected with the personnel of the Statutory Commission to inquire into the working of the Reforms. The proposal that the Commission should not include any Indians finds little or no support here, although responsible quarters endorse the view that the British element in it should consist of men with no past associations with India.

Money Market.

In the financial world conditions have been quiet during the week, with a steady decline in the trade demand for money. The call rate has fallen indicating that easier conditions for which Sir Basil Blackett has been waiting to float his new rupee loan will soon prevail.

BOMBAY AFFAIRS.

A Bombay correspondent writes:—

The loss of Bombay's trade owing to the diversion to the Kathiawar ports is exercising all the public bodies very actively and has led to discussions in the municipality as well as in the various Chambers of Commerce.

Bombay's complaint is justified in so far as the trade of Kathiawar was practically confined to country craft which carried merchandise from Bombay. These ports have now opened up direct communication with foreign countries and are importing ocean-borne cargoes from abroad.

Bombay's complaint is justified in so far as the trade of these ports succeeds in evading Indian Imperial Customs; and in fact, since the Act of 1917, it appears that there have been considerable opportunities of evasion. This will no doubt be stopped and Bombay will be relieved of an altogether unfair and illegitimate form of competition.

But even if this illegitimate factor is eliminated there are many other factors which threaten Bombay's monopoly of the seaborne trade of Western India, and if we wish to maintain our supremacy we shall have to attend to our business. A large port which provides accommodation for the largest steamers is bound to be rather an expensive port. Smaller sized steamers which can discharge their cargo with much less elaborate arrangements are obviously under no necessity to pay the heavy port dues

of Bombay; and it becomes a matter of simple arithmetic to decide whether the conveniences offered by a great port outweigh the initial economies of a small port. With the extension of railways in Kathiawar, the hinterland that can economically be served by the local ports is becoming greater; while the dues demanded by the port and town of Bombay are growing heavier, for reasons which are in many cases quite beyond the control of the Port Trust.

If there is any serious and permanent falling off of the Bombay tonnage, the dues on the remaining ships will automatically have to be increased, and the margin in favour of the smaller ports will automatically become greater.

It is the business of the Port Trust to see that the ships that come to Bombay get full value for their money. But the Government, as well as the Municipality, has to protect the city from being swamped by debt. The most serious feature of the Development scheme was, from the beginning, that the interest on the debts incurred was, in practice, established as a first charge on the trade of Bombay, and this will, unless we are very careful, become a burden which our trade will not be able to support. Our budget may balance admirably, and the finances of Government may look to be all that is desirable; but if our seaborne trade is yearly diminishing because other ports are less expensive Bombay has not got a bright future as the great port and depot of Western India.

Standard Time.

The Municipality has voted by a considerable majority to continue its preference for local time. This has drawn upon it the derision of the *Times of India*, which is pleased to compare Bombay to the village that voted the earth was flat.

I cannot for the life of me see the comparison. About twenty-five years ago Bombay, as a whole, was stampeded into adopting Indian standard time, about 39 minutes ahead of Bombay time, on the ground that it was inconvenient to travellers to accommodate themselves to the difference between Railway and local time. Now the manners and habits of Eastern people are so dependent on the times of sunrise and sunset (which compared to England have of course little seasonal variation) that it is impossible to adapt them to an arbitrary interference with Nature; and the result has been that Bombay now keeps business hours which are ridiculous in the eyes of all civilised peoples. Banks and offices used to open at 10 a.m. that is now about 9.20 by sun time, and on a winter's morning that does not give a Hindu clerk enough time after sunrise. Consequently, to the amazement of casual visitors, Bombay starts its official work at an unheard of time; and whether the inconvenience of having to regulate the whole of one's working hours by a false standard of time is outweighed by the fact that one no longer has to go through the process of checking the time at which a mail train starts, does not appear to me to be quite such a one-sided problem as the *Times of India* suggests.

OBITUARY.

SIR GANGA RAM.

The funeral of Sir Ganga Ram took place at Golders Green Crematorium on July 11. Telegrams of sympathy were received from Lord Irwin, the Marquess of Reading, and the Earl of Birkenhead. The following colleagues of Sir Ganga Ram on the Royal Commission on Agriculture in India were present:—The Marquess of Linlithgow, Dr. L. Hyder, Sir James MacKenna, Mr. S. B. Kamat, Professor N. Gangulee, Mr. H. Calvert, Sir Thomas Middleton, Mr. F. Noyce, and Mr. F. W. H. Smith and Mr. Madan (joint secretaries). Sir Henry Lawrence, another member, was unable to be present. Others at the funeral were:—Colonel A. D. Bannerman (representing the Secretary of State for India), the High Commissioner for India, Chief Justice Sir Shadi Lal, Sir Louis Dane, Sir Walter Lawrence, Sir Edward MacLagan, Sir Michael O'Dwyer, Sir Lionel Jacob, Mr. S. N. Mallik, Mr. S. K. Kirplani, Mr. L. D. Kiohar, Sir James Roberts, Dr. Kapur, Dr. Titmas, Dr. Prior, Mr. F. W. Woods, Sir Thomas Ward, Diwan Anantram Mehta, Mr. Grubb (representing Lord Clwyd), Mr. J. Atal (representing Raja Narendra Nath of Lahore), Mr. G. D. Birla, M.L.A., Mr. Damodar Das, Mr. C. S. Ranga Ayer, M.L.A., and Colonel D. Warliker.

INDIAN PEASANTS AND OVERSEAS MARKETS.

BY JANUS.

Lord Linlithgow and his colleagues on the Royal Commission have now ploughed most of the vast area entrusted to them, and next year they will be sowing good seed, or, at least, I am confident that the seed will be generally good. Looking forward a little further one is tempted to ask, What will be done with the resulting crop? Will it be sold abroad, or used at home? Will the West rejoice in increased supplies of cheap Indian produce, or will it find that there is less to be had, and that only at higher prices? No general answer can be given to such questions as these, but there are some general considerations which will have to be borne in mind by everyone who is interested in the answer. To begin with, India does not produce primarily for the sake of other countries in the way that Australia, for instance, produces wool. It is true that tea and coffee come into this class, but those products are raised by planters, not by peasants, and they are not likely to be greatly affected by the developments in peasant-agriculture which it is the Royal Commission's main business to initiate. Speaking very roughly, India uses up about half her fibres, two-thirds of her oilseeds, and nine-tenths or more of her wheat and rice. She sells the balance, when she can find people to buy it; but quite small changes in production, or in home consumption, may suddenly swell the balance to surprising proportions, or, in the alternative, may leave no balance at all. This is an important consideration for the foreign buyer, because it means that he has always to be on the look out for surprises, and some alteration of habits in Indian villages, too trifling to attract the notice of the Press, may bring about an entirely new situation in the foreign market.

Another point to be borne in mind is that at present India does not get all she needs. Many, perhaps the majority, of the country folk are underfed, and, in the North, many of them are also underclothed. Now there is just one motive which can lead the peasants in the mass to increase production, and that is the Will to Live Better; the Royal Commission can succeed in its task of fostering rural prosperity only if it succeeds in bringing this motive into more effective action; and that means that home consumption must increase alongside of production, so that the margin for sale abroad will not necessarily increase, and in the case of a particular product may vanish altogether. The most striking example of this class of products is wheat. After a run of good years India used to sell a huge quantity, which, however, was only a fraction of the produce. There have been good seasons of late, but wheat has not come forward in the expected quantities, simply because the growers have been eating more. The Punjab, the great wheat area, is now getting in an extra meal a day, and that necessarily cuts into the surplus, while further East more of the substantial peasants are eating wheat, and consequently leaving rather more millet or barley for the poorer people. It is quite conceivable then that the export of wheat will come to an end, while the trade in grain for animal-feed may increase in importance: instead of millet-eaters putting their best fields under wheat for sale, we may have wheat-eaters getting cash from the sale of millet and barley which they do not need.

Allowance must be made for the fact that, as agriculture develops, and when internal commerce has been purged of its inveterate vices, improvements in quality will become important, perhaps more important than increase in yields. Cotton is a case in point. Of late India has been selling enormous quantities of raw cotton of the lowest grade, and importing clothes made of much better material. The future of the market for this low-grade cotton is, however, by no means assured, and, under the guidance of the Central Cotton Commit-

tee, the one recent institution on which India can be congratulated without reserve, the quality of the cotton grown is rapidly improving, and some of it is beginning to compete with American in European markets. Here the present position is unstable, and the probabilities are that, as time goes on, both imports and exports will tend to decrease, because the better cotton will be used more and more in India for turning out the quality of clothing which Indians prefer. The rate of this change depends primarily on the attitude of Bombay. The industry there is, at the moment, very sore over the dressing-down it has received at the hands of the Tariff Commission, and there is no use in rubbing it in; but if Bombay should put her sharp wits and her great energies seriously into the task of dressing India in suitable clothes, made in India from improved cotton grown in India, I believe she would do better business than by squandering her talents in rings and corners.

Some other possibilities must be glanced at more briefly. Indian agriculture needs fewer cattle, of higher quality, and longer lived. That must mean in the end, if the end should ever be reached, a great decline in the number of hides exported, and also an entire change in quality. Again, it is quite possible that, with a rising standard of life, India may take seriously to tea-drinking. The present annual production gives a little over a pound of tea per head of the population, so that, if she adopted Australian habits, she could easily drink the whole production, and would have none left to sell. That, of course, is not likely to happen, but a progressive home demand is one of the factors with which the trade has to reckon. On the other hand, the quantity of Indian tobacco available for sale may increase rapidly, and the quality is likely to improve. The future of the oilseeds trade is, I think, obscure. Agriculturists would like to keep all, or most of the cake, and sell the oil, but it is quite uncertain how far oil-pressing can be carried as an organised industry, and, so far, development seems to have resulted in the export of cake rather than its utilisation in the country. Thus no generalisation is possible as regards the exports of agricultural produce; each article must be considered in the light of the conditions affecting its home consumption, and all that can be said is that exports are not likely to expand in the same measure as production.

As to the imports, it is safe to say in a general way that, as the standard of country life rises, there will be an increased demand, first for finished goods and later for machinery to make the goods wanted in India, but it is hardly possible to forecast the particular lines or which demand will develop.

In the case of one commodity, however, imports may decline or even vanish. It is one of the paradoxes of world-commerce that India has not yet succeeded in supplying herself with sugar, but there are now definite signs of progress in this direction, and, though she may never have much to spare for export, the release of the half-million or more tons which she now buys from abroad would make a material difference in other consuming countries. Such a change would be welcome to the Currency Authorities at least, for the other developments which have been indicated point to a decrease rather than an increase in the trade balance available to meet liabilities falling due abroad. Probably, however, this matter will be settled by a reduction in the imports of the precious metals. At present the mischief which lies at the root of India's economic weakness is simply that Indians in the mass do not know what to do with their spare cash, and follow blindly the old tradition of turning their savings into gold and silver. That tradition is beginning—only just beginning—to lose its hold; if, and when Indian peasants decide to live better, they will spend their savings in other and more profitable ways; they will buy useful things instead of glittering minerals, and by and by they will set their idle accumulations to do honest work. That prospect may never be realised, but, if it is not, the developments

in agriculture will not be so great as to make a material difference in the overseas markets. The clue to the future lies in the fact that Better Farming and Better Living must come hand in hand: while the peasant sleeps, agriculture will show only small changes, but when he wakes up, changes will come not in agriculture alone, but in every sector of the economic life of the nation.

INDIAN MAIL.

Double Income-tax.

In view of two cases which have recently come before them, the Committee of the Bengal Chamber of Commerce think it desirable that they should draw the attention of members of the Chamber to a point in connexion with the arrangement between the Home Government and the Government of India under which relief from double income-tax is allowed. Section 50 of the Act prescribes that any claim for refund must be made within one year from the last day of the year in which the tax was recovered. According to the procedure prescribed, an assessee must, before claiming relief in India, obtain from the authorities in the United Kingdom the proportion of relief which he is entitled to receive there. When he submits to the Indian authorities his claim for the balance of relief which he is entitled to receive in India, he must produce proof that he has obtained relief from the Home authorities, and also proof of the rate of that relief. In view of the delays which frequently occur in obtaining the necessary certificates from Home, it is often quite impossible to submit the complete claim within the time allowed by section 50, and the Committee wish to make it clear to members that the income tax authorities in India accept in practice a formal notice, filed with them within the year, to the effect that a claim for refund will in due course be made, even although, at the time when such formal notice is lodged, it is not possible to give particulars of what the claim will be. On receipt of the requisite information from the United Kingdom, the detailed claim is then made out and filed in the usual way with the income tax authorities.

The Rangila Rasul Case.

Excitement apparently continues to prevail at Lahore over what has become to be known as the "Rangila Rasul" case. In this case the Lahore High Court held that insulting references to the founder of the Muslim religion were not punishable at law, and the indignant comments of a Muhammadan Editor on the decision led to his imprisonment. The matter is now engaging the serious attention of the Governor of the Punjab. Sir Malcolm Hailey, writes the *Pioneer*, is no lawyer, as he would often remind the Legislative Assembly, but he has a remarkable faculty for expounding legal points with a skill and lucidity which many lawyers might envy. In this case the Lahore High Court and the Allahabad High Court have given conflicting opinions. The former has held that under the law insulting references to the founder of a religion although giving pain to the followers of that religion are not punishable. The latter has given a judgment in another case in the contrary sense. To test the law the Punjab Government have taken up another prosecution and if necessary the case will be carried to the Privy Council.

Taxation of Tea Companies.

Writing on Sir Basil Blackett's proposal to increase the assessment of tea companies' profits to income-tax, the *Englishman* says:—It is not so much an adjustment of income-tax assessment to the conditions and needs of individual gardens and companies that is wanted. The main point at issue in this question of the taxation of the tea industry goes deeper than that. Sir Basil Blackett's ideas of ensuring that the Government's revenues will not suffer from the abolition of the export duty seem to have run in the direction of penalising the producer for the benefit

of the distributor, which is the virtual effect of his proposals. We do not suggest that the distributor—in other words, the exporter—gets all the benefit. Our point is that it is the producer who pays most for the whole scheme. A heavier tax on production is a greater impediment to an industry than a minute levy on distribution. The one is fundamental while the latter is incidental; for profits constitute the only income from business and a tax on income goes to the very root of the industry.

Demand for Reforms in Baroda.

The Baroda State Subjects' Conference has passed a resolution recommending that there should be in the State Legislative Assembly one representative for every 25,000 of the population and that the number of the official and non-official nominated members should not exceed one-third the number of elected representatives, that the representation should be by direct election and that the present bar of Government approval to the election of a member be removed. With regard to the powers of the Assembly, it was proposed that new laws or amendments of existing laws should not come into effect without the consent of the Assembly, that the Budget should be passed by the Assembly in the form of a Finance Bill every year, that Government should consider the removal of a member of the Executive Council against whom the House passes a vote of censure, and if such a vote is passed twice in two separate sessions he should be removed by Government from office. It was also proposed that the resolutions passed by this body should be binding, and that His Highness the Maharaja Saheb should have the right of veto. Finally, it was resolved that there should be a general election every three years and that the Assembly should be allowed to elect its own president.

Company Administration in the Punjab.

"There is reason to believe that banking frauds of a serious nature were committed by the managing directors of certain companies. Great difficulty has been experienced in scrutinizing the balance sheets because certain companies do not appreciate the value of good audit." These extracts from the last report of Dr. Rowley, Director of Industries, Punjab, on the working of joint stock companies in the province, writes the *Statesman*, indicate that company promotion in the Punjab is not without its pitfalls. In view of the tendencies above referred to it causes less surprise to be told that more than half the companies floated during the past three years have gone into liquidation. Indeed, the survival of 41 concerns out of 87 becomes almost a matter of congratulation. At the same time a mortality of over 50 per cent. points to a state of things which can hardly be described as healthy, and it is therefore reassuring to learn that "strict vigilance is maintained by the (Industries) Department over companies in regard to which fraud is suspected." In view of the figures one is almost tempted to wish that the vigilance exercised were even stricter, but it is doubtful whether this could in fact prevent a great deal of the fraud that is actually perpetrated.

The High Commissioner for India and Lady Chatterjee were at home at the Indian Gymkhana Club grounds, Osterley Park, to English, Indian, and Australian friends on July 12.

Mr. V. J. Patel, President of the Indian Legislative Assembly, left London for a few days' visit to Geneva, before embarking in the *Morea* for Bombay. One of the last of his many engagements in this country was a visit to Glasgow to launch the first Indian steamer built on behalf of the Scindhia S.N. Company.

The following telegram has been received from India by the Secretary of State:—Rainfall, week ending July 13. Fair: Bay Islands, Upper Burma, Gujarat, Central India (West), and Mysore. Scanty: Baluchistan, Sind, Rajputana (East), Madras (South-East), and Madras Deccan. Excess: Assam, Bengal, Bihar and Orissa, United Provinces (East), Punjab (East and North), Central Provinces and Malabar. Normal elsewhere. Monsoon vigorous North-East India and Central Provinces.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

Exports Credits Insurance.

The National scheme that has now taken shape for protecting exporters against credit risks will, it is to be hoped, lead to much more general interest in the potentialities of Near Eastern markets. That premium rates for the East of Europe should be slightly higher than for other Continental countries is not to be wondered at; but even a charge ranging from one-half to one-and-a-half per cent. for a ninety-day bill cannot be regarded as onerous. Long-term contracts are also provided for, and may be expected to work out on correspondingly generous terms. All the Balkan countries are now bent on the stabilisation of their exchanges, the latest convert being, it is reported, the new Liberal Government of Roumania. With stabilisation comes increased confidence in the countries themselves, and traders will be more inclined to deal in better-class goods than they have hitherto been able to stock without incurring excessive risk. It is essential to the Government scheme, as I understand it, that merchants in foreign countries who are anxious to trade with Great Britain should lose no time in securing a place on what will be a kind of "White List" kept by the Exports Credits Guarantee Department, indicating the general reliability of the firms enrolled. If British firms at this end take steps beforehand to probe the possibilities of these markets and to get into touch with likely customers actual business, when arranged, should be able to avail itself quite easily of the credit facilities.

Information Clearing Houses.

In connexion with the subject of foreign trade insurance it is of interest to note that the leading banks of Greece have recently founded a Greek Commercial Institute for the purpose of furnishing information regarding the moral and material standing of Greek merchants and industrialists. Hitherto information of this kind has been supplied through private sources, often ill-informed and not always disinterested, to the prejudice of legitimate trade. It is believed that by giving a semi-official *cachet* to such information greater confidence will be inspired abroad and Greek trade will benefit. The bearing of this new development on the British Government's scheme for guaranteeing export credits is obvious; it must inevitably simplify the arrangement of credits and so facilitate trade. The action of the Greek banks might be imitated with advantage in the other countries of the Balkan Peninsula.

Prejudice and Palestine.

The attempt on the part of a British newspaper to use the Palestine earthquake as an argument for its case against the Mandate was as crude and as ill-informed as was to be expected from the quarter whence it issued. Other countries have weathered economic crises before now, and even additional damage to the extent of £250,000—the amount as subsequently estimated in the same journal—need hardly be regarded as fatal. Between an economic crisis and economic collapse there is a wide gulf. It is true that in common with other countries Palestine tried to hurry too quickly, and the inevitable aftermath followed; but its vitality has not been sapped, and the time has yet to come when the full benefit of all the money that has been poured into the country of recent years can be obtained. As for the loan that is ultimately to be raised by Palestine, the newspaper in question was obviously ignorant of the purposes that it is to serve. Of

the £4,500,000 to be raised £1,000,000 is to go as repayment to the British Treasury—an item with which the British taxpayer is hardly likely to quarrel—and the balance will be used mainly if not entirely for constructive work. It is possible to urge that Palestine would have been better advised to advance more slowly; but only prejudice will claim that she is not now entitled, having advanced so far, to be given the chance to make good that she can never have without a loan.

Irrigation in the Empire.

The memorandum on "Irrigation in the Empire" by Dr. Keen, prepared at the instance of the Empire Marketing Board, of which a summary will be found elsewhere in this issue, is a very timely attempt to draw attention to a subject which promises to become more and more important as the years pass. There is, perhaps, an undue tendency in this country to think of irrigation largely in terms of cotton owing to the fact that in the last few years the need for increased supplies of this commodity has been particularly pressing, but it is actually in its utility as an instrument for supplementing food supplies that the principal importance of irrigation lies. So long as the world's population was relatively small, and so long as there were at the disposal of potential colonists unlimited expenses of waste spaces, the need for intensive cultivation could not arise. Conditions have changed very vitally, however, in the last decade or so, and with the rapid increase in population and the rapid utilisation of the remaining places overseas where life is possible for the European it is obvious that the time is quickly approaching when, if the world's population is to continue to expand as it is doing, the question of the development of adequate food supplies—to say nothing of commodities in general—will present a very real and definite problem. The remark that, if all the inhabitants of Africa took to wearing shirts, the result would be an immediate cotton shortage simply crystallises the position with regard to commodities in general, and it is because it will be necessary in the future to extract the utmost possible yield from land on which crops can be grown that it is essential that increasing attention should be given now to the question of irrigation.

Next Year's B.I.F.

The latest news with regard to the 1928 British Industries Fair is of the most encouraging description, and it certainly looks now as if this annual event is firmly

BANK OF ROUMANIA LIMITED

(FOUNDED 1866).

Head Office: 123, OLD BROAD STREET,
LONDON, E.C.2.

Branch — 11, CALEA VICTORIEI, BUCAREST.

Directors :

E. W. H. BARRY, Esq.
C. De CERJAT, Esq.
General The Hon. SIR H. A. LAWRENCE, G.C.B.
Lieut-Col. SIR ALBERT STERN, K.B.E., C.M.G.

Bankers :

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.

A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

established among the business community as an important instrument to trade endeavour. Before the War most of our merchants and manufacturers were like Gallio in having no use for such things, though our rivals abroad found them invaluable for trade development, and it is significant that the last few years have witnessed a great increase in the number of fairs and exhibitions in other countries particularly in the Near East. It is equally noteworthy that, following the marked expansion in the number of the exhibitors at the British Industries Fair this year, there has been a very great increase in the number of applications for next year's event. Thus for the Birmingham section the stand space so far allotted is double the total for the corresponding date last year, and, while last year extensions of 120,000 sq. ft. were made, a new building with an area of 70,000 sq. ft. is now to be constructed and provision is made for a further extension of 35,000 sq. ft. The demand for accommodation at the White City is equally pronounced, so that given satisfactory trade conditions the Fair of 1928 promises to be the best on record.

COMMENTATOR.

CHESS.

By "CARO-KANN."

The solution to last week's end-game is as follows:—
1 . . . P—B4; 2, PxP, K—Q2; 3, P—B5, K—B3; 4, P—K6, PxP; 5, P—B6, K—Q2; 6, P—B7, K—K2; 7, P—B6 and wins.

While the first section of the Murton Cup Handicap has been finished, the second promises to end in a tie between four or five players, all of them three points down out of nine games. I cannot recall such a closely contested section since the War.

White to play. What result?

Fifty-four steamships called at Jaffa in April, their tonnage being 47,573. The figures for Haifa were 55 steamships and 47,455 tons.

The Palestine Jewish Colonisation Association are engaged in the establishment of a new colony on the land between Benjamina and Hedera.

It is reported that the production of silk this year in the Vojvodina will amount to between 35,000 and 40,000 kgs.—a larger quantity and of better quality than last year's. The value is estimated between 35 and 40 million dinars.

According to a Bucharest message to the *Prager Presse* the Roumanian export of eggs has come to a complete standstill as a result of the appreciation of the leu, heavy railway charges and the export tax. On the strength of an announcement that the tax was to be reduced it is stated that two English firms, in co-operation with Roumanian firms, purchased large quantities of eggs for export. Owing, however, to the delay in reducing the tax, the dispatch of the eggs was held up, to their grave detriment. The consequent losses to the exporters are placed at a high figure.

The NEAR EAST YEAR BOOK and WHO'S WHO, 1927

Edited by

H. T. MONTAGUE BELL.

A comprehensive survey of the affairs, political, financial, commercial, industrial and social of YUGOSLAVIA, ROUMANIA, BULGARIA, GREECE and TURKEY. With the text of Near Eastern Treaties, Lists of factories, &c., Who's Who of prominent people and five maps.

980 pp. Demy 8vo. Price 25s. net.

To be obtained from *THE NEAR EAST & INDIA*
170 Strand, London, post free, for 25s.

SOME PRESS NOTICES:

The Spectator. "An important book which every student of international politics will want. Here, clarified and condensed . . . will be found information which is of the greatest value . . . Some of it is better reading than the average novel, and all of it is of great interest. Only an expert on the Near East could have attempted the task, and we are grateful to the author for having succeeded so well in supplying us with something that (now that it is available) merchants and journalists and politicians will discover they have been needing since 1919."

The Scotsman. "Makes a welcome addition to the works of reference at the disposal of publicists and students in general of contemporary affairs. . . A real want has been uncommonly well supplied."

The Daily News. "An extremely valuable work of reference."

The Times, in the course of a half-column notice (under "Books of the Day") says: "With best part of 1,000 pages at his disposal, Mr. Montague Bell is able to deal with them (the Balkan States) very thoroughly, and to find room for ample and detailed information about every form of political, financial, economic, commercial, and educational progress. . . Mr. Bell is not content to limit the information he imparts to the geographical details and statistics of all sorts usually to be found in books of reference. He deals very fully with finance, debts, banking, commerce, shipping, insurance, and industry, and provides useful historical summaries, complete with lists of past Prime Ministers and the present strength of parties in the various Legislatures. Indeed, even those who are well acquainted with Balkan and Near Eastern affairs will be surprised at how much there is to learn about those countries; and Mr. Bell himself seems to hope that if the Near Eastern nations can be persuaded to take a greater interest in the present, and its multitudinous and important interests and activities, they may begin to forget about that unpleasant past which has hitherto been such a drag upon their progress. He has certainly provided them and their friends with ample means for taking that interest."

The Morning Post. "A long-felt want is supplied . . . For purposes of reference his book is invaluable. . . Good maps and detailed information regarding every sphere of the activities of these countries are provided in a clear and accessible form."

The Financial Times. "Every branch of activity in these countries is exhaustively and authoritatively reviewed. From its pages a very clear idea can be obtained of the countries' great natural resources . . . while lists of manufacturers and factories make the book of practical utility to the individual merchant. For the student and politician the timely appearance of the work is enhanced by an appendix embodying the text of recent Near Eastern treaties and agreements. . . Mr. H. T. Montague Bell, who has edited the compendium, which is at once informative, comprehensive, and withal accurate, is heartily to be congratulated on an admirable production."

MOTORING IN YUGOSLAVIA.

(From a Correspondent.)

During this season, motorists in Yugoslavia have so far suffered much from bad weather. Traffic with other countries, which has greatly increased in recent years, has given a strong impulse to motoring as a sport, albeit much of this is more or less in the nature of advertisement. Austria, in particular, where there is a comparatively well-developed automobile industry, is always represented directly by its firms at Yugoslav sporting events. So far there has been only one international race in Yugoslavia, the one at Samobor, a little place near Zagreb, the chief town of Croatia.

Austrian, Belgian, and Italian makes were represented; Great Britain only by motor cycles, which came out winners. The best time for motor cycles was made by a B.S.A., and the best side-car machine was an A.J.S. In the motor car section the winners were a Steyr (Hausal) and an Ansaldo, driven by M. Willy Strehler, who did so well at last year's Liubelye motor trials. The Samobor races were full of interest; the average speeds obtained were good, and though no international records were broken, Hausal made the round on the Pleshevitza near Samobor in less time than anyone before him. Oddly enough, just as at this year's Targa Florio, some chauffeurs had persistent bad luck. Several cars which had started under the best auspices had to give up and see others with perhaps inferior engines improving upon last year's performance.

Another event which promised to be interesting was the Maribor motor-cycle race. The Maribor racing track is exactly 1,000 metres long, and is excellent in good weather. On the date of the race the track was ploughed up by rains and was impassable for motor-cycles. So the race was put off until the following Sunday. Again the weather was bad, and again the race had to be postponed. When it took place at last, on Whit Monday, the number of competitors had shrunk so greatly that all interest was lost.

The Yugoslav Autoclub is making great efforts to have the roads put in order. Until about a year ago, Yugoslav roads were badly neglected by the State, and repairs have been recommenced only within the last twelve months. Some roads, it is true, are in quite good condition, but most of the byways and cross-country roads are in a wretched state. Thus one of the principal Alpine roads, that over the Jezersko Pass, is altogether broken up. It is true that the upkeep of these roads costs millions, because it is impossible to pave or cement them; they have to be spread with road metal. Even macadamised roads will not stand mixed traffic at such gradients. On the other hand, the Liubelye Road is proof of what can be done with an Alpine road so long as the road metal is renewed often enough and the road attended to. This road leads over a 1,366 metre pass into Austria and is in excellent condition, although it is under snow from the end of October till the beginning of May. This year the roads suffered a great deal from autumn and spring floods. Most of them are being repaired, but as they are subjected to almost exclusively heavy traffic they are not in good condition. The only road which connects the picturesque Carniolan hamlet of Skofja Loka with the main road and railway is in a very bad state and is getting worse from day to day. But the terror of motorists is the main road to Zagreb and all roads in Slavonia. Slavonia is watered by three great rivers, the Sava, the Drava, and the Danube. The soil is almost all black earth and is devoid of stones. Road metal is so dear that the cost of it would suffice to pave all the roads in the Alpine regions. The result of these conditions is that there are no roads at all, properly speaking—only wheel tracks traced over the ground and through the mud. If one set of tracks becomes impossible, another

is traced alongside. None of the roads boasts kilometre stones, because the country has not yet been properly surveyed. In Serbia, roads are in even worse condition. Here and there there is an excellent macadamised road, but approached by a horrible cart track, which a heavy car cannot negotiate at all, because it is usually too narrow. Of course, roads like this are used only for native, not for international, traffic.

Dalmatia and Bosnia have excellent roads. The limestone of the Kras (Carso) yields ideal road metal, and the climate of those provinces is good for roads, whereas that of Slovenia is bad. There are roads in Bosnia which will bear comparison with the French and Italian roads.

These roads are provided with kilometre stones, danger signals, and guide posts. This season there are to be proper danger signals set up in Slovenia as well, and the old round signals are to be replaced by new triangular ones. Last year quite a number of foreign cars visited Yugoslavia. The following table will give an idea of the progress in this respect:—

Country of Origin.	1926	1925
Austria	703	670
Italy	327	303
Hungary	69	32
Czechoslovakia	71	82
Switzerland	52	22
Germany	28	7
Roumania	23	21
Belgium	8	3
Britain	7	6
Poland	4	—
Sweden	3	1
Other Countries	8	2

This table is compiled from official sources and shows that interest in Yugoslavia as a tourist resort is on the increase. Most of this traffic goes to Slovenia which marches with Austria and Italy. Most of the British visitors come through Italy. If the tourist traffic continues to increase in this proportion, and if the roads in this truly beautiful country are rendered passable, we may expect many a stranger to choose these parts for motoring trips.

Motor Cycling.

The Yugoslav market for motor cycles is supplied in the main by two countries, viz., Great Britain and America. Only within the last year or two have other countries, such as Belgium (F.N.) and France (Monet, Goyon, and Peugeot) contributed an appreciable number of cycles; but the engines of these machines are far too lightly built to stand the rough going over the Yugoslav roads, especially in the south. Motor cycling as a sport is popular above all in Slovenia and Croatia. Slovenia in particular, having decent roads and interesting scenery, has plenty of attractions for the motor cycle tourist. Even before the War motor cycling was so widespread in those regions that in 1910 there were no fewer than fifteen motor cyclist clubs. During the War, in which the Slovene provinces were especially hard hit, all sport was at a standstill, and not until 1920 was there anything like a revival. To-day Liubliana is the headquarters of all motor clubs in Yugoslavia, and in Liubliana alone there are three motor cycle clubs.

Besides American motor cycles, represented by Indians and Harley-Davidsons, many British makes are to be seen, mostly Douglas, A.J.S., B.S.A., Rudge, Zenith, or Matchless. These machines owe their popularity to the enterprise and hard work of their agents scarcely less than to the proved excellence of their engines. To-day they enjoy so good a reputation that neither Austrian nor German motor cycles have a chance against them.

The rider who is expected to come out champion for Yugoslavia this year (M. Strban) rides a B.S.A., and the acknowledged best rider for a motor cycle and sidecar (M. Stuzzi) has an A.J.S.

Motor cycling is very well organised in Croatia and Slovenia. Serbia has only one club, and that is in Belgrade. This is partly due to the fact that there are but few roads in Serbia which are fit for motor cycling. Most of them can be negotiated only by heavy cars.

One of the best among Yugoslav organisers of motor cycling is Major Yaklich, O.C. of the Motor Cycle Section of the Yugoslav Army. He went in for racing himself at one time, and understands the difficulties and opportunities offered by this country. More than once he has pulled through clubs which were on the point of succumbing owing to want of organisation. His great technical and sporting experience has been invaluable also to that excellent organisation, the Yugoslav Motor Cyclists' Federation.

The Federation is at present at work upon the issue of which are so far practically non-existent in Yugoslavia. good road maps and the organisation of first aid stations, The providing of signals upon the roads is the work of the Automobile Club, which has a motor cycle section attached to most of its provincial branches. The systematic repair of the roads has latterly been taken in hand by the Government.

Yugoslav motor cyclists derive great help in the organisation and development of their sport from the moral support of their fellow-sportsmen from abroad when they attend Yugoslav meetings or visit the country as tourists. What a pity that so few British sportsmen find their way to Yugoslavia!

SUDAN GUM ARABIC.

Messrs. Boxall and Co., of Khartoum, report as follows under date June 25 :—

The arrivals of Kordofan Hashab including Tendelti from May 15 to 31 showed a decrease of about 36 per cent. and from June 1 to 25 a decrease of about 41 per cent. against the same periods last year.

The stations Tendelti, Um Ruaba and Rahad taken alone showed a decrease of 71 per cent. for the second half of May whilst during June they have completely given out.

Taking El Obeid as the standard, prices from May 15 to 30 remained steady at the closing price of May 14 with little fluctuation. On the 31st they rose 9d. and from June 1 to 8 they were on the increase, the market closing on the 8th at 1s. 6d. higher than on May 15. From June 9 to 13 the markets were closed owing to Muhammadan holidays; they reopened on the 14th at nearly the same prices and fluctuated until the 20th when a fall of about 1s. occurred, but on the 21st they again rose 6d. and remained steady to the 25th, so that the net rise between the above dates was ultimately 1s.

The Customs export statistics show that during May this year 432 tons less were exported than during the same month last year whilst for the whole period January/May the difference is 643 tons.

Demand during June as indicated by our sales has been somewhat better than during May.

IRRIGATION IN THE EMPIRE

Representations were made to the Empire Marketing Board that there is great scope within the Empire for increased research work on the problems presented by the effect of irrigation water on the soil. It was felt that before any definite proposals were considered a survey should be made of the subject, and the work was entrusted to Dr. B. A. Keen, Assistant Director of the Rothamsted Experimental Station. The Board has now issued a brochure containing a memorandum by Dr. Keen and also a short questionnaire, which, it is stated in the preface, has been included "in the hope that it may bring to light additional information from various parts of the Empire which might prove of value in the investigation of soil and irrigation problems at home and elsewhere."

In his memorandum, Dr. Keen points out that it is not generally appreciated that nearly one-third of the earth's surface receives only ten inches of rain or less annually, and that on land receiving less than ten inches annual rainfall, irrigation is generally essential if any form of profitable crop production is to be undertaken. The geographical distribution of regions of deficient rainfall comprises a considerable proportion of the British Empire and its mandated territories. The main areas concerned include North-Western India up to the Ganges, Palestine and Iraq, and the Sudan; and within these areas the supply of irrigation water is necessary for arable farming.

Dr. Keen goes on to state that a preliminary careful study and a constant attention to a number of economic, engineering, and scientific factors are required for the successful development of a region for irrigation farming and the maintenance of the fertility of the soil. These factors are summarised as follows:—

(a) Economic. The economic factors comprise such questions as probable yields of suitable crops for the given climate and soil, costs of production under the local conditions of labour supply, transport, and marketing facilities. Each district has its own specific problems of this nature, and, although their solution may be difficult, the principles on which it must be based are simple.

(b) Engineering. The engineering problems connected with the construction of dams, main and branch supply canals, drainage ditches, and pumping stations may, like the economic factors, be regarded as specific to each district, and executed in accordance with fixed and well-known principles.

(c) Scientific. The scientific factors are to be regarded as fundamental. They comprise the questions of the composition of the water available for irrigation, the chemical composition and physical properties of the soil. They apply not only to the development of new areas, but also, and in some respects more acutely, to the maintenance of the fertility of existing irrigation areas.

Dealing with soil changes, Dr. Keen points out that sooner or later the danger of deterioration confronts every irrigated area, and that the accumulation of deleterious salts may be inevitable, or may result from some apparently harmless or even desirable change in cultural practice. The memorandum continues:—

Thus the famous irrigation area of the Nile Valley, where fertility has been maintained for centuries, now appears to be showing the first signs of deterioration owing to a change in cultural methods. In the old or basin system of irrigation, after the winter crop of wheat or bersim, the land remained fallow from May to August. The studies of Mosseri show that the numerous large cracks and fissures produced during the summer fallow or "sheraqui" are fundamental in maintaining the fertility of the soil. The evaporation of water from the soil blocks gives rise to a concentration of any soluble salts on the sides of the cracks and fissures, and they are readily washed away into the lower depths of soil at the next irrigation. A further beneficial effect of the shrinkage and cracking accompanying thorough drying is the improvement in the tractability of the heavy clay soil. Economic factors, in particular the extension of the area under cotton and maize, have necessitated perennial irrigation, the necessary water for these summer crops being held by the Assuan dam and delivered as required. Under this system the frequency of the sheraqui period is much diminished, with the result that difficulties in cultivation and decrease in yield of the more sensitive crops are beginning to creep in.

It is further remarked that certain soils display great difficulties in cultivation which cannot be wholly ascribed to the accumulation of salts. On this point the memorandum says:—Some of the Regur lands of the Deccan have similar properties, and areas are said to exist in Palestine. Their characteristic property is an extreme stickiness and tenacity when wet, and an extreme hardness and cohesion when dry. They can only be worked within narrow limits of moisture content, and the selection of the right period requires considerable judgment. Analysis shows that such soils have a high proportion of clay, but their peculiar properties are not due entirely to the amount of clay present so much as to its colloidal characteristics. The Sudan soils are less extreme examples of this class. They contain on the average some 40-50 per cent. of clay. Examination of their properties shows that the crop growth is limited by the slowness of water movement in the soil, and by the associated slow rate of nitrification. This is a striking contrast to the Egyptian soils, in which, as Prescott has shown, nitrification is exceedingly rapid.

PALESTINE AND TRANSJORDAN IN 1926.

The report of H.B.M. Government to the Council of the League of Nations on the administration of Palestine and Transjordan, which has just been issued by the Colonial Office, very briefly summarises economic developments during the year in those two countries. The total gross revenue of Palestine from Customs, Excise, and Port Dues, it is pointed out, amounted to £E1,055,524 as against £E1,019,955 in 1925. The increase was chiefly due to the excise duty on tobacco, import duties, fines, and the sale of salt. The total value of the imports for home consumption was £E6,429,245 as compared with £E7,338,491, while the value of the exports of Palestine produce was £E1,275,625 as against £E1,297,559. The exports included 2,000 tons of cement for Syria, 4,047 tons of laundry soap and 26 tons of toilet soap, and 1,887,581 cases of oranges of the value of £E566,199; 5,549 tons of salt were sold at against 4,794 tons in 1925.

The trade depression which set in in Palestine at the end of 1925 was most noticeable, it is stated, at Jaffa and Tel-Aviv, where there were several trade failures and a number of small industries closed down for the lack of working capital and credit. Local Jewish industries have, however, been maintained, the number of workers engaged in such occupations being over 6,000 as compared with 5,000 in 1925. Of the industries which closed down in 1925 the largest has been reopened and new undertakings have been established.

Three hundred and eighty tons of cigarettes were manu-

factured during the year as against 300 tons in 1925, also 27 tons of cut tobacco and 82 tons of tombac. One hundred and ninety tons of leaf tobacco were exported.

The use of the telephone is being developed in Palestine. A trunk telephone service has been established between the principal towns of Palestine and Egypt, and is stated to have proved popular with the business community. Additional trunk lines have been provided between Jerusalem-Jaffa, Jerusalem-Haifa, Jerusalem-Lydd, and Jaffa-Lydd; 325 additional telephones have been installed, and nine new telephone call offices have been established. A telephone exchange has been installed at the Tel-Aviv Post Office.

As regards agriculture, some of the crops were affected by a heat wave in the spring, particularly in the south. The yield of barley, which had generally matured before the hot weather, was, however, 70,000 tons as against 40,000 tons. The late wheat was affected by the conditions, the total yield of this crop being 99,000 tons. Twenty thousand tons of wheat were imported. The yield of sesame was 1,800 tons as against 5,000 tons, while that of durra fell from 30,000 tons to 24,000 tons.

The area under tobacco is further restricted but better yields and a high standard of quality were attained. The crop on an area of about 9,000 dunums is estimated at 505,000 kgs. Cotton was only grown on a commercial scale at two centres, and the yield of marketable lint was reduced to unprofitable figures by the boll worm. Six thousand six hundred dunums were planted with oranges and grape fruit, while 7,100 were prepared for planting in the following spring. It is interesting to note that the land is prepared mainly by tractor ploughs, of which there were at the time of the report 113 in use. The melon crop was unremunerative owing to the small demand for Syria. Almonds suffered severely from borer, and some

Exports and Imports

To assist its customers, the Westminster Bank has prepared a booklet explaining the many ways in which the commercial man may use the Bank for the furtherance of his business, how he should proceed in order to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and so combine security and caution with progress and enterprise.

Copies will be issued on application to the Secretary at Head Office

WESTMINSTER BANK
LIMITED

Head Office: 41 Lothbury, London, E.C.2

plantations have been replaced by orange and other fruit trees.

As regards conditions in Transjordan, it is pointed out that the great damage to the crops, especially in the south, occasioned by the partial failure of the later winter rains and period of parching east winds, and an outbreak of cattle plague which was followed by the prohibition of the export from Transjordan to Palestine of fodder, animals, meat, and hides reacted unfavourably on the financial situation.

Progress is being made with road development. During the year 162½ kilometres of new road were opened. A water supply for Kerak, including the construction of an engine house and concrete tank and the installation of a hydraulic turbine has been completed.

In the section dealing with agriculture and forests mention is made of the steady progress that has been made in the conservation of forest areas. A third of the wheat crop was lost owing to hot winds, but the yield of barley was three times that of the previous season.

THE ADVERTISING EXHIBITION.

The Advertising Exhibition at Olympia, which was opened on Monday, July 18, by Mr. L. S. Amery, Secretary of State for the Dominions, promises to be a well deserved success. Organised by the Advertising Association, which comprises thirty-one advertising companies, the Exhibition is the largest of its kind and the best organised that has been seen in this or any other country. It is based on a uniform artistic plan, and the whole effect, as Mr. Amery pointed out, is that Olympia, with its 300 exhibitors, presents a unity and not a jumble. The largest stand belongs to the Empire Marketing Board, a Government organisation; it contains exhibits from most parts of the Empire with special reference to Imperial foodstuffs. Another feature to which Mr. Amery called attention is the "Royal Academy of Posters" which showed how the art of advertising could help to beautify and not disfigure.

Apart from its spectacular attraction the purpose of the Exhibition is, of course, to bring home to advertisers and potential advertisers the facilities and technical advantages that are at their disposal. Another year, perhaps, the large advertising agencies will see fit to reveal more of the secrets or the details of their successes—of the instances where advertising has built up business from small beginnings, where the small single room has had to give place to larger premises, gradually extending up to the extensive factory. In this way the power of advertising could be driven home with telling effect. Possibly, however, these are the matters that are revealed to the inquirer who can spend time in the separate advertising

"parlours" which constitute a feature of the exhibition; the information was not shown outside.

On the technical side of advertising the exhibition is well represented, examples of the finest printing, block-making and typesetting being in prominent evidence. Of all these the "Pantone" exhibit attracts by its novelty and it is probably epoch-making in the printing world. By this process it is possible to print half-tone blocks up to 150 screen on paper as coarse as blotting paper and to get "art paper" effect. To those interested in "long runs" such as catalogue work where the use of art paper has been a factor to be considered we recommend this process.

SHIPPING INTELLIGENCE.

Launch of a Vickers Steamer.

The launch of the twin-screw steamer Kedah took place at the Naval Construction Works of Messrs. Vickers Limited, Barrow-in-Furness, on July 16, the christening ceremony being performed by Lady Maxwell, wife of Sir George Maxwell, who was, until recently, Chief Secretary of the Federated Malay States. The Kedah, which is being built by Messrs Vickers Limited to the order of Alfred Holt and Company, of Liverpool, is for the Straits Steamship Company for service between Penang and Singapore. She is 310 ft. in length and 50 ft. in breadth, and with a speed of 15 knots is capable of doing the journey in about twenty-one hours, which is quicker than the journey between the two ports by train. The journey by sea will also be much more comfortable than the journey by rail, as many features are embodied in the Kedah to fit her for her peculiar requirements, climatic and otherwise.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia for Bombay (Birkenhead, July 23); s.s. Castalia for Bombay (Birkenhead, August 8). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Manipur for Calcutta (Birkenhead, July 29); s.s. Malancha for Calcutta (Birkenhead, August 4).

Bibby Line.—S.s. Lancashire for Port Said, Colombo, and Rangoon (Birkenhead, July 27).

British India Line.—S.s. Mundra for Colombo, Madras, and Calcutta (London, July 30); s.s. Tregonell for Bombay and Karachi (London, August 6).

Cunard Line.—S.s. Tyria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement offers (Liverpool and Swansea, July 23); s.s. Sea Victory for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement offers (Liverpool July 23, and Swansea July 26).

Johnston Line.—S.s. Avimore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 30); s.s. Jessmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 3).

P. and O. Line.—S.s. China for Bombay London, (July 22); s.s. Nellore for Colombo, Madras, and Calcutta (London, August 6).

Prince Line.—S.s. Korean Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (London, July 27).

Ellerman and Papayanni Lines.—S.s. Mardinian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, July 29). * Subject to sufficient inducement.

The death occurred last week in Cairo of Shaikh Mohammed Abul Fadl el Guizawi, Rector of Al Azhar University since 1917.

A movement is on foot to establish a free zone in the harbour of Sushak, with a view to meeting the competition of Fiume. It is pointed out in Yugoslav business circles that the favourable position of Sushak and its excellent railway connexions should place it in a very favourable position as a serious competitor for the neighbouring port.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, July 19.

As anticipated, the settlement last week was arranged without the disclosure of any serious troubles, for those affected by the slump in British Controlled Oil shares which followed the suicide of Mr. James White, have had sufficient time to make the necessary arrangements to tide them over their difficulties. The past week indeed has seen a distinctly more cheerful tone in the stock markets, and business has been better than is often the case at this time of the year when the approach of the holiday season is apt to spread general dullness around markets. The effect of Mr. White's death seems to have disappeared in most directions, and some sections in the industrial market are showing pronounced strength. Oil shares are decidedly better as a whole, but the rubber market continues to languish in uncertainty. There appears to be no slackening of interest in new capital issues, which continue to meet with a good response, as witness the rapid oversubscription of the Counties of Hungary Sterling Loan on Thursday.

Industrial Company Profits.

In an analysis of the profit and loss accounts of a number of joint stock industrial undertakings the *Economist* shows that in the past three months the net profits disclosed by 509 companies declined by 5.7 per cent. in comparison with the net profits of the same companies in their previous financial year. In the preceding quarter the profits of 520 companies showed a decline of 4.0 per cent. The effects of the coal stoppage are thus becoming felt to an increasing extent in this direction. In the past twelve months 1,699 profit and loss accounts have been analysed, showing a decline of 2.1 per cent. in aggregate profits, or without rubber, oil and kindred groups, which do not reflect the state of British industry, a decline of 4.5 per cent. Of the profits disclosed in the past quarter 64.5 per cent. was paid to ordinary shareholders, 21.6 per cent. to preference shareholders, and 13.9 per cent. was reserved or added to balance carried forward. The last figure is much below the average and compares with 18.1 per cent. in the corresponding quarter of 1926 and 18 per cent. for the past twelve months. The ratio of net profits for the past quarter to total ordinary and pre-

ference capital works out at 10.9 per cent., as against 1.4 per cent. in the corresponding quarter of last year, and an average of 10.8 per cent. for the twelve months. The average rate of dividends paid on nominal ordinary capital in the past quarter was 11.8 per cent., as against 11.7 per cent. in the same quarter a year ago, and an average of 11.0 per cent. for the twelve months. The average paid by 333 rubber companies was 23.8 per cent. against 19.9 per cent. a year ago.

The Improved Outlook for Tea.

Last week we dealt with the less satisfactory outlook for the holders of shares in rubber producing companies. But for those companies which also own tea plantations there is some consolation in the fact that the prospects for tea during the current year are distinctly brighter than twelve months ago. This has recently found reflection in the prices of tea shares, for quotations, under the stimulus of substantial buying, have advanced considerably. This will be particularly welcome to holders of tea shares, since profits for the past year were generally lower, and in some cases this involved a reduction of dividends. But the position to-day is materially changed. "In view of the improved prices now obtainable in the London market and the strong statistical position of tea generally," says a leading authority, "there is every reason to anticipate favourable results of the working for the current year." For the present year there is less likelihood of markets being flooded with tea and more attention will be paid to quality. Moreover, the tea-drinking habit may be expected to increase gradually. It should be remembered, however, that the earnings of tea companies are liable to fluctuate considerably, so that it is not advisable to overload one's list with tea shares. But the fairly high yields which they give make them useful for mixing purposes. For the guidance of the investor, we give a selection of shares. A yield of £8 6s. per cent. is obtainable on the shares of Jokai (Assam) and £9 per cent. on those of Chulsa. Jorehaut return £8 14s. per cent., Dooars £8 17s. per cent., and Pabbojan £8 6s. per cent.

The Shipbuilding Outlook.

A feature of the shipbuilding returns of Lloyds Register for the quarter ended June 30 is a substantial decline in the tonnage on which work was started during the period as compared with the preceding three months. The importance of the figure lies in the fact that it indicates the amount of work available in the shipyards in the near future. Work was begun on 437,112 tons, against 579,839 tons during the first quarter. Though the drop amounts to the appreciable figure of 142,727 tons, it should be remembered that the work started in the January-March quarter was exceptionally large owing to the severe curtailment of operations during the coal stoppage. In the circumstances, there is no need for the holders of shares in shipbuilding companies to be nervous. The figures are regarded as fairly satisfactory, and if this level of activity or something approaching it, is maintained for some time, it is probable that shareholders would have cause for few regrets. Many of the shipbuilding companies, however, have much leeway to make up, for they have been unable to pay ordinary dividends during the past few years. Moreover, many of them carry on the business of iron foundries, etc., for which the outlook is not encouraging. Thus favourable investment opportunities are by no means numerous. The ordinary shares of Swan, Hunter and Wigham-Richardson are one of the most promising investments. Though the return, on the basis of the last dividend, is only £5 2s. per cent., a higher distribution for the current year is confidently expected.

Messrs. Philip Chapman and Co., Ltd., announce that their head office is being transferred to 17, Rue Nubar Pacha, Alexandria. Mr. Philip Chapman will leave for Egypt in September. The London office, which will be under Mr. J. A. Ferguson, will be transferred to the offices of Messrs. Gordon Woodroffe and Co., Ltd., 13, King William Street, E.C.4.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.)

BULGARIA.

Foundry Pig Iron.—The Bulgarian Ministry of Railways (Direction Generale de Chemins de Fer, Rue VI. September 17, Sofia) invites tenders for the supply of 220 tons of foundry pig iron, the estimated value of which is given as being 880,000 levas (say, £1,300). August 1. (D.O.T.)

Earthworks, Etc.—The Direction Générale pour l'installation des Refugiés, Sofia, will hold a tender on August 17 for the construction of earthworks, including a tunnel about 1 kilometre in length, on the Rakovska-Haskovo-Mastanli line. The value of the work is estimated to be 78 million levas (say, £116,000). (D.O.T.)

EGYPT.

Calico for Map Mounting.—The Surveyor-General of Egypt, Giza (Mudiya), invites tenders for the supply of 7,560 metres calico for map mounting. August 2.

Raw Wool, Etc.—The Controller of Technical Education, Ministry of Education, Sharia Qasr el Aini, Cairo, invites tenders for the supply of raw wool, cotton yarns, etc., required for the Rug Factory at Assiut. August 31.

Millboard, Etc.—The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of millboard, gum Arabic, flour Russian, bamboo sticks for whips, rubber tyres for carriage wheels, asbestos sheeting, belting canvas dicks, mirrors, metal iron bars edged for wheels, articles for stove primus, etc., to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. August 4.

Uniforms.—The Chief Inspector, Direction General, Customs Administration, Alexandria, invites tenders for the supply of winter uniforms for guards and employees during 1927-1928. August 9.

Waggon Covers.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 1,000 impermeable wagon covers. August 16.

Diesel Engines.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection at site of Abul Menaga Pumping and Power Station of four internal combustion Diesel groups with flywheel alternators, three pumps and accessories, required for the Public Works Ministry. September 3.

Bridge Work.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of materials and works connected with the replacement of the superstructures of Mansourieh bridge and the adaptation of the pier and abutments to the new superstructures. August 15.

BULGARIA.

Coasting Steamer.—Tenders are invited by the Bulgarian Mercantile Navigation Company for a coasting steamer. September 6.

NEWS FROM ALL SOURCES.

The output of the Anglo-Egyptian Oilfields for the week ended July 8 was 5,528 tons.

According to an American Consular Report, Afghanistan recently adopted new units of weights and measures, based upon metric standards.

MM. Michalakopoulos and Kafandaris (Greek Ministers for Foreign Affairs and of Finance) were received by Signor Mussolini and Signor Grandi in Rome on July 11, and were entertained at luncheon by Signor Mussolini the following day.

The steamer, Sheaf Lance (3,112 tons), of Newcastle, on a voyage to New York with a cargo of liquorice, arrived at Basra on July 13 with many of the crew in a state of collapse owing to the intense heat. One of them, W. Day, of Cardiff, died in hospital. Others were seriously ill.

Mr. A. P. Bolland, O.B.E., formerly of the Sudan Agency in Cairo, has started business at 4, New Burlington Street, London, under the name of Saunders and Bolland. The activities of the firm will include the purchase of goods for clients, shipping and export.

As a result of excavations carried out in the island of Milos, new catacombs of the earliest Christian period have been discovered. On the inner walls, according to *The Times* Athens correspondent, there is the monogram "J C" and a symbolic representation of a fish and invocations to our Lord as "a harbour of refuge." The catacombs contain many niches full of bones. Measures are being taken for their preservation.

THERE'S A DUNLOP ACCESSORY FOR EVERY NEED

AMERICAN LEATHER IN INDIA.

An official report published by the Department of Commerce at Washington says: American leather sales have shown a consistent increase during recent years to British India, in spite of its relatively small market for imported leather. Prior to 1913 the average yearly American leather sales to India were valued at less than 30,000 dollars, but in the past three years they have totalled more than 180,000. Preliminary figures for the first four months of 1927 show that the trend is still upward. India offers a fairly good market for the medium and cheaper grades of upper leather, most of which now is bought from the United States. Practically all of the important European leather-producing countries operate on this market, making it highly competitive. However, the quality of the American leather has met with favour in British India and increased quantities are sold each year. The bulk of the sales in uppers consist of cattle-side and calf upper leathers. The total value of American upper leather exported to India in 1925 was 28,860 dollars, increasing in 1926 to 68,295. Preliminary figures for the first four months of 1927 show that these sales were valued at 28,414 dollars, almost equalling the total shipments of 1925.

British India imports its entire consumption of patent leather. Most of it is purchased from the United States, with smaller quantities coming from Germany. Some quantities of this leather have also been imported from Australia during recent years, but it has been claimed that it was not as suitable for local usage as the American product. In 1925 exports of patent leather from the United States to British India amounted to 303,122 square feet, valued at 125,373 dollars, and increased in 1926 to 542,417 square feet, valued at 201,300 dollars. According to preliminary figures these sales during the first four months of the present year amounted to 212,331 square feet, valued at 73,547 dollars.

The traffic receipts of the South Indian Railway Company for the week ended June 18 amounted to Rs.10,99,086, making the total from April 1 Rs.1,19,96,488.

Company Meeting.

LAKE COPAIS CO.

Increased Profits.

The ordinary general meeting of the Lake Copais Company, Limited, was held on July 18 at Winchester House, London.

Mr. W. Sandford Poole (Chairman) presided, and, in the course of his speech, said:—During the year 1926 the crops on our Copais estate were adversely affected by an insufficient rainfall and other unsuitable weather. The areas cultivated and harvested in the year 1926 were the largest since the year 1918. Although the area of land cultivated was greater than that cultivated in the previous year, the crops on a rather larger area failed, with the result that the increase in the area from which crops were harvested was only 2,710 acres.

The actual area harvested was 30,713 acres, which compares with 28,003 acres in the year 1925. The yields of cereals were in general poor, but prices in currency were rather better, the ultimate result being an increase of some 20 per cent. in the gross revenue in drachmæ. Expenses were higher, principally due to the increased cost of labour.

Although the average sterling value of the drachma during the year was less than the average of the previous year, there was not nearly so great a fall between January 1 and December 31, 1926, as in the year 1925. Consequently the loss in sterling on the stocks of produce and other balances held in Greece at the beginning of the year 1926 did not entail the provision for depreciation of a serious amount in the accounts now before you, the result being that the net profit in Greece when converted into sterling—namely, £13,217—was some £5,400 more than the profit of 1925.

The principal feature of interest in the balance-sheet is the expenditure on capital account during the year, which amounted to £22,862; £20,576 of this was spent on the new gravitation and other drainage works, and £2,285 on buildings, plant, and machinery.

New Works.

Early in May last I visited Greece at the request of my colleagues and spent about ten days there. During my visit, in addition to discussing various matters of importance with Mr. Bailey, our general manager, I inspected the estate generally. I saw the excellent work being done by our caterpillar tractor ploughs, which, undoubtedly, are breaking up ground which no ploughs drawn by animals could deal with.

I also inspected the Emissary Canal and the Karditza Tunnel, where the important new gravitation drainage works are in progress. At the time of my visit it was expected that the widening of the canal would be finished this season.

Mishap to Karditza Tunnel.

Had the work progressed as was then expected this summer's operations would have greatly added to the outflow capacity of the drainage system, rendering the estate, it was hoped, safe from further flooding. Most unfortunately, however, as mentioned in our report, we experienced a serious setback when a fall of some 1,000 cubic metres of rock and earth in the masonry-lined portion of the Karditza Tunnel occurred late at night on June 24. This fall almost completely blocked the tunnel.

I should explain that no water is at this season passing through the tunnel. Had this fall taken place during the wet season the consequences to the estate would have been extremely serious. As it is, it is hoped to get the tunnel cleared and the arch timbered and restored during the next two months—that is, before heavy rainfalls are likely to occur.

Everything possible has been done that can be done to put matters right. Mr. Bailey, who was on his way to England for a holiday, was intercepted in Paris and immediately returned to Greece. A contract has been entered into with a firm of contractors, now engaged in tunnelling work in Athens, to rectify the damage. Mr. Halcrow, of Messrs. Meik and Buchanan, our consulting engineers, arrived in Greece on the 9th instant.

We have received this morning a telegram from Mr. Bailey intimating that Mr. Halcrow is due back in London this evening. Mr. Bailey states that he understands Mr. Halcrow's considered opinion, which he shares, to be that the tunnel in the rock is quite safe, but where lined it should be grouted in view of suspected cavities and a concrete invert provided. Every effort is being made to carry through the recommendations this season, three shifts working night and day.

Our general manager reports that the crop prospects for the current year are singularly bright.

The report and accounts were unanimously adopted.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended July 13:—

Egyptian Future.—Sakel Contract.—Under the stimulus of increasing trade support and speculative activities, this market has shown a very firm undertone throughout the past week. In the earlier days, little alteration in prices was to be recorded, but during the more recent sessions prices developed a strongly advancing tendency and closed to-night at practically the best of the week, namely 142 to 148 points advance for near and 127 to 138 points for distant positions. That the improvement has some solid foundation is evidenced by the increased activity shown by the fine spinning section; not only has the off-take for Egyptian Sakel been considerably enlarged, but also further heavy purchases of Sudan Sakel from practically all quarters have been in operation. As the Liverpool contract is the only available hedge option for the latter cotton the disposal of approximately 75 per cent. of the crop has radically changed the local outlook. Owing to the high premiums asked and the scarcity in Alexandria for any cottons of tenderable grade, our market stands at far too low a parity when the position is looked at from a purely import standpoint. On this account, we are strongly of the opinion that the present Liverpool Alexandria new crop differences will shortly commence to be readjusted. At the time of writing, November here is roughly 20 points below the corresponding delivery in Alexandria. As mentioned previously, with the Sudans practically out of the way, there seems no reason why our market should not establish a premium of 25 to 50 points. Crop reports continue favourable, as will be gathered from the undermentioned report for June, published by the Alexandria General Produce Association, but it must be borne in mind, owing to general nervousness regarding the price of staple cotton this season, that the position will be very vulnerable to any detrimental reports during the essentially critical month of August:—

“Lower Egypt.—Temperature during June favourable to cotton plants. Growing crops in good condition and about 10 days in advance of 1926 at same period. Some attacks of Shellal, a kind of blight which withers plants, have been notified among Sakellaridis only, but actual damage small. Appearance of egg masses and leaf-worm reported in large quantities in all districts, and steps have been taken for their destruction. In some places, owing to negligence on the part of cultivators, hatching out has taken place; on the whole, damage not very serious. Water in general has been sufficient except in some districts at tail ends of canals.”

To conclude, whilst it is quite possible that minor reactions will take place from time to time, we still consider the probability is for prices to work to a still higher level during the coming weeks.

Upper Contract.—The improved tone to which we drew attention in our last report has been well maintained during the sessions under review, and with more optimistic trade reports in evidence prices have advanced 95 to 102 points for near and 94 to 95 points for distant positions since we last wrote. A further hardening in the basis of competitive outsiders has again been noticeable, and this is bound to exert a favourable influence during the coming weeks. Crop reports continue to be satisfactory, the June condition, according to the Alexandria General Produce Association's report, being as follows:—
“Upper Egypt and Fayoum.—Reports from these parts are satisfactory from all points of view. Cotton plants are well developed, thanks to favourable temperature during month of June. Prospects are satisfactory.”

Egyptian Spot.—There has been a decided improvement in the off-take during the past week, and whilst prices for all qualities and varieties have hardened appreciably, this has not checked business; in fact, to the contrary, there has been distinctly more activity in evidence at the ruling basis than there was when prices were 1d. to 1½d. per lb. cheaper. As far as Egyptians proper are concerned, the inquiry has consisted mainly for the Fully Good Fair to Good grades in both Sakels and Uppers. In the former, the Liverpool market continues to rule distinctly cheaper than Alexandria, but it is noticeable that desirable lots are becoming scarcer and we think a further hardening in basis very probable. We have again to report what can almost be termed an enormous business in Sudan Sakels, and despite prices of this cotton being advanced rather more than 1d. per lb. on the week, they still compare favourably with the ruling Sakel basis. Taking into account that the Sudan crop has only been on the market since the beginning of April existing supplies are not plentiful, and on this account it would seem advisable for those who must secure their requirements to do so without delay.

Forwardings to spinners last week amounted to 6,512 bales Egyptian and 5,359 bales Sudan. Estimated spot sales for the week amount to 2,000 bales Egyptian and 18,800 bales Sudan. Quotations for Sakel on the week are advanced 120 points for F.G.F. and below, and 135 points for Good and above; Uppers have advanced 70 points for F.G.F. and below and 80 points for Good and above.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended July 7, state:—

Since our last report the futures market has been active and firm, especially for Sakel. The week's summary of price movements is as follows:—Sakellaridis: July, 33.83 dollars, 1.11 dollars up; November, 34.57 dollars, 1.12 dollars up; January, 34.42 dollars, 1.15 dollars up. Ashmouni: August, 24.68 dollars, 0.53 dollars up; October,

JOHNSTON LINE

Mediterranean, Black Sea and Danube.

REGULAR SAILINGS from:

Antwerp, Swansea and Liverpool to: Piræus, Syra, Volo, Salonica, Smyrna, Constantinople, Bourgas, Varna, Constanza, Sulina, Tulcea, Galatz, and Braila.

For Freight and other Particulars, apply:

JOHNSTON LINE, LTD., 6 Billiter Street, London, 9, Mount Street, Manchester, and FURNESS, WITHEY & CO., Ltd., Royal Liver Building, Liverpool

25.27 dollars, 0.52 dollars up; December, 25.42 dollars, 0.42 dollars up; February, 25.59 dollars, 0.42 dollars up.

Spot: Total sales amount to about 8,500 bales, of which we estimate 3,400 bales Sakellaridis, 4,700 bales Ashmouni and Zagora, 360 bales Pilon, and 40 bales White.

Sakellaridis: There has been quite an improved demand for this variety but good style cotton is very scarce. One or two selected crop lots have changed hands at very high premiums. Spot differences generally are unchanged.

Ashmouni and Zagora: This week the greater part of the business done has been in the medium grades and higher premiums have been paid owing to the shortage of these qualities.

Pilon and White: A few lots have changed hands; premiums continue unchanged.

Up-country: Some new crop business has been put through, and we have heard of several cases where growers are disposed to sell their cotton on the casis of 35 dollars for November.

Crop, 1927: Climatic conditions continue favourable. Everything is proceeding satisfactorily, with the exception of leaf worm attack which has increased somewhat lately. The attack is causing some anxiety to growers and has induced them to take the necessary steps to destroy the pest.

COMPANY NOTES AND REPORTS.

The report of Messrs. Furness, Withy and Co. for the year ended April 30, 1927, shows an increase in profits amounting to £80,467 over those of the previous year. The total of £603,511 is the best figure recorded for some years past. The balance brought into the accounts, however, was less to the extent of £36,956, and the available total is thus £43,511 in excess of that of a year ago, or £193,814 as compared with £150,303. Two payments of 2½ per cent. have already been made on the ordinary shares, and the directors now announce that a bonus of 2½ per cent. will also be paid, thus bringing up the distribution to 7½ per cent., a rate that has been paid for the past five years. As the usual allocation of £200,000 is made in respect of the depreciation account, the balance left to be carried forward is larger by some £43,000.

The report of the Bombay, Baroda and Central India Railway Company for the year to March 31, 1927, shows net earnings totalling Rs.4,16,21,886, a decrease of Rs.54,53,685. Out of the surplus of Rs.6,38,448 due to the company, Rs.1,97,906 was remitted to England in November, 1926, producing £14,688, and the balance, Rs.4,40,542, in May, 1927, producing £32,811. The directors recommend the payment of a final dividend of 1½ per cent., making, together with the guaranteed interest, 6 per cent.

The Cyprus Trading Corporation, 49, St. James's Street, London, S.W.1, have been appointed Transfer Agents for the Cyprus Asbestos Company in lieu of the Middle East Development Corporation, Limited.

Notes of the Week.

King Ferdinand of Roumania.

With the passing of King Ferdinand, in circumstances that enhance the tragedy of the event, Roumania has lost a ruler for whom there was no call to be great, but who set an example of simple dignity and whole-hearted devotion to the interests of his adopted country. During the long apprenticeship that he served as Heir Apparent he performed his duties as he interpreted them by carefully avoiding any course of action which might have the effect of encroaching upon the monopoly of loyalty and popular affection that was the prerogative of the reigning Sovereign and his gifted Consort. Consequently when he was called suddenly to succeed to the Throne, under the shadow of the European War, King Ferdinand was to a certain extent an unknown factor to his people. Immediately, however, he showed the real significance of his conscientious and unassuming apprenticeship by establishing himself in an unmistakable manner in the hearts of his people. So closely had he identified himself with all that was Roumanian that an attitude on his part at variance with the clearly expressed will of the nation in regard to the War was unthinkable. The fateful consequences of Roumania's adherence to the Allied cause still further cemented the ties between the Dynasty and the nation. In spite of the searching test to which all were exposed there was never the suggestion, or ground for the least suspicion, that King Ferdinand and Queen Marie evaded or tried to evade their share of the national misfortunes. By common consent no royal personages could have shown themselves to better advantage; the King's hardships were those of his people, and withal he set a splendid example of heartening the national will and keeping up the spirit of his troops; Queen Marie devoted herself to every good work and performed even more than her share of hospital nursing. When the War ended and Greater Roumania came into existence the prospects of the race seemed bright indeed. With a united people and with Throne and nation linked by common suffering and mutual respect, Roumania, it was to be expected, would rise superior to any demands made upon her. Fate, however, decided that the period of her testing was not to be over.

A Patriotic Ruler.

In the difficult times that followed the Great War the politicians took charge of Roumania, and King Ferdinand's rigid interpretation of his constitutional position would not allow him to act otherwise than through his Ministers. He identified himself with the cause of universal suffrage and with agrarian reform; in the case of the latter he was largely responsible for the introduction of the system that was at length to do justice to the peasants and he gave the lead by being the first to surrender large portions of the Royal domains. For the rest, King Ferdinand was unable, however much he strove to bring it about, to induce his people to compose political rivalries and to promote the unity of the Kingdom. His Coronation in 1922 had to be performed in the absence of the leaders of the Transylvanians, and he was forced to witness a marked alienation of European sympathy with Roumania as a result of political experiments which, however well meant, argued inexperience and a lack of vision. Within the limits of their constitutional position King Ferdinand and Queen Marie set themselves to counteract the bad impression caused abroad, and again showed that their ruling passion was the country's good. When the illness that sooner or later must prove fatal overtook King Ferdinand, his one aim was to spare the nation the curse of divided allegiance. However ready a loyal people might be to condone the action of a popular Prince, who in wartime had contracted against the wishes of his family a morganatic marriage, had, when this was annulled, consented to be married to the Princess of another Dynasty, and had deserted her in order to link his name with someone else, King Ferdinand realised that a Monarch with such an unsavoury record much always remain an outcast from all European Courts and for this reason could only be a drag on Roumania. With a reluctance which left no doubt as to its sincerity the King won the consent of his people for the one settlement of the dynastic problem which promises to conform with the country's dignity and interests, by the removal of his eldest son from the succession, and in so doing proved once more his large-hearted patriotism.

King Ferdinand's Last Behests.

Few more pathetic documents—if any—can have been penned by a Royal hand than the codicil to King Ferdinand's will, which bears the date, July 11, 1926, and the letter that he has left addressed to the Prime Minister. By his will of July 2, 1925, he had bequeathed the Royal estate at Sinaia, with the Castle of Pelesh, to Prince Carol; but the conduct of the Prince and his renunciation of his rights to the Throne compelled King Ferdinand to rescind these bequests. To the Prime Minister the King wrote:—

"My love for Roumania does not permit me to consider my duty ended with my life, and I must think of what the future may bring forth. God has willed that the Crown shall pass to my grandson, who is yet a child, and the burden of government will fall first upon Prince Nicholas and the Council of Regency. I call upon all good citizens to do what in them lies for the peace and progress of our country. I cannot look into the future without thinking with fatherly love of my dear son Carol, to whom I wish a worthy and happy life in the new destiny which he has chosen. I do not doubt that he and every good Roumanian who loves his country will strive to help the progress of the Kingdom during the reign of his son and his successors. For the peace of the country I have sacrificed my fatherly desire to see him again, and I charge him to keep his promise not to return without the permission of the Government. Let my son Carol respect scrupulously the legal conditions made by his renunciation of the Throne and the sacred duty of a Roumanian son and a father to respect the undertaking which he has given of his own free will."

The Outlook in Roumania.

It would be idle to pretend that, after the first feelings of sorrow at King Ferdinand's death and sympathy with the bereaved family and nation, the first thoughts both of Roumanians and of those others who have the interests of Roumania at heart were not fixed on the future of the country. The prospect of a long Regency, as King Ferdinand himself realised, is not a happy one. Without the least diminution of the loyalty felt towards the Dynasty, it is inevitable that the acts of a Regency should be subjected to a more searching analysis of motives and aims than those of a Sovereign whose single-minded devotion to the country is above challenge. In common with the other peoples of South-Eastern Europe the Roumanians are strangers to the system of Government which presupposes the placing of one or more of their own number above politics and parties, that together constitute the breath of life for the nation, and invest them with a hypothetical aloofness or disinterestedness which the individual is conscious that he himself could never attain. In Roumania there has already been a tendency to criticise the composition of the Regency in its relation to political parties, and dissatisfaction with any of its acts may give rise to the conviction that the country's interests require its early termination or its reconstruction on frankly political lines. All this must spell unrest, if not actual chaos, and it will be well, if the late King's solemn injunction to his people, and above all to his elder son, are stamped indelibly on the heart and memory of the nation. Roumania cannot afford the luxury of chronic political unrest, still less of civil strife; and, unless every individual and every group, political, social and military, resolves to respect the *status quo*, the danger of external aggression will follow hard on the setback to the unification and progress of the country that Roumanian interests urgently demand.

The Greek Parliament.

The Greek Chamber which meets next week has a heavy load of responsibility resting upon it. In the first place its has in its hands the future of the Coalition Government, which the country has given unmistakable signs of preferring for the present to any Ministry representing a single Party. Almost immediately it will be called upon to determine the fate of General Pangalos, who has been kept in prison for nearly a year because it has been more convenient to shelve the question of responsibility for his trial. By the Constitution passed last June the ex-Dictator should be tried by the Senate; but as the latter has not yet been constituted, a special Bill is to be sub-

mitted to the Chamber to provide a substitute tribunal. The procedure proposed is elaborate; an examining commission of fifteen Deputies is to collect evidence for the prosecution; a second commission of thirty Deputies will examine prisoners and witnesses and pronounce judgment; the verdict will be submitted to the Chamber for confirmation or rejection. The main object to keep in view, it would be thought, would be to expedite the proceedings and to see that no suspicion of prejudice, vindictiveness, or party spirit shall enter into them. For the rest, the Greek Chamber will be called upon to pass judgment on the Government's decisions regarding the rehabilitation of Greek finances and the conclusion of a *modus vivendi* with Yugoslavia in respect of the Free Zone at Salonika. If it can avoid a recrudescence of political bitterness in closing the Pangalos affair, the immediate prospects for the country are good. The time is approaching when the effects of the successful settlement of the refugees should begin to be felt in the economic conditions of the country.

Druses and the Hijaz.

There will be little occasion for surprise if the announcement proves to be correct that Sultan Pasha al Atrash, leader of the Druse insurgents against the French, has gone to Mecca in an endeavour to induce King Ibn Saoud to grant an asylum in the Hijaz to such Druses as cannot reconcile themselves to existence either within the French mandated territory of Syria or within the British mandated territories of Transjordan and Palestine. For no doubt can exist that the leader of the Wahhabis is, for all the correctness of his relations with other Powers in Arabia, not only a good Najdi but also a good Arab, and his sympathies will almost naturally have been with his brethren across the Wadi Sirhan who have for so long been "struggling to be free." King Ibn Saoud's heart, however, has never got the better of his head, and although he is understood to have set considerable store on having his territory contiguous with Syria, he has abided with excellent and constant grace by the agreement which he came to in 1925 that British mandated areas should run uninterruptedly across the northern section of the Arabian Peninsula. In other words, he has wisely refrained from imbroiling himself in the perplexity of Syrian affairs. Whether he will allow the irreconcilable Druses under Sultan Pasha al Atrash to settle in the Hijaz depends, possibly, on the Druses' ability to be assimilated, but there is nothing intrinsically improbable in this report that the most dogged remnant of an adventurous sect should finally settle down under the spacious arm of the new ruler of the Hijaz. Such an arrangement is, no doubt, *faute de mieux* in the opinion of the Druses, but the Druse refugees in the neighbouring country of Transjordan do not seem quite to have "played the game," and it would probably be as a riddance of an embarrassing factor in their midst that the British authorities in Transjordan, who have been particularly troubled by the Druse refugees in places like Qasr al Azraq and by the visits of Druse leaders to these refugees, would view the migration of these warriors to the lands of King Ibn Saoud.

The Air Route to India.

The suggestion is being mooted, as a consequence of the hitch that has arisen over the passage by Imperial Airways over Persia, of organising a route to India along the Arabian shore of the Persian Gulf. This alternative route contains many drawbacks, the majority of which are, of course, physical. But, as our Jidda Correspondent pointed out in the letter which we published on July 7, the whole Arabian coast of the Persian Gulf does not lie within the orbit of the British Empire. The sovereignty of King Ibn Saoud over a certain length of the coast must be recognised. This fact, however, should by no means prove to be a stumbling block, for the relations of Great Britain with the Wahhabi ruler are on an excellent and recently strengthened foundation. King Ibn Saoud can have no such material considerations to deter him from giving sanction for British aeroplanes to traverse his

territory as have induced the Persians to delay ratification of the projected agreement with Imperial Airways; nor can he have any counter or complementary proposals like those which may have influenced the Persians in their desire for direct aerial connexions between Teheran and Baghdad. Obviously it would be regrettable if Imperial Airways had to fall back upon this longer, more costly and more difficult route to India, but equally obviously the Company cannot wait indefinitely for the extension from Basrah to India.

Middle Eastern Services.

Statistics are not perhaps an infallible guide to the progress of countries, and there are in mandated territories things of deeper import and of profounder significance than the amount which the mandatory Power has to spend on them, or in them. Nevertheless the fact is beyond dispute that Great Britain has reason to be content with her declining expenditure in Middle Eastern countries. The Secretary of State for the Colonies has just issued an explanatory statement of this year's estimates, and it is eminently satisfactory to see that the total expenditure provided in the Middle Eastern services is £3,395,000, as compared with £4,444,000 for the previous year. This decrease has, of course, been rendered possible mainly as a result of the Treaty made between Iraq and Turkey in June, 1926; actually £1,141,400 of the decrease is in respect of Iraq. In this connexion, however, it has to be remembered that the British Government waived their claim against the Government of Iraq for the repayment of the value of certain "transferred assets" (irrigation works, roads, bridges, telegraphs, and so on); the capital value of these was estimated originally at £700,000, and was afterwards reduced to £570,000. But Palestine also is economising to the extent of £166,600. Only in respect of Aden is there an increase—of £259,000—and this is due to the fact that the political and military administration of the Protectorate have been transferred from the Government of India to the British Government. Certainly the tax-payer at home, who is inclined to take the short view of things, has some reason for complacency; as a matter of fact, the security of Imperial commitments in the Middle East is being achieved at remarkably low cost.

The Visit of King Faisal.

It is credibly reported that King Faisal of Iraq is shortly to visit England, this time in the interests of his country rather than, as necessitated hitherto, of his own health. The opportunity will doubtless be taken for a direct exchange of views between our royal visitor and the British Government upon the question of the revision of the Anglo-Iraq Treaty, and every confidence is felt that an arrangement welcome to both parties will result from the negotiations. Naturally, it is too early to discuss details, but since the crux of the new treaty will turn upon the revision of the military and financial clauses of the present Treaty, it is obvious that the whole matter of Conscription for Iraq will have to be thrashed out and decided. It is too early, again, to speculate whether Iraq, as a result of the achieving of a new Treaty, will for the time being forgo her claim to be admitted into the League of Nations, but that would seem to be a not improbable outcome. Possibly Iraqis view the Geneva institution with suspicious eyes on account of its equivocal attitude in the affairs of Iraq's northern frontier, but the feeling appears to be uppermost that it is better, in Arabia at all events, to trust to the support of Great Britain than to put confidence in the mixed assembly at Geneva. After all, it will be the new Treaty which determines the real status of Iraq, and one may not be far wrong in supposing that the agitation for admission with the League Assembly was in the nature of gaining a means to an end. If Iraq secures all that her dignity and interests require by the new Treaty, perhaps the subjects of King Faisal will not be too discontented with temporary non-representation at Geneva.

Conscription in Iraq.

The royal Irade which has just been issued from Baghdad accepting the resignation of Major-General A. C. Daly, Inspector-General of the Iraq Army and Military Adviser to the Iraq Ministry of Defence—he left Baghdad, as a matter of fact, some weeks ago—reminds one of the fact that the Conscription Bill brought in by the Cabinet of Jaafar Pasha was introduced in order that it might be discussed thoroughly before the Baghdad Majlis reassembles next November. There was considerable wisdom in this delaying step, and it is greatly to be hoped that before the Iraqi deputies meet again the whole problem will have met with exhaustive inquiry from every point of view. Whether General Daly's plans were identical with those of Arab military leaders, or whether given a basis of conscription, he merely propounded a scheme which met with their enthusiastic support, are matters which are now perhaps of academic interest. It is possible—one cannot now say more than that—that a compromise will be reached between King Faisal and the British Government, whereby Iraq will be spared the experimental imposition of compulsory service upon the tribes. But, as we have already said, this is no matter for dogmatic reasoning, but rather for amicable adjustment.

Refugee Settlement.

The striking benefits that Greece stands to derive from the *débâcle* of all her aspirations in Asia Minor through the settlement in the old Kingdom of a million and a quarter refugees are not confined to the impetus thus given to production in the country. A solution of the Greek shore in the vexed Macedonian question has been found in the removal of the Bulgarian population in the territory concerned, not without protest from and considerable hardship to the people themselves, but by formal agreement between the two countries, and in the substitution of a homogeneous Greek population. The settlement of the latter under foreign supervision has caused serious attention to be paid to the health of this region, with the result that marshes are being drained, land reclaimed and the dread scourge of malaria gradually eliminated. Other direct consequences for Greece through having had to throw herself, as it were, on the good graces of Europe are that she is now on the way to obtaining a loan that should enable her to set her shattered finances in order. The loan of nine million pounds that she hopes to obtain this autumn will include three millions still required for refugee settlement, but should leave two sums of equal amount available for Budget arrears and for stabilisation of the currency.

GREECE AND YUGOSLAVIA.

During the absence abroad of the Ministers for Foreign Affairs and for Finance the Greek Coalition Government has been content to mark time in respect of a number of important matters of State that are pressing for solution. Foremost among these is the problem of finance, with which the visit of the Ministers to London may be supposed to have been primarily concerned. In April M. Kaphandaris obtained the sanction of the Chamber for two months' delay in the presentation of the Estimates for the current year; but it soon became evident that, before any satisfactory settlement of Greece's finances could be reached, there must be a closer understanding between the Government and the world of finance as represented in London. It was, therefore, a sound move on the part of the Coalition Ministry to face the inconvenience of delaying the settlement of various questions, both domestic and international, while M. Michalakopoulos and M. Kaphandaris undertook their important mission abroad. The task of the latter was to gauge the attitude of the London market towards Greece, with a view to bringing Greek policy, as far as might be desirable or necessary, into line with the requirements of that market, and at the same time to satisfy financial interests in London that Greece is definitely committed to a policy of sane and healthy finance. The loan that it is hoped ultimately to float in London is required mainly for the stabilisation of the Greek currency, and in a minor degree for the completion of the work of refugee settlement. While M. Kaphandaris was dealing with financial matters, M. Michalakopoulos was able to show that Greece had also entered once more on the straight path of constitutionalism, and, as far as the popular will was concerned, might be regarded as finally weaned from dictatorships, and revolutions. The Coalition has been subjected during its brief tenure of office to a number of severe strains, but has successfully weathered them all, owing in a large measure to the steady resolve of the people that the so-called "Œcumenical" Government is the only solution, for the present, of the ills from which the country is suffering.

In the realm of foreign affairs by far the most important question confronting the Greek people is that of their relations with Yugoslavia. It is significant of the confidence which the Coalition Government has inspired in the country that it has felt strong enough to make it clear

from the first that it was not prepared to accept the supplementary agreements regarding the Yugoslav Free Zone at Salonika made by the Pangalos Government during the last days of the Dictatorship. The question is necessarily a delicate one. In November 1924 Yugoslavia denounced her alliance with Greece, and gave it to be understood that there could be no renewal until the Salonika question had been settled. General Pangalos decided that an alliance with Yugoslavia was worth some sacrifice in regard to Salonika, and under his orders his Foreign Minister concluded on August 17, 1926, a new agreement which not only increased the area of the Yugoslav Free Zone, but also gave Yugoslavia complete control within it. Before the agreement could be ratified the Dictatorship had come to an end, the Yugoslav Minister in Athens who had carried through the negotiations died, considerable delay ensued in the arrival of his successor and a series of Ministerial crises in Belgrade kept the Yugoslavs pre-occupied with other matters. In the interval the relative positions of the two countries have undergone subtle changes. Greece, having recovered from the effects of the Asia Minor disaster and its long-drawn-out aftermath, finds herself rehabilitated in the eyes of the world; Yugoslavia, on the other hand, is anxious regarding her international position and has almost persuaded herself that she is dangerously isolated in the Balkan Peninsula.

If it were true, as has been stated in the Greek Press, that the Yugoslav Government has already accepted, through its Minister in Paris, the principle of a revision of the Salonika agreements, the problem would have lost much of its seriousness. It is to be feared, however, from the careful steps that are being taken to regularise the refusal to recognise the Conventions by securing their rejection in the Chamber, that the Greek Government is by no means satisfied that its overtures to Yugoslavia are to be met half-way. Both countries have strong reasons for making a conscientious effort to secure an amicable settlement, and not the least satisfactory sign of good intentions is the fact that the subject is not being referred to by the Yugoslav Press, so that the exacerbation of feeling on both sides which generally results from newspaper discussions in these countries is being avoided. That Yugoslavia should wish to hold what she has been accorded after prolonged negotiation is only natural. On the other hand the desirability of close relations with Greece is so apparent that we may hope that a reasonable amount of give-and-take on both sides will lead to an early settlement. The contention of the Greeks that only four per cent. of the foreign trade of Yugoslavia passes through Salonika will, no doubt, be met by the reply that the percentage will be considerably increased as soon as the Yugoslav Government is in a position to devote more attention and money to the Free Zone. If reliance is to be placed on arguments of this nature, however, there is little chance of a settlement satisfactory to both parties. Each Government should realize that the need for a Greco-Yugoslav understanding is a paramount necessity, and should, therefore, approach the question with the intention to give effect as far as it possibly can to the other's point of view.

The Sobranye Debate.

The discussion on the Speech from the Throne furnishes each year in the Sobranye a grand debate upon the general policy of the Government and on the internal and external position of the country.

Now this year the debate, coming immediately after the legislative elections—elections which were a landmark in the political evolution of Bulgaria—assumed exceptional proportions, on account not only of the number of speakers in Parliament, but also of the importance of the subjects treated—subjects which, it cannot be denied, passed far beyond the ordinary parliamentary limits. For that, there were several reasons, of which the main was the resentment caused among the Governmental deputies by the attitude of the Socialist leader, M. Sakazoff, who, at the beginning of the session interrupted the King, to protest against the use of violence in the elections. Moreover, this violence, affirmed by the Opposition, denied by the Government, occupied a prominent place in the debate. For instance, one of the speakers, no less a person than the former President of the Council, M. Malinoff, went so far as to recommend the inscribing of guarantees for freedom in the elections in the Constitution, guarantees, that is to say, which neither the Government nor the ordinary Sobranye could abrogate or suspend. He argued that the obstacles now put in the way of ascertaining freely the popular will can only increase, and that it is necessary to guard against the dangers of to-morrow, when the reins of power may be in hands less scrupulous than those directing them to-day.

This fear of future events was the fundamental feature of the debate. It was manifested by the reappearance of the Agrarians, behind whom are to be seen the Communists. It must not be forgotten that out of a total of 1,200,000 voters who took part in the elections on May 29, the Agraro-Communists secured about 300,000 votes, of which a third were given to the Communists, who have no official existence. This whole mass is under the influence of little extremist chiefs, who, as the President of the Council has said, are directed by an invisible hand receiving funds and instruction from abroad. The result of this is a troubled perspective for the country. In listening to the speeches of the different orators in the Sobranye one could not help feeling that this fear of the future was the bottom of the trouble—not the policy of the present Cabinet, nor even that of its predecessor. What was at the back of the mind of everyone was the peace of the country. The Governmental deputies heatedly attacked the Bolshevik tendencies of the Left, and the Agrarians, joined in this emergency by the Socialists, defended themselves with no less heat. The Agrarians, however, with a *finesse* of which one did not suspect them, declared that they set above all things the tranquillity of the country, and that they would lend their support to the Government in accelerating and in securing the effective pacification of the people. This declaration, nevertheless, did not succeed in convincing the Democratic Entente. But

it is necessary to say that the Government itself sees no immediate danger from the Agrarians, that it entertains no prospect of a sudden *bouleversement*, and that, in a word, it feels master of the situation. Yet it is pushed on by the old and young officers of the patriotic associations to proceed against the Agrarians and the Communists. So two fronts opposed to one another are being drawn up, ready for collision, and in between them, directed by M. Malinoff, stands the party of the Centre, preaching in vain its policy of conciliation and of general collaboration. Moreover, M. Malinoff himself, whose protection the Agrarians and Communists have more than once sought, expressly declared in his speech that if the citadel of State and public order is in danger, the extremist elements could no longer count on him and his friends. For he and his supporters would range themselves upon the side of the State and of the Constitution, that is to say, after all, on the side of the Government and against the malefactors, so long as these latter are accused of being, in their criminal actions, in close relations with the Communist International of Moscow and with certain militarist circles in Belgrade.

And so the first political debate in the Sobranye has demonstrated the great crisis in the country which has been going on for some years and which is aggravated by the economic and financial difficulties, and also by the premature introduction of democratic Western ideas. This crisis is furthered by the class struggle, by a bad educational system, and by the material misery which is rife in the country as a result of the War and of civil strife. By a curious paradox, it is this same crisis which holds the solution of this perilous situation. For everybody, the Government and the Opposition alike, believes firmly in the necessity of maintaining and consolidating at all costs internal peace as the condition to which everyone aspires. The needs of national economy exceed the pre-occupations of Governments and of governed, and override the squabbles of political opponents. Moreover, economic necessities form an adequate basis for preventing all adventure and all provocation. The country has had enough of vain struggles, and if the new Sobranye succeeds, under the impulse of the Government, in drawing it out of the grave economic crisis, it will deserve recognition.

POLITICAL PARTIES IN ROUMANIA.

The final returns of the Roumanian Elections give the Government (National Liberal Party) 61.69 per cent. of the total number of votes polled, the National Peasant Party 22.09 per cent., the Magyar-German group 4.28 per cent., the People's Party (General Averescu) 1.93 per cent., and the Anti-Semites (M. Couza) 1.90 per cent. These percentages give the following representation in a Chamber of 387 seats: Liberals 318, National-Peasants 54, Magyar-German Group 15. Groups with less than 2 per cent. of the total vote have no representation in the Chamber.

THE ANGLO-HELLENIC LEAGUE.

An informal dinner was given to Lord and Lady Beauchamp at the Ritz Hotel on July 20, at which the Members of the Council and Executive Committee of the Anglo-Hellenic League inaugurated Lord Beauchamp's assumption of the Chairmanship. Among those present were:—His Excellency the Greek Minister, Sir Francis and Lady Elliott, Sir A. H. and Lady Crosfield, Sir John Stavridi, Lady Meiklejohn, Sir Harry P. Robinson, Mr. and Mrs. Wace, Mr. Marchetti, and others.

KING FERDINAND OF ROUMANIA.

A heavy blow has fallen on Roumania in the death of King Ferdinand, whose reign will always be associated with the creation of the Greater Roumania that was the reward of a much-tried country for the part it had played in the Great War. Although the shadow of his incurable illness has brooded for many months over the land, the end is none the less a shock for the Roumanian people. If anything could add to the tragedy of a doomed King, whose removal from the scene must of necessity spell uncertainty and anxiety for the country, it was the solicitude that he showed in trying to shield the nation from the troubles of which all are conscious and all alike have reason to fear. When hope of his recovery had to be abandoned, King Ferdinand sought to provide Roumania with a Government that might reasonably be expected to be proof against sudden or violent change. To this end he urged the Prime Minister of the day to form a Coalition Ministry, and when General Averescu failed, the unusual step was taken of calling upon Prince Barbu Stirbey, the close friend of the Royal Family, but essentially not a politician, to form a Cabinet of all the parties. This move also came to nought, and finally King Ferdinand found himself obliged to entrust the Government to M. Ion Bratianu, who, as head of the Liberal Party, has a unique hold on the country, and can invest his administration with the strength and stability that no other political party can hope to attain at the present time. With the passing, therefore, of King Ferdinand Roumania may not be as well equipped as the King would have liked for possible troubles ahead, but in the absence of a union of all the parties she can feel tolerably secure.

King Ferdinand, who was the son of Prince Leopold of Hohenzollern-Sigmaringen, was born on August 24, 1865. In 1889 he was formally recognised as heir to his uncle, King Charles (Carol) of Roumania, and from that date he identified himself wholeheartedly with his adopted country. Four years later he married Princess Marie, daughter of the Duke of Edinburgh. Although his interests in early life were mainly military, he was of a quiet, retiring disposition; he was conscientious in all that he took up and set a striking example of unsparing devotion to Roumania. Until he came to the throne, his personality was necessarily overshadowed by those of King Charles and Queen Elizabeth ("Carmen Sylva"); but the Great War supplied King Ferdinand with the occasion to establish himself firmly for all time in the hearts of his people. King Charles had allied himself with the Central Powers and could not reconcile it with his conscience—even if it had accorded with his better judgment—to make war against them. King Ferdinand, who succeeded to the throne on October 11, 1914, on the death of his uncle, laboured under no such handicap; he could not disguise from himself the unmistakable feelings of the people or the manifest interests of Roumania, and, however much it may have gone against the grain to find herself at war with Germany, he allowed no personal considerations to stand in the way of Roumania's adherence to the Allied cause. How sorely the Roumanians were tried for their decision is a matter of history. King Ferdinand and Queen Marie set a splendid example in sharing the country's misfortunes and it must have been no small measure of consolation to them to have their sacrifice rewarded by the enthusiastic devotion that the people subsequently accorded to them and by the final aggrandisement of Roumania as a result of the Allied victory.

In spite of the loyalty and affection of the Roumanian people to the Throne King Ferdinand's reign was far from running a smooth course when the War was over. The failure of the component parts of the new Kingdom to pull together in the work of reconstruction was a source of constant regret (the Transylvanian Party absented itself from the Coronation ceremony); family troubles added to his chastening. Prince Carol, his eldest son, on whom King Charles and Queen Elizabeth had lavished special pride

and affection in his young days, failed to regulate his private life in strict accord with his responsibilities. In 1918 he contracted a morganatic marriage at Odessa with Mlle. Zizi Lambrino. When this marriage was annulled by the Roumanian Courts in the following year, he was married to Princess Helen of Greece, and it is their son, Prince Michael, who in January 1926 was proclaimed Heir to King Ferdinand when Prince Carol, who had left the country with another lady of his choice, renounced his rights of succession and was formally excluded from the Roumanian Throne. The decision was not taken without reluctance by the King. Prince Carol up to that time had been popular, and there were many Roumanians who were still prepared to overlook his escapades rather than run the risk of a long period of regency, which might encourage various elements in the country to aim at wielding power through the Regents. The King's wishes, however, prevailed, and all parties, having realised that Prince Carol's actions had now compromised Roumania's reputation, have formally accepted the succession of Prince Michael.

The Regency.

On the death of King Ferdinand, which took place in the early morning of July 20, at the Royal Castle at Sinaia, no time was lost by the Government in proclaiming the accession of Prince Michael to the Throne and in the administering of the oath of allegiance to the new Sovereign. The young King, who was born in November 7, 1921, is thus only five years old, and under the Constitution there must be a Regency until he attains his eighteenth year (1939). The Regents, who were appointed in January 1926, are Prince Nicholas, second son of King Ferdinand and Queen Marie, Monsignor Miron Cristea, Patriarch of the Roumanian Orthodox Church, and M. Ion Buzdugan, President of the Court of Cassation. The Patriarch Miron, it is interesting to note, is a Transylvanian. As a young man he identified himself with the Roumanian cause in Hungary and was conspicuous for his writings in the Press. He was enthroned on November 1, 1925, as the first Patriarch of Roumania. The Regents take the same oath as the King: "I swear to defend the Constitution and the laws of the Roumanian people, and to maintain its national rights and the integrity of its territory;" and in all respects the government of the country is carried on as in the lifetime of a King who has attained his majority, with the single exception that by Article 85 of the Constitution, "no modification can be made in the Constitution during the period of a Regency."

King Ferdinand's Funeral.

The remains of the late King Ferdinand have been deposited in the crypt of the Church of the Monastery at Curtea d'Argesh, where King Charles and Queen Elizabeth are also buried. The body lay in State at the Palace of Cotroceni, in Bucharest on July 21 and 22, and on July 23, after a service in the Palace, was taken through the streets of the capital and conveyed by train to Curtea d'Argesh. Immediately after the Royal coffin, which was on a gun-carriage, walked in the funeral procession King Alexander of Yugoslavia, Prince Nicholas, the Prince of Hohenzollern (the late King's brother) and Prince Hohenlohe (brother-in-law). At the station the procession was awaited by Queen Marie and her three daughters, the Queen of Yugoslavia, Ex-Queen Elizabeth of Greece, and Princess Ileana, and by the Princess of Roumania (Princess Hélène, mother of King Michael). The crowds of peasants and others who thronged all the stations between Bucharest and Curtea d'Argesh testified to the affection in which the late King was held by the whole Roumanian nation.

In consequence of Greek representations the American School of Archaeology in Athens has agreed, according to *The Times*, to accept the collaboration of Greek archaeologists in its coming excavations on the site to be expropriated north of the Acropolis in Athens in virtue of the recent concession granted by the Greek Government.

ON "ASIATICISM."

Considerable misconception exists upon the subject of the relations of Asia with the rest of the world, and the number of dismal prophecies upon the development of an Asia noxious and hostile to the West does not appear to diminish. It so happens, however, that two eminently sensible articles upon this subject have just been published. The first is by Mr. Stanley Rice, and is contained in the July issue of the *Asiatic Review*. Mr. Rice calls his article "Asiatisme," and he begins:—

Quite a respectable literature is growing up round the question of the reappearance of Asia as a serious factor in the make-up of the world. In Anglo-Saxon countries it generally takes the form of somewhat alarming prophecies based ultimately upon numbers. The school which believes in them and has nightmare visions of Asiatic hordes sweeping upon Europe and tearing down the barricades of European civilisation by sheer weight of numbers, the school of Dr. Inge and Mr. Lothrop Stoddard, trembles for the supremacy of Europe conceived for the most part in terms of trade, of imperialism in its literal sense, and more generally and vaguely of a threat to European civilisation and to Christianity as the chief bulwark of it. It is a mode of thinking essentially European. It sees before it huge masses of men beside which the ranks of Europe look particularly thin; it hears vocal India clamouring for Swaraj and self-determination and vocal China gnashing Celestial teeth at the iniquities of the foreigner; the factories of Japan are sounding hammer-blows on the coffin of European civilisation, and rebellious Russia is rousing mysterious legions in Central Asia. Throughout the Asiatic continent is rising a Hymn of Hate against all that the West stands for, and the will to power is, as it should seem, the will to destroy. In other words, this school expects Asiatics to behave exactly as Europeans would behave if these hypothetical rôles were reversed.

Mr. Rice points out, however, that while the great majority of Europe is naturally warlike, the great majority of Asia is naturally peaceful. He remarks again, very pertinently, that "nearly all discussion of this subject is in terms of contrasted dualisms: East is opposed to West, Asia to Europe, materialism to spirituality, action to contemplation, Buddhism to Christianity." This is a danger. Take East and West, for example. In so far as climate has influenced civilisation, "East and West simply do not exist." For—

The tropic is the tropic whether the Equator runs through West Africa or a little to the South of Ceylon, and the latitude of Gibraltar does not lose its character when it becomes the latitude of Tokio. By an artificial division of the world along the lines of longitude climate loses all meaning and language leads us into all kinds of false values. The Mussulmans of Morocco are "Oriental;" not because they live in the East, but because they live in the latitude of Syria. This division of the world into East and West has led to false conceptions; in Europe, in spite of the better informed statements of travellers, it has suggested generalisations *a priori* and has branded the whole of the Orient with ready-made labels.

After some philosophical reasoning, Mr. Rice comes to his conclusion that "Asiatisme" is no danger to Europe. The real danger to European civilisation, he holds, comes "not from Asia, nor conceivably from Russia or Germany, whatever purpose they may have served or are now serving for the importation of Asiatic ideas, but from America."

The other article, entitled "The Caliban of Asia," is by Mr. H. E. Wortham, and is published in the July issue of the *Atlantic Monthly*. Mr. Wortham at the outset con-

fesses that he has no dread of the monster, Asiaticism; in fact—

The more I look at the question the more it appears that, far from Europe being in danger of submersion by Asiaticism, there has been no period in the world's history when the predominance of Europe over Asia in the region of ideas has been more secure.

He insists that it is the slogan of material progress that is now everywhere heard in the East. Asiatic statesmen are now talking the lingo of English utilitarians, or of Macaulay.

Mustapha Kemal Pasha in Turkey, King Amanullah Khan in Afghanistan, Riza Shah in Persia, King Feisal in Iraq, Mr. Chen in China, speak in accents sufficiently similar to suggest that the rebirth they postulate will produce, not the nameless horrors of a Tamerlane or a Jenghiz Khan, not the monster with "a name and a face" which publicists, eyeing the Eastern horizon, see striding towards us, but an Asia desiring to become as like Europe as possible.

He then examines the position of Islam. He finds that its politico-religious influence has undergone an extraordinary eclipse. "True, the Muhammadan East is burgeoning with a new life, but the springs feeding it are in no sense Islamic." In Afghanistan, and very much more in Iraq, the trend is towards the adoption of Western modes; in Egypt reaction, as implied by the persecution of Shaikh Ali Abdul Razak, is fighting a losing battle against the young men of the country; and in Turkey, of course, the West is openly and constantly imitated.

Mr. Wortham concludes by remarking upon the unworthiness of the Western thinkers who put up one bogey after another in regard to Asia—the thinkers who "are determined that Europe shall have its back to the wall somehow—if not in one way, then in another." This attitude, he suggests, is

a churlish and frightened return on our part to the frank admission of the oldest continent that it has everything to learn from the youngest. It is hardly worthy of our achievements or of our spiritual heritage. Spiritual heritage—these words are enough to make the prophets of evil intervene once more. They may admit that a Europeanised Asia will not turn and rend Europe, but they lament over the spiritual loss that will accrue to the world from the adoption by Asia of what the American vision has conceived as "the lifting of the millions." They must do so. The picturesque East as it appealed to a Loti, to a Blunt, and to scores of other Western souls in love with beauty so long as it is not of to-day and therefore cannot offend their scrupulous taste—that East spoke of decay and death. Such sentimentalities must be left to their tourist natures; they never moved an Oriental. Yet, though Asia has broken from its moorings and has begun to move its vast bulk over the uncharted sea of progress, seas whereon we have no idea where the Promised Land lies, seas that offer no havens and that are lashed with storms which may destroy the stoutest vessel, one cannot imagine that it will follow tamely in our wake. All we can do is to wish it God-speed in the great adventure of the modern world, the greatest adventure on which humanity has so far been engaged.

According to a Cairo message the Helouan Observatory recorded an earthquake shock at 37 seconds after 6 a.m. on July 22. Two further severe earthquake shocks were recorded the following day at 10.23 and at 26 minutes past midnight, both relating to a disturbance the centre of which was approximately 1,400 miles distant, presumably in Persia.

NEAR EASTERN PRESS.

Turkish Refugees from Syria.

A great deal of bitterness is felt in Turkey concerning the treatment of Turks in Syria and Greece. These unfortunate people have, as it were, fallen between two stools, in that they are turned out of the country of their domicile and repatriated to a nation unready to receive them. The Turkish Government is slow to move in the matter of their settlement and will only partially assist them until indemnities be paid to the Turkish Government to the value of the goods abandoned. The reason for preventing these Turks from recrossing the Syrian frontier for a period of three years is not appreciated and Turkey is uncertain whether to hold France or the Syrian Government responsible in the matter.

La République writes :—

Let us begin by reading what a correspondent has written : " Now that the local Government has controlled for a year the seizure of the possessions and lands of the Turks in Syria, public opinion seems to know little about it, and our Government is only partially interested. The fact nevertheless is that the value of the Turkish properties in Syria is equivalent to that of the Turkish possessions in Greece and Yugoslavia, whose restitution the Turkish Press is daily endeavouring to obtain. In consequence of which there is every reason for attaching the greatest importance to the property of the Turks in Syria. We are sorry to see this treatment applied by an Arab Government of the same religion under the protectorate of such a friendly country as France. The Turks who own property in Syria come under two categories :—

1. Turks born and established in Turkey who own landed property in Syria. The Syrian Government forbids the sale of their possessions, and have set up a special commission to value the property but with what aim in view is not known. Now, there seems to us no difference between a Turk living in Turkey and possessing land in Syria and a Frenchman owning property in Turkey who resides in France. Why, therefore, is a Turk living in Syria under the Mandate of France forbidden to sell his possessions or dispose of them as he thinks fit, whereas under our Government a Frenchman is free to dispose of his goods as he wishes?

2. Turks born or residing in Syria who own land and property in that country but who, having adopted Turkish nationality in accordance with the Lausanne Treaty, are obliged to establish themselves in Turkey. The sale of the property of Turks who come under this second heading has been equally forbidden for a year by order of the Syrian Government. These people arrive in Turkey in groups, leaving all their property in Syria as it stands, and the last convoy is due to leave the country in the beginning of August. And what will become of these poor men in Turkey, whose sole means of livelihood consists in their land and property in Syria? They are thus condemned to a life of misery or to die of hunger.

We would point out, by the way, that our Government has promised no help to the Syrian immigrants who are even debarred from the advantages which the law *ad hoc* accords in the shape of a grant of land repayable in twenty years time to the immigrants from Tripolitania and Bosnia who have no connexion with the Turks, whereas the immigrants from Syria are for the most part of pure Turkish blood.

Our consuls in Syria assured us and declared at the time that those Turks who would go and establish themselves in Turkey would have the right to return and live in Syria, to dispose of their goods, or to put them up for sale if they so desired. Our joy at this news has been short-lived, for the Syrian authorities are already preventing those who have abandoned their Syrian nationality and passed over to Turkey from returning to Syria. We also learn that none of these people will be allowed to enter Syria for three years.

To oblige these poor Turks to leave the country without granting them the right to sell their possessions, not to allow them to return to Syria for years to come, to seize their belongings and deprive them of the rights of property! Such is exactly the mentality of a Balkan State! It is not the French Christians who are responsible for these cruel proceedings with regard to the Turks, nor is it the people, who really care for Turkey and who look with bitterness on the happy days of the past. This vile treatment is meted out to us by the Syrian Government composed of notable indigenous Arabs who are termed our co-religionists. These vampires, who have sucked the noble blood of the Turks for centuries past, who have dipped their hands in their coffers and, profiting by the present crisis, exercise their influence over the French, are determined to disgust the Turks in order to be able to take possession of their belongings at ridiculous prices or more exactly to renew the atrocities which they committed at the time of the retreat of the Turkish troops at the end of the Great War. . . ."

Immigrants from Greece.

With regard to immigrants from Greece *La République* writes again :—

. . . There has been no means of proceeding to the valuation of

the respective belongings of the interchangeable peoples according to the means and conditions stipulated in the Treaty and we know the reason. It is because, instead of a delay of two years as prescribed in the treaty of exchange for the transfer to Turkey of Turks established in Greece, a delay which had been fixed so as to give them time and leisure to superintend the valuation of their property, Greece succeeded in reducing these two years to some five months by the sole means of a régime of terror in which she involved our immigrants who sought safety in a precipitous flight. In this panic and general disorder the Turkish State could but receive with open arms this multitude of compatriots who found themselves in danger of immediate death. Thus it has not been possible to determine the value of the property of the populations subject to exchange, nor have means been found to proceed with the valuation of these goods.

It was necessary, nevertheless, to find some expedient to deal with the matter, for there exists no ill without a remedy if it is searched for long enough. This is what Greece has done, whereas we have been slow to move in the matter. Laying aside the question of valuation, Greece brought all her efforts to bear on the question of a quick and definite settlement of the immigrants. Meanwhile we have contented ourselves with letting certain lands to our refugees while awaiting the results of the valuation, with the result that none of our immigrants can dispose of the property granted to them. They cannot, for instance, raise funds by means of mortgage, which is, according to the law of property, a proof that one has not the right to dispose of what one possesses. . . . We know of more than one refugee who have been able to obtain no relief in spite of the fact that they are in possession of all documents proving the exact amount of their property abandoned in the country of their origin. This question of settlement bids fair to be of lengthy duration, a situation which is entirely inadmissible. . . .

The Ghazi's Work.

The reception of the Ghazi in Constantinople has been extravagantly described in the Turkish Press. The report of an eye-witness of the work of this great man in the economic development of the country is interesting. The correspondent of the *Morgenblatt* (Yugoslavia) in Stamboul, while pointing out the German influence, gives the following account :—

Constantinople is on the eve of a great event : the Ghazi—Kemal Pasha—is to come to Dolma Bagtche. The arrival of the President is official : in circles here it is considered an action of the State. Also the fifth anniversary of the great Turkish victory of 1922 draws near and there will be a great ovation here for the victor of Dumbur-Punar—in the former Rome of the Government—for the first time since 1922.

Kemal Pasha will be accompanied to Constantinople by the Prime Minister, Ismet Pasha. Not only Anatolian Turkey, but also the Turks and guests of Constantinople will be evidence of the gratitude of the Young Turks to the Kemalist Régime. . . .

Talking of the great work of the Ghazi and the development of trade in Turkey, the article continues :—

In the Turkish towns all the trade and commerce lies in the hands of greedy Levantines who hardly know Turkish and who are the horror of all working Germans, who think that they will find honest Turks. It is clear that a National State, such as Turkey, does not anticipate any patronage for such tradespeople. The Turkish Government rightly favours economic relations and commerce only with friendly States, and above all with the civilised State of Germany. By the Turko-German Convention of March 3, 1924, both States, according to the wish expressed, have to further all relations between the two lands, and also to conclude a most-favoured nation agreement. This agreement is of consequence to shopkeepers, manufacturers and tradesmen of both countries as well as to commercial traffic. Turkey makes concessions : for machinery, implements, books, leather and artistic wares, brushes, chemicals, drugs and toys from Germany, against which Turkey is a most-favoured nation for the imports of seed, cotton, hazel nuts, figs, raisins, almonds, opium, eggs, oil, emery, carpets, and tobacco. Germany is further concerned with the economic development in Turkey. To-day Germany exports goods to Turkey to the value of 30 mill. T. pounds, but according to this year's statistics is surpassed by England (32 mill.).

M. J. A.

The Rev. Arthur Clayton Ryan, D.D., one of the General Secretaries of the American Bible Society, died suddenly last month at Scarsdale, New York. Dr. Ryan was formerly Secretary of the Levant Agency of the Society with headquarters in Constantinople. He and Mrs. Ryan went, in 1911, to Turkey as missionaries of the American Board of Commissioners for Foreign Missions. They spent the next fourteen years in Asia Minor. During the Italo-Turkish and Balkan Wars Mr. Ryan directed much general relief work and was agent of the American Red Cross in the rehabilitation of Eastern Thrace. In 1914 he was Secretary of the Constantinople Chapter of the American Red Cross and continued this war relief work during the Dandanelles campaign.

KING FUAD'S VISIT.

King Fuad of Egypt, who paid a visit to Lancashire because of the peculiar circumstances attaching this English county to his own country, arrived in Manchester on July 19. On that day he had been to Preston, and had visited the great mill of Horrockses, Crewdson, and Co., Ltd., and was shown the whole series of processes through which Egyptian cotton passes before it issues as fabrics. The King was greatly impressed and expressed his intention of using his influence when back in Egypt to obtain clean cotton for the English market.

At Manchester the Lord Mayor and Lady Mayoress (Alderman J. H. Swales and Mrs. Swales), the Town Clerk (Mr. P. M. Heath), the Deputy Mayor (Alderman Miles E. Mitchell), Alderman T. Fox, Alderman Derwent-Simpson, and Alderman Robert Turner were waiting to receive him. The Lord Mayor welcomed the King to the City, and at once conducted him and his suite to the residential apartments where they were to stay during their visit. A more ceremonial welcome was extended in the evening, when an address was presented to the King before a large gathering in the Council Chamber. At night the King and his suite were entertained at a banquet in the Town Hall. In the Council Chamber of the Town Hall an address on behalf of the City of Manchester was presented to his Majesty. It was read by the Town Clerk, Mr. P. M. Heath. It referred to the inter-relation of British and Egyptian commerce, and recalled with pleasure the great interest which his Majesty took in the proceedings of the International Cotton Congress held in Egypt in January and February of this year.

King Fuad, in his reply, said that Manchester was well known to him and his people. Egypt and Manchester had common interests. He spoke of his admiration of the faith and character of Manchester civic governors, shown so well when they came to the assistance of the Manchester Ship Canal. He appreciated Manchester's deserved position as a great commercial centre, but not only in commerce did Manchester's citizens enjoy exceptional prestige. They had shown that art, literature, music, and the sciences could be a daily part of a busy life.

At the banquet which followed there were about 350 guests present. The Lord Mayor was in the chair, and there were present almost all the aldermen and councillors of the city, together with most of the Lady Mayoresses of recent years, and the Mayor and Mayoress of Salford. Many of the Consuls serving in Manchester were also present, and many well-known citizens, including Lord Colwyn, Sir Percy Woodhouse, Sir William Clare-Lees, Sir William Milligan, Sir Arthur Haworth, the Bishop of Salford (Dr. Henshaw), the Vice-Chancellor of the University (Dr. W. H. Moberly), Dr. Guppy, Dr. Réé, Archdeacon Aspinall, and Judge T. B. Leigh.

The Lord Mayor proposed the toast of "His Majesty the King of Egypt." When he was informed, he said, that His Majesty proposed to visit England he felt that the business community of Manchester would take the liveliest interest in the event, and he lost no time in conveying an invitation that His Majesty should visit Manchester, which he had been graciously pleased to accept. He was sure that the city, and, indeed, the whole cotton trade area of Lancashire, gave His Majesty a warm and hearty welcome in recognition of the close connexion of the Manchester trade with the production of cotton in Egypt.

"When the International Cotton Congress was held in Egypt early in this year," he went on, "it was under His Majesty's high patronage, and those who were present at that conference noticed the keen interest he took in all their proceedings. The idea of holding the congress originated with His Majesty, and the members learned at first hand the deep knowledge which His Majesty possesses of the detail of the cultivation, the handling, and the merchandising of cotton."

A similar conference was held in Egypt in 1912, and excellent results followed that occasion. Considering the development which had taken place in Egypt in scientific

research since then, those, who attended the last conference were confidently looking forward to still greater progress.

"His Majesty's rule," added the Lord Mayor, "we feel, offers a strong guarantee that the bond formed by common experience in the past will grow even stronger, and that there is before us an era of confidence and friendship, and that his visit will foster Anglo-Egyptian relations so that the understanding between the two nations may continue to be of the most cordial nature. In the realisation of her national aspirations Egypt will continue to count no friend more true, no onlooker more sympathetic than Great Britain."

His Majesty, in replying, and at the same time in proposing the toast of the Corporation of Manchester, said it was with great pleasure that he had accepted the invitation to visit the famous city of Manchester—first, because it was the centre of the commerce and of the manufacture of a product representing the most important resources of his country; secondly, because he very much wished to see again the prominent men whom the recent Cotton Congress at Cairo gave him an opportunity of meeting. He would like to assure them of the great satisfaction which the results of the Congress gave him. It brought about the beginning of a happy co-operation between Egyptian producers and eminent representatives of the British cotton industry, and it allowed the latter to acquire an exact idea of the hard and patient work that the cultivation of cotton demanded from the Egyptian fellah.

He was pleased to say that on the practical as well as on the scientific side his Government had taken to heart the realisation of the wishes formed by the Congress. Strict measures continued to be taken to avoid the mixing of the various qualities of grain or cotton, while more specialists had been engaged to give new and vigorous impulse to the researches already undertaken with a view to fighting the parasites of cotton and improving its quality. He was convinced that these efforts, the fruits of which would soon be gathered, answered to Lancashire's interests and wishes as much as to Egypt's. Though Egypt was blessed with radiant weather, it needed the greatest endurance on the part of the Egyptian people, coupled with their hereditary love for the soil, to ensure the necessary energy and hard work for the cultivation of a product whose advantages and superiority Lancashire manufacturers had long appreciated. The Nile waters were the life-blood—the very existence—of Egypt, and that was why their safeguarding and good distribution had always been of the greatest concern to his Government and people. "I am very happy to hear you say, my Lord Mayor, that, for the realisation of its national aspirations, Egypt will continue to have no truer friend or more sympathetic watcher than Great Britain."

His Majesty went on to speak of his gratitude for his reception by the King and Queen and of the cordial feelings they had shown towards him.

On July 20 King Fuad visited the Manchester University, the John Rylands Library, and the Royal Exchange, and then, travelling by road to Bolton, inspected the Musgrave Spinning Mill and the fancy weaving mill of Messrs. Walter Mather and Co. In the evening he was entertained at a banquet by the Bolton Corporation. As soon as he entered the University buildings he found himself faced by a score or thirty of his subjects who are students in Manchester. These, some wearing fezzes, some bare-headed, but all bearing a little green ribbon emblem of the Manchester Egyptian Students' Association, had gathered to render their homage. Their spokesman, Mr. A. A. Sabry, conveyed their loyal greetings and welcome, and expressed their great delight in seeing the King's beloved person.

"The interest shown by your Majesty in centres of learning and industry," he said, "will be an inspiration to the Egyptian people to strive for those high ideals which your Majesty has set before them. Your Majesty's great work will undoubtedly have beneficial results on the welfare and prosperity of the Land of the Pharaohs." That visit would be a stimulus to the Egyptian students in Manchester throughout their future careers, and they

asked permission to offer a token of their joy in welcoming their King to Manchester.

The token, which the King accepted with a smile of pleasure, was an engraved silver box. Mr. M. Hamdy, in handing it to the King, asked him to accept "our love and thoughts, embedded in this silver case." The King passed on to the Council Chamber amid shouts of "Long Live King Fuad! Long Live Great Britain!"

In the Council Chamber the Vice-Chancellor read an address of welcome on behalf of the Court and Senate. He greeted in King Fuad the sovereign of a country which was not only linked to our own by a thousand ties of business and friendship, but which, as the home of the earliest and longest civilisation known to history, had profoundly affected the arts and sciences studied in that University. The King had just seen, in the representatives of the Egyptian students, who were welcome and active members of the University's fellowship, an evidence of the links which bound the University to the Egypt of the present day, and in a few moments, when they passed through the museum, there would appear signs of Manchester's interest in the Egypt of the past.

The University, Dr. Moberly went on, was trying to do two things; to bring to bear the highest possible and most thorough research, by highly trained specialists, upon both those technical problems of industry and those wider economic and social problems which affected all modern communities; and to give to all its students such a training as would equip them to be useful citizens, and, in the course of time, to be leaders in commerce or industry or whatever profession or calling they might adopt. "We trust," he said, "that those of your Majesty's subjects who return to Egypt after having taken their degrees at this University will be found to be so equipped."

The King and his suite were then conducted through the museum, where they looked with much interest on the many relics of ancient Egypt. Afterwards they went to the physics laboratories, where Dr. E. C. Scott Dickson demonstrated some interesting facts, principally concerning the properties and potentialities of liquid air.

At the Rylands Library Dr. Guppy, the librarian, and Dr. Mingana received the King, and showed him the principal treasures of the place. He was particularly interested in a splendid edition of the Quran from the Mosque of the Madina and in a ninth-century "Apology for Islam." The Quran is the biggest book in the library. It is nearly a foot thick, and its covers are about two feet by three feet.

After luncheon at the Town Hall King Fuad visited the Manchester Royal Exchange. The floor of the Exchange was crowded, and there was a roar of cheers when he was introduced by Sir Arthur Haworth, Chairman of the Exchange. Sir Arthur presented his Majesty with an address and a finely printed and bound booklet as souvenirs of his visit. Replying in French, King Fuad spoke of the importance of cotton production as being the principal source of the wealth of Egypt and of the prosperity of his people. He added that great good had followed the Cotton Congress in Cairo last winter, and that, thanks to the co-operation of Lancashire spinners and manufacturers, his country would benefit materially and both nations would mutually gain.

King Fuad passed through cheering crowds in the Manchester streets as he left the city for Bolton. Here he was given a civic reception by the Mayor of Bolton and made a tour of inspection of two large cotton mills. At Messrs. Walter Mather and Co.'s mill, the mill girls flocked around King Fuad, making it difficult for him to move. The oldest woman employee was presented to the King. She was Miss Sandiford, who had worked in the mill for 57 years.

The King of Egypt left Manchester on July 21, and returned to London. Escorted by a contingent of mounted police, he and his suite drove from the Town Hall at 3.30 p.m., the Police Band leading the procession to London Road Station by way of Princess Street, Portland Street, and Piccadilly. Large crowds lined the route, and cheered and waved "good-bye."

"Please tell the public of Manchester," said the King to the Lord Mayor, "how much I thank them for their glorious reception."

Two saloons were attached to the 4.10 p.m. train for the convenience of the King and his staff, and Sir Edwin Stockton, as a director of the London Midland and Scottish Railway, accompanied the party. In addition to the civic representatives, a group of Egyptian students were on the platform, and as the train went out they raised repeated cries of "Long live King Fuad!"

The King had spent a busy morning. Before ten o'clock he was out and on his way to Trafford Park to visit the Metropolitan-Vickers works. Here he was received by Sir Philip Nash and Captain R. S. Hilton (the chairman and deputy chairman of the company), and conducted round the works. Time pressed, so that the King was able to make but a hurried inspection of the vast workshop; nevertheless, he received a vivid impression of the marvels of modern engineering. At the present time the company is carrying out some large orders for electrical equipment of almost every kind, including steam turbines and generators up to 60,000 horse power, electric locomotives, transformers, switch-boards, motors, and control gear in a wide range of sizes. In the company's own sub-station he listened with special interest to an explanation of a machine which automatically controls the conversion of electrical energy of high voltage into a lower voltage supply, according to the demand for power on the system. The apparatus is of a type with which the company has equipped a large number of automatic sub-stations.

Another exhibit which attracted his attention was a highly complex machine for the manufacture of glass bottles, the output of which is 5,000 bottles an hour of ten different sizes up to 15 inches in height and nine inches in diameter. The manufacture of these machines is a new undertaking of the Metropolitan-Vickers workshop.

King Fuad's visit created lively interest among the workpeople. They had decorated the shop with hangings of green and white—the Egyptian colours—and in several departments the girls employed in winding processes had worked out similar colour schemes for the adornment of the machines they were operating.

Walking along one of the great aisles of the shop, the King was asked to turn a switch fixed on a work bench. He did so, and immediately a large Egyptian star high up broke out into flame and shot out vivid, crackling lighting from every point. He was told the display was made by current at the enormous voltage of half a million.

From the Metrovik works the King drove to Trafford Wharf, and there embarked on a special tender to inspect the Ship Canal. He went as far as the Barton Aqueduct, which never fails to excite the admiration of visitors, disembarked once to inspect a new shed opened within the last few days for the reception of raw cotton, and when he finally came ashore he expressed warm admiration of the enterprise which had created a port almost at the centre of an island city, some forty miles from the coast.

The occasion was a fortunate one for the visit, since there appeared to be an unusual number of large steamers in the docks. Indeed, the assemblage of towering liners rather impressed people to whom the canal and port are familiar sights.

King Fuad, on reaching London after his Lancashire tour, was met by the Egyptian Prime Minister, the Egyptian Minister in London, and other officials of his suite. He was given a hearty reception by several hundred people waiting on the platform.

On July 22 he honoured the Governors and Directors of the National Bank of Egypt with his company at luncheon at the Savoy Hotel.

Sir Bertram Hornsby presided, and among those invited to meet His Majesty were Viscount Inchcape, Lord Cullen of Ashbourne, Lord Swaythling, Colonel the Hon. Sidney Peel, Brigadier-General the Hon. Everard Baring, General Sir Reginald Wingate, Sir Gordon Nairne, Sir Harry Goschen, Mr. Laurence Currie, the Hon. Cecil Baring, Mr. J. Beaumont Pease, Mr. F. C. Goodenough, Mr. J. T. Beatty Pownall, Sir John Mullens, Sir William Plender, Sir Felix Cassel, Mr. P. W. Craver. Mr. Reginald McKenna, Mr. Walter P.

Norton, Mr. J. S. Haskell, Mr. F. H. Nixon, Sir H. E. Barker, Sir Charles S. Addis, Harari Pasha, Mr. Colin F. Campbell, Mr. A. G. M. Dickson, Said Zulfikar Pasha, Mr. R. M. Holland Martin, Mr. A. F. Gillbee, Mr. Percy MacKinnon, Mr. F. G. Bonham-Carter, Sir James Leigh-Wood, Sir F. T. Rowlatt, Sir John H. Davidson, Sir Edward M. Mountain, Ahmed M. Hassanein Bey, Sir Montague Sharpe, the Hon. R. H. Brand, Mr. Max Fontheim, and Mr. E. W. P. Foster.

The following day, in the afternoon, the King of Egypt held a reception at the Egyptian Legation.

Among those present were:—

The Spanish Ambassador and the Marquesa de Merry del Val, the German Ambassador, the Brazilian Ambassador, the Turkish Ambassador and Mme. Ferid Bey, the Japanese Ambassador and Baroness Matsui, the Portuguese Ambassador, the Italian Ambassador, the Norwegian Minister, the Swiss Minister and Mme. Paravicini, the Austrian Minister, the Argentine Minister and Mme. de Uriburu, the Polish Minister, the Colombian Minister, the Greek Minister, the Latvian Minister, the Afghan Minister, the Cuban Minister, the Minister for the Kingdom of the Serbs, Croats, and Slovenes, the Mexican Minister and Mme. Valenzuela, the Peruvian Minister and Mme. de Freyre y Santander, the Persian Minister, the Liberian Minister and Mme. Dresselhuys, the Nicaraguan Minister and Mme. Pérez-Triana, the French Chargé d'Affaires, the Belgian Chargé d'Affaires, the Swedish Chargé d'Affaires, the Paraguayan Chargé d'Affaires, the Chargé d'Affaires of Salvador and Mme. Reyes-Guerra, the Chinese Chargé d'Affaires and Mrs. Chen, the Venezuelan Chargé d'Affaires, the Chilean Chargé d'Affaires, the Lithuanian Chargé d'Affaires, the Iraq Diplomatic Agent, the Counsellor of the French Embassy and Mme. Thierry, Mme. de Marees van Swinderen, Sir Edward Wallington, Lieutenant-Commander Colin Buist, R.N., Lady Bertha Dawkins, Mr. P. K. Hodgson, Lieutenant-Colonel F. E. Packe, Lieutenant-Colonel Sir Malcolm Murray, the Earl and Countess of Lucan, Lord and Lady Amptill, Colonel and Mrs. Arthur Erskine, the Hon. Sir Derek and Lady Keppel, Admiral Sir Colin and Lady Keppel, Sir Harry and Lady Joan Verney, Colonel B. W. L. McMahon, the Earl of Granard, Admiral Henry Campbell, the Earl and Countess of Cromer, the Marquess and Marchioness of Anglesey.

Miss Dorothy Yorke, General Sir George and Lady Milne, Sir Frederick and Lady Ponsonby, Lady Mary Trefusis, Lady Helen Graham, Lady Cynthia Colville, Viscount Gage, the Earl of Balfour, Sir George and Lady Hennessy, Mr. Godfrey Locker-Lampson, Viscount and Viscountess Curzon, Sir Hamar and Lady Greenwood, Mr. and Mrs. H. Malkin, Mr. and Mrs. Selby, Mr. J. B. Monck, Mr. Mark Patrick, Mr. and Mrs. Headlam-Morley, Sir Victor and Lady Wellesley, Mr. Ernest Gye, Mr. Lancelot Oliphant, Mr. Geoffrey Herbert, Sir Edward and Lady Crowe, Mr. G. Mounsey, Mr. Leigh, Sir Malcolm McIlwraith, Lord Blanesburgh, Sir Arthur and Lady Colefax, Harari Pasha and Mrs. Harari Pasha.

Colonel Sir Henry and Lady Lyons, El Firsk Baron N. Slatin Pasha, Sir Philip and Lady Nash, Lady Beauchamp, Judge and Mrs. McBarne, Sirry Pasha, Lord and Lady Riddell, Tewfik Doss Pasha, Sir Denison and Lady Ross, Sir Bertram and Lady Hornsby, Sir Ernest and Lady Dowson, Sir Frederick and Lady Rowlatt, the Dowager Lady Boyle, the Dowager Countess of Airlie, Colonel Sir William and Lady Smith, George Wissa Pasha, Brigadier-General Sir George Macauley, Sir William and Lady Brunyate, Sir Frederick Butler, the Earl and Countess of Stradbroke, General Sir Reginald Wingate, Lady Slade, Lady Scott-Moncrieff, Captain the Hon. Alexander and Lady Patricia Ramsay, Viscountess Burnham, Viscount Haldane, Sir Gilbert and Lady Clayton, Hassan Nashat Pasha, Sir Murdoch Macdonald.

Lord and Lady Inverforth, the Marquess of Reading, Brigadier-General Sir William Horwood, Viscount and Viscountess D'Abernon, Sir Horace and Lady Rumbold, Sir Charles Ballance, Mr. and Lady Alice Mahon, Sir Robert Horne, Countess Jellicoe and Lady Gwendoline Jellicoe, Lady Cunard, Lady Rogers, Lady Arthur Browne, Violet Duchess of Rutland, Sir William and Lady Berry, Colonel the Hon. Sidney and Lady Delia Peel, Lord and Lady Biddulph, Lord Colebrooke, Sir Edmund and Lady Wyldbore-Smith, Lady Macdonald, Major Sir George Manners, Sir Oliver and Lady Swann, the Hon. Mrs. Home, Colonel and Mrs. Jennings Bramley, Lieutenant-Colonel and Mrs. Elgood, Captain C. H. Verge, the Hon. Mrs. Robert Lindsay, Lieutenant-Colonel H. S. Turnbull, the Hon. Mrs. Rochfort Maguire, Brigadier-General Garstin, Lieutenant-Colonel and Mrs. Garsia.

Mr. and Mrs. Ernest Beare, Captain J. R. Aird, Lieutenant-Colonel A. C. Parker, Councillor and Mrs. S. P. B. Bucknill, Mr. John Aspinall, Sir John and Lady Maffey, the Lord Mayor of London and the Lady Mayoress, Sir Felix Schuster, Lady Archer, Sir

Frederick Lugard, Mr. and Mrs. Percy Keppel, Mr. and Mrs. W. H. Rean, Dr. and Mrs. Elliot Smith, Mr. C. E. Dupuis, Mr. F. T. Dallin, Mr. H. H. Gardiner, the Syed and Mrs. Ameer Ali, Mr. and Mrs. Joseph Maudsley, Mr. W. H. Molesworth, Mr. and Mrs. Ward Boys, Miralai and Mrs. A. Gordon Ingram Bey, Mrs. Crookshank Pasha, Mr. A. F. MacCallan, Mr. C. C. James, Mr. and Mrs. Reginald McKenna, Mr. and Mrs. Rhuvon Guest, Aly Omar Bey, Mr. and Mrs. H. Bowden Smith, Mr. A. H. Hooker, Mr. J. B. Hobman.

Mrs. L. S. Cobham, Dr. and Mrs. Madden, Mr. Borrisow, Dr. and Mrs. Warnock, Dr. Acland, Mr. Peckitt, Mr. R. D. Blattner, Mr. J. J. Redding, Mr. and Mrs. Perceval Foster, Mr. and Mrs. James Hopkins, Captain and Mrs. Maxwell Sayer, Mr. Archibald Flower, Mr. L. G. Roussin, Dr. W. Hastings, Dr. R. T. Leipner, Mr. O. G. Brooke, Mr. and Mrs. Arthur Merton, Mr. Stanley Stone, Mr. Vere S. Alston, Mr. A. F. H. Wiggins, Mr. and Mrs. Charles Robertson, Mr. and Mrs. Woods Humphrey, Mr. and Mrs. Cecil B. Harmsworth, Mr. I. B. and Mrs. Christopherson, Mr. G. H. W. Boffin, Mr. and Mrs. Harold G. Judd, Mrs. Llewellyn Phillips, Mr. and Mrs. J. T. B. Pownall.

Mr. and Mrs. W. H. Hill, Mr. Frank S. Webb, Mr. H. Percy Shepherd, Mr. E. O'Brien, Mr. L. Graham Scott, Mr. and Mrs. P. Westacott, Youssif Noor El Deen Effendi, Mr. and Mrs. A. F. Gilbee, El Lewa F. F. Carroll Pasha and Mrs. Carroll Pasha, Miss Granville, Mr. and Mrs. Tite, Mr. and Mrs. Cotterill, Mr. A. Gam: El Dine, Mr. and Mrs. Elliott, Lieutenant-Colonel A. C. Parker, Professor and Mrs. Hewins, Mr. and Mrs. Damer Dawson, Mr. J. M. Gatti, Mr. and Mrs. Western, Mrs. Halahan and Miss Halahan, Mr. Walter Stewart Roberts, the Rev. Walter and Mrs. Weston, Mrs. Borton Pasha, Mrs. Harmsworth, Mr. and Mrs. Chatterton, Mr. W. S. Paterson, Mrs. Davidson, Mr. P. A. Barnett, Mr. Howard Carter, Mr. F. J. Madden, Miss Mason, Dr. Aly Ibrahim Bey, Dr. Mahmoud Riad, Dr. Mahomed Bayoumi, Me. Hassan Hosni Bey, Abdel Raouf Bey, Mohamed Erfane Bey, M. Mondour Bey, Moustafa Foda Bey, and Professor Azzam.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

ON SUFISM.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Sufists are the mystics of all creeds. When, therefore, the Muhammadan Sufists in our midst chose to couple it with their teaching of Muhammadanism, they are wrong, for here is Sufism:—

If to Mihrab of the Mosque,
Revelation gives a light,
Think you not, the Altar also,
With the Gospel shines as bright!
And the Rabbis chanting nightly,
What the burning bush dictated,
Is it vain, or is it even antiquated!
Or that childish early worship,
Of the Stone we so despise,
Was it but my childish lover,
Not so wise!
And what wonder, if my brightness,
In the Sun beguiled mankind,
Into worship of my presence,
In that aster so sublime!
And the Fire of those Parsees,
Think you, was it mere wood,
Or my Light Divine appearing,
To their fancy for me stood?
So don't be foolish in your learning,
Don't be learned to befool,
Those my lovers, those my children,
All of them, of every school!

Incidentally, I may mention that this poetry was written about 700 years ago in Cairo, with other poems wherein love was given as the sole true rule of conduct, without which no attempt at pleasing or propitiating the Divinity can be of any avail. So from Egypt comes again to the West, not this time the worship of Isis, nor the later worship of the Trinity, both of which Rome embraced eagerly, but the religion of love, free from any dogmatic conditions, but real, and not a simple word of mouth, soon forgotten.

Therefore, why call on Christians to apostasise, or mix drinks, when all one wants can be found in the Elixir of Love!—I am, etc.,
Buckingham Gate.

PERSONAL AND GENERAL

TO-DAY

July 28, 1927 (New Style).

July 15, 1927 (Old Style).

Muharram 28, 1346 A.H. of the Muslim Calendar.

Tammuz 28, 5687, of the Jewish Calendar.

Prince Karamjit Singh of Kapurthala arrived in London last week, and is staying at the Savoy Hotel.

The Rt Hon. the Earl of Balfour, K.G., O.M., has consented to be Patron of the Anglo-Hellenic League.

Sir C. Veravalli Kumarasami Sastri who last week arrived at Harrogate for the cure, is staying at the George Hotel.

Mr. Amery and his party, who left London for South Africa on July 22, will be the guest of the Union Government whilst they are in the Union.

Sir Henry Dobbs (High Commissioner and Commander-in-Chief, Iraq) had the honour of being received by the King at Buckingham Palace on July 23.

The Right Hon. Leopold Amery, M.P., Secretary of State for Dominion Affairs and the Colonies, had an audience of the King at Buckingham Palace on July 21.

Major W. H. Flinn, the new Trade Commissioner for Cyprus in London took over office on July 18 at Avenue House, Northumberland Avenue, W.C.2. He arranged a representation of Cyprus in the Empire Marketing Board's section of the Advertising Exhibition at Olympia.

According to the *Palestine Weekly*, Mr. E. T. Richmond, who has had previous experience in the Palestine Administration, has been appointed Director of the Department of Antiquities in the Holy Land.

The King has given to Victor Raphael Harari Pasha, C.M.G., Chairman of the Mortgage Company of Egypt, authority to wear the insignia of Grand Cordon of the Order of the Nile, which decoration has been conferred on him by the King of Egypt, in recognition of valuable services.

Sarwat Pasha was the guest of Mr. and Mrs. Arthur Merton for luncheon at the Berkeley Hotel on July 20. Among those invited to meet His Excellency were Sir George Boughey, Bart., and Lady Boughey, Sir Hamar and Lady Greenwood, Mr. and Mrs. John Walter, Sir Stanley and Lady Reid, Mrs. Arthur Gill, Mrs. Alec. Tweedie, Sir Benjamin Robertson and Captain R. Shaw.

THE DEPARTURE OF KING FUAD.

The visit of King Fuad came to an end on Tuesday, July 26. His Majesty was seen off from Victoria Station by the Duke of York, on behalf of King George, and by a large company, which included, in addition to the Staff of the Egyptian Legation and of the Egyptian community, the Earl of Cromer, Lord Lloyd, High Commissioner for Egypt and the Sudan, Sir John Maffey, Governor-General of the Sudan, General Sir John Maxwell, Sir Hamar Greenwood, Sir Bertram Hornsby, and Mr. W. H. M. Selby representing the Foreign Office. King Fuad, who left with his suite and was accompanied as far as the coast by Aziz Izzet Pasha, Egyptian Minister in London, was greeted with cries of "Long Live King Fuad" from the members of the Egyptian community as the train left the station.

Sarwat Pasha, Prime Minister of Egypt, is staying for a few days longer in England.

The War Office announces the appointment of Colonel E. C. Jury, C.M.G., M.C., to be Assistant Adjutant-General, Egypt, in succession to Colonel R. M. Wetherell, C.M.G. (November 17, 1927).

THE KING OF ROUMANIA.

A service in memory of King Ferdinand of Roumania was held at the Greek Church, Moscow Road, Bayswater, on July 23, and was attended by a large congregation. The King was represented by the Duke of York, who attended in naval dress, wearing a Roumanian Order across his breast. He was received by the Chargé d'Affaires of the Roumanian Legation and by Major-General Sir John Hanbury-Williams, and was conducted to a reserved seat. His Royal Highness was attended by Lieut.-Commander Colin Buist, who also wore naval dress and a Roumanian Order.

The Infanta Beatrice of Spain was present. Princess Beatrice was represented by Colonel Packe, and Princess Louise Duchess of Argyll by Major-General Sir Frederick Robb. Princess Bibesco was also present. The Prime Minister was represented by Sir Patrick Gower, the High Commissioner for Canada by Mr. E. MacLeod, Sir Austin Chamberlain by Mr. Walford Selby, and the High Commissioner for Canada by a member of his staff. The Lord Mayor of London sent a special representative, and the Mayors of Paddington and Marylebone attended in person.

Archbishop Germanos officiated, assisted by the Archimandrites Constantiniadis, Legakis, Moscovakis, and Genadius. The Catafalque, draped with a crimson and gold pall, was surrounded by burning candles. The music was, of course, rendered by an unaccompanied male choir. Among those present were:—

The Spanish, German, Brazilian, Turkish, Japanese, Portuguese, and Italian Ambassadors, the Belgian Ambassador, accompanied by Prince Eugène de Ligne, the Norwegian, Swiss, Estonian, Polish, and Colombian Ministers, the Egyptian Minister, accompanied by Sesostri Sidarouss Bey, the Greek Minister, the Hungarian Minister and Mr. E. Nelky, the Latvian and Afghan Ministers, the Minister for the Kingdom of the Serbs, Croats, and Slovenes, the Mexican, Finnish, Peruvian, and Siamese Ministers, the respective Chargés d'Affaires for Paraguay, El Salvador, Uruguay, Venezuela, and Chili, the Lithuanian Chargé d'Affaires and Madame Rackauskas, the Danish, Swedish, French, and Bulgarian Chargés d'Affaires, Mr. Boulston Beal, Dr. Francisco de Arce, Senor Don Carlos M. Dominguez, Dr. Fragner and Lieut.-Col. Nemec (representing the Czechoslovakian Minister), the Secretary of the Netherlands Legation, the Iraq Diplomatic Agent, the following members of the Roumanian Legation: M. C. M. Laptew, M. and Mme. D. Hiott, M. and Mme. I. C. Miclescu-Pragescu, M. Marcu Beza, M. G. N. Gologan, M. D. N. Ciotori, Princess Nadeje Stirbey, and Miss C. A. Pratt, Mr. John B. Monck, Major A. E. Wood, Air Vice-Marshal Sir John Higgins (representing the Secretary of State for Air), Rear-Admiral E. J. A. Fullerton, C.B. (representing the First Lord of the Admiralty), Mr. H. R. Boyd (Ceremonial Secretary to the Home Office), and Major-General Sir Gerald Boyd (representing the Secretary of State for War).

OMAR KHAYYAM'S RUBAIYYAT.

The *Bulletin* of the School of Oriental Studies, London Institution (Vol. IV., Part III.), contains thirteen quatrains of Omar Khayyam's "Rubaiyyat," reproduced from the Kevorkian MS. Sir Ernest Denison Ross has a brief introduction to the quatrains, which are likely to interest students of Fitzgerald's "Omar" as well as students of Persian. The MS. referred to is dated 741 (A.D. 1304-5) and was brought to Paris in 1915 by Mr. Kevorkian. It contains an anthology of the works of Persian poets from early time down to the compiler's day; Omar Khayyam is represented in it by thirteen quatrains. This MS. is 123 years older than the Bodleian MS.

THE CENTRAL ASIAN SOCIETY.

The *Journal* of the Central Asian Society, Vol. XIV., contains, among many excellent things, accounts of lectures given upon "The Overland Route from China to India" and "Waziristan," as well as of those duly reported in *THE NEAR EAST AND INDIA*. Readable and authoritative reviews of books are a special feature of this issue of the *Journal*, which is steadily increasing in scope, interest, and value.

Captain Harry Douglas Palmer, late R.M.L.I., has been appointed assistant to Spinks Pasha, Inspector-General of the Egyptian Army.

Book Reviews

TRAVELLER'S JOY.

"TO THE LAND OF THE EAGLE." By Paul Edmonds. (London: Routledge, 12s. 6d.)

Mr. Edmonds begins his book with an apologia in the course of which he differentiates between travellers and tourists. But the fact is that he requires no apologia, and that he is himself one of a third class, one of those who take a holiday because they want to enjoy it and succeed in doing so. Further, he has the gift of being able to pass his own enjoyment to his readers, in which laudable task he is greatly aided by his clever sketches in a delicious two-plane convention. These little pictures he scatters all over the book. The reader cannot decently complain of parsimony in this respect, though their charm is such that we could gladly have done with more.

This jolly book leaves us with a definite addition to our ideas of Montenegro and Albania and their inhabitants, though the tour was one of three months only and the ground traversed was in no way strikingly novel. For special excellence we would select the account of the journey, on pack-horse, from Lake Ochrida to Elbassan. Happily it is not one of the books to which we are so accustomed where solid information is served up in solid chunks. Information of the kind we have in view is quite out of place for lands which are fairly well known. Books of reference contain enough of this to satisfy the most voracious appetite. But Mr. Edmonds gives us much information that no book of reference records, and we accept it thankfully. Thus, if a studious reader wants to know all about the spring wild flowers of Albania, he finds (and it serves him right) the following:—

One flower in particular grew on the hills in great profusion. At first glance it resembled a wild rose, but on a closer examination I found it was more like an anemone.

Just that. But when one least expects it, one is charmed to be told that, in Corfu:—

Ginger-beer is a survival from the time of the British administration which ended more than sixty years ago. The Victorian habit of closing all windows at night—night air being considered poisonous—is another. . . . A more satisfactory legacy from the British occupation is the game of cricket, which is popular to this day.

There are many excellent anecdotes. One, which may or may not be true, concerns Ahmed Zogu, President of Albania:—

The story goes that on one occasion he was shot at and wounded in two places whilst presiding at a sitting of the Chamber. Taking

his revolver from his pocket, he placed it on the table in front of him and proceeded with the business in hand—whereupon the deputies as one man rose to their feet with arms uplifted. They were taking no chances.

Mr. Edmonds has a precious gift of seeing the intimate and humorous side of things and the still more precious gift of conveying what he sees without being facetious, and without placing himself on a "superior" pedestal. In fact we can only repeat an adjective which we have used already and assure our readers that, if they like a jolly book and incidentally want to become better acquainted with the people of the Eastern Adriatic, this is the book for them.

CONFIDENTIAL AND INDISCREET.

"SOME PEOPLE." By Harold Nicolson. (London: Constable. 7s. 6d.)

Readers of Mr. Nicolson's various contributions to Literature (and at least his studies of Byron and Tennyson are nothing less) will be aware that, however lightly omniscience may rest upon his shoulders, he carries the burden of solemnity with but uneasy step. Yet in places in his earlier books it was possible not only to say: "This is how he puts it," but also "This is what he believes." Of "Some People" one cannot say that. The book is one exquisite cynicism. Real people and imaginary people are pulled out from Mr. Nicolson's memory, and from his malice, in order to dance, puppet-like, but irresistibly alive, before our amazed and shocked and prying eyes. Nor do these figures only dance. Impelled by a masterly manipulator, the self-deprecating Mr. Nicolson, they occasionally burst forth into words so precious, so chiselled, that the reader, for all his instinct against the artificial, is touched to whimsical smile and refined applause. In the academic phrase, this is "a beautiful book," even a "nice" book. If we thought that congratulations were things of the slightest significance to Mr. Nicolson, we should congratulate him. For his sake we will not, but if we were to, we should mention the immortal story of Lord Curzon's valet, "Arketall," on the way to and at Lausanne, the hopelessly indiscreet account of Mr. Nicolson's companions on the route to Persia—it is called "Miriam Codd"—and the revengeful compositeness of "Professor Malone."

As a matter of course, this book will be widely read, and applauded, and decried. And it will deserve all three experiences. What Mr. Nicolson writes should be read, because he manifestly can write; he should be applauded for the skill—it has not yet been imitated, so that it may be called extraordinary skill—with which he culls the choicest flowers of his career; and he should be decried because he gives to the least scrupulous and the least intelligent reading public which England (and probably America) has ever had his confidential criticisms of living or but lately dead people.

MALAYALAM

"MALAYALAM SELF-TAUGHT BY THE NATURAL METHOD. WITH PHONETIC PRONUNCIATION." By Don M. de Zilva Wickremasinghe and T. N. Menon. (London: E. Marlborough & Co. 3s. and 4s. net.)

Messrs. Marlborough and Co. have added yet another volume to the thirty and more of their admirable series of "Self-Taught" Primers. Malayalam is one of the Dravidian vernaculars spoke by about eleven million people inhabiting the British District of Malabar and the Native States of Cochin and Travancore. As in companion volumes of this series the aim has been to present an essentially practical guide to the language, to enable anyone whose lot is cast in this part of India, whether for commercial, educational or missionary purposes, to acquire readily a working knowledge of the language of the people. The question of pronunciation is dealt with exhaustively, and the correct pronunciation of every Malayalam word is given by Marlborough's system of English phonetics.

BRITISH INTERESTS IN INDIA.

The report of the special meeting of the East India Section of the London Chamber of Commerce which we publish to-day shows that commercial interests in the City of London are becoming alive to the great changes that are manifesting themselves in our Indian Empire. The London Chamber of Commerce is a body apart from politics. But politics to-day impinge on commerce, and in no part of the world is this tendency more marked than it is in India. We have here the explanation of the concern which is felt among British merchants and industrialists in that country in regard to the Constitutional changes that have already been made, and the prospect of further changes that may be proposed in the near future. There is a disposition to assume that the Royal Commission to be appointed to enquire into the working of the Reformed Constitution must necessarily recommend further advances of a more or less comprehensive character. That sentiment is obviously premature. The functions of the Commission will be to examine the evidence laid before them as to the use that has been made of the powers already conferred upon our fellow subjects in India, and, in the words of the Government of India Act, to report "as to whether and to what extent it is desirable to establish the principle of responsible government, or to extend, modify, or restrict the degree of responsible government then existing" in British India. The words of the Act open a wide field of investigation, and in view of the events that have occurred since the Montagu-Chelmsford Reforms came into operation, the task allotted to the Commission will not be a simple one. On the contrary, if the evidence submitted envisages the facts as a whole, the duty laid upon the members of the Commission will be complex and onerous. The absent are proverbially in the wrong, and the object of the speakers from India who addressed Tuesday's meeting was primarily to ensure that when the Commission proceeds to its investigation the case of commerce shall be adequately presented.

A noticeable feature of the proceedings at the Chamber of Commerce meeting was the absence of any depreciatory reference to the desire for legitimate constitutional advance. But among responsible Indians there is a growing feeling—especially in view of the communal tension that exists—in favour of cautious progress. The idea of democratic government is alien to India. Now that a definite step has been taken in that direction, through the constitution of Legislatures containing an elected majority, it is clearly seen that the sudden introduction of Western representative methods in an Oriental country is far from being an unmitigated blessing. What has happened hitherto is that a vocal section of the community, which cannot be said to represent either the masses of the people or the conservative and stable elements of Indian society, has secured a position in the Legislatures out of all proportion to its numbers and importance. In the main it has been hostile to Government, and without any justification has displayed an anti-British bias. The ignorance of economic questions, and especially of the implications of modern commerce and finance,

which prevails among many of the so-called political leaders, is notorious. Not only that, but these leaders have shown open and unreasoning hostility to the employment of British capital, and have used what influence they possess to create the belief that British commercial interests are merely concerned with the "exploitation" of India, and have conferred no benefit upon the people. It is these undoubted facts that have convinced thoughtful Europeans in India that the time has come for them to band themselves together, in association with responsible Indians who possess a stake in the country, in order that further political power shall not be placed in the hands of a small class which is likely to misuse it, to the detriment alike of India and of Britain.

The benefits conferred by the investment of British capital and the enterprise of British merchants are writ large on the face of modern India. Owing to the British connection it has been possible to secure at a low cost the finance necessary to create a great railway system and to construct irrigation works which have secured the Indian people from the more serious consequences of the failure of the crops. The provision of means of transport, moreover, has opened foreign markets to the Indian cultivator and enabled him to enhance his profits in a manner undreamt of by his forbears. The jute industry, the coal fields, the tea gardens, all of which provide employment for many thousands of the working classes, owe their inception and success to British capital and direction. These industries have added materially to the wealth of India as a whole, and helped her to attain the high place she now occupies among the commercial countries of the world. In recent years Indians themselves have made considerable investments in enterprises inaugurated by the British, and have consequently a direct interest in preventing unjust encroachments on the commercial rights involved. The British community ask for no special privileges for themselves. All they claim is that they may be permitted to go about their business without interference originating in political or racial prejudice, and that their just rights shall receive the protection which is their due. In an age of advertisement the British in India have been apt to be unduly modest in regard to their achievements. That perhaps may be to their credit, but it would be a grave mistake on their part if they failed to adopt the necessary measures to safeguard their position in an era of political clamour and prospective political change. There seems, however, no reason to fear that when the Statutory Commission embarks on its momentous enquiry the case for commercial interests will be allowed to go by default. The proceedings at Tuesday's meeting amply prove that in this country as well as in India the need for organised effort is receiving practical recognition, and that there exists a general desire that the co-operation of Indians shall be secured. The welfare of India herself is bound up with the prosperity of commerce, and as Sir Stephen Demetriadi pointed out in his thoughtful speech as Chairman of the Chamber of Commerce meeting, some such organization as is proposed would do much to keep the balance between political idealism and the practical needs of India's economic life.

CURRENT TOPICS.

"Essential Facts."

An organisation styling itself the Indian Information Centre has been established in London which states that it will make a "sincere effort" to record essential facts relating to Indian life and affairs without political bias. The value of the information it purveys may be gathered from the statement which it makes in its first Bulletin, that at the time of the mutiny "the Indian peasant was more prosperous than to-day." This assertion which runs counter to all the evidence is contained in an article on the Salt Tax, a perennial subject with politicians who have no real acquaintance with Indian economic conditions. In his Budget speech Sir Basil Blackett estimated the proceeds of the tax in 1926-27 at 6.70 crores, which divided among the population of British India works out at substantially less than one halfpenny per head per month. Yet the readers of the Bulletin are expected to believe that this tax inflicts grievous hardship on the masses of the people.

"Mass Action."

It is evident that some apprehension is felt in Bombay at Mr. Gandhi's intervention in the animated discussion that is proceeding over the troubles of the cotton industry. The chief complaint of the Bombay millowners is against what they regard as unfair Japanese competition, but Mr. Gandhi declares that the refusal of the Government of India to grant protection to the industry is another gift to Lancashire. "I wonder whether this hit will stir millowners to right action?" he asks. "No petition, no resolution in the Assembly will be of any use unless it is backed by mass action." It is not surprising that this pronouncement has been strongly condemned. What does it mean? asks the *Times of India*. "Anarchy as usual," says that journal. "No active programme of political endeavour has ever yet sprung from Mr. Gandhi that would not, if put into effect, produce anarchy." It seems but yesterday, our Bombay contemporary points out, that Mr. Gandhi was inciting poor people to burn their mill-made clothing in heaps in the streets. But now that the millowners are sore against Government he is seeking their financial support for stirring up the masses. It is highly unlikely considering what "mass action" has meant in the past, that he will succeed in his appeal.

A Simple Matter.

A Swarajist member of the Legislature Assembly has formulated a new method of settling the future Constitution of India, and if the opportunity arises, he will recommend it to the attention of the Legislative Assembly at Simla next month. Acting on the assumption that India is already fit for complete self-government, he dismisses the idea of appointing a Royal Commission to adjudicate upon the question, and proposes instead the summoning of the inevitable "round table conference," the delegates to which should be elected as to one-half by the Assembly and one-half by the Congress. These delegates as representatives of the whole of India would meet representatives of His Majesty's Government either in London or Delhi, and arrange the whole business forthwith. The simple assurance which always characterises great proposals is very evident here.

The King received Major C. A. L. Howard (Officer-in-Charge) and the King's Indian Orderly Officers at Buckingham Palace on July 22, and took leave of them upon the eve of their return to India.

Mr. and Mrs. S. N. Mallik held a reception at the Hotel Cecil on July 19 to meet the chairman and members of the Royal Commission on Agriculture in India. In addition to the Marquess of Linlithgow and his colleagues of the Commission, with their ladies, there were present Lord Sinha, the Bishop of Bombay, Sir Arthur and Lady Hirtzel, Mr. and Mrs. Ameer Ali, Chief Justice Sir Shadi Lal, the Maharaj-Kumar Victor of Cooch Behar, Sir William and Lady Smith, Sir George Hume, M.P., Sir Louis and Lady Kershaw, Dr. Cloudesley Brereton, Sir Thomas and Lady Richardson, Colonel A. D. and Mrs. Bannerman, Sir Edward and Lady Chamier, Mr. and Mrs. J. N. Gupta, and Mr. and Mrs. Mookerjee.

CALCUTTA LETTER.

(From Our Own Correspondent.)

The Governor's Return.

The Governor of Bengal, who left Darjeeling last week, has been busy since his return to Calcutta. Apart from the heavy programme of the official tour in Bengal, which includes a Durbar at Dacca, the opening of the Conference of the Presidents of Union Boards, the Dacca University Convocation, and divers ceremonies of medal distribution and title investiture, it is understood that Sir Stanley Jackson will pay a visit to Simla towards the end of September. A few days ago, the Governor presided over the eighth annual encounter between the Europeans and Indians on the Calcutta Football Club Ground. The occasion was a great success. The players were presented to His Excellency, who shook hands with them, and the medals were presented by Lady Jackson. (The Indians won the match for the fourth year in succession; by one goal to nil). To-day, Lady Jackson who is President of the Bengal Presidency Council of Women, will be present at the Grand Hotel Ball in aid of the funds of the Council. Their Excellencies will, in a few days, pay a visit to the Co-operative Milk Union in Bow Bazaar. It is supposed to be the finest dairy in the East. It supplies 1,225 gallons of milk daily, and it is hoped to bring it to 5,000 gallons. Their Excellencies have evinced sympathetic interest in the institution. The varied and numerous problems of administration at present confronting the local authorities, and the condition of the population whose welfare is entrusted to his care for the next five years, will keep His Excellency busy, for he intends to acquaint himself personally with people, facts and figures. There are plenty of them to get acquainted with. Five years seem hardly enough for the purpose. And when most of the useful information has been gathered, it will be time to go, to allow a new man to find his own way about.

New Governor for Assam.

It has been said that Governors who have been trained in the Administration of the province of Bengal generally make a success of their Governorship of neighbouring Provinces. Such was the case with Sir John Kerr, who has just retired from the Governorship of Assam. The appointment of Sir Lucas Hammond as Governor of Assam is considered as the best possible selection. The new Governor is the author of standard works on Indian Elections. It is hoped that the province of Assam will greatly prosper under his administration. Assam was none too happy when Sir John Kerr took charge of it; but within the five years of his Governorship nothing untoward has happened there. No event of any importance, except perhaps a Congress, has marred the perfect tranquillity of the province.

The Statutory Commission.

The mixed body of "assessors" suggested by the *Englishman* to assist the "impartial Commission" wanted by the European Association to examine the question of constitutional advance in India, should, they say, satisfy both parties, but it does not. The political leaders on the Indian side have taken the view that the Commission should be a mixed one, not the European Association's idea of the Commission "composed of men with no previous association with India." The *Pioneer* supports the European Association's opinion as a practical scheme, calling it a "counsel of perfection." The *Englishman's* view is that a non-Indian Royal Commission is far from being a "counsel of perfection." It is not sufficiently understood, writes Bipin Chandra Pal, that the Statutory Commission will not be a Court of Justice. Neither its conclusions nor its recommendations will directly, and on their own authority, determine the character of the amendments that may have to be made in the present constitution of the Government of British India. The Statutory Commission will only be a sub-committee appointed by Parliament to examine the question of the working of the

present Government of India Act, with reference to that of future constitutional advance. It will work on the spot, in direct personal consultation with the representatives of the Government on one side, and the leaders of public opinion on the other. Nothing definite can be said as yet. The name of Pandit Motilal Nehru has been put forward as of the chosen representatives of India. Who are the five Indians whose nomination would satisfy every one on both sides?

Indian States and The League of Nations.

Dissatisfaction has been caused in some quarters by the Government's decision to "re-impose a land Customs line" in spite of the protest from the Kathiawar States. Clause 4 in the 1917 Treaty reads: "If at any time in the future by the creation of a port capable of accommodating large vessels or otherwise, the fiscal interests involved become very important, the Government reserve the right to reconsider the position generally." The papers state that the Kathiawar States are ready to take their case to the League of Nations; but the Indian States have been kept out of the League of Nations. Sir William Lee Warner has declared that the "Native States of India cannot claim an international position." What is clearer still is that if the merchants have to pay double duties at Jamnagar and Viramgam, they will be ruined. The Jam Saheb may possibly in these circumstances agree at least temporarily to the arrangement proposed by the Government, which consists in taking over certain ports and running them in exchange for a consideration, plus an allowance for development expenses incurred since 1917.

Bengal National Bank Failure.

As reported last week, the Imperial Bank of India brought a suit against the Bengal National Bank Ltd. An application was made for an order on behalf of the Imperial Bank that the Receivers appointed by the Court be allowed within fourteen days to furnish security for 17 lakhs to the satisfaction of the Registrar. The Receivers were in possession of the leasehold premises and properties of the defendants, and were proceeding with the realization of the outstanding book debts. The Receivers, being in possession of the entire assets, have in their hands far more than the plaintiffs' dues. The plaintiffs deny that the receivers had been appointed Receivers of the entire assets; they were solely to realize amounts due to the plaintiffs, together with costs of the suit. The Judge directed that the Receivers furnish security for Rs. 17 lakhs within 14 days.

Excise Revenue and Prohibition.

The Excise Revenue returns of the Government of India provide an interesting study. They show that if the policy has decreased the number of liquor shops, it has increased the revenue from them. Calcutta, as has been seen, vehemently protested against the suggestion of going dry. But in Madras legislation is being proposed to prohibit the manufacture and consumption of alcoholic liquor and intoxicating drugs in the Presidency. There would, if the suggested legislation were carried, be total prohibition, except for medicinal and industrial alcohols. Manufacture, possession, export, import, transport, purchase, sale and consumption of any liquor or intoxicating drugs would be punished with imprisonment which may extend to six months and fines from 10 to 100 rupees. The Local Government would be empowered to grant licences for the manufacture or transport of alcohol and drugs, but only for a *bona fide* medical or industrial purpose.

Here and There.

The dark and congested lanes of Burra Bazar are to be widened. In order to find the necessary funds for the much needed improvement, the Improvement Trust propose to levy "betterment fees" on the owners of lands in the vicinity of Burra Bazar, close to the improved areas. This would help the Trust to reconstruct old roads, and obviate the purchase of the land for new roads at prohibitive prices. At present, most owners have the option

of offering their lands for acquirement by the Improvement Trust, but purchase would mean many lakhs of rupees in the case of the Burra Bazar Improvement scheme. The levy is considered a good idea.

The Eastern Bengal authorities ran a demonstration train in February and March for the rural community to have the benefit of agricultural improvements in the shape of lectures and exhibitions of implements and products. They are to repeat the experiment, this time with textiles and ready-made garments, stationery, and jewellery and travelling requisites. There will be a cinema car which is to be run during the Pujahs, in September-October, for 30 days or so. It will bring fancy goods and amusement to the smallest stations between Jessore, Khulna, Krishnagar, Berhampore and Rajbari, and will stop two days in larger towns and one day in smaller places.

The tax on cheques has gone, and all stamps printed on cheques unused as at July 1 will be refunded. But the procedure has been, during the last few days, the destruction of the cheques, after refund of the amount. The Bengal Chamber of Commerce, taking into consideration the waste of paper and printing, has suggested to Government that the arrangement for cancellation should consist in a punched hole in the embossed stamp. The books should then be produced at the Collector's office with a statement of the amount to be refunded. Then the cheques would be returned, in order to be utilised. It is recommended that the pieces punched out of the embossed stamps should be destroyed, to avoid possible fraud.

The Head of the Co-operative Department in the Punjab has recently shown a film before the Viceroy. The picture illustrates the development of rural credit in Punjab. The story on which the film is based is that of an agriculturist who was practically ruined by a money-lender, and who, on the appearance of a co-operative bank at Gujranwalla, became flourishing again, ultimately receiving recognition for his co-operative work. The money-lender seeing that his money-lending business was in its turn ruined, started another business connected with the cotton industry, and became rich by honest means.

COMMERCE AND INDIAN REFORMS.

Sir Stephen Demetriadi, K.B.E., presiding on Tuesday at a largely attended meeting convened by the East India Section of the London Chamber of Commerce, said British business men had so much capital invested in India and Indian trade that it was vitally necessary they should exercise their right to do all in their power to ensure that in the experimental and transitional period to self-government, unwise measures should not be taken which might do irreparable damage not only to India but to Great Britain. No one could foretell whether the anticipated Royal Commission on Indian Constitutional Reform would make any far-reaching recommendations or not, but he thought everyone would admit that, with the increasing spread of Western ideas and of education in India, some further reforms and adjustments might be required, and even some readjustments might be desirable. Trade and commerce were extremely sensitive to political influences and those whose interests were bound up with India's welfare and those who knew something of the country and its people were naturally anxious that any fresh constitutional changes should be devised with full appreciation of the economic issues at stake as well as of those which were purely political. They all recognised how intricate were the problems with which the Imperial Government and the Government of India had to deal, and he saw a real danger that those who represented British trade with India, partly through desire not to add further complications and partly through apathy, might fail to keep prominently before the Governments the fact that in the rulers of the modern State economic wisdom and experience were of paramount importance, and that without these political and administrative ability were not enough.

Lt.-Col. J. D. Crawford, D.S.O., M.C. (Member of the

Legislative Assembly and General Secretary of the European Association in India) said extraordinary changes and developments were taking place in India to-day. Local bodies were entirely self-governing with elected chairmen; Provincial and Central legislatures had an elected majority, and in all Services Indianisation had proceeded at a far greater pace than was generally realised. In view of the forthcoming Royal Commission, it was necessary to organise all those who had a stake in the country, both Indians and British, so that they could assist the Royal Commission to see clearly the position and requirements of commerce and similar interests. There already existed a European Association in India as well as the Chambers of Commerce, but an organisation embracing all interests and ensuring the closest co-operation with those Indian elements having interests and needs similar to their own, was needed. Steps to this end were already afoot and should eventually provide a common platform for joint action by all those interests, irrespective of race or creed, desiring stable and efficient administration.

Mr. C. B. Chartres (President of the European Association in India) thought the next two years would be critical for the future of commercial interests in India. There was a tendency for the politician in power in India to look at every question from a racial point of view and to take an anti-British standpoint, regardless of the true economic interests of India. The threat of discrimination against British commercial interests was serious and would have to be borne in mind when the time came to meet the Royal Commission. Already a Bill to reserve the coastal traffic of India to a purely Indian Mercantile Marine had been introduced. Rail traffic in India was gradually passing under State control. They must be prepared to put forward an All-India representation of commercial interests before the Royal Commission, giving their views not only as to the immediate safeguards required by commerce, but on the whole problem. Who was to undertake this task? There were the British Chambers of Commerce in each Province and the European Association with its head office in Calcutta and 21 branches or sub-branches all over India. Both of them fulfilled important and necessary duties in their respective spheres, but they dealt only with British interests, and it appeared to many of them in India that if a new organisation could be formed, to include not only British but also Indian commercial interests, representation from such a body in favour of All-India commercial interests would carry great weight with the Royal Commission.

Mr. C. T. Allen, C.I.E. (of Cawnpore), after referring to the dangers to economic stability which threatened through the existence of communal antagonisms and the large increase in the number of semi-educated young men who were being added year by year to the unemployed, said he felt sure the Royal Commission would listen to a body which could claim to represent all British and Indian trading interests and who had something to lose by instability, insecurity or misguided legislation and administration. The existing organisations for the protection of commercial interests in India were, however, too slender, and something bigger was required. They already had definite proof that the formation of a Progressive League would meet with practical support among Indians and Europeans and while they had also come to certain basic conclusions regarding a Revised Constitution, they wished to enunciate emphatically the principle of complete and definite co-operation between the British and responsible Indian communities whose interests were identical. An All-India organisation such as they proposed would have a Central Office, located at Delhi and Simla, and it would, to commence with, cost Rs.75,000 per annum; and each branch as formed Rs.45,000 per annum: this did not allow, however, for some necessary initial expenditure. He was satisfied that, provided those Indians who were with them heart and soul, and those of similar mind who would unquestionably join them, could be given positive proof that British interests were ready to co-operate with them, to

organise for them, to protect them from insidious flank attacks, and help them to express their views, and hopes, and fears—they would be able to obtain for the financing of this combined effort all the money they required.

Mr. J. S. Wardlaw Milne, M.P., strongly supported the amalgamation of commercial and industrial interests in India. He felt that the thing most needed was not so much the presentation of a better case from the British point of view, but a better presentation of the existing case. There was much criticism of what Great Britain had left undone in India, but it was very little appreciated, even in this country, what Great Britain had accomplished in India, which was now the most prosperous country in the world, excluding the U.S.A.

Sir Michael O'Dwyer, G.C.I.E., K.C.S.I., reminded the meeting that one thousand million pounds of British capital were invested in India. Forty thousand miles of railways and thirty thousand miles of irrigation and canals were the result of British efforts and capital, as were the great mining, jute, tea, and cotton industries giving employment to an enormous section of the community. The prosperity of India depended upon three main things:—(1) Security; (2) a well-ordered and progressive policy; (3) the British ideal of equal justice to all concerned. In their desire to meet the wishes of a section of the Indian people, they must not lose sight of the claims of the vast inarticulate mass to the benefits of even-handed justice.

Sir Charles McLeod, Bt., said the great need, not only in India, but in this country, was that the people should be educated to realise the actual position. If the British left India to-day, there would be chaos and anarchy to-morrow. He had every sympathy with Indian aspirations, but he thought we should "hasten slowly."

Sir Stephen Demetriadi, in reply to a vote of thanks proposed by Sir James Martin, J.P. (President of the London Chamber of Commerce), said the aim should be to build up an organisation truly representative of British and Indian commercial and kindred interests—trade, industry, finance, shipping, the landowner, and that most important person, the cultivator. In this way these various interests would be moulded into one big constitutional force, strongly represented in the different Governments, and would so have a very direct influence over the future of India. Thus her destinies would to a large extent be taken out of the hands of the demagogues who were the curse of so many countries in the present day. If business men would interest themselves more closely in the Government of India, or alternatively support those who were working for them, it would be to the lasting benefit both of India and of the British Empire.

There were also present at the meeting:—The Right Hon. Lord Southwark, Lord St. John of Bletsoe, Sir Reginald Craddock, G.C.I.E., K.C.S.I., Sir William Beynon, K.C.I.E., C.B., D.S.O., Sir Alfred Grant, K.C.S.I., K.C.I.E., Sir Trevredyn Wynne, K.C.S.I., K.C.I.E., Sir H. P. Burt, K.C.I.E., C.B.E., Sir Henry Wheeler, K.C.S.I., Sir Frederick Halliday, C.I.E., M.V.O., Sir Duncan MacPherson, C.I.E., Sir Malcolm Hogg, Sir Alfred D. Pickford, Sir Denison Ross, Sir William Currie, Sir Stanley Bois, Sir Victor Sassoon, Sir Ernest W. Glover, Bt., Sir Logie P. Watson, Mr. E. L. Ralli, Mr. R. Langford James, Mr. T. McMorran, Dudley B. Myers, O.B.E., Mr. C. J. Longcroft, Mr. James Warren, Mr. Wm. Turner McLellan, C.B.E., and representatives of over 100 firms and companies established in or trading with India.

The Maharaja of Nawanagar has arrived in England from India.

The following telegram relating to the monsoon has been received by the Secretary of State for India:—Rainfall, week ending July 20. Excess: Assam, United Provinces (West), Baluchistan, Hyderabad (South), Madras Deccan and Madras Coast (North). Fair: Lower Burma, Chota Nagpur, Punjab (South-West), Sind, Rajputana and Mysore. Scanty: Bengal, Orissa, Kashmir, North-West Frontier Province, Central India (West), Berar, Konkan, Bombay Deccan and Hyderabad (North). Normal elsewhere. Monsoon been somewhat weak, but again strengthening.

INDIAN MAIL.

Unemployed Graduates.

A middle-class Indian youth called on us yesterday in desperation because of his inability to obtain employment after three months' vigorous search. He produced evidence of a first-class college education with a degree, and he asks us to explain what use a university career to an Indian is in these days. Alas! his case is typical of many thousands of Indian youths to-day. On every hand there are barristers without briefs, pleaders without cases and doctors without patients. Yet dozens of Indian Universities continue to turn out machine-like, thousands of young men with degrees after their names which are worthless from the commercial point of view. These young men go round and round in what may be described as a vicious circle, for in their view it is *infra dig.* to enter anything but Government service, medicine or law to earn an honest living. It seldom ever occurs to them that India needs capable manual labourers—agriculturists for instance. There is a fixed idea in their minds that manual labour is undignified in the land of their birth. Vocational training, too, is given a wide berth by the average Indian student, with the result that India is unable to absorb the unemployed products of her own universities. The leading professions are heavily overstocked; yet the University machine still continues its mass production of graduates every year. The problem to-day is a grave one, but not until vocational training is taken to by a far larger number of Indian youths will the situation improve. Even officialdom is beginning to realise that now. When India enters into the enjoyment of complete self-government, her sons will have to supply labour for *all* branches of life—not merely doctors, barristers, and Government servants. Will she be able to do it?

Cost of Indian Cotton Labour.

Apparently the delegation sent to India by the International Textile Factory Workers' Association has made an unbiassed report upon conditions in the Indian cotton mills, says the *Statesman*. They find these equipped with modern machinery and up-to-date labour-saving appliances. Where they confess themselves at sea is in regard to labour costs. They comment on the fact that some four men are required to attend the machines that would be controlled by one man in England, and they express surprise at the number of people "squatting in the milliard and standing about inside of the mill apparently having no particular machine under their supervision." It is these factors that confuse them when they come to calculate relative wage costs. They are of opinion that the weekly payment of wages would do much to break down dependence on money-lenders. That is a view natural enough, but if the weekly payment of wages in England has not done away with the money-lender it is far more certain that that social sore would survive in India under similar conditions.

Separation of Sind.

The following resolutions were passed at a meeting of the Sind Mahomedan Association held recently at Hyderabad (Sind). This association, while affirming their resolution passed at their meeting held at Larkana on May 2 to the effect that Sind be constituted into a separate province, with full autonomous Government, regrets that the All-India Congress Committee assembled at Bombay have by their resolution obscured the important question of the separation of other provinces and have thereby strengthened the opposition to the most important part of the Muslim demand. The Sind Mahomedan Association further resolves that in the present state of communal dissensions caused by the aggressive Hindu communal activities in India, separate electorates are the only proper and the safe method of securing the effective representation of Mussulmans on the elected bodies. The Association regrets that the political atmosphere in India has been so much vitiated on account of aggressive communal

activities of the Hindu Maha Sabha and its leaders that Mussulmans cannot, at least at present, be persuaded to agree to mixed electorates, under which the Association feels the Mussulman community will not have the opportunity of returning their true spokesmen.

Village Panchayets.

The result of the attempt by the Maharashtrian Conference of Local Self-Governing Bodies to solve the problem of the failure of the revived village panchayet system will be watched with considerable interest, says the *Times of India* in a recent article. Despite the efforts of the various legislative bodies, practically every province has found during the past three years that all efforts to revive the old-time village government through the council of five elders have failed. This has been as true in the Bombay Presidency as anywhere; and so it was only appropriate that the recently-formed Local Self-Government Institute should have agreed to this matter being fully discussed in this sectional conference which is serving more or less as a feeder to the Provincial Conference to be held in Poona. More than one Minister for Local Self-Government has admitted that the failure of the present panchayet system is not so much an indication that its old-time successes had been exaggerated, but rather that there are certain modern obstacles which need to be removed. Foremost among these obstacles are the question of finance and the prevalence of local factions.

Burma Timbers.

The report on Forest Administration in Burma in 1926 states:—The results of the sales of hardwoods in Europe have shown that the time is not ripe for the development of a big export industry, so that our chief efforts in timber research must be devoted to improving the internal demand for hardwoods as substitutes for imported timbers. In accordance with the joint programme of investigations arranged with the Research Institute at Dehra Dun a number of sleepers of the less durable woods were sent there for impregnation tests. It is doubtful, however, if a trade in impregnated sleepers from Burma will ever develop as an economic proposition. The cost of extraction of the less durable woods is so close to that of *pyingado* that so long as supplies of the latter are available it will hold the field. The Indian Railways are capable of taking up large quantities of impregnated sleepers, but the cost of extraction and delivery in India of timber from Burma is very much higher than anything that the Indian Railways are at present prepared to pay for species other than *pyingado*, so that for the immediate future the investigation of sleeper impregnation has only rather an academic interest in Burma. On the other hand, it is possible that there may be a field for impregnated timber in Burma to replace the more durable naturally resistant timbers in constructional sizes such as are needed for the mines and oilfields.

Nagpur's Republican Amazons.

An amusing account is given by a Bombay contemporary of a march at Nagpur on June 26 of the Women Republican Soldiers, led by their "Captain" Chaturabai. The "army" consisted of about twenty soldiers. In front walked two male soldiers, holding horizontally supported by two poles a cloth which was spread out as usual for receiving donations. Then came the women soldiers, whose number has dwindled down from six to two, with swords in their hands. Chaturabai herself carried no sword. But in the rear there was a remarkable change. No longer did mere urchins follow the "Army" but full-grown men with spears, ready apparently to sacrifice their lives at Captain Chaturabai's bidding. As the processionists marched, or rather shuffled along they sang revolutionary songs, which were not without a few comic notes, such as "Butler has run away from Pachmarhi to Simla" (the reference obviously being to Sir Montague Butler) and "These spears of ours will make the Britishers

run away from India." The soldiers stopped at brief intervals with a view to collect money, but the response was very discouraging.

Crime in Burma.

Over eight hundred persons were murdered in Burma last year, robberies and dacoities increased alarmingly; and firearms were used by criminals to a greater extent than in previous years. The number of reported violent crimes increased by nearly 24 per cent., including several instances of horrible savagery. A fisherman was hacked to death by a band of five because he would not surrender his day's catch. Dacoits burned a woman to death before leaving with their spoil; and torture by fire resulted in the death of two victims on another occasion. Another gang, after shooting the owner of the house which they had attacked, ravished his little daughter. Crime of this sort, however, is apt to bring its own reward, and the numerous instances in which dacoits were attacked and routed by villagers were a natural corollary to methods of unnecessary cruelty.

Indian Tobacco.

One of the recent witnesses before the Royal Commission on Agriculture, writes the *Times of India*, is reported to have said that imports into England of Indian cigars and cheroots had steadily declined since 1892 owing to the steady raising of duty, the decline in quality of Indian tobacco, and the enormous increase in the consumption of cigarettes. The inference from that evidence may very easily be wrong. The Indian tobacco industry is far from being in such a bad way as is suggested, though no doubt unintentionally, by that evidence. The third of the reasons given for the decline in the imports of Indian cheroots is probably the most cogent: but it is not the cigarette alone, we think, that has driven the cheroot out of fashion. Cheroots were all very well in the days when those who smoked them lived in large houses, although even then many a veteran of the Joey Bagstock type was driven into the kitchen, after the servants had gone to bed, to enjoy his odoriferous weed as best he could: in the modern small house or flat in England the cheroot is at a marked disadvantage. But the decline of the cheroot has not involved the decline of the Indian tobacco industry. The preference given by England to British Empire tobacco growers in 1919, which was increased to one-fourth in 1925 and which was stabilised for ten years in 1926, has been the saving of the industry in India. At present India sends to Britain a greater quantity of raw tobacco leaf than any other part of the Empire, and according to statistics recently published, the total exports of tobacco from India in 1925-26 were over 38,000,000 lb., of which fifteen-sixteenths was unmanufactured; and of this total the United Kingdom took nearly 8,000,000 lb. A good deal has been done at Pusa to encourage the tobacco industry and to improve the types of tobacco grown, so that within the next few years, thanks largely to the preference given by England, the production of tobacco in India should considerably expand.

INDIA HOUSE.

A rent of £6,000 a year for a 999 years' lease of a site in Aldwych, at its junction with Montreuil Place, has been offered to the London County Council by the High Commissioner for India. The land has an area of about 12,450 square feet, with frontages to Aldwych and Montreuil Place of about 134 feet and 103 feet respectively. The Improvements Committee recommend that the offer should be accepted.

The King's Indian orderly officers, Hon. Lieut. and Subadar Major Chada Singh, Sirdar Bahadur; Hon. Lieut. and Subadar Major Kischen Singh, Bahadur; Risaldar Major Udham Singh, Bahadur; and Subadar Major Sant Singh, Bahadur, were received by the Lord Mayor at the Mansion House on July 22 prior to their return to India this week. The Lord Mayor welcomed the officers, one of whom, on behalf of his companions, thanked him, and said they had greatly enjoyed their visit to England, where they had received the greatest kindness.

RANGOON'S PROSPERITY.

According to an official report, the Port of Rangoon enjoyed exceptional prosperity during the year 1925-26.

The number of steamers entering the Port was 1,513, or more than a hundred in excess of the previous year; and their tonnage rose by nearly half a million tons to the record figure of 4.05 million tons. Of the total number of steamers entering, 1,491 carried cargoes for Rangoon. Of a total sea-borne trade of 5.36 million tons, 1.69 million tons passed over the Port Commissioners' premises; in addition, the river-borne traffic handled was 84 million, and the rail-borne .66 million tons, making a total of 3.20 million tons, a record figure, exceeding that of the previous year by nearly half a million tons. The programme of future improvements to the Port reached a further stage with the sanctioning of six main schemes which aim at the provision of extended wharfing and additional moorings at a cost of three crores of rupees. It is proposed to complete these schemes, by means of loans, within ten years.

INDIA'S FOREIGN TRADE.

His Majesty's Senior Trade Commissioner in India (Mr. T. M. Ainscough, C.B.E.) has forwarded to the Department of Overseas Trade a statement concerning India's foreign seaborne trade during May, 1927, as issued by the Director-General of Commercial Intelligence and Statistics. The trade returns of British India for the month of May, 1927, as compared with the preceding month, showed decreases in the value of imports and exports with an increase in re-exports. The imports of private merchandise totalled Rs.20,32 lacs in May, 1927, and showed a decrease of Rs.1,41 lakhs, as compared with the preceding month. The value of exports of Indian produce and manufactures also decreased by Rs1,03 lakhs from Rs.25,27 lakhs in April, 1927, to Rs.24,24 lakhs in May, 1927, while re-exports increased by Rs.11 lakhs to Rs.76 lakhs. The share of the United Kingdom in imports fell from 50 per cent. in May, 1926, to 49 per cent. in May, 1927, but in exports it rose from 14 per cent. to 19 per cent. The shares of Germany, Japan, and the United States in May, 1927, were 7, 8, and 8 per cent. respectively under imports, and 9, 9, and 13 per cent. respectively under exports.

OBITUARY.

GENERAL DYER.

The death occurred at St. Martin's, Long Ashton, Bristol, on Saturday, of Brigadier-General R. E. H. Dyer, whose name came prominently before the public in connexion with his action in repressing the outbreak of rebellion at Amritsar. Some five years ago he received a stroke from the effects of which he never fully recovered. A gallant soldier, General Dyer had a fine record of service on the North-West Frontier of India, and he also distinguished himself in the Great War. His action at Amritsar led to his enforced retirement, which he felt acutely, but he had the satisfaction of seeing the adoption by the House of Lords of a resolution deploring the treatment accorded to him. Moreover, in the libel action brought by Sir Michael O'Dwyer against Sir Sankaran Nair, Mr. Justice McCardie declared in his summing-up that General Dyer had acted rightly, and that he was wrongly punished by the Secretary of State for India. A fund promoted by the *Morning Post* for a testimonial to General Dyer reached a total of over £26,000, a substantial proportion of which was contributed from India.

THE REV. A. LOGSDAIL.

The death occurred on August 19, at the age of 72, of the Rev. Arthur Logsdail, who spent the whole of his working life in India as a missionary of the Society for the Propagation of the Gospel. He was ordained in 1882, in which year he went out to Ranchi. He was afterwards for a short time at Roorkee, but in 1890 removed to Chaibasa (Bihar and Orissa), where he was stationed till his retirement thirty years later.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

British Trade in the Balkans.

A correspondent in Yugoslavia makes some shrewd remarks on British trade in the Balkans that I gladly reproduce here. That this trade has not had the degree of success that it ought to have had is due in his opinion largely to the fact that representatives of British firms do not speak the language of the people with whom they are trying to transact business. The employment of an interpreter increases overhead charges and the value of tact in personal conversation is lost. Again, it is desirable that the representatives should know something of the psychology of the people, should be well posted in the relative values and peculiarities of the different local markets and should know all about the goods that each country manufactures itself, regulations regarding exports and imports and the laws governing relations between creditor and debtor. In the case of Yugoslavia he points out that everything required can be obtained from Italy or Czechoslovakia. Yet preference would nearly always be given to British goods if the cost of the latter could be brought into some relation with the cost of Italian and Czechoslovakian goods, which are used only because circumstances compel buyers to take the inferior article if it is very considerably cheaper. There is no real reason, my correspondent adds, why British manufacturers and exporters should not carry on a large and profitable trade in Yugoslavia, in spite of high wages and dear freights, provided that they will make themselves conversant with the methods of the country and the prevailing conditions of trading. As the type of goods suitable for Yugoslav markets he instances tweeds, serges, worsteds and cheviots, "clean in finish, of attractive designs and durable, such as formerly manufactured for China, India, and the East generally," at a moderate advance on the ruling prices of Czechoslovakian textiles.

Greek Passenger Ships.

It is satisfactory to note that increasing attention is being paid in Greece to the question of the Greek Mercantile Marine. From the point of view of tonnage, traditions of seamanship and geographical position, Greece's shipping should occupy a more prominent place in the eyes of the travelling public than it does. The proportion of passenger ships (7.7 per cent.) to the total number of ships is smaller in the Greek mercantile marine than in any other. The reason why the passenger service has been relegated into the background may be due partly to a shortage of funds which restricts the vessels to a small tonnage, but is in larger measure to be sought in the indifference of companies and their captains to the comfort of their passengers, and the cleanliness of the ships. In the old days, say twenty or thirty years ago, no foreigners, and few Greeks accustomed to first-class travelling, would set foot on a Greek steamer for a night or longer on board, if they could help it. Things have steadily improved since then; at least two liners now sail under the Greek flag, and there are several other passenger ships on regular routes which the foreign traveller need not hesitate to take. That there is still, however, some leeway to be made up is shown by the fact that the Pangalos régime, which in spite of the outcry against it, has some useful regulations to its credit, promulgated a decree-law on the subject of Greek passenger ships. This law has now been ratified with certain unimportant

modifications, and should have the effect of improving Greek passenger ships. In the first place, no ship more than forty years old, is to be allowed to carry passengers, and ships of thirty years and over are subjected to a special tax if they are used for passenger services. When it is recalled that only seventy-five per cent. of the Greek mercantile marine is less than fifteen years old, and that in June, 1925, just half the total number of ships had been built between 1880 and 1890, the reason for the new regulations is obvious.

Bulgarian Tobacco.

The crisis which overtook the Bulgarian tobacco industry a few years ago has not yet come to an end, although it may be said to be in process of being liquidated. The high prices obtained for tobacco during the War owing to other sources being closed to the Central Powers led to a considerable increase in the area planted with tobacco, and little heed was paid to the ominous drop in exports in 1919 and to the consequent accumulation of stocks in the country. The appearance of the United States as a purchaser and the elimination of Turkey as a serious competitor provided further ground for optimism, and after marked fluctuations in the area planted during the four years immediately following the Armistice the acreage soared in 1923 (147,000 acres) to practically three times the area planted in 1914, and was 123,000 and 130,000 acres respectively in 1924 and 1925. By this time the whole industry was in the grip of a very serious crisis, but found great difficulty in facing the uncomfortable fact. To add to the evil of over-production came the revival of competition from Turkey and Greece, as well as the imposition of an increased export tax to meet the needs of the Bulgarian Exchequer. There is still a large quantity of unsold tobacco in Bulgaria, but the situation has been improved by a crop of excellent quality in 1926, and a comparatively small production arrived this year. Consumption at home continues to increase, and the demand for good Bulgarian tobacco abroad is maintained, although with a critical attitude towards prices. It was the inferior qualities that suffered most from over-production; and there can be no doubt that the industry requires both regulation and supervision, if Bulgaria is to derive the maximum benefit from it.

The Art of Salesmanship.

One of the most interesting features of the Advertising Convention at Olympia was the discussion of the promo-

BANK OF ROUMANIA LIMITED

SHELL

tion of efficient salesmanship. In the speeches, which covered the ground very thoroughly, a number of very important points were made. One was that there is nothing more mischievous than the doctrine of saturation markets, and it was justly pointed out that salesmen are able to extend their boundaries to an extent hardly realised by those who have not appreciated how infinitely the wants of mankind can be multiplied. This point, like others to which I shall refer, has a special and most obvious reference to the Near East markets to which even now British merchants and manufacturers pay far too little attention. Another, equally applicable to the Near East, was the remark of the President of the Board of Trade, Sir Philip Cunliffe Lister, that efficient salesmanship means studying the customer's desires, supplying them with what they want in the form they want it, and in the place they want it. The failure to follow out this policy in the past explains to no small extent the failure of British traders to play a more important part in the Balkan markets. There has been far too much of the "take it or leave it" policy about our business methods, and far too little anxiety to study the requirements of the various markets. In the circumstances it is small cause for wonder that more enterprising foreign rivals have obtained a strong foothold in the markets at our expense. The same speaker went on to point out that the best salesmanship consists in the anticipation of demand, and that, of course in the Near Eastern outlets presupposes a constant survey of the markets by representatives on the spot. It means, in short, as far as a great number of British traders are concerned, a complete orientation of the whole theory of salesmanship. It cannot be too strongly emphasised that it is only by pursuing the policy indicated that a real measure of success can be achieved. One more point made—and that a very important one—which requires notice was that while the quality of British goods will always hold its high place there are some cases where we put commodities on the market that are too good, the result being that the prices are too high for the particular outlet. Obviously it is a mistake to produce a superlatively good article when a moderately good one is required. It all comes back, of course, to the question of catering adequately for the requirements of the various markets. If that is done systematically in the Near Eastern outlets—coupled needless to say with regular advertising—I am sure that British traders will have no reason to feel dissatisfied with the results.

Turkish Debt Negotiations.

The negotiations on the Turkish debt have often seemed on the verge of being concluded, only for the long-suffering bond-holders to be again disappointed. At long last, however, the prospect for a settlement appears to be somewhat brighter, though in view of what has happened in the past it would be foolish in the extreme to build any undue hopes upon it. What has happened apparently is that the Turks have made certain proposals which, while differing somewhat widely from the demands of the bond-holders, yet would seem to offer the prospect that a common basis may be discovered. A settlement will obviously require some concessions from the bond-holders, but the value of an agreement on the question is such that minor concessions would clearly be worth while. The coming visit of the Turkish Finance Minister is of considerable interest in relation to the negotiations, and it may be assumed that we must await his arrival for further developments. It is abundantly evident, it may be emphasised, that the Turks are now ardently desirous of a settlement, for however much they may disclaim any interest in such considerations, they realise very plainly that it is essential for them to improve their credit abroad, and the only way to do that is to meet their obligations.

The Rubber Position.

After a prolonged period of depression the rubber position seems at last to be improving. For several weeks deliveries have been in excess of landings, and the London stocks are now 62,819 tons as against the highest point reached on May 10 of 68,187 tons. The present total, it

may be pointed out, is more than double the total at the same date last year, and this fact no doubt explains why the price of the commodity is so slow in responding to the turn of the tide. At the time of writing the price is no more than 1s. 5d., and the average for the quarter is only fractionally above 1s. 6d.—an astonishing development when it is borne in mind that the production is now restricted to 60 per cent. We are assured of the same percentage for another three months, and within that period I shall expect the restriction to make its effect felt. For the price to rise appreciably, a considerable further reduction in the London stocks will be necessary, and when a figure below 50,000 tons is reached I anticipate that the price of the commodity will begin to advance, perhaps not rapidly but sufficiently quickly to put a new complexion on the situation. When all is said and done, however, it is not the immediate position which most acutely interests those who are concerned with rubber but what will happen when production is again at the 100 per cent. level. It is obvious that sooner or later the restriction scheme must have its effect, but it is very far from clear that its effect will be lasting. The trouble is that there has been an undue expansion of rubber growing—undue in the sense that it has not kept pace with the development of the world's demand for the commodity, and so far as can be seen at present it will not be many months after production reaches the 100 per cent. level before there is a new restriction of production.

COMMENTATOR.

CHESS.

By "CARO-KANN."

The solution to last week's end game is as follows:—
1, P—Q5, PxP; 2, K—Q4, K—Q3; 3, P—B3, K—B3; 4, P—Kt5 (ch), KxP; 5, KxP, K—Kt3; 6, K—K5, K—B3; 7, KxP, K—Q3; 8, KxP, K—K3; 9, K—Kt5, K—B2 and White wins.

The international team tournament at Westminster is proving a most attractive event. The results so far, however, have not been in accordance with anticipations. It was generally thought that the British Empire and the Yugoslav teams would prove to be the strongest combinations. The Yugoslav team, however was weakened by the absence of one of its strongest players, and while the British team has held its own with most of its opponents it seems fairly clear that it has now only an outside chance of winning. The success of Hungary, whose team has played well throughout, is not surprising, while other teams which have done well are Denmark and Germany. At the time of writing Hungary leads by four points from Denmark, and with this substantial lead it is to be anticipated that they will be the ultimate winners.

SHIPPING INTELLIGENCE.

Tanker Chartering.

In their half-yearly report covering the period to the end of June, Messrs John I. Jacobs and Co., state:—

The period under review has seen freight rates decline very considerably. The large oil companies and Independent Owners have embarked on a vast building programme which completely altered the situation in the British and Continental yards. The percentage of oil-engined vessels continues to increase; passenger liners of the largest size and most of the tankers building are to be so propelled. Marine Oil Engines of 1,102,424 i.h.p. are under construction as against reciprocating engines of 580,600 i.h.p.

An interesting phase has been the chartering, for periods of from five to ten years, of a number of large Diesel tankers to be built for Scandinavian account, and the sale in conjunction with ten years charter to sellers of several war built oilers.

World production of petroleum has further increased, and over production in the United States has had the effect of bringing the price of petroleum products to a low ebb. This has been one of the factors that has brought freight rates to lower levels. Political factors in Mexico continue to hinder activity in the oilfields with lower production resulting, but this has been more than offset by Venezuela, where big strides have been made both in production and transportation facilities to tide water.

Continued efforts are being made in non-producing countries to obtain a marketable motor spirit substitute. It is chemically possible to produce oil from coal, but so far it has not been possible to do so at a cost which will enable it to compete commercially. The amount of crude oil transported continues to increase owing to the efforts of distributors to refine the crude petroleum as near the distributing centre as possible.

It is estimated that tankers ordered and building number some 150, of which 75 per cent. are to be fitted with oil engines, and that their total deadweight carrying capacity is about 1,400,000 tons. Lloyd's returns for the first quarter of the year showed 97 tankers building, of 602,846 gross tonnage, and at the half-year the Society's figures are 112 of 725,426 tons gross.

It is not unnatural that opinions vary as to the outlook in the near future, and whilst there are those who hold the view that lower freight rates will operate until the market absorbs the new tonnage, there are others who think that increasing production and consumption calls a further expansion in carrying capacity which will maintain freights.

Dealing with conditions in different parts of the world, the report add:—

Persian Gulf.—Quieter conditions have prevailed, and there is at present no demand for tonnage. White oil vessels were closed at 55s. to U.K. early on in the year,

and Black oil tonnage having obtained as high as 60s. cannot now be fixed at 40s.

Roumania.—With the recent substantial reduction in export taxes and transportation costs it is anticipated that overseas exports will be augmented. A recent fire at Constanza has temporarily further restricted the loading facilities at that port. Inquiry is mostly for vessels of 3½,000 tons. The U.K. Continent rate rose to 41s. in March, but early in June was 30s. with the freight tendency downwards. A considerable business has been done for Alexandria at rates which have fallen from 16s. 6d. to 13s.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Castalia for Bombay (Birkenhead, August 8). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Malancha for Calcutta (Birkenhead, August 4); s.s. Mahseer for Calcutta (Birkenhead, August 13).

Bibby Line.—S.s. Cheshire for Port Said, Colombo, and Rangoon (Birkenhead, August 10).

British India Line.—S.s. Mundra for Colombo, Madras, and Calcutta (London, July 30); s.s. Tregonell for Bombay and Karachi (London, August 6).

Cunard Line.—S.s. Brescia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement offers (Liverpool, Glasgow, and Swansea, August 27); s.s. Phrygia for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool August 20, and Swansea August 23).

Johnston Line.—S.s. Aviemore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 30); s.s. Jessmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 3).

P. and O. Line.—S.s. Mantua for Bombay (London, August 6); s.s. Nellore for Colombo, Madras, and Calcutta (London, August 6).

Prince Line.—S.s. Sicilian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, August 13); s.s. Italian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (London, August 30).

Ellerman and Papayanni Lines.—S.s. Mardinian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, July 29). * Subject to sufficient inducement.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.)

EGYPT.

Diesel Engines.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection at site of Atf Power Station of four internal combustion Diesel Alternator groups and accessories required for the Public Works Ministry. October 12.

Machinery Tools, Etc.—The Director-General, Ports and Light-houses Administration, Arsenal, Alexandria, invites tenders for the supply of machinery tools and plants for Suez Workshops. August 29.

Calico for Map Mounting.—The Surveyor-General of Egypt, Giza (Mudiya), invites tenders for the supply of 7,560 metres calico for map mounting. August 2.

Raw Wool, Etc.—The Controller of Technical Education, Ministry of Education, Sharia Qasr el Aini, Cairo, invites tenders for the supply of raw wool, cotton yarns, etc., required for the Rug Factory at Assiut. August 31.

Millboard, Etc.—The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of millboard, gum Arabic, flour Russian, bamboo sticks for whips, rubber tyres for carriage wheels, asbestos sheeting, belting canvas dicks, mirrors, metal iron bars edged for wheels, articles for stove primus, etc., to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. August 4.

BULGARIA.

Foundry Pig Iron.—The Bulgarian Ministry of Railways (Direction Generale de Chemins de Fer, Rue VI. September 17, Sofia) invites tenders for the supply of 220 tons of foundry pig iron, the estimated value of which is given as being 880,000 levas (say, £1,300). August 1. (D.O.T.)

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, July 26.

The stock markets during the past week have been fairly steady, though featureless. The brief duration of the troubles in Vienna had a reassuring effect, though the prices of Central European bonds have not been seriously affected by the outbreak. The Home Railway market has been weak and neglected as the dividend season approaches, the only exception being districts which have been in demand. A reduction in the Metropolitan dividend announced on Thursday caused general disappointment. But the steadiness of most sections of the stock markets is noteworthy in the face of one or two factors which might be expected to exercise an adverse influence. Firstly, the near approach of the holiday season usually puts a pronounced restraint upon business; secondly, the monetary outlook is by no means favourable to the gilt-edged market, for the Bank of England, during the past few weeks, has failed to secure an addition to its stock of gold, and a rise in Bank rate in the early autumn, when the adverse movement in the Exchanges, which is already showing itself, becomes more pronounced, must be expected; and thirdly, there is at present no pause in the output of new capital issues, which continue to be well received by the investor when the terms offered are attractive. A slackening in the new capital market is, of course, to be expected shortly, and the holiday season will provide a very necessary period for the digestion of the large volume of new securities which have been absorbed during the past few weeks.

European Bonds.

A considerable proportion of recent new issues has been made by foreign Governments, municipalities, and railways, and these loans appeal only to a limited circle, since they do not offer much chance of capital appreciation within a fairly short time, and, moreover, cannot be sold in small parcels. Shares, in fact, enjoy the advan-

tage over stocks and bonds that they can readily be bought or sold in modest quantities, whereas foreign and other bonds, which are usually in a minimum denomination of £100 are more suitable for the permanent investor who puts them away and merely draws the interest payment. Nevertheless, European bonds have been growing in popularity, and some of those which stand below par or by reason of their redemption terms are attractive from the point of view of drawings, are worth the consideration of the investor. The flat yields obtainable from the principal European reconstruction loans vary from 6 per cent. on Austrian Sixes, which stand at about par, to £7 13s. 10d. per cent. on Bulgarian Sevens, and over 9 per cent. on the Roumanian 4 per cent. Consolidated loan; the yields naturally differ according to the nature of the security or guarantee. The French railway bonds, the coupons of which are payable in sterling, have as their special security the railway revenues and the guarantee of the French Government. The 6 per cent. bonds of the Midi yield £6 7s. 7d. per cent., of the Nord, £6 4s. 8d. per cent., and of the P.L.M. £6 6s. per cent.

The Shipping Position.

In recent weeks shipping shares have not been very much in the limelight. Nevertheless, the prices of the shares of the larger companies at least have been well maintained. It is true that during the first half of 1927 there has been a moderate improvement in the freights obtainable by "tramp" shipping; and doubtless ship owners welcome the low prices at which they are obtaining fuel. Apart from temporary and seasonal spurts, however, the shipping industry will probably have to suffer several years more of fierce competition and keenly-cut rates before the great tonnage surplus created between 1919 and 1922 is finally worked off. In these circumstances, there is much to give the shareholders in British companies satisfaction, for the relatively higher efficiency of British shipping will be a substantial factor in favour of the British companies securing a fair proportion of the trade on offer. Only 9 per cent. of the tonnage registered in Great Britain and Ireland falls into the category of the "out-dated," while almost fifty per cent. of the tonnage launched in the past five years sails under the British flag. Great Britain's supremacy is unchallenged as regards large ocean-going liners, 219 of the 376 vessels afloat of 1,000 tons gross and over being owned in this country. Excluding ships of less than 5,000 tons, tankers and vessels over twenty-five years old, nearly 38 per cent. of the total world ocean-going tonnage available for passengers and general cargo belongs to ship-owners in Great Britain and Ireland. Thus, taking the long view the fortunes of the holders of British shipping shares may compare less unfavourably with those of recent years.

An Attractive Well-Secured Investment.

The British Electric Traction Company's 6 per cent. cumulative participating preference shares provide a well-secured and high-yielding investment. The Company's title does not accurately suggest the character of its present-day operations. Though at first chiefly engaged in financing electric supply and traction undertakings, it has since so widened the range of its activities that it is for all practical purposes an investment trust company. The concern is under exceptionally capable management, as may be seen from the following net profit figures: 1923, £134,740; 1924, £152,360; 1925, £162,219; 1926, £171,358; and 1927, £173,008. In recent years the ordinary dividend has been gradually raised, 8 per cent. having been distributed for 1926 and 1927. For 1927 a bonus in the form of deferred ordinary stock, was also distributed, and the ordinary stock was converted into 8 per cent. preferred. The preference stock is entitled to a cumulative dividend of 6 per cent. per annum, and after the preferred stockholders have received their 8 per cent., to a further 2 per cent., making 8 per cent. in all. This 8 per cent. dividend was earned with a very good margin last year. In view of the fact that the stock gives a return of no less than £6 15s. per cent., it is clearly among the most attractive of its class.

THE JEWISH DEVELOPMENT OF PALESTINE.

Sir James Parr, High Commissioner for New Zealand, who has recently returned from Palestine, has written a letter to the Zionist Organisation, in which he writes:—"I am interested in the work of the Zionist Organisation in Palestine, and it was a welcome opportunity to see what was being done. I think the Organisation is doing good work. I was particularly interested in the thoroughly scientific manner in which farm instruction and organisation is being carried on, and further observed, with pleasure, the keen interest of the young Hebrew men, brought from all parts of Europe, to become farmers. The operations of this training farm seem to be quite comparable with the work done in similar institutions in New Zealand and Australia. I was especially struck with the training School for Jewish Girls which you have at Nahalal. It was a most interesting sight to observe 60 Jewish girls brought, at about the age of 17 years, from Russia and other European countries to Palestine and there being instructed in domestic science and in farm work, so that they might become useful helpmates to the Jewish young men of the Settlement, who will be their future husbands. I believe that the Zionist settlers in Palestine may yet prove to be the true interpreters in many things between the East and the West—to be, so to speak, the liaison or bond between the great Eastern and Western Communities of the World."

IVORY IN GOOD DEMAND.

Messrs. Hale and Son's report on the recent quarterly ivory sales states that they comprised 33½ tons (against 47 tons at the same time last year), viz.: 13 tons Zanzibar, Bombay, Mozambique, East African and Siam, 3½ tons Abyssinian, 5½ tons Egyptian (4½ tons Alexandrian and 1 ton Malta description), 5½ tons Congo, West Coast African and Lisbon, and 6 tons land carriage; also 1½ ton mammoth tusks, ¼ ton boars' tusks, and a few sea horse tusks, and ¼ ton rhinoceros horns; total, 35½ tons.

The following was the assortment of the East Indian description: 8 tons soft tusks, ½ ton hard and Siam, 1 ton billiard ball pieces, and a few bagatelle pieces, ½ ton billiard ball and bagatelle scrivellos, ½ ton cut points off large tusks and cut points for balls, ½ ton under-size and defective points, etc., 1½ tons cut hollows, and ½ ton scrivellos. Of the above quantities 11½ tons consisted of lots previously offered or indirect import, viz.: 1½ tons East Indian, 2½ tons Abyssinian, 1 ton Egyptian, 1 ton Congo, and West Coast African and 6 tons land carriage. During the progress of the sales 8½ tons were bought in, viz.: 1½ tons East Indian, 1 ton Abyssinian, 1½ tons Egyptian, ½ ton Congo, 3½ tons land carriage, and ½ ton mammoth tusks.

There was a good attendance of buyers and a good

demand throughout. The quantities catalogued were very moderate, the hard description especially being in small supply. There was a fair assortment of soft, large and medium tusks, and some fine lots of billiard ball pieces. America and the Continent bought freely, and the home trade took their usual proportion. Soft, large and medium tusks were a little irregular, but on the whole steady, whilst hard advanced £4 to £8 per cwt. Ball pieces were firm to £5 to £10 per cwt. higher for the better qualities, which in some instances were even more.

JOINT STOCK COMPANIES IN EGYPT.

A decision of the Egyptian Council of Ministers published in the *Journal Officiel* of June 23, substitutes the following provisions in regard to the registration of Joint Stock Companies in the place of the conditions prescribed in Decisions of the Council of Ministers of April 17, 1899, June 3, 1906, and July 18, 1923, which are abrogated:

(1) The Board of Directors shall include at least two members of Egyptian nationality.

(2) Excluding workmen the personnel of the company must include to the extent of one-fourth Egyptian nationals. This requirement extends to any person occupying the situation of clerk, bookkeeper or any other administrative or technical post under the company.

(3) In any public issue of shares or debentures, at least one-fourth of the total issue shall be reserved for public subscription in Egypt, four-fifths of such being reserved for Egyptians. In any instance where the proportion of one-fourth of the issue thus offered to the public is not entirely taken up in the period fixed, the Council of Ministers shall be empowered to extend the period for a further term not exceeding three months or to waive, according to circumstances, this condition.

(4) Any share or debenture having been offered for public subscription must, within a period of one year at most after the date of issue, be presented for quotation on the Egyptian Bourse under the conditions of the Regulations of such Bourse.

(5) Documents establishing the annual situation of the company (balance-sheets, profit and loss accounts, reports of directors and auditors) must be published in full in two daily newspapers (one in Arabic and the other in foreign language) circulating in the place where the general meeting is to be held, and at least 15 days before the date of such meeting.

Dr. A. Neave Kingsbury, Colonial Medical Services, has been awarded the North Persian Forces Memorial Medal for the year 1926 for his paper, "Some Investigations of Malarial Fevers," published in the transactions of the Royal Society of Tropical Medicine and Hygiene.

THE SMYRNA MARKET.

Fruit Crop Prospects.

In a report dated July 12 Messrs. C. J. Giraud and Co. summarise the position of the Smyrna trade as follows:—

Sultanias.—Estimates of the production vary between 45,000 to 50,000 tons. Reports latterly advise some damage through extreme heat, but, so far as can be judged, the immediate consequences are not material, although some loss may eventually result dependent on atmospheric conditions over the next two or three weeks. That is, the condition of the vines has been weakened, but the actual loss of fruit has not been of consequence.

The crop last year yielded 34,000 tons, distributed approximately as follows:—Continent, 15,800 tons; United Kingdom, 12,100 tons; sundries, 1,100 tons; local, 5,000 tons.

Stocks are now entirely exhausted, what fruit was left over having been taken up for distilling purposes. The visible surplus in sultanias this year over last season between Smyrna, Crete, and Greece, admitting of normal conditions up to the end of August, will be about 15,000 to 20,000 tons. Other factors bearing on the situation are the extent of supplies that will be available from Australia and California. Information from both these sources has unfortunately proved unreliable in the past. Present opinion inclines to the belief that Australia will have a surplus of 3,000 to 4,000 tons available for export over last year, but this affects mainly the United Kingdom and Canada, where Australian fruit enjoys preferential tariffs.

The more important fact, however, is California. There, the yield admittedly is under last year's. The quantities exported by California in 1925 and 1926 were 38,648 tons and 58,052 tons respectively, distributed as under:—

	1925.	1926.
Germany	2,102	7,824
United Kingdom	9,932	18,802
Rest of Europe	4,352	9,467
Canada, New Zealand, China, etc.	22,261	21,959
	38,648	58,052

The bulk of exports consist of Soda Bleached, which come into competition with our produce in years when prices run high; but the quantity of fruit bleached in California is dependent upon the premium that export prices permit of being paid over unbleached, otherwise farmers have greater advantage in marketing their fruit in the States in its natural condition.

Prices this year for Smyrna sultanias are ruling at about 25 per cent. below last year's level. As a consequence, the demand for Californias is being largely replaced by Smyrnas, Cretans, and Greeks. This is evidenced by the extent of forward sales of Smyrna fruit, which approximate 500,000 boxes for September/October shipment. The prices at which California can afford to sell its Soda Bleached are not competitive at present against Smyrnas and may result in a considerable reduction in exports compared with the past season.

While it is a difficult matter to forecast such probable reduction, taking the figures of Californian exports, as given above, for the years 1925 and 1926, when the increase in the latter year was due to the higher level of value of Smyrna and Greek fruit, it may be logically deduced that tons 17/22,000 less Californian sultanias may reach European and United Kingdom markets during the present season.

Figs.—The yield last year attained the record figure of 29,000 tons and distribution was approximately as follows:—North and South America, 12,000 tons; United Kingdom, 9,000 tons; European Continent, 4,000 tons; Balkans and Egypt, 2,500 tons; Turkey and Russia, 1,500 tons.

Considerable uncertainty obtains this year regarding prospects. Up to recently an even larger yield than last was rumoured. Reports from the orchards have, however, been consistently unfavourable during the past month, and to-day's estimate is put at approximately 10 per cent. to 15 per cent. below last year.

Even so, the yield will be large, but conditions generally appear to be unpropitious this year and eventual results may fall considerably short of present expectations.

In spite of last year's record output, the entire crop went into consumption and no stocks whatsoever remained over. Prices ruled relatively low throughout the season and at no time sagged as a result of any excessive weight of fruit on the market.

Opening quotations this year are lower than last season and this notwithstanding the fact that there is a smaller yield in prospect.

A new tobacco factory is being erected at Nish in Serbia. The building cost will amount to 100 million dinars, and the factory will be the largest in the Balkans.

It is estimated that this year's wheat crop in Bulgaria will total 12,180,000 metric cwts., an increase of 9 per cent. on last year's, and 22 per cent. higher than the average for the past five years.

The Corporation of Sofia has under consideration the raising of a municipal loan of 1,250 million levas for the consolidation of old loans and carrying out street and other improvements made necessary by the expansion of the city.

Bulgaria's imports in 1926 totalled 341,255 tons of the value of 6,246 million leva, while the exports amounted to 398,862 tons of the value of 5,617 millions, so that there was an unfavourable balance of 629 million leva.

An official return gives the number of limited liability companies in Bulgaria at the end of 1926 at 598 with a total share capital of 2,341 million leva and 2,105 million leva paid up as compared with 579 companies with 2,244 million leva (2,034 paid up) at the end of 1925. Apart from financial institutions numbering 274 the largest number of companies (39) was interested in the textile industries, 25 in the milling industries, 24 in the pottery, and 20 in the chemical.

BENGAL AND NORTH-WESTERN RAILWAY.

The interim report of the Bengal and North Western Railway Company for the half-year ended March 31, 1927, shows that the company's share of the net earnings amounted to £419,115, which, together with £179,671, brought forward and £36,971 for gain by exchange, represents a total of £635,757. After providing for interest and dividends on Debenture and Preference stocks, making provision for annual payment of £35,000 to sink-

ing fund and placing £50,000 to the reserve, there remains £416,212. The Board have declared an interim dividend of 4 per cent., together with a bonus of 4 per cent., or 8 per cent. in all, for the half-year, less tax at 2s. 1d. in £ on the Ordinary stock, leaving £201,212 to be carried to the second half of year. Compared with the corresponding half-year of 1926, on the open system the coaching receipts decreased by Rs48,068, or .51 per cent., goods receipts increased by Rs2,57,802, or 2.86 per cent., and miscellaneous receipts decreased by Rs89,478, the result being an increase of Rs1,19,356 in the total gross earnings. Working expenses decreased by Rs2,07,819, while the ratio of working expenses to gross earnings decreased by 1.32 per cent. Traffic returns to date of the current half-year ending September, 1927, are reported as satisfactory.

NEWS FROM ALL SOURCES.

Sir Alfred Mond has been elected president of the Chemical and Allied Employers' Federation.

The announcement is made that the measures taken to combat the ravages of the Egyptian cotton worm have been rewarded with great success.

It is reported that the apple crop of Yugoslavia promises to be good, an increase over last year's crop being expected.

A report of the Director of Agriculture and Forests of Palestine states that in the Southern Circle there are indications that the orange crop will be smaller than that of last season.

A decree has been issued by the Greek Government forbidding the registration of steamers more than forty years old. For steamers more than 30 years old a tax will be imposed according to tonnage.

The traffic receipts of the South Indian Railway for the week ended June 18, amounted to Rs. 10,99,086, making the total from April 1 Rs. 1,19,96,488. For the corresponding periods of 1926 the totals were Rs. 10,75,443 and Rs. 1,19,87,237.

The prospects of the prune crop in Bosnia are reported to be excellent, and it is expected that the yield will amount to about 15,000 tons, as against 9,000 last year. In Serbia the prune crop will probably be below last year's figure of 40,000 tons, but a slight increase for the whole of Yugoslavia is anticipated.

The public hearing of the case arising out of the dispute between France and Turkey over the arrest of the officer of the watch of the Messageries steamer *Lotus*, which came into collision with the Turkish steamer *Boz Kurt*, on August 2, 1926 will begin in the Permanent Court of International Justice at The Hague on August 2.

The Board of Directors of the National Bank of Greece is reported to have postponed its decision as to the details of the transformation of the Bank into an emission institution. It will probably form a special emission bank and retain the present organisation for general business says the *Morning Post* Athens Correspondent.

The attar of roses industry in Bulgaria, which has been passing through a number of lean years, has again suffered during the 1927 season, which came to an end about the middle of June. Reports state that neither the crop from the new plantations nor that of the older fields came up to expectation, with the result that on an average the quantity of flowers required to produce a kilogram of the essence has ranged from 3,800 to 4,500 kgs. as compared with a normal year of 3,500 to 3,700 kgs., and with last year, which recorded an average of between 3,000 and 3,200 kgs.

Company Meetings.

EGYPTIAN DELTA LIGHT RAILWAYS.

Gradual Improvement in Conditions Anticipated.

The annual general meeting of the Egyptian Delta Light Railways, Ltd., was held on July 22 at Winchester House, Old Broad Street, E.C., Sir Montagu Sharpe, K.C. (the Chairman), presiding.

The Secretary (Mr. F. J. Horne) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: The year under review has been one of difficulty and disappointment. When in July, 1926, I last addressed you, there were strong indications of a general and progressive improvement in the financial and commercial conditions in Egypt. This was reflected in the traffic on our railways—both coaching and goods—which up to that date had shown an aggregate increase of over £8,000. But I regret to say that circumstances over which we had no control, and to which I will refer later, entirely changed this encouraging position of affairs, and from the beginning of September last there was a steady diminution in the traffic returns, which, by the close of the financial year, reversed this increase of over £8,000 to a decrease of nearly £27,000.

As I explained at the last general meeting, a fall in the price of cotton "had the inevitable effect of creating a scarcity of money in the provinces." This we were largely able to meet during the year ended March, 1926, by reducing fares and improving the train service. This policy maintained the improvement in traffic returns during the first six months of the year now under review; but a further heavy fall in the market price of cotton, in addition to passenger motor-car competition, created a position which it was impossible to meet by these methods.

The severe financial stringency created by the collapse in cotton prices, which was acutely felt in all the districts served by our system, resulted in a heavy falling off in the long-distance traffic, which is most remunerative. This was the main cause for these poor results, and, in a lesser degree, the reductions in fares which we were compelled to make to compete with the passenger motor-cars.

During the whole year ended March 31, 1927, we carried 505,408 more passengers than in the year 1926, the receipts being £22,577 less—namely, £209,017, as compared with £231,594 for the previous year.

At our last general meeting I gave you a general indication of our financial position at that date, and I now repeat what I then said—namely, that "our capital proper is considerably over-expended, and a large proportion of our reserves are also invested in the line." The position to-day is practically unchanged, except that certain of our capital commitments to which I then referred have been carried out, and our liquid resources available for capital works are correspondingly reduced. No additional commitments of any importance have been entered into during the past year, and the commencement of new works will be deferred wherever possible. The Egyptian Government authorities, who are responsible for the greater part of this expenditure, are continually urging us to proceed with further construction, and it becomes increasingly difficult to delay it, as we should prefer to do, until we are in a stronger financial position. You may, however, rest assured that the position has received, and is receiving, our most careful consideration and constant attention.

Since we met last year the section of line from Biban to Kherbeta has been realigned in order that the important village of Kom Hamada might be tapped, and the section between Kherbeta and Yahoudia, which was lifted during the War, has been relaid.

It is to be regretted that these lines, which, under normal conditions, should prove to be highly remunerative sections, were opened during the severe economic crisis.

The severest economies are being exercised in every department consistent with the proper upkeep of the lines, rolling-stock, stations, etc.

I will now pass to the revenue account. After meeting all fixed charges and Government's share of profits, as detailed on the debit side of the account, and after deducting the balance of £40,245 17s. 1d., brought in from last year's accounts from the £65,019 18s. 10d. shown as carried forward at March 31, 1927, an amount of £24,774 1s. 9d. remains, which represents the net result for the year available for dividend.

After full consideration of the present position we have decided to recommend the payment of a dividend for the year of 2½ per cent. on the Five and a-Half per Cent. Cumulative Preference share capital, which will absorb £26,019 10s. and necessitate the reduction of our carry-forward by £1,245 8s. 3d., as compared with last year's figures.

We have also decided to further reduce the amount carried forward by transferring the sum of £10,000 to general reserve towards the capital expenditure to which I have previously referred, making the balance to be carried forward into the next year's account £29,000 8s. 10d.

In March of this year Mr. W. Home, C.I.E., one of your directors, visited Egypt, and with our agent and general manager made a tour of inspection. He also saw some of the chief officials of Government Departments, and was received by Lord Lloyd, the High Commissioner, and discussed with these gentlemen various subjects connected with our railway. Mr. Home has expressed his satisfaction at the

condition of the line and of the rolling-stock, stations, etc., which he inspected, the condition and efficiency of which has been greatly improved during the past few years.

You will have noted with satisfaction that H.E. Sir Ismail Sirry Pasha, K.C.M.G., late Minister of Public Works in Egypt, has accepted a seat on the Board as resident director in Egypt. You will remember that His Excellency accepted this position in October, 1924, from which his appointment to the Cabinet of the Government of Egypt necessitated his retirement. Changes in the Government have now admitted his rejoining the Board, and it is with great pleasure we welcome his return.

In conclusion, I should like to say a few words about the prospects of the current year. For the period from April 1 to June 30 last our approximate traffic returns are £67,579, showing a decrease of £6,537. This, I would remind you, is by comparison with the corresponding period in 1926, when the traffics were good and before the decline occurred. The total approximate gross receipts during this period of three months for the last three years were £67,530 in 1925, £74,116 in 1926, and in 1927 £67,579, which shows that, as compared with 1925, there was actually a small increase at June 30 this year.

Up to the end of August, 1926, our receipts steadily increased; but although there are distinct indications of an improvement in the present economic conditions in Egypt, I cannot hold out hopes that the position of our traffic returns will by comparison improve until after the end of August—that is to say, until September, 1927—when comparisons will be made with the falling receipts in 1926. With the resumption of normal conditions there may then be prospects of the decrease being wiped out, and possibly becoming an increase.

Egypt has just passed through a very hard time, but it has great recuperative powers; the financial position of the country is sound; political conditions are smoother, and the relations between the British and Egyptian Governments more cordial than has been the case for some time. The general consensus of opinion among the financial and commercial element is that a gradual improvement may now be anticipated.

Much depends upon the next cotton crop and the market price of that commodity. It is too early yet to form any reliable opinion as to these important factors; but there is a hopeful feeling abroad in that country, and I trust that the circumstances under which we shall meet next year will be more satisfactory.

As on former occasions, I cannot conclude without reference to our high appreciation of the services rendered by Colonel Marryat, our agent and general manager, and his staff during a very difficult year's working in Egypt, and also to Mr. Horne and the officials in London for their continued care and attention paid to the numerous and varied details connected with the administration of a railway working in a foreign country.

The motion was carried unanimously.

Arrangements have been made for a bi-weekly sleeping-car train service to run between Haidar Pasha, opposite Constantinople, and Aleppo, in connexion with the Simplon Orient Express. The time for this journey is to be reduced to 20 hours.

A Moth aeroplane in which Captain Vetch, an ex-R.A.F. officer, was giving "joy-rides," crashed at Shillong on July 22. Captain Vetch was slightly injured, and two women on the ground were seriously injured. The machine became entangled with telegraph wires while ascending.

According to the *Palestine Bulletin*, Sultan Pasha El-Atrash, the leader of the Druse insurgents, who recently escaped from the French, last week left for Mecca to meet the Wahabbi King, who is said to have offered asylum in the Hijaz to Druse refugees.

A slight earthquake shock was felt on July 24 at 11.30 a.m. in Jerusalem and Jaffa, and, more markedly, at Hebron, where it caused a mild panic. The municipal inspection of Jerusalem shows that 175 houses were dangerously affected by the first shock on July 11.

Agrarians and Communists, who had been in hiding on Mount Vitosh during the day, raided a village ten miles from Sofia in the evening on July 18 and began to loot, but were chased away towards the Yugoslav frontier by the Peasant Militia. Another party of Communists crossed the Bulgarian frontier from Yugoslav territory and advanced towards Kustendil, but was hunted back across the frontier by soldiers, who captured the guide. There were no casualties.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended July 14, state:—

Since our last report the Futures market has been very active and prices have registered a considerable advance. The week's summary of price movements is as follows:—Sakellaridis: July, 37.30 dollars, 3.47 dollars up; November, 37.67 dollars, 3.10 dollars up; January, 37.40 dollars, 2.95 dollars up. Ashmouni: August, 26.15 dollars, 1.47 dollars up; October, 26.91 dollars, 1.64 dollars up; December, 26.91 dollars, 1.49 dollars up; February, 27.11 dollars, 1.52 dollars up.

Sakel.—The market for this variety has been very active, and prices have risen at every session; November was quoted at the close to-day 37.67 dollars, a rise of almost 3 1/4 dollars over the close last Thursday. The advance is principally due to speculative manipulation on the part of some local operators. Speculative buying originated as the result of reports intentionally exaggerated that the crop had been heavily attacked by leaf worm, as well as by the firmness of the New York market, especially since the publication of the official report on the 9th instant, giving 42,683,000 as the acreage against 48,898,000 last year, which means a reduction this year of 12.4 per cent. The operation was well planned and succeeded owing to the existing heavy short positions, the holders of which, alarmed by the sudden rise, endeavoured to liquidate at any price. It is estimated that more than 100,000 kantars shorts have been bought back during the last few days. As is generally the case in similar circumstances, sellers were lacking, and the repurchase of such a large quantity brought about wild differences in prices and an abnormal advance.

The demand from abroad has been moderate, but a little better than last week.

At the second July tender, 2,250 kantars were issued; the total dockets issued at the first two tenders this month amount to 11,000 kantars.

Uppers.—The Uppers market has also been rather active, but the advance here is not so pronounced as for Sakel. There has been a fair amount of straddling between October and November, operators selling the first option against purchases of the latter.

The demand from abroad has been rather poor.

The week's receipts amount to 34,901 kantars, against exports 157,497 kantars; the stock in Alexandria stands at 2,557,713 kantars.

Crop, 1927.—Reports from our Interior agencies indicate a satisfactory progress of the plant, due particularly to the favourable climatic conditions. As regards the leaf worm attack, latest reports are much more reassuring. In several districts, the attack has completely subsided. The plants which were most severely attacked have commenced to produce fresh leaves and again seem to be in a more or less satisfactory condition. As regards the damage caused by the leaf worm attacks, we repeat what we have previously written on this subject, namely, that while the attack has been more severe than last year, it has not been sufficiently serious to make us expect a reduction of any importance in the final production.

In certain localities, the water supply has been somewhat scarce and this has affected the plants.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended July 20:—

Egyptian Futures.—Sakel Contract.—With the exception of Monday last when we had a sharp reaction, resulting in a break of about 80 points in Liverpool, and 150 points in Alexandria, our market has again displayed conspicuous strength. There have, on many occasions, been distinct signs of a shortage of contracts, and, at times the market has had the appearance of being over-

sold. As a result, a further advance has been registered since our last report. A little buying from trade and speculative interests has been quite sufficient materially to influence prices, though the amount of business passing has been of a rather limited character. With the exception of Monday's break already referred to, Alexandria has maintained a strong front, and even at the present high levels, with the existing sentiment of the markets, there seems little encouragement for anyone to hold "bearish" views. While the crop is reported to be well advanced, and, on the whole, satisfactory, there are reports of rather extensive attacks by leafworm which may later have serious consequences. In addition to the above, the enforced restriction of acreage, and the growing fear of a short supply of American staple cotton, have been exploited by speculators of "bullish" tendencies. On the other hand, the stocks of Egyptian cotton, including that held by the Egyptian Government, are heavy, and the premium of Sakellaridis cotton over American has reached what would appear to be an abnormal difference. Nevertheless, in spite of these adverse arguments, we do not look for any serious decline in Egyptian unless in sympathy with a break in prices of American cotton.

Uppers.—There has been quite a fair business in Uppers this week, prices naturally having an advancing tendency in sympathy with the movements in the Sakel market. There has been a marked shortage of contracts, resulting in a very narrow market on most days. The Continent and the trade have been the chief buyers, Liverpool speculation and fresh American selling supplying the contracts on such occasions, otherwise, there has been no outstanding feature.

Egyptian Spot.—The market continued active following on our last report, and spot sales, both of Egyptian and Sudan cotton, were on a satisfactory scale, notwithstanding further advances in prices. Saturday, the 16th, however, proved to be the climax of the recent sharp advance, when Fully Good Fair Sakel was officially quoted at 19.85d. the highest point touched this season; Fully Good Fair Uppers on the same day were quoted at 14.65d.

During the week-end a change of sentiment took place, and when the future market opened on Monday prices tumbled rapidly. As usual on such occasions, the demand for spot cotton evaporated and hardly a buyer appeared in the market. Values have steadied again since and the drop in spot quotations has been more than recovered. American markets are still good, and, provided no further break appears in that quarter, it is highly probable that fresh buying power will develop in the near future. No special features have cropped up as far as the demand

The Company transacts, either direct or through its Allied Companies, all classes of Insurance Business in all parts of the World.

CHIEF ADMINISTRATION
7, CHANCERY LANE, LONDON, ENG.

for Egyptian cotton has been concerned, and the medium qualities of both Sakel and Upper have still continued to attract most attention from buyers. Low cotton at from 6.00d. to 12.00d. has been in fair request at steady rates. Pillion has been in rather better request and sales have been reported at from 15.00d. to 17.00d. Until to-day, when only 100 bales were returned as sold, a steady business in Sudan Sakel, chiefly for the medium qualities, has been maintained. This cotton has hardened recently, but still remains relatively very cheap when compared with Sakel.

Forwardings to spinners last week were returned as 3,903 bales Egyptian and 6,193 Sudan. Estimated spot sales 1,800 Egyptian and 8,100 Sudan. Quotations of Sakel have been advanced 115 points, and those of Upper 85 points. F.G.F. Sakel to-day 19.95d. F.G.F. Upper to-day 15.15d.

Cholera has broken out in the Anglo-Persian refineries at Abadan [at the head of the Persian Gulf] and traffic between Abadan and Basra was stopped indefinitely on July 24 until the situation is safely in hand. Deaths have also been reported from Basra.

At Zarka, east of the Dead Sea, near the hot springs, the crater of what was believed to be an extinct volcano was last week gently belching forth smoke and steam. The phenomenon was visible from the heights near Jerusalem—a distance of twenty-five miles.

MOTOR CARS IN AFGHANISTAN.

It has been estimated that, up to the beginning of 1926, Afghanistan had bought about 500 motor vehicles of all descriptions (says an article in the United States "Commerce Reports." As at January 1, 1926, there were reported to be about 50 passenger cars and 50 lorries circulating in the country. During the course of the year there were added about 35 passenger cars, 30 lorries and 2 motor cycles, thus bringing the total to 165. This represents approximately one motor vehicle to each 32,000 inhabitants—not a very high ratio as compared with the 1 to 5 in the United States, the most thoroughly motorized country in the world. Nevertheless Afghanistan, as it develops, has certain real potentialities, remote though they be, as an appreciable motor-vehicle market. It is in other such nations as this that the motor car, during the past quarter century, has proved itself a major factor for development, with a resultant raising of the standard of living among their peoples.

As Government House, on the Mount of Olives, has become uninhabitable owing to the earthquake, Field-Marshal Lord Plumer, on his return to Palestine with Lady Plumer, will take up his residence at the Hospice of the Sovereign Order of St. John of Jerusalem at Tantur, on the road between Jerusalem and Bethlehem.

Notes of the Week.

Anglo-Turkish Relations.

Through good report and ill report there has always been, as between Turks and Britons, a strong regard for one another. Each party may have done much to obscure that regard. They were on opposite sides in the Great War; Britons were up against the ruthless and organised brutality of the Turkish authorities that found vent in wholesale massacres and in the maltreatment and deaths of thousands of prisoners; the Turks, to whom such things are nothing, found much in the brief occupation of Constantinople to lower British prestige in their eyes, and they affect to regard Mr. Lloyd George as the permanent embodiment of an unalterable British policy that aims at wiping Turkey off the map of the world. When all is said and done, however, there are many traits in each people that make a strong appeal to the other. Even when they were allied with the Germans and at war with the British, the Turks never lost sight of the fact that they preferred their enemies to their Allies. The post-War recovery of Republican Turkey has appealed strongly to the British instinct, however much it may have damaged for the time being British interests in the country. Given a fair chance, therefore, Anglo-Turkish relations would soon revert to a favourable state which would be of advantage to both peoples, and of particular advantage to the Turks. Unfortunately, every now and then some malignant fate ordains that the Turkish authorities should embark upon a peculiarly foolish policy which must retard on one side or another the approach to more satisfactory relations.

The Victimization of "Anglophils."

At the very time when the Turkish Minister of Finance was setting out for London to enter upon discussions which, it is hoped, will ultimately result in an agreement that may help Turkey to improve her financial posi-

tion, considerable publicity began to be given to the work of a Commission appointed last year to investigate the activities of a so-called "Anglophil Committee," founded in Constantinople after the Armistice. The facts are hardly in dispute. At the time in question one or more organisations were formed in Constantinople of serious-minded Turks who, rendered anxious by the chaotic state of Turkey, considered that the only solution ready to hand was to be found in close co-operation with the British. Some of these Turks even went so far as to advocate a British mandate over Turkey; but they did not carry many of their countrymen with them, and the suggestion was quickly dropped. A very different solution was found by Mustapha Kemal Pasha and his followers in Anatolia, and the subsequent history of Turkey speaks for itself. That the Republican authorities should to-day rake up this old matter from a spirit of unedifying vindictiveness is neither a credit to them nor a sign of their confidence in themselves. No "Anglophil Committee" exists in Turkey now, and if those who formed the organisation of six or seven years ago have not been convinced that Mustapha Kemal Pasha's way of helping Turkey was better than theirs, they are not likely to be convinced by persecution or worse now. Such action is neither worthy of a self-respecting Government that pretends to be governing with the approval of the Turkish people, nor will it help the Turkish Finance Minister in his mission to London. The names of the defunct "Anglophil Committee" are unknown in this country, and, if they were, the British public, which had nothing to do with them or with the Committee's formation, would take no interest in them. Their selection at this particular moment for pillory and persecution will suggest to the British mind that the Angora Government is still not sure of its position, still fears that some one who may aspire to greater popularity one day has been left unchanged, and is still, for all its lip-homage to Western civilisation, wedded to

uncivilised methods. The oppressor, said Mazzini, is never quiet. That the Angora Government and its adulatory press should want to eliminate a few more Turks is their own and Turkey's affair; but they can hardly expect Great Britain to be impressed by a policy which selects the moment of Abdul Halik Bey's visit to London for victimising a few Turks who protested six years ago their belief that Turkey's ultimate salvation rested on a working agreement with Great Britain.

Yugoslav Elections.

Little more than a month separates Yugoslavia from a general election, and the electoral fever is being maintained at a high point. Practically all the chief parties will go to the poll sadly divided amongst themselves—the Radicals worst of all. The removal of M. Pashitch's strong hand has had the inevitable result—foreshadowed at the time of his withdrawal from the leadership of a Radical Government—of engendering considerable competition for his mantle, without much thought for a policy or policies round which the Party might hope to rally once more. The Democrats are divided in their sympathies between M. Marinkovitch and M. Davidovitch, and at last even the Croat Peasant Party seems to have wavered in its allegiance to M. Raditch. Whether the latter's sun is really setting is difficult to determine at this distance. He has given grave offence to Yugoslav journalists as a body, and there is consequently a fairly thorough boycott of the Croat leader by the press. Only the Dissident Democrats can claim to be solid behind their leader, M. Pribitchevitch, but their numbers hold out little prospect for them except as useful allies to another group. The same may be said for the German group in the northern provinces, who in virtue of their well-disciplined organisation, acquire more significance than they might otherwise have, owing to the fissiparous tendencies of the bigger parties. One effect of the multiplying of small groups will be to stimulate a desire for a return to the old two-party system, and it is possible that Yugoslavia is already on the threshold of this movement in the attempt of M. Voukitchevitch, the Prime Minister, to evolve with M. Marinkovitch and Dr. Koroshetz, the Slovene Clerical leader, a working arrangement that will go beyond the immediate problem of next month's elections.

Prince Carol of Roumania.

If the statement attributed to Prince Carol by the Paris newspapers has really emanated from him, it will neither enhance his reputation nor benefit the country that he claims to be anxious to serve. There is only one way in which he can now contribute to the promotion of Roumania's interests, and that is by honouring his word and by remaining strictly in the private life to which he elected to retire. The circumstances in which the renunciation of his rights to the Throne was made are to-day immaterial; he had already forfeited his birthright and the respect of the Roumanian people when he deserted his wife and went abroad with the companion with whom he still lives. That he should now regret his action, in view of the untimely vacancy on the Roumanian Throne, or for other reasons that were to be foreseen, is not to be wondered at; but his contention that he has the right and duty "as a father and as a Roumanian, to see that the greatness of the nation suffers no injury" suggests that the Prince entertains a very poor opinion of the Roumanian sense of humour. The significance of the alleged statement lies in the threat that Prince Carol will hold himself ready in the hope that a movement for his recall will be started in Roumania. If such a movement is set on foot it will be a domestic affair of the nation; but it is clear that the Roumanians will be running the risk of repeating the experience of Serbia with King Milan and his son, King Alexander, with the inevitable sequel that overtook the Obrenovitch dynasty. The situation is admittedly complicated. A twelve-year Regency has no attractions for the country; but it should not be beyond the genius of the Roumanian people to

make a success of it. Much depends on the actions of the Bratianu Government and the resolve of the Council of Regency, by holding itself above all party considerations, to serve only the interests of the country as a whole.

The American Financial Mission in Persia.

Followers of affairs in Persia will have been prepared both for the limitation of powers in the new contract which had been prepared by the Teheran Government for the head of the American Financial Mission and for Dr. Millspaugh's rejection of it. The position, which has necessitated or at any rate implied the temporary management by the Persian Prime Minister of the finances of the State, appears to have arisen thus. All well-informed Persians are agreed that it is desirable to have an American advising on financial questions in the land of the Shah, but all seem agreed that no dictation of policy is permissible. They recognise with gratitude the fact that under Dr. Millspaugh's régime taxes have been collected—both new and old taxes—but they appear ill-disposed to accept the claims of the American Adviser in regard to such things as the appointment of officials. It is the claim of the Persians that some of the posts which Dr. Millspaugh thought fit to fill with Americans could as well have been filled with Persians. The Majlis, therefore, has been unwilling to renew the large terms of Dr. Millspaugh's original contract. Whether Dr. Millspaugh has actually left Persia yet we do not know, but it would seem improbable that there will be yielding on either side. If no fresh contract is arranged between the Persian Government and some American Financial Adviser, the consequences may be disappointing for those of the Persians who are longing for increased contact with the Western world. No doubt the people will console themselves with the thought that there are as good fish in the sea as ever came out of it (provided the bait used is attractive enough), but foreigners, in Great Britain, at any rate, are more likely to observe that the question of the Persian debt to this country is still unsettled, and that the unequal tariff in favour of Russia still obtains. It would be a thousand pities if, after accomplishing so much good work, the American Financial Mission were to depart before such anomalies as these had been got rid of and before the embarking upon some of their largest schemes, like that pertaining to Persian railways, had been more than begun.

The Kurds and Iraq.

We understand that Shaikh Mahmoud, who was recently in the capital of Iraq, and who, it will be remembered, a few weeks ago made his submission to the Government of King Faisal, intends to have alternative residences in Iraq and in Kurdistan. One of his sons, of course, is, by the terms of his surrender, being educated in Baghdad. It is sincerely to be hoped that, so far as Iraq is concerned, this is the end of Kurdish intransigence. The Kurds in Iraq may still be disappointed that the high hopes entertained in the days about the Armistice have failed of accomplishment, but they must realise, at any rate, how much better off they are than their brothers now in Turkey and Persia. It is quite creditable, in fact, that the Angora and Teheran Administrations are exercised at the degree of enlightened rule which the inhabitants of Southern Kurdistan enjoy as Iraqis. Kurds are employed everywhere in Iraq; the Minister for Communications, for instance, is a Kurd. It may be that literary facilities for the teaching of Kurdish have not been granted with such speed as these "Scotsmen of Iraq" may wish, but the goodwill of the Arabs is in general being so extended towards this valuable element of Iraq's population that it is difficult to doubt the ultimate welding and natural cohesion of the two races. Quite apart from British advice, in fact, Arabs appear now so well disposed towards their brother Iraqis who are non-Arab that the perfect reconciliation of the gifted Kurds is almost assured.

Egypt, Italy and the Hijaz.

The opportunity will doubtless be taken of King Fuad's visit to Italy to discuss with the Fascist Government the Egyptian and the Italian attitude towards Arabia, and particularly towards the Hijaz. It has been stated, indeed, that an endeavour will be made to bring these two attitudes into line, although it might appear that the only existing basis of such harmony could be common hostility to, or suspicion of, the Hijaz. Italy, whose preoccupations in the southern portion of the Red Sea area do not decrease, has no apparent reason other than flattery of the Imam Yahia of the Yaman for any longer withholding formal recognition of the new régime in the Hijaz; and Egypt, whose *amour-propre* may have been disturbed by the circumstances surrounding this year's "Mahmal," can be encountering no insuperable obstacle to having the closest relationship with the present Guardian of the Holy Places of Islam. Only the very suspicious alarmist, therefore, can entertain visions of an Italo-Egyptian alignment as against the Hijaz. Certainly it is to be hoped that the new friends of the Yaman will not succeed in jockeying the Egyptians into an over-interpretation of the "Mahmal" incident. The outcome of the discussions that are said to have been contemplated on this subject between King Fuad and Signor Mussolini will be watched with very close interest, since both the Egyptian and the Italian ties with Arabia have so much increased during the past year or two.

The A.P.O.C. and Persians.

It is creditable to both the Persian Government and the Anglo-Persian Oil Company that permission should have been given to establish an educational system in Khuzistan, and that already six Ispahanis should have been selected by the Company to come to Birmingham University to train as teachers. This step is an excellent one, and a welcome indication of the relations existing between the Teheran Government and the A.P.O.C. Few things will convince Persians of the benefits accruing to their country from the presence therein of what Northern Persians, at any rate, are sometimes apt impatiently to describe as "alien capitalists" more than this wise policy of employing Persians wherever possible in the service of the Company and of simultaneously demonstrating that the Company can perform a quite disinterested and gratuitous task in Persia, a task the accomplishment of which moreover, is more likely to cement real friendship as between British and Persians than any amount of royalties, or even of dividends, to Persians. We have no hesitation in congratulating the A.P.O.C. upon the sapient policy which it is at present pursuing in Persia in furthering the interests of the inhabitants of the country, and it may be hoped that in time the Northern Persians, from places such as Teheran or Tabriz, will be brought increasingly within the beneficent orbit of the Company's influence. There can be few enterprises in the world which so strikingly sustain British Imperial interests and the interests of the local inhabitants as does the A.P.O.C.

King Fuad's Visit.

The good impression left by King Fuad's visit was strikingly confirmed, and, if possible, enhanced, by the manifest sincerity of the telegram that His Majesty sent to King George as he was leaving Dover. Even in less exalted circles the scope offered for originality of expression by communications familiarly known as "hospitable roofers" is usually found to be restricted; but King Fuad's message gives rein to an appreciation in which there is nothing stilted or conventional. The message indeed merits quotation in full. The King telegraphed:—

I am still much affected at the moment of leaving England by the so profoundly cordial and grand reception I have met with from your Majesty and her very gracious Majesty the Queen, as well as from your noble people. Everywhere I have been I was made the object by the authorities and the population of the warmest receptions and

the greatest spontaneous marks of friendship and sympathy. Nothing was left undone to make my stay a most agreeable one.

I have been very keenly touched, and it it particularly agreeable to me to renew to your Majesties the expression of my deep gratitude, and to reiterate to the noble British nation my most cordial thanks. I am sure that the evidences of friendship which have been lavished on me so generously in these circumstances will contribute powerfully to drawing closer together and to rendering more fruitful the bonds of friendship which unite Great Britain and Egypt.

King George in his reply said:—

On behalf of the Queen and myself I hasten to thank your Majesty most cordially for your kind message on leaving England. The appreciative sentiments which you have been so good as to express have afforded us the liveliest satisfaction and I feel confident that your visit will have the happy result of drawing still closer the bonds of friendship which unite our respective countries to their mutual benefit and advantage.

FRENCH POLICY IN SYRIA.

(Continued from page 132.)

We notice that France still refers to the "Levant States" of Syria. There is perhaps in this description more than a matter of mere nomenclature. The ports of Syria are indeed of the Levant, but the heart of Syria belongs to the Arab polity. In other words, the future of Syria is inextricably bound up with Iraq, Palestine, and Transjordan. This is an aspect of the political problem of Syria which is sometimes ignored by Frenchmen. But that is a matter of the future. At the moment resolute and unflinching radicalism in its literal sense is Syria's most urgent necessity, and all those whose interests lie in Western Asia are awaiting its imposition.

The question of an emission bank in Athens has been settled. An independent emission bank will collaborate with the National Bank, which will give it capital.

An international "Who's Who" is at present being compiled at the Institute of Intellectual Co-operation at Paris, which works under the auspices of the League of Nations.

The Marchioness of Titchfield has received a cheque for £50 from the King of Egypt in aid of the National Association for the Prevention of Tuberculosis.

FRENCH POLICY IN SYRIA.

The revolution against the French Mandatary in Syria is at an end. Quiet has been definitely established. The "rebels" have become nominally reconciled or actually refugees. And upon the arrival of this "peace" comes the announcement of French policy in Syria, made by the High Commissioner, M. Ponsot, an announcement that for weeks has been eagerly awaited both by those who feared the worst and those who hoped for the best. For ourselves we must say bluntly that, so far as we understand it from the rather vague telegraphic summaries, we find it a disappointing statement, the occasionally excellent detail of which is minimised by the fact that the old and discredited policy of *divide et impera* is still to obtain in Syria. But of that more in a minute. First let us recall the report of the French Mandatary to the Permanent Mandates Commission, which examined this problem on June 30 and the days following. This report stated that the military position in Syria no longer inspired any kind of anxiety. Auxiliary forces were being formed in Syria itself, and national forces would gradually take the place of French troops in the maintenance of order and the security of the mandated States. It was also pointed out that in 1926 France gained the position, which had been held ever since 1921 by England, of principal importer into Syria. Further, M. le Caix, French representative before the Commission, explained that the drawing up of the Organic Statute had been delayed owing to the desire of the Mandatory Power to obtain the collaboration of the inhabitants of Syria. This appearance of France before the League provided possibly one of its most satisfactory showings as Mandatary, but satisfaction derived rather from promise of things than from accomplishment, in Syria. In any case, we should await the Commission's report before expressing their content. Now let us turn to the statement of policy which M. Ponsot has just made in Syria.

The High Commissioner for Syria began, according to the reports available, with the general statement that France will respect her obligation to the League of Nations, an obligation which provides for the gradual development of Syria as an independent country. This statement at least should put an end to the foolish rumours and propaganda in favour of the abandonment by France of her mandatory charge and, more unworthy still, of its relinquishment to another European Power. The Mandatory Power's main idea, declared M. Ponsot, was "to give satisfaction to the interests of the various people of Syria in conformity with their wishes, so long as those wishes are expressed in a peaceful and orderly manner and respect the rights of minorities." The various Syrian States could protect their own interests and settle their own disputes, with France looking on as general arbiter. The High Commissioner went on to promise greater decentralisation of administration, and this promise appears to have been regarded as proof that the Mandatory Power is encouraging the political evolution of the States in conformity with the aims of the League of Nations. It seems to us, we may remark in passing,

nothing of the sort. The diminution of French effectives; to which we have already referred, was foreshadowed by the High Commissioner, together with the development to be made in the local forces and militia at the charge of the various States. And M. Ponsot, having sketched the political and military policy of France in Syria, ended with a reference to the economic future. He emphasised the necessity for co-operation between the various States and the Mandatory Power, warned the people of Syria against indulging in a too narrow separatism, and suggested that the management of common interests would bring the States nearer together.

Now this statement of the French High Commissioner is, in the form in which it has been published in Europe at any rate, most disappointingly vague. Upon one thing, indubitably, France, with Syria, is to be congratulated: the reduction of French troops in Syria and the development of Syrian defence forces. But why so continually harp upon the divisions existing in Syria; why this emphasis upon the separate States? Admittedly, the present State of Syria is but a piece, a carving; but who carved it up again, the people of Syria or the Mandatory Power? Was the original, international mistake—possibly a necessitated mistake—of partitioning the original Syria, attended with such happy results that France must reproduce it in an aggravated form in Syria? To suppose, moreover, that the political evolution of the various States in Syria is being conducted "in conformity with the aims of the League of Nations" seems a trifle extravagant, for we are unaware that the League had much else in view, when it conferred the Mandate for Syria upon France, than the establishment of the independence of a unified Syria. Surely the partitioning of Syria has had no implicit sanctioning from Geneva. It is because we feel this disunity of Syria to be the crux of the whole problem that we so insist upon it, and because we feel that Syria can never become a natural organism until its artificial boundaries are destroyed. The real reason why Iraq, for instance, is so far ahead of Syria is mainly because certain far-sighted British officials rejected the advice of other British officials to divide up Iraq on some such plan as has been unwisely adopted and inelastically clung to by the French in Syria. Iraq was hammered, and is now being welded, into a unity; the first fruits of the early British administrators in Iraq are ripening well. It sounds almost incredible that the Basra, Baghdad, and Mosul vilayats should once have been conceived as separate States, but it is a similar conception that is still ruling French minds in Syria. "Reforms," such as political decentralisation, a new economic organisation for the various States, and so on, are mere palliatives: in the reconstruction of Syria as a unity lies its only real salvation. That is the business of France; and, could she but see it, that is her interest also. The perpetuation of minor rivalries, artificial frontiers, petty separatisms is not, as some tired Frenchmen might appear to think, but the inevitable manifestation of the Syrian character. Let France, whether through the agency of an Arab monarch or by whatever means, but scrap the discredited methods of earlier policies in Syria, boldly and unashamedly imitate the lines adopted for another Arab State on the other side of the Syrian Desert, and weld, purposefully and concentratedly, the peoples under her charge into a unity, and her harvesting will be secure. Otherwise, who can foretell what unexpected storms may ride once more the fair lands of Syria? For in a country which, though quiet, is not ordered, anything may happen. It may be, of course, that France is clinging to the delusion that economic prosperity implies political content. This is a doctrine in which we have no belief, and is disproved by revolutions as far apart as those which occurred in France in 1789 and in Egypt in 1919. But even if it were true, the artificiality of the various Syrian States is still a bar to the greatest economic prosperity in Syria. One word more.

The Near and Middle East

From Our Own Correspondents.

Cairo, July 17.

Earthquakes.

Two earthquake shocks within ten days is quite enough to make Cairenes nervous and to start them inquiring about earthquake risk insurance rates. It is true that neither of the two recent "quakes" was very serious, so far as Egypt was concerned, that no lives were lost and that only in the case of the second, last Monday, and then only at Suez, was any material damage done, this being confined to the destruction of a few mud huts and other insecure dwellings. But the fact that the epicentre of the last disturbance was so near this country, and details of the loss of life and damage done in Palestine, together with the circumstance that more shocks have been perceptible here during the last two years than in the previous twenty, have started uneasy speculation regarding the prospects of Egypt having an earthquake of her own, instead of feeling only the repercussion of other country's misfortunes. Needless to say, no useful opinion in the matter can be formed by anyone. If the premium rates for earthquake damage risk quoted at Lloyds in reply to cabled inquiries from here can be taken as any guide, we stand a quite good chance of being tumbled violently out of our beds one of these days, or nights, for the rate given, five shillings per cent. is greater than the fire risk insurance rate on ordinary house property.

Zaghloul Pasha's Oratory.

The Parliamentary session ended on Thursday, the Budget, with a prospective deficit of nearly two million pounds, having been disposed of and the Government authorised to deposit a quarter of a million pounds with Bank Misr for loans at two per cent. per annum to the agricultural co-operative societies to whose impending creation I referred last week. The feature of the "breaking up" sitting was a characteristic oratorical effort by the President of the Chamber of Deputies. Zaghloul Pasha, like the rest of us, gets older every year, but time has as yet been powerless to mar his perfect command of the Arabic tongue and his all-conquering charm as a speaker. Even to listeners for whom the Arabic used by Zaghloul Pasha is far from easy of comprehension his speeches are always a delight. He has all the gifts of an orator and much more than the average politician's sense of humour. His speeches are always bright and sparkling, and his hearers are alternately impressed by the earnestness of the speaker and moved to delighted laughter by some witty sally.

Parliamentary Questions.

On Thursday evening Zaghloul Pasha reviewed the work of the Chamber during the session just ending. He took the opportunity to reply to a number of criticisms which have lately been made of the proceedings of the Chamber. One of these related to the number and the nature of the questions asked by deputies. After assert-

ing that the House of Commons, during an average session, asked more than ten times the number of questions put in the Egyptian Chamber of Deputies, Zaghloul Pasha affirmed that, in regard to the character of the questions asked, the Chamber had nothing to fear by comparison with the Commons. In proof of this he quoted a number of questions recently asked in the British Parliament, mainly by Labour members, and particularly referred to the inquiry regarding the cost to the British Government of King Fuad's visit, and the reply given that it would not be courteous to discuss such a matter whilst King Fuad was in England. "Had King George been the guest of this country," said Zaghloul Pasha, "no Egyptian deputy would have ever thought of asking such a question. We must agree that the reply made to the inquirer was a very wise and correct one, but our Ministers, too, have often this session made wise and correct replies to questions that should not have been put."

Dr. Sarrouf.

Two well-known figures have been lost to Egypt this last week. Dr. Yacoub Sarrouf, founder of *Al Mokattaf*, the original Arabic monthly review, and its editor during the whole of its fifty-one years of existence, and co-founder and proprietor of *Al Mokattam*, perhaps the best informed and best edited of Arabic daily newspapers, died last Sunday morning. Shaikh al Guizaoui, Rector of Al Azhar since 1917, died on Thursday.

Dr. Sarrouf was one of the numerous Syrians who came to Egypt at about the time of the British occupation and of whose work it is not too much to say that it has been almost entirely responsible for the intellectual renaissance in Egypt during the last few decades. Prior to the arrival here of such men as Dr. Sarrouf, Dr. Paris Nimr, the late Takla Bey, Elias Ziade Bey, and others, there was practically no Arabic periodical literature. Syrians founded the Arabic daily Press and practically monopolized it during more than three decades. Only during the last ten or twelve years have Egyptians learned enough of the business as well as the editorial side of newspaper management to be able to keep a paper in existence for more than a few years. Innumerable Egyptian owned and staffed Arabic organs have been founded, made a much-heralded appearance and, after a hectic career, ceased to be, leaving little but debts and regrets behind them. During all this time *Al Mokattam* and *Al Ahram* have steadily progressed and increased their circulations and their influence. In British eyes it is a fact most creditable to *Al Mokattam* that never, even in the most fevered periods of political excitement, has that paper allowed anti-British propaganda to appear in its columns. Another distinguishing feature of *Al Mokattam* has been that although nearly every Muslim-owned journal prints advertisements for alcoholic drinks, *Al Mokattam* has consistently refused to accept this form of publicity and has in consequence sacrificed many thousands of pounds of revenue annually. From all these facts it may be deduced what manner of man was Dr. Sarrouf. He was, indeed, of a conspicuous uprightness of character and devotion to principle which earned him the esteem of everyone with whom he came into contact. The messages of sympathy which his family have received, from all over the world and from personalities as diverse as His Majesty King Fuad, Lord Beaver-

brook, Lord Rothermere, Mr. Adolph Ochs (proprietor of the *New York Times*), and King Ibn Saoud are an indication of the loss which Arabic literature has sustained.

Shaikh al Guizaoui.

The late Rector of 'Al Azhar was never much in the limelight, but he was a distinguished theologian and scholar. He was a professor for forty years at Al Azhar, before becoming Rector, and his lectures were extremely popular with students from the whole of the Muslim world. Latterly the Rector of the leading Muslim university has been much criticised in the Egyptian Parliament, but this criticism has referred to the system, or lack of it, followed in the university's financial affairs, never to the personality of its Rector.

Cairo, July 25.

Complaints of Cultivators.

Invariably, at this time of year, the local Press is filled with complaints regarding (a) an alleged deficiency in supplies of irrigating water, and unfairness in distribution of the quantity available, and (b) the depredations of the cotton boll worm. This summer the grumbling has been louder than usual; indeed, I do not recollect so many complaints regarding the water distribution since 1922, a year of exceptionally low Nile. There is not, this season, the excuse that the river is low, for up to the present discharges at most of the recording stations in the Sudan have been up to average, giving expectations of a fairly good flood, while the impounded water used for summer irrigation has been available all through the summer in quite average quantities. In so far as the complaints of cultivators are justified, the comparative scarcity of water in certain areas appears to have been caused more by deliberate action on the part of irrigation service officials, acting on instructions from their superiors. The Minister of Public Works was asked about this matter shortly before Parliament rose, and then made the inaccurate and, in the circumstances, very impudent reply that the trouble in such areas as were short of water, such as parts of Behera Province, for example, was due to the fact that the system of rotations which had been in force for several years was a bad one, which he had not yet had time to change. This statement is quite opposed to the facts, though not more so, it is to be feared, than many of the declarations made in Parliament by the present Minister of Public Works.

The Boll Worm.

The second of the annual "silly season" topics—the boll worm—has also had more than a fair share of publicity this season, if a statement issued to-day by the Ministry of Agriculture may be taken as accurate. According to the official version, boll worm has done practically no damage in Upper Egypt. In Lower Egypt a total of about 45,000 feddans has been attacked by the worm. Of this area all but five thousand feddans have been cleared, thanks to the energetic measure taken by the Ministry's inspectors and by the growers themselves. Only in Gharbia Province is the area affected spreading, and this is occurring only in a few districts, the general situation throughout the province being distinctly better than it was a week earlier. If this version of the affair is accurate, it is decidedly reassuring, for alarming reports had been circulated regarding the manner in which the boll worm was devouring the crop.

An Alfresco Farce.

Egypt is notoriously a country of imitators. Perhaps it is the relaxing character of the climate which makes so many people prefer to borrow someone's else good idea rather than take the trouble to think of one for themselves. Anyhow, nothing is more conspicuous than the way in which, so soon as some novelty attracts the public, plagiarists jump up on every side and "spoil the market." The latest example of this process concerns out-of-doors restaurants. Nothing could be more agreeable, on a hot summer's night, than to eat one's dinner out of doors,

preferably in a pleasant garden, or near the river's bank. The first few restaurant proprietors to grasp the fact that eating is more pleasant in such surroundings than in a stuffy, overcrowded room, earned a gratifying financial reward for their initiative. But now that idea, like every other in Cairo, has been overworked. During the past two summers, and especially this year, out-door restaurants, combined with dancing floors, cabaret shows and similar attractions, have sprung up everywhere. Now that their novelty is wearing thin, and also because so many residents have left for Europe, these places are finding business rather dull. An exception is the latest and most luxurious, just opened at Embaba, on the west bank of the Nile, opposite the north end of Gezira Island. The proprietors of this establishment, meaning to make certain of big attendances for the first few nights, distributed many hundreds of invitations. On top of this, very extensive publicity was arranged, the result of it being that, during this place's first week of existence it has been filled with twice or three times as many people as could find seats. To avoid trouble, the management has returned the admission price (P.T. 10) to all who could not find chairs. In the crush and confusion it has been impossible to distinguish between those who paid to go in and those who had invitation cards, so the latter (unless they refused it) have been paid two shillings a head too, and many of them transported back and forth by the special free omnibus service which the restaurant maintains to and from the middle of the city.

IRAQ.

Baghdad, July 14.

The High Commissioner's Departure.

The violent opposition of the Shiahs, and the now common knowledge that the British Government would not use armed force to impose conscription on the Iraq nation, have made it clear even to the warmest supporters of the Bill that the Conscription Law may not be ratified by Parliament; and the political situation, tense during the negotiations over this Bill, on which the King has set his heart, is by no means eased. The importance of the question is such that the High Commissioner left for England—on July 7—for consultation with the Home Government.

The arguments of the King's adherents appear to be on these lines. With a large army such as conscription would provide, Iraq would (in her own opinion) cease to be dependent on Great Britain for protection, and would, therefore, be entitled to claim complete independence. She could then justly claim admittance to the League of Nations; and this secured, the present Anglo-Iraq treaties and agreements would be automatically cancelled. If new treaties were then made, King Faisal would endeavour to arrange a drastic reduction in the powers of the High Commissioner to control his conduct in important matters.

Administrative Appointments.

Baghdad is watching with some amusement the efforts of the Government to extricate itself from a predicament into which it has been led by hasty action in high quarters. For some time past His Majesty has shown a preference for Mutasarrifs who are known to favour absolute rather than constitutional monarchy; and in the spring of this year Jamil al Azzawi, one of Iraq's ablest provincial governors, was dismissed on a trifling pretext. A few days another Mutassarif of similar views incurred the royal displeasure. The offence was at the very worst a small one, and by the time Naji Beg al Shaukat Pasha had been suspended and brought down to Baghdad it was discovered that he had never committed it. He might now, with profuse apologies, have been sent back to Mosul without a stain on his character; but the Cabinet proposed to transfer him to another liwa—a proposal which he not unnaturally refused to consider. The latest suggestion is.

that a seat in Parliament should be found for Naji Beg, his administrative abilities, which are of a high order, being thus lost to a country which is already sadly lacking in officials of his type.

Riot at Khadhimain.

A serious riot occurred at Khadhimain, a few miles from Baghdad, during the celebration of the tenth day of Moharram. A Shiah procession forming part of the passion play came into conflict with a detachment of troops of the Iraq Army. The soldiers were not sent as representing the authority of the Government, but were taking part in the mourning processions at their own request; they were unarmed, but were marched from Baghdad to the Khadhimain Mosque in formation. The affair seems to have begun with a quarrel between a boy and a woman among the spectators. The crowd took sides, and in their already excited and hysterical state of religious fervour were speedily engaged in a free fight with the soldiers. The casualties were one soldier killed and forty injured, three civilians killed and seven injured. The conduct of the civil police in quieting the rioters without arousing more hostility was most praiseworthy. An inquiry into the affair is to be made by an officially constituted commission. It is inevitable that Shiah hostility to a Government which they (the Shiahs) seem to regard as a purely Sunni one should, whether with or without reason, be popularly read into this conflict between religious enthusiasts and the employees of the Government.

Iraq Army.

On June 30 a ceremonial parade was held at the Iraq Royal Military College to celebrate the passing out of the first batch of cadets. King Faisal inspected the cadets, and afterwards presented prizes to those who had passed out first in each division—a sword of honour (infantry), a pair of binoculars (artillery), a polo saddle (cavalry), and a cup for marksmanship. A large gathering was present, including the High Commissioner and the Air Officer Commanding. At night Sir Henry Dobbs, members of the Cabinet, Iraqi senior officials and the British officers of the Iraq Army were guests at dinner in the mess of the newly commissioned officers.

General.

Imperial Airways, by considerably reducing the price of the passage by air liner from Baghdad to Cairo, have given another impetus to the increasing adoption of the air route, now advertised as "the cheapest and most comfortable route to Europe."

The Prime Minister made a tour of inspection in the northern liwas at the end of June, and the Minister of Finance (Yasin Pasha) has left Baghdad to go on tour in the South.

The eclipse of the sun on June 29 was observed in Baghdad, but aroused very little interest among the Iraqis. An eclipse of the moon, on the other hand, is always regarded as a portent, and is much feared by the superstitious.

THE HIJAZ.

Jidda, July 19.

The Climate of Jidda.

The climate of Jidda during the month of June was exceptionally mild, and the thermometer has refused to record higher daily maximum temperatures than 92 degrees except on two occasions, when 95 and 99 degrees respectively were reached. The Mecca readings are, of course, very much higher than these, but the climate there is very much drier. July has opened with a tendency to greater heat, but we have still to touch the 100 degrees mark, and there is, therefore, nothing to complain of on this score. Nevertheless, as many as possible as can reasonably get away are making preparations to do so as soon as possible in order to enjoy fifty days of Europe before they have to endure another cycle of Arabia.

The Pilgrims.

The pilgrim-visitors to the Hijaz are rapidly melting away under the efficient arrangements of the various shipping companies to carry off the endless streams of them which flow down almost daily from Mecca and Madina. About two-thirds of the total overseas influx must already have departed from these shores, and the rest will have gone within a month. The great majority are more than content with the arrangements made for their security, health and comfort, but the Hijaz Government, which has had a good financial season, is already taking in hand the question of further improvements for next year, when a still larger influx from overseas may be confidently expected if the shipping companies can meet the demand on their accommodation. A special committee has been set up at Mecca to consider and to report on the whole problem; meanwhile the King is taking vigorous steps to increase the water supply both at Jidda and Mecca (including the various stations of the pilgrimage such as Muna and Arafat). He is expected to pay a visit to Jidda in the near future, but no date has yet been fixed for it. His Majesty's third son, the Amir Muhammad, has, however, recently paid a flying visit to this town in company with the Governor of Hail, who went through by car on July 15 on his return to his headquarters, via Madina after having taken part in the pilgrimage ceremonies. The Governor in question is Abdul Aziz Ibn Musaid, a cousin of the King, and has held his important post for some six years, i.e., almost since the Shammar capital first came under the sway of Ibn Saoud.

Foreign Relations.

There is still no news on the probable date of publication of the Jidda Treaty concluded between the King and the British Government last May. In other directions the foreign relations of the Hijaz Government are eminently satisfactory. Negotiations still continue at Sanaa for the settlement of outstanding questions between the Yaman and the Dual Monarchy. There is peace on the Asir borders. And it is to be hoped that the relations between Egypt and the Hijaz will soon become cor-

dial now that the Mahmal controversy is out of the way. It is true that there is a tendency in sections of the Egyptian Press to be captious, but that will pass with time. The fears so freely expressed before the pilgrimage for the safety of the Egyptian pilgrims have been shown by events to have been unnecessary, and it is only natural, perhaps, that some Egyptian papers should seek to justify themselves by pointing out that a number of pilgrims did die on the return journey from the Hijaz to Suez. The pilgrimage is certainly a severe ordeal, but much has been done this year to mitigate its severity and a great deal more will be done in this direction before next year. The Holy Carpet was this year made in Mecca, and it is understood that arrangements have been made for it to be made in future by Indians domiciled at Mecca.

Foreign Representatives.

M. Gault has recently arrived here to take up the post of Vice-Consul of France on first appointment to the French Consular service. And the amenities of the British Agency have been substantially increased by the arrival of a much-needed new launch and a motor-car. Mahmud Nadim Bey, formerly Wali, and Commander-in-Chief of the Yaman, and now Counsellor of the Turkish Representation, is about to leave Jidda, and it is not known whether he will return after the expiry of leave. His official acquaintance with Jidda goes back over a period of more than thirty years, and he would be much missed by a wide circle of friends of many nationalities.

GREECE.

Athens, July 21.

Problems for the Government.

On the day after the return of M. Kafandaris and M. Michalokopoulos, an amusing cartoon appeared in the *Eleftheron Vema*. The two Ministers, with distended stomachs, are standing in front of M. Zaimis, Prime

Minister, who says, "Welcome back, what news?" "We have had some splendid dinners," they reply. "Good!" says the Prime Minister, "what impressed them most about you in Europe?" "The strength of our stomachs."

Apart from the favourable impression thus created, the two Ministers have accomplished some successful work, for their country, the fruits of which should soon be apparent. The cohesion of the Government is assured as long as the prospects of a loan remain good, though it can hardly be expected to survive, when once the loan has been obtained. Advantage should be taken of the period of office which remains to tackle the problems that are still unsolved. That the military question is not dead is shown by the recent Pangalist movement—an answer to the long-deferred publication of the "A" and "B" lists. This movement which was a determined attempt to resurrect the late Dictator, who was to have been returned to his former position with a mandate to restore the monarchy and was within measurable distance of success, seems to have had quite appreciable support throughout the country. It was not inspired—needless to say—by any personal love for General Pangalos—but, as long as he remains untried and free to communicate with the outside world, he will be used to serve the purpose of disaffected elements. The feeble and hesitating way in which the Government deals with these elements is a measure of its weakness.

Greek and Armenian Archæologists.

The negotiations between the Greek Archæological authorities and Dr. Capps, who is representing the Archæological Institute of America, are proceeding normally and the Americans have accepted the Greek conditions, viz., that while part of the area should be reserved for Greek Archæologists, the expenses of expropriation, and so on, for the whole area should be borne by the Americans. The theory that the two nations should thus co-operate is excellent, but one fears that, in practice, work in the Greek area may suffer by contrast with that in the American, which will have the advantage of more men and more money. The Greek Archæological Service is ill-equipped by comparison, in both respects. Owing to reduced salaries, few promising young men in Greece are adopting the profession of archæologist, and those that are adopting it, are not being sent abroad to make their studies, as formerly. This involves a lowering of the standard—which has hitherto been high—because although the practical side can be acquired in Greece, the scientific foundation cannot be laid except in foreign universities. It is to be hoped, therefore, that a spirit of co-operation rather than of competition between the two nations will prevail at the excavations, and that no touch of national self-advertisement will mar the harmony of their relations.

The British School.

Excavations by the British School this season have taken place at Sparta, in Crete and in Macedonia. The work at Sparta has been mainly clearing up of certain points in connexion with the theatre and stage, with a view to the forthcoming publication of this historic site.

In Crete Mr. E. J. Forsdyke, of the British Museum, opened several tombs of the Middle Minoan period. A specially interesting find was a gold ring inscribed with Minoan writing—the first of its kind. Mr. H. G. Payne, working in a different area, discovered a tomb containing a unique series of vases of the Geometric Period.

In Western Macedonia—a region almost entirely unexplored—a prehistoric village was excavated—the finds from which promise to throw much light on Greek origins and on the problem of the Dorian Invasion.

Disfiguring Greece.

The vulgarisation of the country is proceeding. Corfu is generally admitted to be one of the most beautiful islands in the world, and the stretch of coast on which the Achilleion stands the most perfect piece of natural scenery on the island. The Achilleion is bad enough, but

and Branches.

this incomparable spot is to be further disfigured by a Casino, and its attendant horrors. Only when they have driven away the only class of tourist that matters, will the Greeks realise the folly of allowing the get-rich-quick fraternity to spoil their country.

While the country is thus being "improved" in order to attract an undesirable class of foreigner, the inhabitants of the capital have no proper bathing facilities. Such at Phaleron as exist date from the time of Queen Amalia—when Athens was a small provincial town, and the water at Phaleron was a good deal cleaner than it is now.

Centenary of Navarino.

The centenary of the Battle of Navarino falls on October 20, and the programme of the celebrations is being prepared. Though from a naval point of view, the engagement was not particularly glorious, the results were so decisive and far-reaching for Greece, that it is fitting that England which took such a prominent part in it, should be well represented at the commemoration. Greeks will certainly be much disappointed if she is not.

CYPRUS.

Nicosia, July 12.

The Summer Exodus.

The Governor, with his household and staff, moved to "Government Cottage," Mt. Troodos, on July 11. The stream of Cypriots who now seek the hills in the hottest season seems to increase yearly, while the steamers, as usual, bring many visitors from Egypt. In the early years of the British occupation not a single native family went to the mountain heights. English families made their way to Troodos, and camped by permission under canvas near the summer quarters of the troops. By degrees Greeks from the chief towns began to follow their example by going to the higher villages. Now it is the fashion for all who can afford it to rent village houses, or go to hotels; while in some cases merchants spend week-ends only with their families, numerous cars being now available. The smallest huts are in demand and let at high prices. Music, dancing, and all the latest forms of amusements and gaiety are provided, and endless picnics are arranged.

Expected Visit of the Fleet.

It is believed that the Mediterranean Squadron will visit Cyprus during the summer for a few days. The question is often asked why the Fleet, which in the early days came far more often, should now so seldom visit the island. The sojourn of a few days, of course, brings welcome benefits to the coast towns of Larnaca, Limassol, and Famagusta, not to speak of the mutual pleasure which is much appreciated by the British communities during the sweltering monotony of the summer routine.

An Ancient Monument.

An underground cave in the Papho district, generally known as "the Sanctuary of Apollo" (Hylates), has been declared an ancient monument, and duly assigned for protection to the Commissioner, as Curator. Remains of interest are from time to time gazetted as "ancient monuments," and thus confided to the care of the District Commissioner. But as there is no fund, the duty seems merely nominal; for in most cases, unless paid guards are placed in charge, the "monuments" are exposed to damage by wandering shepherds, or other chance depredators, just as they were before being thus distinguished.

The Mail Service.

It is understood that no action is to be taken to effect a change in the service of the Khedivial Mail Steamers. This means that the island will have to put up with the unsatisfactory conditions—calling for strong protest—which exist under the present contract, for several years to come.

General News.

All officials proceeding to the United Kingdom, on leave or duty, are directed to report, if possible in person, to the Commissioner for Cyprus, at Avenue House, Northumberland Avenue, London. Presumably this should relieve the Colonial Office of many visits from officials.

The Colonial Secretary, Mr. R. Popham Lobb, C.M.G., having changed his surname, will return in the name of Nicholson.

Lists of donations to the New Public Library are being published in the papers.

SPORT IN THE NEAR EAST.

With reference to a note in our issue of June 23 calling attention to the zest with which games are now played and watched by the public in Turkey, a letter from a Turkish correspondent in Constantinople takes us to task for not having completed the information given by recording the result of the football (Association) matches played between Constantinople and the visiting Czechoslovak team. Of the three matches played the Czechoslovaks won one (5 goals to 1) against Galata-Serai, and lost two, against Phanar Bagtche (0—1) and a combined Constantinople team (1—3).

During the past month a Constantinople football team has visited Bulgaria, where it has drawn with Sofia and beaten Varna, and on July 22 a visiting Austrian eleven, "Slovan," beat Galata Serai by three goals to two.

As symptomatic of the popularity of football in South-Eastern Europe it may be added that immediately after the tour of the Constantinople team Bulgaria received visits from a Polish and an Austrian football team. The fortunes of these teams are followed with considerable interest not only in the countries concerned but also in the neighbouring States.

The Air Ministry last week announced that as the result of an accident at El Tabbin, on the River Nile, to a D.H.9A machine of No. 47 (Bombing) Squadron, R.A.F., Helwan, Egypt, on July 22, No. 355883 A.C.1 Harold Kauntze Bacon (previously reported missing) was killed. Flying Officer Francis Stanhope Homersham, the pilot of the aircraft, was uninjured.

As the Persian Government has now granted permission to the Anglo-Persian Oil Company to establish an educational system in Khuzistan (the province in which Abadan Island is situated), the Company are sending six Persians from Ispahan to Birmingham University next term to be trained as teachers.

The Spanish flotilla now in Greek waters took part in last Thursday's commemoration of the battle of Lepanto (July 28). In addition to the Greek authorities, Spanish officials and diplomats, the Italian Minister, Signor Arlotta, and the Italian Military Attaché, Colonel the Baron di San Martino, representing the Sovereign Order of St. John of Jerusalem, was present.

Ninety pilgrims, including 20 members of the Episcopal Church of America, taking part in the fourth official Anglo-Catholic Congress pilgrimage to Palestine and the Near East, attended a dismissal service conducted at St. Matthew's, Westminster, on August 1, by the Bishop of Willseden, and left Victoria the following morning, travelling overland to Marseilles, whence they will sail to Alexandria. The pilgrimage, of which the Bishop of Lewes (Dr. Cook) is President, includes visits to Damascus, Jaffa, Jerusalem, Ephesus, Constantinople, and Athens. The pilgrims will return to London on August 29.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

THE ORIGIN OF CYPRIOTS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I thank my friend Mr. Bevan for the answer which he published in your issue of July 7.

Mr. Bevan, in order to justify what he had said in his lecture that modern Cypriots are not Greeks, writes that no Englishman would take offence if one were to deny to him his Anglo-Saxon or Norman descent. We are, then, according to Mr. Bevan, as much Greeks as Englishmen are English. Admittedly, such an explanation of a most unfortunate term, a term which has called for so much protest within and without the Chamber in Cyprus and in the Press outside the Island, establishes the truth which ought long to have been established.

Mr. Bevan refers to the "foreign influences" in Cyprus and to the unsuccessful revolutions of Cypriots against the Persians, and generally to the foreign rule. These are historical events which need no support from Encyclopedias or handbooks. It is just here where the power of Cypriot Hellenism manifests itself. In being conquered, the Cypriot conquers his rulers, and this reminds us of the famous verse of the Latin poet. In spite of so many conquests and adversities, the Cypriot remained Greek in race. This led one of the best English historians, Professor Bury, to advocate in the columns of *The Times* (February 4, 1919) the return of Cyprus to Greece. Surely, Professor Bury knew something more than Mr. Bevan on this subject.

The National character, the customs and morals, the language, and above all the national conscience, are those which constitute the true test of one's nationality. Our language is Greek, purer than the dialect of the Athenians. The hills of our country are named after some of the Greek Deities and legends. Round the verdant valleys and the pine clad mountains the shepherd of to-day sings as of old, as he did at the time of Hesiod or Theocritus, the charms of Aphrodite and at the fairs the youths in their songs sing the heroism of Acrites of Byzantium. Archbishops, eminent prelates, leaders and people of all classes shed their blood in the Greek revolution. The mountains of Macedonia, Epirus, Crete, all bear testimony

to the abundant blood of those who are not "Greek in race"; whole companies and regiments recruited from Cypriot volunteers took part in the Greek wars; 4,000 were the Cypriot volunteers that fought in the unfortunate war of 1897. Cypriot students, afterwards members of the Legislative Council, Mayors or school teachers were amongst those who were bombarded by foreign warships, in defence of the Cretan cause. In 1912, near Janina, there fell, while serving at the front, the Mayor of the town from which I am writing this letter. When he left Cyprus, Cypriots in large numbers followed him and formed a whole regiment. Over 16,000 Cypriots stood in the Allied ranks in Macedonia, whether as soldiers in the Greek Army or as muleteers in the British Army. In 1918, M. Venizelos asked me while in London whether Cyprus would respond to his appeal for reinforcing the Greek front in Asia Minor. When the appeal came over 15,000 Cypriots enrolled at the Greek Consulate, but the "foreign influence" prevented them. A relative question was put in the House of Commons by the Rt. Hon. T. P. O'Connor. Surely, if we are not Greeks, we must doubt the Greek quality of Pericles, Constantine Paleologos and of Venizelos.

Allow me, Sir, to extend my letter to a few lines more, and, if I am abusing of your kindness, look rather at my motive and forgive me. I have been one of the most sincere and honest friends of the British Nation and I am a true admirer of your country. At critical times I was one of the strong advocates of the British cause through the Athenian Press. The Greek Government, in appreciation of my services, appointed me a member of the Greek Delegation. This appointment I refused and I declared that my mission was elsewhere. As a friend and admirer of the British Nation, I believe that Great Britain is committing a grave political mistake in withholding by force liberty from a Greek people worthy of receiving it. Your Great Empire is not based upon that Imperialism which brought Rome's downfall, but upon a federation of interests (which we recognise to be the Greek interests) based upon those moral precepts which have brought Great Britain to her modern grandeur.

M. Venizelos immediately after the signing of the Treaty of Sèvres, in the same Chamber told me: "Keep calm, since the Union of Cyprus with Greece may be considered a fact; England may maintain ports, aerodromes or *places d'armes*; or anything else that she may require in Cyprus."

Here is a basis of settlement. If you will continue to be persuaded by those who ignore the bases of England's grandeur, and retain Cyprus, you will be injuring the prestige of your glorious Empire.

Macaulay said about Ireland in that superb Introduction to his History of England, "Ireland, cursed by the domination of race after race and of religion over religion, remained indeed a member of the Empire, but a withered and distorted member adding no strength to the body politic and reproachfully pointed at by all, who feared or envied the greatness of England."

Why then, without the slightest reason, should you be creating a second Ireland in the East?—I am, etc.,
Limassol, July 20. DR. NIC. KL. LANITIS.

CYPRUS AND GREAT BRITAIN.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In your issue of June 23, you published a letter from Dr. Nic. Kl. Lanitis, about the Greek Christians of Cyprus, which seems to me rather like the ravings of Don Quixote after his decisive defeat by the Knight of the White Moon, holding his spear at Don Quixote's throat.

The fact is that every point of the Cyprus question had been almost exhaustively discussed in the columns of THE NEAR EAST and other English newspapers during the years 1919-20, and it had been decisively and most clearly proved that the Greek Christians of Cyprus are not Greek by origin and descent, that their language is not the language of Homer, but "only a dialect of the ordinary commercial language of the Eastern Mediter-

anean which has gradually superseded the Italian," that Cyprus had never been a Hellenic Island, that the permanent retention of Cyprus by Great Britain is most just, honourable, necessary and a sacred moral obligation, that it can never be just or reasonable to allow a plebiscite in Cyprus about the political status of the Island.

The solution of the Cyprus question, in October, 1920, rises up as an everlasting monument of Justice. Because the British Government had allowed the best opportunity and hearing to those who wrongfully desired the annexation of Cyprus to Greece, and after most conscientiously scrutinizing and carefully weighing all the facts and arguments put forward by those who desire the permanent retention of Cyprus by Great Britain and by those who demanded the annexation of the Island to Greece, they decided to retain the Island. Therefore, to respect, nay, to applaud this decision of the British Government, is the duty of every civilized and righteous person.

The few statements put forward by Dr. Nic. Kl. Lanitis in his letter, have no weight and no value at all after the facts published in *THE NEAR EAST* of May 2, 9, July 11, and August 22, 1919 over the signature of Colonel Yate, of "Cypriot," and of myself. No sensible friend of argument would try to forget these irrefutable facts and arguments so soon.—I am, etc.,

Nicosia. July 23.

M. NEJMI BODAMIALISADE.

THE TURKISH MENTAL ATTITUDE.

Few subjects since the Great War have occupied so much attention as the growing Westernisation of Eastern peoples. But even yet there prevails considerable ignorance about this matter. Much light, however, was thrown upon it by the publication, last year in Constantinople, of "The Book of Mustapha Kemal," by Abel Adam. The *Moslem World* of July has performed a service in providing for Western readers a summary of this important book, and we are happy to take extracts from the missionary quarterly.

The author of this book is amazingly frank. He begins by saying:—"The mentality of Europe is the mentality of this world; while we live in this world, we act by it. The mentality of Asia is the mentality of the next world; in the next world we shall act by it." That is the key-note of the whole work, the necessity of casting off the slough of the immemorial East and of adopting Western modes.

The nations who live at the present time are all to the West of us, whereas the East represents a series of nations whose rights to live have not been recognised.

It is the West that represents the happiest life, the strongest State organisation and the truest human life.

America was humanised through the science of the West. Japan was modernised with the mentality of the West. The Balkan States learned this art and accepted all its points and go ahead of us. It is clear that this art has been tested and found true.

After this wholehearted acceptance of the superiority of the West, the author explains why, in his opinion, the Asiatic mental attitude is impracticable.

The Asiatic people have never been saved from poverty and misery by the habit of deducting judgments from the divine laws. One cannot see anything else in the history of Egypt, India, Persia, Ancient Japan, China, Turan, and Arabia. These people, by sheer ignorance, have ascribed to sultans, or other opportunists, sometimes a divinity, or the authority of a revelation, and this mentality has been the chief cause of the misery of all Asiatic nations.

For the religions of the East, Abel Adam has little use.

Religions in the history of Asia are nothing else but reactionary movements of the jealousy of new prophets for each other. In essence they are all the same. The teachings of Buddha, Confucius, Brahma, Moses, Jesus, and Muhammad are all the same; they differ only in details. . . . This is the truth in the history of Asiatic peoples. Asia has been dominated by this mentality and it has no capability of itself to change this mentality. Salvation can be secured only by the vaccine of European mentality. This is the secret of the amazing progress of Japan within the last half century in contrast with China.

Abel Adam concludes his survey with postulating the bases of the European civilisation, foundations which must, he says, also be applied to the Turkish Revolution. These are:—(1) *The rights of man*, (2) *national culture*, and (3) *national economy*. On this last point he writes:—

Christianity has followed the principle of producing only as much as needed for consumption. The present economy is just the contrary. It is not based on the principle of producing as much as consumed, but consuming as much as produced. This difference is great. It increases production and gives to it variety.

Finally:—

European civilisation is this organisation. . . . It is not important for us to know whether it is civilised or barbaric. Human life is such at the present time. The duty of Turkey is to enter this family, and to establish equally Turkish rights, Turkish culture, Turkish economy based on mining crafts. Life is logical and tragic, but it is plain.

If this book is a correct representation of the ideas actuating the Ghazi and his co-adjutors—and it is reasonable to suppose that it is—students of the East will have obtained a clearer insight into the potentialities of the direction of "peaceful revolutions" in countries farther East than Turkey.

An Italo-Hungarian Convention providing for the formation of a Free Zone at Fiume for the benefit of Hungary was signed in Rome on July 26.

The Greek Archaeological Society will soon begin excavations in the island of Leucas or Santa Maura. These excavations, says *The Times*, will have peculiar interest in view of Professor Dörpfeld's well-known theory that Leucas, and not the small adjacent modern island of Ithaca, was the Homeric Ithaca, the kingdom of Odysseus.

Deaths from cholera at Abadan, at the head of the Persian Gulf, were, according to *The Times*, last week averaging 12 a day. It is reported that the position is rendered more difficult in that the Anglo-Persian Oil Company's medical staff has no official jurisdiction over the native quarters.

The Greek Ministry of Education states that the ante-chamber of the Mycenaean tomb discovered some time ago at Medea by Swedish archaeologists has been found to contain a variety of articles, including bronze swords, decorated vases, mirrors (one with an ivory handle), and tripods (one 3 ft. high, built on the hearth).

The King of Bulgaria, travelling incognito as Count Rilski with his sister Princess Eudoxia, and attended only by two aides-de-camp and his Private Secretary, M. Hanjicoff, left Sofia last week to spend some time in various Swiss resorts before going on to France, Great Britain, and Italy, where His Majesty hopes to have some political conversations. Before leaving Sofia the King entrusted the exercise of certain powers during his absence to the Cabinet in conformity with the Constitution.

ON TREK IN ALBANIA.

"TWO VAGABONDS IN ALBANIA." By Jan and Cora Gordon. (London: The Bodley Head. 12s. 6d.)

Those who have already read a "Gordon" book will know what to expect in the authors' elucidation of Albanian life and customs, and will not be disappointed. These inimitable artist-writers have a knack of getting down to bed-rock; every page is informative, and the people whom they describe, whether by sketch or by the written word, more often by both, are made very real. It is impossible, even for one who has never been there, not to feel after reading this book that he has much more than a nodding acquaintance with Albania. He will have—almost in reality—trekked and climbed, fasted and feasted, and shared the authors' perils and pains with ponies and motors; he will have been with them in numerous towns and villages, on mountain tops and in market places. That is the peculiar gift which Mr. and Mrs. Gordon have of bringing home to the reader their own experiences. They are leisurely "Vagabonds," conscientious enough to struggle with the language before they reach the country and thorough enough to give themselves plenty of time when moving about it. From their stories and descriptions it is possible to learn more about Albania and the Albanians than many a more serious and more erudite work would teach. We are given a vivid insight into Albanian justice, Albanian administration, the vendetta system, the returned emigrant, the psychology of the people and all those hundred and one aspects of existence in the country which tend to make the problem of Albania so complex and complicated. Even the rare excursion into high politics bears the masterly touch. The authors are approached by "a small anxious-looking little man," who in bad American pours out his woe at not having had an answer to his letter to the "Manager, Pershun Oil," offering his services. Here is the footnote:

This conversation is more important than it seems on the surface. The whole of Albania's future is gambled on the finding of oil in the Malakstra. Every evil is to be cured with oil, loans raised and already spent are to be liquidated with oil, the cost of Government is to be paid by the oil, the unemployment problem will be solved by the oil, above all, palms oiled, and so on. The trouble is that at the moment of writing the oil hasn't been found, and never may be.

The temptation to quote from "Two Vagabonds in Albania" is strong, but must be resisted, and we will

content ourselves by recommending everyone who has never felt any interest in Albania before to study the Gordons' picture "of a half-Oriental, half-Western community trying to make a State of itself."

FIVE DETECTIVE STORIES.

"THE JURY." By Eden Philpotts. (London: Hutchinson. 7s. 6d.)

"BIG FOOT." By Edgar Wallace. (London: Long. 7s. 6d.)

"CRUSADER RING." By John How. (London: Melrose. 7s. 6d.)

"MYSTERY OF THE ASHES." By Anthony Wynne. (London: Hutchinson. 7s. 6d.)

"THE CRIME." By Anthony Lang. (London: Melrose. 7s. 6d.)

Mr. Philpotts has written a story of crime from a new point of view. His novel is not exactly a detective story, because the solution of the mystery of St. Philip Heron's murder is of far less importance than is the clash of temperament between the members of the jury, and their conscientious efforts to return a just verdict. The greater part of the book consists of an account of their conference when they have retired to consider the verdict. Mr. Bowlby, Mayor and Auctioneer, who is Foreman, sets out the main points of the evidence which indicate that Lady Heron is the murderess, and soon everyone is ready to return a verdict of "Guilty," except Mrs. Bartlett. At last she gives way, worn out by arguments and persuasion, and convinced that in any case it must happen "as the Lord wills." How her belief is justified is shown in the last chapter. The circumstances in which he has placed his nine men and three women give Mr. Philpotts an excellent opportunity for showing his skill and shrewdness in sketching in character.

"Big Foot" is a very good Edgar Wallace. Sooper—otherwise Superintendent Minter—is delightful. We feel that his poses and eccentricities are really those of a man with a touch of genius for his profession.

"Crusader Ring" belongs to the type of detective story in which light-hearted youth overcomes a powerful gang with a sinister leader. Tuffy and his friend Bunny are most satisfactorily reckless, yet cool in moments of crisis, and there are two nice girls.

"Mystery of the Ashes" has an ingenious and complicated plot. The situations become more blood-curdling as the story goes on. Dr. Hailey, the detective, has to show courage in gruesome situations as well as skill in finding clues.

Mr. Lang has a good title, an interesting mystery, and the correct method, but not the knack of making his characters live. We hope that an author who has so much the right feeling for detective fiction will get over this difficulty. J. B. Ainslie.

It is reported that it is M. Venizelos' intention to pay a brief visit to Salonika and Athens in September.

The Principal and 30 students from Wycliffe Hall, Oxford, who arrived in Jerusalem on July 27, are being housed in the English College during their stay, and will pursue their ordinary studies, supplemented by lectures from the scriptural and historical experts now living in Jerusalem.

The Court of St. James' changed to half mourning on July 27 for the King of Roumania.

The Right Hon. Sir Alfred Mond, M.P., and Lady Mond left London last week for Paris.

Princess Hassan, daughter of the Egyptian Minister in London, is staying at Claridge's Hotel.

Sir Edward and Lady Manville left London at the end of last week for the Grand Hotel, Harrogate.

The Rani of Pudukota, who returned last week to London from Scotland, left on July 28 for Baden-Baden.

The King of Egypt visited the Stock Exchange on July 25 and was received by the Chairman and the senior manager of the committee.

Major-General Lord Edward Gleichen last week joined Lady Edward Gleichen at Court-in-Holmes, Forest Row, after a short visit to London.

Lady Donald and Sir Alexander Muddiman were among the passengers from Bombay in the P. and O. s.s. Malwa, which arrived on July 29 at Marseilles.

Sir Chimanlal H. Setalvad, Vice-Chancellor of the University of Bombay, and some time President of the Central Parliament of India, arrived in London on July 24.

Atta Beg Amin, Secretary of the Iraq Diplomatic Agency in London, has been appointed Law Draftsman in the Ministry of Justice, Baghdad. He is leaving England for Iraq this week.

Field-Marshal Lord Plumer, High Commissioner in Palestine, accompanied by Lady Plumer and his Secretary, Captain Drummond, left London on July 29 on his return to Palestine, where he expects to arrive on August 11.

King Fuad arrived in Paris on July 26. He was welcomed at the Gare du Nord by M. Becq de Fouquières, Director of Diplomatic Ceremonial, Lord Crewe, the British Ambassador, the Egyptian Prime Minister, and by members of the Egyptian colony in Paris. On landing at Calais earlier in the afternoon the King of Egypt had been greeted by the Prefect of the Department and the Mayor. King Fuad, after spending a week in Paris, left on August 1 for Rome, attended by his Prime Minister, Abdel Khalek Pasha Sarwat, and his son-in-law and Minister in Paris, Mahmud Pasha Fakhry.

Sarwat Pasha, the Egyptian Prime Minister, gave a dinner at Claridge's on July 25. Those present included: Mr. Reginald McKenna, Viscount Inchcape, Sir Eric Geddes, Sir Arthur Shirley Benn, Mr. P. J. Hannon, Sir Philip Dawson, Sir George Armstrong, Sir Thomas Calender, Sir Edmund Wyldbore-Smith, M. Zarvasy, Sir Murdoch Macdonald, Mr. P. J. Pybus, Sir Hugo Hirst, Mr. Cornish, Colonel V. Gray, Mr. Osmond Walrond, Major Ward Humphreys, Mr. F. W. Rickett, Mr. R. A. Furness, Mr. G. C. Delany, members of the suite of the King of Egypt, the Egyptian Minister, and other Egyptian guests. The following day he entertained at luncheon at Claridge's Hotel Sir Austen Chamberlain, the Marquess of Salisbury, the Earl of Cromer, Lord Eustace Percy, Field-Marshal Viscount Allenby, Lord Lloyd, Mr. Chamberlain, Mr. G. Locker-Lampson, Mr. A. M. Samuel, Sir John Maffey, Sir Cecil Hurst, Sir Malcolm McIlwraith, Sir William Brunyate, Sir Victor Wellesley, Sir Bertram

Hornsby, Sir Hubert Montgomery, Sir John Gregory, Mr. W. H. M. Selby, Mr. John Murray, Mr. H. L. Thomas, Mr. C. M. Patrick, Mr. A. T. H. Wiggins, Captain J. R. Aird, Dr. Hafex Affifi Bey, Ahmed Aboud Bey, and Sesostri Sidarouss Bey (Counsellor of the Egyptian Legation), and other members of the Legation.

NEWS IN BRIEF.

Ibn Saoud, King of the Wahhabis, has given £500 to the Palestine Earthquake Relief Fund.

Mr. W. F. Sinclair, District Commandant of Police in Haifa, Palestine, died on July 29 after six days' illness.

A portrait of the Amir Abdullah will appear on some permanent postage stamps which are to be issued in Transjordan under the new Constitution, in place of the present provisional overprints.

The Roumanian Government is reported to have agreed to the resumption of telephonic communications between Sofia and Bucharest, which have been interrupted since the War.

As a result of a fire which broke out in the refugee settlement in the Kephissia Road, Athens, on July 28, 300 wooden houses and numerous small shops and cafés were completely destroyed.

M. Miltchitch has been appointed Yugoslav Chargé d'Affaires in Albania, instead of M. Sakovitch, and leaves for Tirana to-day (August 4) simultaneously with the return to Belgrade of the former Secretary of the Albanian Legation, Dr. Shtylla.

King Faisal of Iraq has appointed two more Shiahs as Ministers in the Baghdad Cabinet:—Haji Abdul Muhsin Chalabi as Shallash, who was a member of Jaafar Pasha's Cabinet from November, 1923, to August, 1924, and Shaikh Salman al Barak.

The Egyptian Ministry of Finance has approved the appointment of ten additional technical officials to the bureau formed to report on the practicability of heightening the Aswan Dam as an alternative scheme to building the Gebel Aulia barrage in the Sudan.

The London-Angora express was inaugurated on August 2. The journey takes four days, and involves transshipment at the Bosphorus. The passage between the two termini at Stamboul and Haidar Pasha is made by ferry.

During July 24 and 25 the seismograph in Belgrade recorded a series of slight earthquake shocks, which were also felt in the city. The epicentre was the Rudnik district, 50 miles south of Belgrade.

According to a Basra message the Persian employees of the oil refineries at Abadan, at the head of the Persian Gulf, on July 30 smashed a medical car in protest against the interference of the Anglo-Persian Oil Company's European medical staff in the present serious cholera outbreak in the native settlement.

The £1,000 which the King of Egypt handed to the Lord Mayor when he visited the City of London on July 5, for the poor of London, has been distributed as follows:—£65 each to the mayors of 13 of the poorest London boroughs, £100 to the Invalid Children's Aid Association, £20 to Mr. F. N. Charrington, of the Great Assembly Hall, Mile End, and £10 to the Friends of the Poor, leaving £25 for special cases of distress.

Passengers by Imperial Airways arriving in Egypt from Basra are required to undergo five days' quarantine at the aerodrome at Heliopolis, owing to the outbreak of cholera at Basra. This is the first time the quarantine station has been used since the inauguration of the Imperial Airway services between Egypt and Iraq.

THE RESERVE BANK BILL.

New light is thrown upon the somewhat cryptic telegraphic reports of the proceedings at the Calcutta session of the Joint Select Committee on the Reserve Bank of India Bill if a rumour mentioned in a leading Calcutta commercial weekly is correct. According to the writer of the money article in a recent issue of *Capital*, who is usually well informed on such matters, Sir Basil Blackett is meeting his critics half-way. "The Reserve Bank of India Bill, it is rumoured," the article proceeds, "is being redrafted, and when submitted to the Calcutta Session of the Select Committee, will be found to embody a scheme for a State bank, without share capital, under the management of a board of fifteen governors, comprising certain members, including the managing governor, nominated by the Governor-General, others representing the Chambers of Commerce, and other again representing the exchange, Indian joint-stock and co-operative banks, respectively. No provision has been made, the gossips assert, for direct representation of the Central Legislature, nor could such a proposal be pressed to its logical conclusion without wrecking the entire scheme. Nor is it likely that this dangerous fad will be insisted upon by the Select Committee, subject to a Board of Governors thoroughly representative of the economic interests of the country being secured, without the intrusion of share capital." Later messages from Calcutta, where the Select Committee resumed consideration of the measure on July 18, referred, it will be recalled, to an alleged "threat" by the Finance Member that "he would revive the Assembly scheme for a shareholders' bank, in view of the Committee's rejection of the Government scheme concerning the directorate." As there were no suggestions, on the part of either the Currency Commission or the Government of India, that the new institution should have no share capital until the Select Committee decided, by a majority, at its first meeting in Bombay in favour of such a course, the reference to the "revival of the Assembly scheme" hinted at a modification of the Government's attitude, of which no indication had been forthcoming in previous messages. In the face of the Finance Members' unequivocal assertion, on the occasion of the earlier decision, that a Reserve Bank constituted generally on the lines of the Currency Commission's recommendations must be regarded as the fundamental principle of the whole scheme of currency reform propounded in the report, and adopted by the Government, the course of subsequent developments is somewhat difficult to follow. The interval of six weeks which has elapsed since the adjournment of the Bombay Session has, however, afforded the authorities ample time for consultation with the Home Government and the present concessions, if the reports to that effect prove to be correct, are no doubt the outcome of the joint deliberations.

In this connexion it is interesting to recall that the Joint Committee's decision to amend the Bill in such a way as to make the proposed new institution a purely State concern was apparently also unpremeditated. It was known

that objection was taken in some quarters to the precise proposal in the Bill—namely, that an option to take up 30 per cent. of the share capital should be given to the Imperial Bank of India and the remaining 70 per cent. be offered for public subscription. Various critics suggested that a definite option to subscribe some portion ought to be given to other banks as well. The view was also put forward that commercial banking interests, both indigenous and external, should have permanent representation on the Board of the Reserve Bank. No guidance was forthcoming on either point from the Currency Commission's report, for the Commissioners evidently considered it a foregone conclusion that, if there was to be a Reserve Bank at all, its shares should be held by the public, as is the case with the great majority of modern central banks of issue. In their report, indeed, they did not even think it necessary to set forth and compare the arguments for and against an entirely State institution. When the evidence was being taken in India, it was assumed by most witnesses that the choice lay between retention of the note issue by a Government department and its transfer to the Imperial Bank of India, the constitution of the latter being transformed to any necessary extent into the semblance of a true central bank. After the publication and circulation of the Bill various "opinions" were communicated to the authorities, but so far as they were published they were mainly directed to improvements in detail. One body, claiming to represent the views of the principal Indian merchants and industrialists of Calcutta, it is true, did advance the suggestion that the new bank should be a State institution, with no public shareholding. But the best argument which it could bring forward was an analogy with the Commonwealth Bank of Australia, which—as is well known—cannot be regarded as a type of the central bank, in the ordinarily accepted sense. Apparently the Government of India has now acquiesced in the Joint Committee's decision that, in existing Indian conditions, a State bank, without share capital, is to be preferred to a joint-stock undertaking, however carefully safeguarded such an institution might be against subordination to sectional interests. The finality of the decision, however, clearly turns on the ability of the authors of the new scheme to devise a form of management acceptable equally to the executive and the legislature. By mutual consent the Joint Committee deferred further consideration of alternative methods of control and management—for even the victorious majority were themselves divided upon what was obviously the crucial test of their proposal—until the recent session at Calcutta.

Although, as we have said, the idea of a State bank finds no place in the Currency Commission's report, the arguments which that body adduced in favour of entrusting the management of the currency, and the consequent control of credit, to a central bank of the recognised type, rather than to a Government authority, are equally cogent against the new scheme. In particular Sir Basil Blackett stressed the difficulty of constituting a sufficiently independent board of management without shareholders or

the improbability of agreement being reached as to the proper electorate for the selection of its personnel. The creation of share capital is a convenient device for securing a directorate in close touch with commercial and financial interests, while still preserving intact that freedom from political influence and official interference which is so essential to the proper discharge of its responsibilities. That the Government's fears have proved only too well-founded is sufficiently indicated by the reported further amendment of the Bill in such a way as to secure in all circumstances an Indian majority on the board, and the annulment of the clause which expressly disqualified members of either the central or provincial legislatures from becoming directors. It was apparently the two latter decisions which evoked the threat by Sir Basil Blackett to which we have already referred. Fortunately there is still time for wiser counsels to prevail before the members of the Joint Committee reassemble at Simla.

CURRENT TOPICS.

A New Departure.

There is stated to be no precedent for the announcement that Sir Laming Worthington-Evans, Secretary of State for War, is leaving London in the autumn for a three months' tour of India. The purpose of his visit, which will be of an official character, is to inspect the British units stationed in the North-West Frontier, so that he may acquire personal knowledge of the conditions of military service in India. There is, it may be presumed, no connexion between the new departure, which is warmly to be commended, and the news by mail from Simla that the indefatigable Mr. K. L. Neogy and nine other members of the Legislative Assembly have notified their intention of moving two resolutions at the forthcoming session, which opens on August 18. The first one calls for the reorganisation of the Army Headquarters administration in India and the other for the appointment of a committee of the Central Legislature to inquire into the present frontier policy on the North-West Frontier in its political and financial bearings, and to make recommendations. The Indian North-West Frontier problem, which thus once again comes into prominence, is made up of a number of problems which, though they are frequently detached from each other and studied in isolation by journalist and critics alike, are really inextricable, or, more accurately, merely different aspects of the same question. The four subsidiary problems are—the international relations between India and Afghanistan; the military defence of the Frontier; the "political" problem, that is, the problem of the control of the border tribes by the Indian Government and the question of their relations with Simla and kindred tribes in the adjoining parts of British India; and, the civil administration of the North-West Frontier Province. Even the word "Frontier" itself used in this connexion has different meanings for different persons. There is the administrative border, i.e., the border between the five districts of the Frontier Province and Tribal Territory, and there is also the Durand Line, which is the border between India and Afghanistan.

The Indian Floods.

Although it is still impossible accurately to estimate the amount of damage to life and property caused by the floods in Gujerat and Kathiawar, the latest official reports of the relief measures in hand are more reassuring. At the meeting of the Bombay Legislative Council last week the Government spokesman dealing with the position in the Presidency itself, explained that the Kaira district was isolated and no information was available, but the situation at Broach no longer gave cause for alarm. The damage to the crops, stated in the first instance to extend over more than fifty per cent. of the area under cotton, and to be irreparable, is now said to be not so serious as was at first reported. The stories of the panic-stricken inhabitants fleeing from Ahmedabad, where 15 inches of

rain fell in twenty-four hours are also denied, although it was significantly added that the river was still rising. Outside the Presidency the situation seems more serious. In the Baroda State the inundation of the capital and surrounding villages, and the extensive wash-outs on the Bombay, Baroda and Central India Railway appear to have been caused by the bursting of the banks of the lake from which the main water supply of the area is drawn. Without minimising the gravity of the situation in general officials with practical experience of similar occurrences recall that India is never so productive or prosperous as after a period of severe floods.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, July 14.

Sir Stanley Jackson's Week.

His Excellency the Governor of Bengal, an Army Gazette, states, has been appointed Honorary Colonel of the Northern Bengal Mounted Rifles. Since his return from Darjeeling, many interviews have been granted to Indian personages, mostly princes and leaders. The Hon. Lady Jackson received Cornelia Sorabji and other eminent Indian ladies. Their Excellencies lunched with the Stewards of the Tollygunge Club, and attended the races afterwards. The Governor has formally promised to open the Calcutta station of the Indian Broadcasting Co. in August.

But the "clou" has been the invitation of the Mayor, Mr. Sen Gupta, to His Excellency, to preside over a meeting of the citizens of Calcutta, with the object of providing funds for the rescue of minor girls from a life of degradation. The matter is above all controversy, declared the Mayor, in reply to the questions raised by such sudden co-operation. Though there were many bitter and prolonged dissensions between Lord Lytton and the party to which Mr. Sen Gupta belongs, the late Governor of Bengal, at the end of his career, took the first initiative in this useful work and the Mayor immediately responded, but the generous example of the protagonists left the public indifferent, and Lord Lytton was disappointed. Now, Sir Stanley Jackson might help in the fight against the iniquitous system. The Governor said: "The object provides a common platform for all who are actuated by a desire to remove a serious evil which exists in Calcutta. Such a desire is the prerogative of no particular religion or sect, or indeed of any one class of decent-minded men or women. It is an object with which everyone must feel sympathy, and if the law of the land prescribes powers for the removal of the girls from their vicious surroundings, and the police are operating under this law with vigour, on the other hand we must depend largely upon voluntary efforts to provide for assistance in securing the blessings of a decent and respectable life. It is suggested that more homes should be provided for the purpose, besides that established through the efforts of Sir Ewart Greaves, and that the funds raised should be allocated to any establishment certified as suitable for the reception and training of the girls. I shall watch with interest and sympathy the progress of this praiseworthy endeavour."

The Beggar Nuisance.

In reply to a Government of Bengal letter addressed to the Calcutta Corporation, regarding the decision of the Municipal body, in the matter of a home for the beggars (who have become a public nuisance and a menace to the health of the City), the Committee point out that the cost of providing and maintaining such an establishment should be met by Government, especially as most of the beggars are not Calcutta people. Finally, it has been suggested that the Corporation should pay one-third of the expenditure, the Government bearing the balance of the cost of construction of the proposed home, as well as of its maintenance. There will be two wards: one for curable and

the other for incurable, diseases. Well and good; but after they are cured the more valid ones should be provided with work, or sent back to their respective provinces, otherwise, the evil will be repeated; begging is a paying trade in Calcutta, and as long as it is considered as an honourable vocation, very little can be done to eradicate it altogether. The more charitable institutions, the more beggars.

Howrah Bridge Again.

The public seem to be considerably interested in the projects of a suitable connecting bridge between Calcutta and Howrah. Many letters and suggestions have appeared in the Press. It is not the wish of the Calcutta Port Commissioners to have a floating bridge erected, they say, neither do they recommend that type of bridge, but the funds allotted are not sufficient to allow the building of the much desired cantilever type of bridge. A prominent engineer has now come forward with estimates showing that, even with the scanty resources at the disposal of the Port Commissioners, a bridge can be made, with an opening span of the cantilever type, with piers, at a certain distance from the banks, and if placed in a manner to allow an 800 feet span in the centre, there would be no risk of endangering the banks lowered down the stream. Other engineers also think it possible. From the unnecessary delays, one gets the impression that the authorities are trying to move Calcutta until it yields the money that is necessary to make a bridge worthy of the second city of the Empire.

Agriculture in Bengal.

The agriculture problems of this country have been discussed *ad nauseam*. Fifteen volumes have been filled with reports of the possibilities and impossibilities of Indian Agriculture. But the root-cause of all the trouble has always been in what is called "the excessive fragmentation of agricultural holdings." And it is easy to understand that agricultural enterprise can pay, only if worked on a large scale, with adequate and up-to-date machinery. As long as individuals are expected to make the most of negligible plots, there will be no progress, in spite of agricultural classes and training of school boys in manual work and farming. The Bombay Government has shown the way to Bengal in making the first attempt at legislation directed against the evils of uneconomic land holdings. The Small Holdings Bill will include the prohibition of all future sub-divisions of land into plots of negligible superficies; it will ensure that all transfers of land shall be made in view of the consolidation of holdings instead of in the direction of an uneconomic fragmentation; an interesting part of the Act proposes to debar the owner of a plot, so fragmented that it is hardly worth cultivating, from disposing of that plot except if the transfer is made to the owner or occupant of a contiguous holding. This will help more than the library of evidence published by the Agricultural Commission.

The Statutory Commission.

Forward's special political correspondent states that neither Lord Reading nor Lord Sinha will head the Royal Commission. He also declares that all talks of Lord Ronaldshay heading it are "sheer kite-flying." Attempts to place Lord Ronaldshay as Chairman of the Commission seem to have failed. The name of the South African leader is on the lips of political gossipers. Everyone is watching the advent of the Statutory Commission with increasing eagerness. The issue is "the progressive realisation of responsible government in India as an integral part of the British Empire." This explains why Indians cannot wish for representation in this Commission, if they belong to the Extremist party. Moderates are honestly convinced of the necessity of maintaining India, in her own interest, with her present Imperial association, but on the other hand, Mr. Gandhi and the last orthodox non-co-operators are watching, and a mistake in the composition of the personnel of the coming Commission might give them an opportunity. All this calls for calm consideration, as Mr. Bipin Chandra Bal says.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, July 15.

Back from Simla.

The Bombay Millowners who organised the deputation to the Viceroy have returned from Simla after a brief but busy visit, and that they are optimistic as regards the outcome of their conversations with the Viceroy and other high officials up there, must be taken as a good sign. A very brief official communique gave very bare details regarding the actual audience the deputation had with Lord Irwin, in which it was made only too clear that it was not to form the basis for an official revision of the decisions reached on the Tariff Board's report—and that is all that the general public knows about the whole affair at present. Curiously enough, the members of the deputation are also just as reticent, so apparently they have been given some sort of undertaking providing they desist from arousing public opinion on the matter. That, at least, is the only logical supposition.

Sub-Division of Lands.

Sir Chunilal Mehta has made a courageous move in tabling an official Bill to prevent the sub-division of agricultural lands in the Presidency—a subject which was dealt with in this letter a short while ago. That this daring piece of economic legislation has caught the imagination is emphasised by the comment it has aroused in the up-country press. It is an all-India evil, but nowhere is it more apparent than in the Bombay Presidency. Thus committee after committee has examined the subject with a view to coming to some settlement of it; and now that a definite scheme has at last been put forward it is to be hoped that the opposition that it will undoubtedly raise in the Legislative Council will be overcome. The first part of the Bill provides for prohibiting all future sub-division of lands into holdings that will be uneconomic; while the second part provides for consolidation by regulating all future transfers of land and by setting up machinery to redistribute plots in such a way as to make all holdings economic.

Bombay Broadcasting.

By next month we are to have a regular service of broadcasting in Bombay, and tests of the transmission station have already commenced. These tests are being made with a view to ensuring that the apparatus at the studio at Apollo Bunder, and the transmitting station at Worli, is functioning perfectly the Viceroy formally inaugurates the service on July 23. So far very sketchy efforts have been tried out, but shortly a complete programme is to be transmitted. The wavelength of the Bombay station is 357 metres and the call sign 7BY.

Stock Exchange Panic.

It has become a regular habit for a panic to touch the Stock Exchange every now and then, but the latest one has been more justified than many of its predecessors. Tata Iron and Steel shares have been mainly involved, and the holders have been lucky if they have managed to unload their holdings and cut their losses. Before the publication of the annual report, a statement was issued by certain directors giving the profits and loss accounts of the firm and pointing out that there could be no dividend on the Ordinary or Deferred shares for some time to come. The panic followed immediately and the shares came down in leaps and bounds. It is understood that a move is on foot by certain brokers, headed by a leading firm, to pass a vote of censure on the Company's agents, and if possible to secure the removal of certain directors who are due to retire by rotation.

Sir Stanley Jackson, Governor of Bengal, is captaining a strong mixed European, Anglo-Indian, and Indian cricket team in a series of matches against local clubs of the rest of Bengal during the coming cold weather.

THE INDIANISATION OF THE INDIAN ARMY.

BY COLONEL G. M. ORR, C.B.E., D.S.O., p.s.c.
(Indian Army, retd.)

The Government of India, with the consent and blessing of the British Parliament, embarked in 1918 on a policy of Indianising the officer cadre of the Indian Army. It is quite probable that there is a general belief that the rate of progress of Indianisation depends simply on finding sufficient Indian youths to take up a military career, and on training them to be efficient leaders. The recent publication of the recommendations of the Indian Sandhurst Committee for acceleration of Indianisation and for the formation of a Sandhurst in India is the excuse for bringing to notice certain factors peculiar to India and to the organisation and composition of the Indian Army.

Although the organisation of Indian cavalry and infantry units is similar to that of British units, the system of command within the units is entirely different. Whereas in the British Army a subaltern passes through the command of a troop or platoon to that of a squadron or company, in the Indian Army a subaltern never commands a troop or platoon, but begins as a squadron or company officer, as an assistant to and deputy for his squadron or company commander. The troops and platoons are commanded by Indians who have risen from the ranks. They get commissions not from the King, but from the Viceroy. Although they rise through the grades of Jemadar and Risaldar or Subadar, they never command any unit higher than a troop or platoon. They also never command troops or platoons of men other than of their own class, caste or creed.

The cavalry and infantry of the Indian Army consists of 21 regiments of cavalry and 116 battalions of Pioneers and infantry, organised in regiments, each of 3, 4 or 5 battalions of similar composition, including a training battalion. There are in addition 10 regiments of Gurkhas, each of 2 battalions, but these are outside the scheme of Indianisation, because their men are not Indians, nor are they British subjects. With the exception of 17 battalions, each of the 21 cavalry regiments and 116 battalions have a class company composition. Nor are any of these regiments or battalions composed wholly of Hindus or wholly of Muhammadans. Thus each battalion of the 6th Rajputana Rifles has two companies of Rajputana Jats, one company of Rajputana Rajputs, and one company of Punjabi Mussalmans; each battalion of the 16th Punjab Regiment has one company of Sikhs, one of Dogras, one of Punjabi Mussalmans and one of Pathans.

It will be readily understood that no Indian youth with a King's commission can go through his regimental service without commanding at some time or other men of a different class, caste or creed. Here in lies the cause of the matter, and for this reason. It is necessary to emphasise that India is not a country holding one nation any more than does the Continent of Europe. Three hundred and twenty millions of people, speaking with some two hundred different tongues, having races in their midst showing clear lines of cleavage, peculiar features, and distinctive characteristics, these do not form a nation. The greatest cleavage of all is the irreconcilable antagonism between 217 million Hindus and 70 million Mussalmans. Even on the basis of a common religion there can be no nation of Hindus, for Hinduism teaches that there is no brotherhood and no equality. The strength of the religious prejudices of the followers of the two great religions of India is such as to be inconceivable to those who have not had first-hand experience of India. It is because Britons are free from such prejudices and communal jealousies that the natives of India are prepared to give them their confidence and have come to rely on their impartiality. It is because under the social system of India, particularly under Hinduism, strong personal pressure can be relentlessly applied to a co-religionist that a native of India mistrusts the impartiality of another native of India. So great an authority as Sir Reginald Craddock has lately said in the columns of *The Times*

that "it is only impartial British leaderships" which has kept the Indian Army together. And in no position must confidence and impartiality be found in greater degree than in the leadership of a squadron or company, if an army is to maintain its discipline. An Indian youth, trained as he may be in the British spirit of "playing the game," and personally free from prejudices of caste will find the forces of his environment too strong to resist. It is not only the writer who is convinced that from the moment when Indian King's commissioned officers begin to be in command of squadrons and companies, the Indian Army, first here and then there, will begin to lose its efficiency. For this reason it is believed that the pledge to Indianise the officer cadre of the Indian Army was to hazard an ill-advised experiment.

Enough has, perhaps, been said to show that the discipline and efficiency of the Indian Army will not rest merely on the quality of the future Indian King's commissioned officers. Certainly acceleration, and extension of Indianisation to arms of the service other than the cavalry and infantry, as recommended by the Indian Sandhurst Committee, must hasten a disintegration which it is believed, will inevitably follow any degree of Indianisation. The Committee's report has been published without any expression of opinion by the Government of India, but in a highly significant foreword they say that these essential conclusions "must necessarily take account of certain factors of which it was not within the province of the Committee to undertake a complete survey." It is perhaps, not generally understood what the extent of the responsibilities of the Cabinet and War Office are *vis-à-vis* the Government of India and the Indian Office. The army in India is under the control of what may be called a joint administration—the India Office in Whitehall and the Government of India in India. The control is, however, subject to certain conditions in matters affecting High Policy. Thus in any question affecting the Army Council's responsibility for the British units in India, the Secretary of State for India would consult the War Office and would then bring the question before the Cabinet for decision. For instance, the increase of Indian King's commissioned officers with all its implications of the power of command over British troops, methods of officering Indian units which may jeopardise the safety of British troops alongside whom they are serving, changes in the organisation and composition of Indian units—these are all matters which virtually concern the responsibility of the Army Council to the Cabinet, and of the Cabinet to the British people.

PARSEE ASSOCIATION.

Dinner to Sir M. M. Bhownaggee.

Sir Mancherjee M. Bhownaggee was on July 27 entertained at a banquet at the Hotel Cecil by the members of the Parsee Association of Europe, London, of which he is the president, in recognition of his services to the community during nearly four decades of residence in London. Sir Mancherjee, who is in his 76th year, was presented with his portrait in oils, a handsome piece of silver, and an address. Proposing the toast of the evening, Sir Dinshaw Petit, Bt., the chairman, recalled the fact that Sir Mancherjee was the second Indian to enter the British Parliament.

Earl Winterton, Under-Secretary for India, declared that during his Parliamentary career, covering an unbroken representation of one constituency for ten years, Sir Mancherjee was the friend of all and the enemy of none; not even of his political opponents. Speaking of the Parsee community, Lord Winterton said he knew of no community which in proportion to its numbers had such a remarkable record or could claim such remarkable achievements in commerce, industry, and finance, and above all in social and philanthropic advancement. Responding, Sir Mancherjee said that no one knew better than he that, while thankful for the security and prosperity enjoyed under the Pax Britannica, it had ever been the aspiration of the Parsee race to work hand in hand with Hindu and Muhammadan compatriots for the development and well-being of the common motherland. The Maharaja of Burdwan, Lord Lamington, Lord Sinha, and Sir Abbar Ali Baig also joined in the tribute to Sir Mancherjee.

Among those present were: Sir Jamsetjee Jejeebhoy, Sir D. J. and Lady Tata, Sir William and Lady Bull, Sir Atul Chatterjee (High Commissioner for India) and Lady Chatterjee, Mrs. J. N. Badhurjee, Lady Rustom Vakil, Lady D. M. Dalal, Lady Strangman, Sir Chemanlal Setalvad, Lady Manockji Dadabhai, and Mrs. H. N. Vakil.

INDIA IN PARLIAMENT.

By SIR FRANK NELSON, M.P.

The debate on Indian affairs which took place on July 8 attracted, as usual, only a very moderate attendance of members but those who did listen were rewarded by a truly admirable survey of the course of Indian administration, the delivery of which by Lord Winterton occupied an hour and a half. The record of progress he unfolded, the array of facts and figures which he marshalled in orderly precision and the note of frank candour which he sounded throughout, make this year's statement on Indian affairs a distinctly notable achievement.

The Oppositions made no sort of impression on the favourable effect created, and the incident which caused the debate to be adjourned in some disorder was the raising of a question which, from its method and substance, reflected no credit on the Party responsible.

To listen to the speeches from the Socialist benches, in fact, one would derive the impression that the topic of thought and conversation amongst all races in India at the present moment was the Statutory Commission. Col. Wedgwood said:—"The whole of India to-day—and when I speak of the whole of India, I mean the thinking people of India, is waiting as one man for the declaration of the Government of India on one point. They want to know whether the Statutory Commission is to be appointed; what that Statutory Commission is to be like; whether it is to be something from which hope can come, or whether it is to preserve things and relations as they are. They are waiting for that, and the people in England are waiting for that in order to see whether they can complete in India a bigger job than the Sukkur Barrage—the creation of a free people." This is a very representative example of Socialist oratory on the Indian Reforms, and only my great personal regard for Colonel Wedgwood persuades me to leave it without some very obvious comments.

I do not in the least desire to under-estimate the deep interest undoubtedly evinced in India in the composition of the Commission, in the date upon which it will commence its labours and the effect of its recommendations—but no good purpose is served by alluding to this in superlatives only.

It is a pity that the Indian Debate took place ten days or so before the cabled report of some proceedings in the Punjab Legislative Council reached this country—for it would have shown some of the Socialists here (whose sincerity and honesty of conviction I freely recognise) how dangerous it is to generalize.

I take the following extracts from a despatch from *The Times* Simla Correspondent which appeared in its issue of July 20:—"The problem of Communal animosity prevalent in the Punjab was the dominating topic of the debates at the ordinary Session of the Punjab Legislative Council. The general tenor of the unofficial speeches was a frank declaration that the trouble was the outcome of the embodiment of the democratic principle in the Reforms and a courageous admission of its profound gravity and of the wide reaction against the recent loud clamour for Indianization."

I commend also to the consideration of some of our Socialist critics the following passage in a report of a speech stated to have been made by Dr. Sir Mohamed Iqbal at the same Session of the Punjab Legislative Council:—"Certain posts which formerly went to British gentlemen now went to Indians or Moslems, but the Government had made a great mistake when it made that change, and he would welcome more British officers. The vogue of Nationalism has been on the lips of the people of this country for several years; it is like the cackle of the hen that lays no eggs."

Words are inadequate to portray the immense responsibility which is going to rest on the President and members of the Statutory Commission.

Their task is to advise His Majesty's Government as to whether the present degree of self-government in India should be extended, modified, or restricted; their

recommendations will affect—and fundamentally affect—over 300,000,000 of our Indian fellow-subjects: the great bulk of these are already divided in religion, between them they speak about 150 languages, and, despite a steady tale of progress under British rule about 70 per cent. are illiterate, and earn their living by or on the land. They are, therefore, dependent for a good or bad year on the amount of rain which falls between June and October; and, finally, a huge percentage care little and know less of the Reforms, and of those who have knowledge of the Government of India Act, 1919, some want extension, some modification, and others prefer to be left in *statu quo ante*.

Truly, a task beside which that of Sisyphus rolling his boulder up-hill dwindles into insignificance.

Whatever may be the finding grave dissatisfaction must inevitably be given to certain factions, and, therefore, is it necessary—for self-evident reasons—that all that is best in the sacrifice of public service should, if possible, be combined in the personnel of the Commission; time, money, convenience, health, peace of mind, all may quite possibly have to be sacrificed in this public duty, and what is perhaps the greatest sacrifice of all, the justification and commendation of their verdict may in the natural course of events be pronounced only by a generation coming after them.

Young or old, European or Indian, political or non-political, whether with or without previous knowledge of India and pre-conceived notions as to Indian policy—all these are minor details compared with the vital necessity of finding men—and perhaps a woman—who will be willing to place the interests of India above every other consideration for many months, perhaps years, and will thus be able to face this great responsibility.

I do not know the exact statutory position, but I can find nothing in the Act which would preclude a woman being given a place in the Commission, and there is certainly one very weighty reason why this might be eminently desirable.

The following extract from an Indian publication will explain my point of view, dealing as it does with the question of child-marriages:—"It is sapping the vitality of thousands of our promising boys and girls on whom the future of our society entirely rests. It is bringing into existence every year thousands of weaklings, both boys and girls, who are born of immature parents. It is a very fruitful source of the appalling child mortality and stillbirths now prevailing in our society. It is a very important cause of the gradual and steady decline of Hindu society in point of numbers, physical strength and courage and morality."—That is a quotation from an article which is quoted with approval by Mr. Gandhi, and I cannot but reiterate my opinion that a woman's counsels in this aspect of the future of the Indian race would be invaluable.

It is excellent news to hear that there is no truth in the rumour that was so prevalent a short time ago, that Sir Leslie Wilson contemplated retirement from Bombay.

Sir Abdul Qadir has been appointed to act as Revenue member of the Punjab Government, in succession to Sir Mian Fazl-i-Husain, during the latter's absence as a delegate in Geneva.

In reply to a question in the House of Commons on July 28, Earl Winterton (Under-Secretary of State for India) said that the views of His Majesty's Government on the Auxiliary and Territorial Forces Committee's report had been communicated to the Government of India. He added that he was obviously not in a position to give any indication of the Home Government's attitude towards the proposals until the Indian Government had had an opportunity of considering the matter.

In the House of Commons on July 28 Mr. Wellock asked the Under-Secretary of State for India whether, in view of the satisfaction created by the release of Mr. Subha Chandra Bose, H.M. Government could not see their way to advise the release of the other *détenus* under the Bengal Ordinance. Lord Winterton, replying in the negative, again reiterated that the Government are not prepared to interfere with the discretion in that matter of the responsible authorities in India, who were steadily pursuing a policy of release as and when conditions permit.

INDIAN MAIL.

A Paper Problem.

The inquiries now being made by the Indian Tariff Board into the demand for protection from the indigenous match industry recall to mind the anomalous situation which has lately arisen out of one of the Board's earlier reports on an allied trade—the paper industry. The Board's investigation having justified the hope that the manufacture of paper pulp and paper from bamboo could be successfully developed in India, the Bamboo Paper Industry (Protection) Act was passed in 1925, providing for the imposition, until March 31, 1932, of a protective duty of one anna per lb. on certain classes of printing and writing paper held to compete with the indigenous article. Effect was given to the measure by the addition of a new item—item 155—to the import tariff schedule in which the dutiable varieties were defined as "printing pulp (excluding chrome, marble, flint, poster and stereo), all sorts containing less than 65 per cent. of mechanical wood pulp." The intention of the Act was to exclude "news-print," defined for that purpose by the Tariff Board as "printing paper containing not less than 65 per cent. of mechanical wood pulp," from the protective duty and leave it under the revenue duty of 15 per cent. *ad valorem*.

Subsequently, however, it was represented to the Central Board of Revenue that item 155, as worded, excludes from the protective duty not only such paper but also paper containing no mechanical wood pulp at all. On a reference from the Board the Government of India have been forced to admit the accuracy of the contention and that consequently the protective duty does not apply to the class of imported paper with which paper manufactured in India particularly competes. To that extent, therefore, the Act has failed of its purpose. The Government of India accordingly propose to amend the Act at the forthcoming Session of the Indian Legislature, so as to make the protection of paper effective in accordance with the intention of the Legislature and to validate the past administration of the Act. The proposed amendment will make printing paper containing no mechanical wood pulp liable to the protective duty of one anna per lb., and will have retrospective effect from September 21, 1925, the date on which the Act became law.

The Art of the Films.

According to the *Times of India's* Simla Correspondent, the Government of India are considering the introduction at the forthcoming session of the Legislature of a motion for the appointment of a Committee to examine the question of the censorship of cinema films in India. In view of the frequency with which American and other foreign films are adversely criticised in India, the Government proposal seems eminently sensible and the Bombay paper, commenting editorially on the announcement, hopes that the Legislature, which has more than once discussed the question, will agree to the Committee being appointed. "In all this criticism, of American films in particular, it appears to us that there has been a great deal too much loose talk. The committee of inquiry would presumably be able to get definite examples of films to which objection has been taken and the reason for that objection, and it would be able to find out from the four boards of censors, in Bombay, Calcutta, Madras and Rangoon, the principles they have had in mind in applying the censorship. Our Simla Correspondent says that the main objection to American films is that 'they are generally subversive of the religion and morals of the people.' Our own experience is that objection to them is grounded on the fact that they exhibit European or American civilisation in a way calculated to lower it in the eyes of Indian observers. But it would be interesting to find out whether American residents in India find fault with films for that or any other reason. We can understand them objecting, for example, to the way in which Mr. Sinclair Lewis depicts life in America in his latest novel, 'Elmer Gantry'; but we do

not recollect that there has been any American antipathy to displaying American films in India. Of course the best ground for criticising American or any other films would have nothing whatever to do with morals but would be concerned only with the art of the films. But with that, we suppose, the Committee of Inquiry will have nothing to do. We, fortunately, have not got to the stage when Government decides for us what is and what is not bad art."

An Undesirable Practice.

Some years ago one of the commonest complaints against Indian cotton was that it was frequently watered at the time of pressing, and this matter was referred to in some detail in the report of the Indian Cotton Committee, 1919. Since that date there has been no very general complaint on this score until the present year, when the practice has been revived—especially in the Central Provinces and Berar. It is true that in many tracts the practice of damping cotton slightly at the time of pressing has never been discontinued, but it is over five years since the malpractice of wholesale watering, in such a manner as materially to increase the weight of the bales and seriously to reduce the value of the cotton, has been prevalent. In a leaflet recently issued on the subject of the effect of watering on cotton, the Indian Central Cotton Committee explain the harm done when the cotton is pressed wet. The Committee state that the scientific investigation, actual spinning tests and commercial experience all go to show that the watering of cotton is harmful, being definitely prejudicial to its keeping and spinning qualities. The microscopic study of the cotton fibre indicates that even slight damping is harmful and should be avoided. The Committee desire to bring these facts to general notice, for, if the intrinsic value of Indian cotton is reduced by faulty handling or by malpractices the inevitable result is a general economic loss to the country and also lower prices to the cotton grower.

OBITUARY.

MAJOR DENIS G. J. RYAN, D.S.O.

Major Denis George Jocelyn Ryan, D.S.O., of the 6th Gurkha Rifles, whose death from injuries received in a polo accident is reported from Abbottabad, was born in 1885, the son of the late Major C. A. Ryan, R.A., and Thomasine Caroline, daughter of Major-General George Shaw, C.B. He served in the Great War, was mentioned in dispatches six times, and received the D.S.O. and bar.

A funeral service for Brigadier-General R. E. H. Dyer, who died at Long Ashton, near Bristol, on July 23, after a long illness, was held at St. Martin-in-the-Fields on Thursday. The Bishop in Egypt and the Sudan officiated, assisted by the Rev. W. P. G. McCormick. The coffin was taken from Wellington Barracks on a gun-carriage to the church and was followed by a detachment of the 25th Battalion London Regiment, which served under General Dyer at Amritsar. The bearer party was composed of non-commissioned officers of the Irish Guards. In addition to near relations the large company present included:—Sir Charles Mules, Sir Bartle Frere, Colonel O'Connor, Sir John Campbell, Sir George Arthur, Mr. R. R. Millais (representing the Home Secretary), Sir Charles Oman, Sir Lionel and Lady Jacob, Major-General Sir W. Beynon, Lieutenant-General Sir Thomas Scott, Major-General Lionel Herbert, Sir Daniel Keymer, Brigadier-General d'A. C. Brownlow, Major-General Sir Richard Allason (representing the Royal Regiment of Artillery), Lieutenant-Colonel and Mrs. Gannon, Lieutenant-Colonel and Mrs. McIver Smith, Lieutenant-Colonel H. Worsley-Gough, and many others. Lieutenant-General Sir Michael O'Dwyer, who was Lieutenant-Governor of the Punjab when Brigadier-General Dyer was holding a military command there, was represented by Colonel H. Smith, who was with General Dyer at Amritsar. The cremation took place at Golders Green.

A resolution of the Government of India in the Commerce Department states that the appointment of the Indian Tariff Board has been extended for a further period of two years, with effect from July 5, 1927. Mr. P. P. Ginwala, who recently succeeded Sir George Rainey as President of the Board, on the latter's appointment as Commerce Member in the Governor-General's Executive Council, is at present in this country. The Board is engaged at the moment in inquiring into a demand for protection of the indigenous match industry.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

Yugoslavia's Debts to Britain.

For the last three weeks or more a Yugoslav mission has been in London, under the direction of M. Voyin Juritchitch, Manager of the State Mortgage Bank, for the purpose of concluding the long-drawn negotiations in regard to the settlement of Yugoslavia's War Debts to Great Britain and the payment of Serbia's pre-War debts to British creditors. There is reason to hope that on both matters a satisfactory settlement will be reached. The amount of the War indebtedness is in the neighbourhood of twenty-nine millions sterling; that of the pre-War debts is quite small, a matter of a few hundred thousand pounds. Great Britain's offer was to fund the War Debt on terms similar to those agreed upon in the analogous cases of Roumania, Portugal and Greece, and if the negotiations have been unduly prolonged it was owing to the desire of the Yugoslav mission, encouraged by the experience in similar circumstances in America, to explore all possible avenues of influencing the British Government to make special concessions. The delay in regard to the settlement of the pre-War debts has been the more regrettable, as the smallness of the amount involved tended to enhance the effect of the Serbian debtors' unwillingness to meet their obligations. An attempt was made in 1921 by the Yugoslav Government to settle the indebtedness on a purely arbitrary basis and when this proposal was rejected by British traders, the failure of the Yugoslav authorities to revise the question has undoubtedly reacted on Yugoslav credit in Great Britain. Some allowance has to be made for the uncertainties of the political situation in Yugoslavia during recent years; but there can be no doubt that the action of the Yugoslav representatives in London in pressing for a settlement of these pre-War debts has convinced the Yugoslav Government of the present urgency of the matter.

Sudan Trade Depression.

The figures of the trade of the Sudan for the first four months of this year bring out very clearly the effects of the economic depression in the country as reflected by the reduced purchasing power. The value of the total trade at £E4,798,078 shows an increase of £E70,608 on the figures for the corresponding period of 1926, which is satisfactory as far as it goes, but an examination of the various items which compose the list is not so encouraging. The only expansion was in exports, the value of which at £E2,749,816 showed an increase of £E273,013. The value of the imports, on the other hand, declined by £E165,657. Government imports totalling £E708,340 as against £E795,606, and public imports amounting to £E1,213,952 as against £E1,292,343. This decline in imports is, of course, only a passing phase, and the gradual development of cotton growing will ultimately revolutionise the country as a market. It may be mentioned here that one of the features of recent months at the Liverpool cotton market has been the remarkable and growing demand for Sudan Sakel. This cotton is now in great favour in Lancashire, and its encouraging reception should be a stimulus to the extension of its cultivation.

The Turkish Debt Settlement.

The settlement of the Turkish Debt, details of which will be found elsewhere in this issue, will be received with chastened satisfaction by the bondholders, while it is likely

to meet with more approval in Turkey, where, as has often been emphasised, the need for an agreement has been increasingly realised with a view to raising the country's credit abroad. The negotiations over the debt have been in progress off and on for roughly three years, dating, in fact, from the ratification of the Treaty of Lausanne, by which instrument the foreign debt of the old Turkey was divided between the new Turkey and what are known as the Succession States. The net result of the Treaty was the reduction of Turkey's foreign debt to half the sum at which it stood at the time of the Armistice, and the long-drawn-out negotiations have turned on Turkey's efforts to obtain concessions in regard to the interest and amortisation on this reduced debt. The settlement now achieved, which is subject to ratification by Angora and the bondholders, represents very considerable concessions. It had been suggested that Turkey's payments should begin with an annuity of £T2,000,000 gold, and that this amount should be raised gradually until in about 25 years the annuity would suffice to meet the debt service in full. Actually the first payment will be £T1,980,000, and this will continue in force until 1935, and by 1951 the annual payment will be £T3,400,000. As guarantees for the service the Turkish Government offers the Constantinople Customs and the revenues of certain ports. It is not to be assumed that there is likely to be any difficulty over the ratification of the settlement which can justly be regarded as a further and very definite step on the path of reconstruction in the Near East.

British Trade and the Balkans.

Writing last week on the advertising convention, I laid stress on the apathy that British traders as a whole display towards the Balkan markets. In another column in this issue will be found an article on the Liubliana Samples Fair by our Liubliana Correspondent, which provides an apt illustration of the lack of enterprise to which I have referred. While foreign manufacturers of motor cars pay special attention to the Yugoslav market and are invariably well represented at events like the Liubliana Samples Fair which offer a special opportunity of obtaining a good footing in the market, in the seven years that this Fair has been held a single British car has been exhibited. That is an illuminating instance of the way in which our manufacturers ignore the Balkan markets. Admittedly special cars are required for the difficult terrain en-

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.
A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

countered in the Balkans, but that is no excuse for the British trader, for we manufacture cars specially for the Dominions, and the cars which fully meet the conditions encountered there are equally suitable for the Balkans. Our motor cycle manufacturers, it is satisfactory to know, have long realised the scope that exists for trade in the Near East, and in Yugoslavia, to give only one instance, the British motor cycle ranks first. The great reputation that this product holds in the Near East and elsewhere is, of course, due to a very great extent to the numerous successes obtained in the various international competitions abroad. It is open to our motor car manufacturers to take the same means of bringing the merits of their goods prominently to the notice of potential customers. As I have said before, we cannot afford now to neglect any possible trade opening, and it has been proved beyond a shadow of doubt that the Balkans do offer a market for motor cars. It therefore behoves our manufacturers to see whether they cannot obtain the same measure of success there as their competitors.

Yugoslavia's Mercantile Marine.

Considerable developments in regard to Yugoslav's mercantile marine are foreshadowed in an article in a Belgrade contemporary. At the present time Yugoslavia's shipping amounts in all to not much more than 200,000 tons, most of the tonnage being in the hands of half a dozen companies. On the country's coast line there are many ports, but only six of them are of real importance, these being Split, Shibenik, Gruz, Kotor, Bakar, and Soudhak, and of these Split and Gruz have the bulk of the trade. For 1924 the tonnage of vessels calling at Split was 3,168,058, the figures for Gruz being 1,834,352, while Shibenik was third with 1,055,568. That there is room for great development is beyond doubt, but the expansion of Yugoslavia's sea-borne trade is dependent on the extension of communications with the Adriatic which are now in process of improvement. The particular development in view to which reference is made in the contemporary in question is the construction of shipbuilding yards of the modern type on the Adriatic, a question which it is stated is now under the consideration of the Yugoslav Ministry of Commerce. In addition to the repair of vessels the yards are to be designed to undertake the construction of small vessels and eventually of ships up to about 14,000 tons.

Economic Barriers to Trade.

In the course of his speech at the general meeting of Furness, Withy and Co., Sir Frederick Lewis touched on the important question of trade barriers in the Near East. Within the past few weeks he made a tour of the company's Danubian interests, during which, he remarked, he had the opportunity of seeing at first hand to some extent how irksome and wasteful these economic barriers are. The position with regard to the Danube is complicated by the fact that that river flows through seven countries, and the consequent restrictions on trade gravely militate against the utility that the Danube should have as a commercial channel. Admittedly the position is better than it was, and is improving, but it is still extremely unsatisfactory, and is likely to remain so as long as what may be termed a parochial view of their responsibilities is taken by some of the riverain States. The problem of trade barriers was considered by the recent International Economic Conference held at Geneva, from the report of which Sir Frederick Lewis quoted the following most apposite passage:—"Transport agents, whether they are concerned with transport by rail, maritime transport, transport by internal navigation, road transport or aerial transport, are merely the servants of trade. They do not create traffic and they are subject to the influence of the general economic situation rather than exercising an influence upon it. The prosperity of agriculture, industry and commerce alone is able, by providing traffic, to permit them to attain the full return on their undertakings and

puts them in a position to give, in return, the maximum of service. Similarly, the greater part of the hindrances from which transport is suffering do not originate in the transport system itself; on the contrary, transport is subject to the influences of formalities, delay or precautions of various sorts inspired by administrative, police, financial or political economic considerations, the extent and effects of which transport agents can only submit to without influencing them. The smaller the importance the authorities concerned consider it possible to attach to these considerations, the more will transport itself benefit. All that can be asked of transport agents is that their services, on all transport routes, shall be adequate for the needs of trade; shall be provided without prejudicial discrimination between different nationalities, and that their régime shall, as far as possible, not be such as to place any obstacle in the way of international trade, but shall, on the contrary, promote the free flow of traffic."

The Cotton Position.

While it is too early as yet to write with any certainty on the cotton outlook, it seems reasonably certain that the world production this year will be some way below last year's figures as a result of the reduction in the American crop. At the moment this crop is expected to be somewhat below 15,000,000 bales, and while a yield round about that total will no doubt prove amply sufficient for the existing world requirements, it will also in all probability result in a somewhat higher level of prices in the ensuing months, which, while unwelcome to Lancashire, will have an excellent effect in stimulating the cultivation of the American type of cotton in the Empire. One of the principal difficulties to be contended with in the development of this crop is that unduly low prices tend to make cultivators abandon the crop as unremunerative, and if some means could be found of stabilising prices at a level satisfactory both for the grower and the consumer the result on production would be excellent. That, however, is an ideal impossible of attainment, and the best that can be done in the circumstances is to lower costs by the development of transport and other facilities so that even if low prices obtain the crop will still be worth while from the point of view of the grower.

Rubber Restriction.

When on May 1 the percentage of the standard production of rubber was reduced to 60, it is safe to say that no one imagined that this low percentage would be maintained for two periods of six months. The factor which has upset all calculations is the quantity of unused licences and coupons which were accumulated when the percentage was 100, and as it is understood that these are now practically used up—in which connexion the recent reductions in the London stocks are not without significance—it may be taken for granted that henceforward it will be really possible to see the effects of the existing percentage. It is necessary, however, to utter a note of warning, for it may conceivably be anticipated that a steady reduction in the London stocks for a few more weeks will have a very appreciable effect on the price of the commodity. It may do so, but if that proves to be the case it will be in defiance of the statistics. At the present time the London stocks, and those in America and the East are roughly 90,000 tons more than they were in April, 1925, just before the sharp advance in prices took place. While it is possible that in three months time a considerable decline in that total may have taken place, it is not conceivable that the decrease will be sufficient statistically to justify a rapid rise. That is not to say that there will not be a marked change, for there is the psychological factor in these matters, and that is incalculable.

COMMENTATOR.

The 1927 crop of locust beans in Cyprus is estimated at from 50,000 to 55,000 tons.

AVIATION IN BULGARIA.

(From Our Sofia Correspondent.)

The Situation after the War.

Since the end of the Great War until quite recently aviation in Bulgaria has not shown any marked development. Military aviation does not exist, any more than civil aviation; all that there is is known under the name of State aviation, which, under the auspices of the Ministry of Communications, represents all the resources of the country, both in material and personnel, as far as the any air service is concerned. The reason for this state of affairs is to be found primarily in the conditions imposed by the Treaty of Neuilly on the subject of military aviation, and also in the absence of any national aircraft industry. The Treaty of Neuilly laid down that the military forces of Bulgaria should not include either military or naval aviation, and in accordance with its terms all air material existing in Bulgaria on the conclusion of hostilities was handed over to the Allied Powers or was destroyed, and the personnel of the Air Force was demobilised. The Bulgarian Government, however, and a small portion of the personnel of the former military flying corps was attached to the Ministry of Railways, Posts and Telegraphs.

This service had, especially at first, very little material at its disposal. Funds were very reduced and hardly sufficed for the upkeep of aerodromes, hangars and personnel and for the purchase of a few machines. These machines, nominally intended for the postal service of the Ministry, were used almost exclusively for the training of pilots. The main purchases were made in France, in 1922 and 1923 (Caudron and Hanriot aeroplanes) and in England (Bristol aeroplanes) and were confined to four or six models of each type. No regular postal service was introduced and the country still remains without one.

In recent years the Budgets have made provision for larger credits for aviation, with the result that the State service has been able to purchase more modern and powerful aeroplanes. Thus during the last six years the sums set aside for aviation have been:—1922-3, 5,693,000 leva; 1923-4, 9,468,000 leva; 1924-5, 23,243,000 leva; 1925-6, 77,849,000; 1926-7, 32,880,000 leva; 1927-8, 32,227,000 leva (in the last two years approximately £50,000). In 1926 a number of aeroplanes of the Potez IV type (similar to the French military reconnaissance biplanes of that make, but without their war equipment) were purchased, as well as several Czechoslovak machines for training purposes. In the meantime steps were taken for the construction of aeroplanes in Bulgaria at the Bojurishte factory. These are two-seater biplanes, with wooden frames and fitted with German engines (Mercedes and Benz) of 160 and 200 h.p., resembling in appearance certain old German types, such as the Albatros machine. Some twenty of these aeroplanes have been built, more than half of them for training purposes.

Air Legislation.

In the face of these developments—albeit on a small scale—but primarily with a view to placing future developments in regard to civil and State aviation on a sound basis a special Law was enacted, which was published in the *Journal Officiel* of July 23, 1925. This Law created an Air Department (*Direction de l'Aéronautique*) "to safeguard the aeronautical interests of the State, to organise, assist and control air services, to train their personnel and to create an aircraft industry." The functions of the different services subordinated to this Air Department were set out in full, special stress being laid on the technical service and the schools for instructing the personnel and training pilots. An aviation school has been established at Kazanlik where the navigating personnel receives a year's training. The Law also sets out the relations that are to exist between the Air Department and private enterprise. It stipulates that these private enterprises can be compelled to carry out postal services and that the State can participate financially in any such

enterprise or accord it a subsidy. Finally a clause of interest to foreign aircraft manufacturers provides that purchases of aeroplanes, accessories and various materials for State aviation purposes can be effected by special orders, without tenders.

Two Agreements.

It follows from this Law that the intention is not to reserve to the State a monopoly in regard to air services in Bulgaria and aircraft construction. On the contrary the State counts rather on private enterprise in both directions, provided that it retains a measure of control. In this spirit two important agreements have recently been concluded, one for the establishment of air services and the other for the creation in Bulgaria of a private factory for aircraft construction. Yet a third agreement has been made with a foreign company for the exploitation of the trans-Bulgarian section of the Paris-Constantinople air route.

The first of these agreements was made in February 1927, with the First Bulgarian National Aeronautical Company. "Bournavad"—as the company is styled for short—is accorded the exclusive right of exploiting the following air routes:—1. Vidin-Rustchuk-Varna (in connexion with the European line, Vienna-Budapest-Rustchuk-Constantinople). 2. Sofia-Rustchuk-Varna. Other routes as required may be allotted to the company. All air routes are to be used for the transport of passengers, postal matter and parcels. The agreement is for ten years and may be extended to fifteen. The company receives no subsidy from the State; its revenue is derived from the surcharges on postal matter, of which the State takes only ten per cent., and from the charges levied on the passengers and parcels. It is accorded, however, a loan of 1,000,000 leva, without interest, which is to be repaid at the end of the tenth year, and will use without payment the State's aerodromes and hangars. Whatever may be the financial results of this undertaking, there can be no doubt that it will materially aid the development of aviation in Bulgaria and will be most useful from a commercial point of view, if the services are carried out regularly. As between Sofia and Varna and between Sofia and Bourgas there will be a considerable saving of time as compared with the duration of the present railway

journey. The first service to be opened was that between Sofia and Varna, for which the first aeroplane for the purpose was received at Bojurishte on May 23. It is a single-engined monoplane (Junkers type), all metal, with accommodation for four passengers. The company, it may be mentioned, is obliged to keep always in Bulgaria a number of aeroplanes equal to a third of its total fleet and not to take them beyond the frontiers without special authority. This clause shows the anxiety of the Government to have continually at its ultimate disposal the largest possible number of aeroplanes.

The agreement for aircraft construction was concluded with the Czechoslovak firm, Aero-Prague, which is accorded for twenty-five years an exclusive concession for the manufacture in Bulgaria of aircraft. The workshops are to be installed within six months at Kazanlik on land given gratis by the Government. The latter undertakes to order half the number of aircraft required for its air services from the company, at a price allowing 15 per cent. profit on the cost price, inclusive of all overhead charges. The other half of the State's requirements in regard to aircraft will be purchased abroad or manufactured in its own factories. In these circumstances, having regard to the smallness of the funds available Bulgaria is not likely to be for some time an important purchaser of aircraft abroad.

The third agreement is with the French Compagnie Internationale de Navigation Aérienne, which has been responsible for the Paris-Belgrade-Bucharest-Constantinople air service. For some time there has been a talk of a new and more direct route between Belgrade and Constantinople, via Sofia. Trial trips have been made successfully, and after prolonged negotiations the Company obtained a concession for the line Dragoman-Sofia-Svilengrad, for a period of three years. It has the right to use gratis the aerodrome and hangers at Bojurishte, and the State undertakes to give it all air postal matter consigned to towns served by the Company outside Bulgaria. Of the surcharges on such postal matter two-thirds will go to the Company and one-third to the Bulgarian Government. This Company also undertakes to keep in Bulgaria one-third of the fleet used on the service and not to export the machines beyond the Bulgarian frontier without express authority. Moreover, it must use a Bulgarian personnel not only for its administrative and technical services, but also as pilots and mechanics. Thus a third of the flying personnel on the Belgrade-Sofia-Constantinople line will be of Bulgarian nationality. The service is to be opened as soon as the necessary arrangements have been made with the Turkish Government. It is not expected that at first the services between Sofia and Paris and *vice versa* will be very regular, especially as there will be no night flying, and the consequent saving of time over the railway journey will be small. For the stretches of more immediate interest to Bulgarians, i.e., between Sofia and Belgrade and between Sofia and Constantinople,

there will be on the other hand a very considerable saving of time. The latter service, for instance, will take four hours instead of twenty as at present.

TERMS OF TURKISH DEBT SETTLEMENT.

The Association Nationale des Porteurs Français de Valeurs Mobilières has issued the following statement giving details of the agreement which has been arrived at regarding the resumption of the Ottoman Debt loan service:—

The negotiations between the Turkish delegates charged with the financial settlement of the part of the Ottoman Public Debt falling to Turkey (roughly 67 per cent. of the whole) and the representatives of the German, English, Belgian, French, and Italian holders of the various Ottoman Loans have resulted in an agreement in principle, the chief points of which are as follows:—

The first payment of interest will take place before June 1, 1928. The Turkish Government will pay its portion of the Ottoman Public Debt in the following annuities:—From 1928 to 1935 £T1,980,000; 1935 to 1941 £T2,380,000; 1941 to 1946 £T2,780,000; 1946 to 1951 £T3,180,000; 1951 and onwards £T3,400,000.

The average percentage of the nominal interest on the long-term debt will be:—From 1928 to 1935 38 per cent.; 1935 to 1941 48 per cent.; 1941 to 1946 58 per cent.; 1946 to 1948 68 per cent.; 1948 to 1951 90 per cent.; 1951 and onwards 100 per cent.

It is foreseen that a differential percentage will be established in favour of the Unified Four per Cent. Debt which will receive at the beginning 48 per cent., whereas the other loans will receive 35 per cent.

The interest will be paid in the most appreciated currency, it being understood that the loans for which the most appreciated currency is the franc will receive 100 per cent. payments in francs.

The arrears for which the percentages will be the same as for the interest of the corresponding loans will be paid off within 30 years. Treasury Bills will be included in the plan of settlement and will be consolidated in a loan redeemable in 20 years.

As regards guarantees, the Turkish Government offers the product of the Constantinople Customs and of certain harbours; some questions remain to be settled.

The definite plan of settlement will be submitted to the ratification of the Grand National Assembly of Turkey, and in due course, to the acceptance of the bondholders.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Castalia for Bombay (Birkenhead, August 8). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Malancha for Calcutta (Birkenhead, August 11); s.s. Mandasor for Calcutta (Birkenhead, August 30).

Bibby Line.—S.s. Cheshire for Port Said, Colombo, and Rangoon (Birkenhead, August 10).

British India Line.—S.s. Tregonell for Bombay and Rangoon (London, August 6); s.s. Mulbera for Colombo, Madras, and Calcutta (London, August 13).

Cunard Line.—S.s. Phrygia for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool August 20, and Swansea August 23); s.s. Brescia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement (Liverpool, Glasgow and Swansea, August 27).

Johnston Line.—S.s. Jessmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 3).

P. and O. Line.—S.s. Mantua for Bombay (London, August 6); s.s. Nellore for Colombo, Madras, and Calcutta (London, August 6).

Prince Line.—S.s. Sicilian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, August 13); s.s. Italian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (London, August 30).

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, August 2.

The account which ended satisfactorily this week, though not giving rise to so much anxiety in Stock Exchange circles as its predecessor, was still overshadowed to some extent by the aftermath of the troubles which followed the death of Mr. James White, and members are glad to see the back of it. Nevertheless, taking all things into consideration the tone of markets is better than might have been anticipated at this season of the year when the holiday season is beginning. The tone of the gilt-edged market, indeed, has been noticeably firm, especially in view of the large volume of new capital issues. The home railway market, which slumped a little on the lower dividend declaration by the Metropolitan, picked up again and appears to be satisfied with the interim dividends declared yesterday and on Thursday, with the exception of that of the London and North Eastern. Argentine rails have been a bright spot, on dividend anticipations, and in the industrial section, which in the main has been dull, there have been one or two interesting movements. The rubber and oil markets, on the other hand, continue dull and neglected. In view of the circumstances, the general position can be described as satisfactory, and it now seems certain that there will be no serious developments as a result of the events of a month ago. But no material recovery in prices can be looked for during the next month, nor indeed until the full resumption of work after the holidays.

The Strength of India Stocks.

One of the outstanding features of the stock markets in the past few days has been the strength of India stocks. The buying is reported to be chiefly on account of India itself. This development is comparatively new and became noteworthy in the spring of last year following the publication of a satisfactory Budget. But a proportion at least of these purchases has since been sold, and it remains to be seen what will be the fate of the stock now being absorbed. The growth of the investing habit in India, however, will probably result in a continuance of Indian interest in sterling stocks in greater or less degree. This movement is naturally welcome to existing holders of

Indian stock, since it has been responsible for notable buoyancy in the prices of the securities. Indeed, the majority of the stocks are standing at levels at which they cannot be said to offer any conspicuous attraction for the new investor. At present, prices are very near the highest points touched this year. Thus the 3 per cent., which is redeemable at the option of the Government after 1948, returns no more than £4 18 per cent., and the 3½ per cent., redeemable at the option of the Government after 1948, yields £4 18s. 6d. per cent. A flat yield of only £4 17s. per cent. is obtainable on the 4½ per cent., which is repayable in 1955, or at the borrower's option in or after 1950.

Iron and Steel Companies' Prospects.

For an iron and steel company, in the short space of twelve months, to convert a debit balance of £96,072 into a surplus of £7,066, after payment, in the latter instance, of a full year's Preference dividend, is an achievement of no mean merit. The shareholders of the Bengal Iron Company, therefore, have every reason to be satisfied with the report for 1926-27 in which this reversal of fortunes is recorded, more especially as the past year has by no means been a good one for its trade. For 1924-25 the gross profit was £156,986; for the following period £34,193; and for 1926-27 £291,644. These figures indicate that the well established and soundly managed iron and steel concerns are capable of fairly rapid recovery from the recent depression once conditions become more favourable. For the average investor the main difficulty is to pick out those companies which have so conserved their resources as to enable them to take full advantage of any trade opportunities which occur. Among them may be noted the Coltness Iron Co., whose Ordinary shares, having received dividends of 10 per cent., 7½ per cent. and 10 per cent. respectively for the past three years now yield £5 10s. per cent. Guest Keen and Nettlefold's Ordinary shares yielding £5 6s. 6d. per cent. have been paid 10 per cent. for several years past. The Millon and Askam Hematite Co., has distributed no Ordinary dividends since 1920-21, but has always faithfully met its Preference obligations, while the Scottish Iron and Steel Co., which dropped out of the Ordinary dividend paying list last year, has also been able to pay its Preference shareholders their full dividends. Other enterprises worth noting for ultimate recovery include Swan, Hunter and Wigham Richardson, Vickers and Beyer, Peacock and Co.

Tobacco Shares.

During the week the prospectus of a tobacco company appeared and the issue was fully subscribed. It should not be inferred from this, however, that the investing public is extremely optimistic regarding the prospects of tobacco companies in general. The present prices of the majority of the leading shares are considerably below the highest ruling this year. Thus Imperials, though at one time £5 29-32, are now in the neighbourhood of £5 1-16. Carreras, which touched nearly £19, now stand at £16¼. The difference in the case of Godfrey Philips is even more conspicuous, the present figure of £3 comparing with a highest of £5½. Judging from the facts as they are known, it seems reasonable to assume that the tobacco companies will certainly not increase their profits during the current year. The increase in the tax on tobacco imposed by the last Budget is being largely shouldered by the companies and cannot fail to make an impression on profits. The smaller companies at least will find it exceedingly difficult to maintain the recent dividend distribution, but the larger companies have substantial reserves on which they can draw, should this be necessary. The shares of the British American Company, as might be expected in view of its international market, have not shown the same tendency as other shares; the current price being near the highest for the year. It is true that China is a disturbing element, but the chairman, at the last meeting, did not appear very concerned in this connection. The shares return £4 18s. per cent. free of income tax.

WILD COFFEE IN THE SUDAN.

The current issue of the monthly report of the Central Economic Board of the Sudan Government contains the following report on coffee in Opari District of Mongalla Province:—

The existence of wild coffee in a patch of dense forest near to the Acholi town of Obbo has been known for many years. The town lies, or rather lay, some 41 miles nearly due east of Opari, and was the residence of Aburri, the principal chief of the Acholi. At long intervals small quantities of the wild coffee were brought in to Opari for sale. In 1925 the collection of it was systematised. A bagful of money was taken out to the town and each person bringing in coffee was paid on the spot at the rate of two piastres the rotl. The news of this spread rapidly and between the winter of 1925 and the autumn of 1926 over 12,000 pounds weight were brought to Opari and sold under Government supervision to the local merchants.

About this time three of the Acholi chiefs and their clans were moved up into what are known as the Acholi Mountains, the reason for the move being the appearance of sleeping sickness. Two other Acholi chiefs (Odouro and Ongiro) had already settled there from time immemorial, so there were now five clans in the hills, all excited by the news that all coffee brought in would be paid for at what was to them a liberal rate. The result was the discovery of wild coffee in several others of the very dense forests which clothe the lower slopes of the hills and descend into the immense khors. Two of these coffee areas (Laboni and Katiri, the latter in Torit District) are very large, one is of medium size (Jama) while the other only holds a few scattered trees. This wild coffee is certainly the ancestor of all the *Coffea robusta* grown in Uganda.

It was decided to make an experiment to ascertain whether Uganda coffee would grow in the Acholi hills on a commercial scale and under normal coffee growing conditions. Fifty pounds of *Coffea robusta* seed were obtained from Kampala and in April 1926 seed beds were planted near eight Acholi villages. The seeds germinated exceedingly well, healthy seedlings appeared and were thinned out, and in April, 1927, 2,798 healthy young bushes were transplanted to prepared and shaded clearings. Some of these yearling bushes were over a foot high, a remarkably rapid rate of growth.

So far the experiment had succeeded beyond hope so 100 pounds of *Coffea robusta* were brought from Uganda—over 40,000 seeds were planted in the Acholi hills, more will be planted in the Acholi hills, more will be planted in Kajo-Kaji, while 70 pounds have been sent for distribution to Torit, Yei, Meridi and Nagichot. What the future of it will be cannot yet be stated with any certainty, but there are good grounds for believing that we are at the beginning of what may turn out to be a very important Sudan

crop. It would seem, however, best to proceed slowly until the bushes actually begin to bear for if planting be undertaken on a large scale and the coffee failed to produce a remunerative crop, the people would be discouraged from making fresh attempts. The success which, up to now, has attended the Opari experiments has interested the Acholi to a degree seldom seen amongst these people.

CHESS.

By "CARO-KANN."

The solution to last week-end's game is as follows:—1, P—Q5, K—Q2; 2, K—Q3, K—B2; 3, K—B3, K—Kt3; 4, P—Kt4, PxP; 5, KxP, and the game is drawn, for neither White nor Black can get round.

The international team tournament at the Central Hall, Westminster, ended in accordance with anticipations with a victory for Hungary, but the finish was much closer than seemed likely when I wrote a week ago—Hungary's score being 40, as against Denmark's 38. It is interesting to note that if the scoring had been by matches won Denmark would have been first. Several of the players, among them Sir G. A. Thomas, Bart., who tied for the prize for the best score, went through the fortnight's play without a loss, a considerable achievement when it is borne in mind that on several days two matches had to be played. I gather that the tournament will be held again next year, this time in Holland. While it has been a great success this time, I cannot help feeling that it would be a mistake to make it an annual event. Every five or every ten years would seem much better, and I am sure that if it is held every year many countries will find it impossible to place their best teams in the field. This year the British Championship was not held, but it will take place in 1928, and few players will be able to take part in this event and in an international team tournament.

White to play. What result?

In the first five months of this year 270 tons of senna were exported from the Sudan.

A contract has been placed by Sir John Jackson, Ltd., London, the contractors for the Nag Hammadi Barrage, for seventeen 5-ton locomotive steam cranes with Thomas Smith and Sons (Rodley), Ltd., Rodley, near Leeds.

The British Thomson-Houston Company, Rugby, have received a contract from the High Commissioner for India for sub-station and track-sectioning equipment for the electrification of the Bombay-Igatpuri and Bombay-Poona lines of the Indian State Railways.

THE LIUBLIANA SAMPLES FAIR.

(From Our Own Correspondent.)

At this year's Liubliana Samples Fair the automobile section was beyond doubt one of the chief attractions. Besides a large number of American cars and motor cycles—Erskine, Chevrolet, Oakland, Chrysler, Buick, Ford, Indian, Harley Davidson, and Excelsior were the makes I noticed—French cars were greatly in evidence and some of the best-known French firms were represented, such as Dormet, Peugeot, Bugatti, Amilcar and Renault. In the motor cycle section British industry was well represented by B.S.A., A.J.S., and Ariel machines. In all of them the workmanship was excellent, and several quite new models were on show. Special interest was roused by a beautifully made and hard-wearing little A.J.S. of the same make as that ridden by the President of the Yugoslav Motor Cyclists' Federation. In competition with the British, American and Continental motor cycles were certainly being offered at a slightly lower price.

On the road, one meets above all American and British motor cycles. The market for motor cars is dominated by American cars of the makes mentioned above, and the Italian Fiat, which firm was also exhibiting its newest models.

Austrian makers are very intent on pushing their goods, but cannot compete in price with French, American or Italian makes. Cars shown by Steyr, Daimler and Austro-Fiat were handsomely finished, the bodies well-fitted and constructed, but they were too dear for Yugoslav conditions. In this respect Czech cars suit better. The well-known arms factory Zbrojevka and the Skoda firm in Pilzen had cars on show, besides Tatra cars, well-known in the Alps as excellent hill-climbers. Skoda manufactures everything in ironmongery, from needles and pins to steam rollers. The firm has now bought the patents of the automobile factory Laurin-Klement, and is building engines in large series. The Zbrojevka is a water-cooled, double contact two-cylinder engine, with a top speed of 90 kilometres. The Tatra is slower. Its advantage lies in its being provided with oscillating axes without chassis, which makes it such a good hill-climber. The air-cooled two-cylinder motor is similar to that of the Morgan Runabout.

Austrian motor cycles of native make (Püch works) were shown this year for the first time. The engine is small and light in contrast to American and British engines, being intended only for a solo machine without luggage carrier. It has only two gears and an automatic clutch.

Besides motor vehicles and motors, the most important exhibits in the section were fire engines.

The chief things one missed were British motor cars, British tyres, and British clothing. It is time that British exporters should take an interest in Yugoslavia; for Northern Yugoslavia would prove a good market and a reliable one. This is the seventh Liubliana Samples Fair, and only once was a British car shown. In that case the agency was in Belgrade, the car had to be imported *via* Salonika, and the carriage was too expensive and so interest languished.

German industry is making great efforts to ensure new bases, but these cannot be created under existing conditions, with the present state of the mark and quality of German goods. Germany turns out goods suitable for home conditions and not for use abroad, which is a point a good tradesman should bear in mind. Britain turns out such large quantities of cars and engines for the Dominions, which is to say, for difficult conditions and hard wear, that she has the very material on hand which is lacking on the Yugoslav market. That British motor cars should be very successful over here is proved by the success of British motor bicycles in Yugoslavia.

The Samples Fair, apart from the motor section, radio installations, and other up-to-date exhibits in the machine section, did not differ greatly from its predecessors.

It speaks well for Slovene industry and business determination, that the Liubliana Samples Fair should have preserved its character and importance throughout these years of financial crisis and trade depression.

EMPIRE COTTON GROWING CORPORATION.

A meeting of the Administrative Council of the Corporation was held in London on July 27. In the absence abroad of Lord Derby, the President, the chair was taken by Mr. R. H. Jackson.

The quarterly report of the Executive Committee was presented by the Chairman, who asked the Assistant Director to mention any matters which should be recorded since the report was drafted. The Assistant Director expressed the belief that the Corporation would regard the results of the Colonial Office Conference as extremely satisfactory, and that the proposed interchange, particularly of scientific agricultural officers, would be extremely helpful to the objects which the Corporation had in view. As regards transport, the Empire Marketing Board, to whom the Colonial Office Conference had referred the recommendations of the Sub-Committee for the establishment of a tropical Transport Council, had set up a Committee which was exploring the best method of raising funds for the work of such a Council and investigating the best lines of attack on the technical problems involved. The Corporation had offered to hand over to the Council their experimental vehicles now working in Nigeria, and the results that had so far been achieved by the experiments.

Lord Lovat, Parliamentary Under Secretary of State for the Dominions, said that as regards the report of the Executive Committee, he was glad to be able to tell the Council that good progress was being made towards

Exports and Imports

To assist its customers, the Westminster Bank has prepared a booklet explaining the many ways in which the commercial man may use the Bank for the furtherance of his business, how he should proceed in order to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and so combine security and caution with progress and enterprise.

Copies will be issued on application to the Secretary at Head Office

WESTMINSTER BANK
LIMITED

Head Office: 41 Lothbury, London, E.C.2

giving effect to the proposals of the Colonial Office Conference regarding the establishment of an Imperial Agricultural Research Service. With reference to transport, he suggested that it might be proposed to the Committee of the Empire Marketing Board that was dealing with this subject that they should get into touch with the Forestry Commission and the Forest Products Board regarding the manufacture of charcoal for producer gas.

The following extracts are taken from the report of the Executive Committee:—

The Conference held in London in May, at which the Crown Colonies, Protectorates and Mandated Territories were represented by their Governors or by senior officers, may confidently be expected to produce results of importance to the development of those parts of the Empire. A suggestion, approved by the Conference, which is specially noteworthy, is that there should be frequent interchange of officers between the Colonial Office and the various Colonial services. Such an arrangement should undoubtedly tend to a more complete understanding by the former of local conditions overseas and an appreciation, begotten of experience, of the problems engaging the attention of the various colonial administrations. Of special interest to the Corporation is the decision of the Conference that it is desirable that an Imperial agricultural research service should be created, working under a central council in London, as well as a chain of agricultural research stations similar to the College in Trinidad and to the Amani Institute in Tanganyika. Members of this service would be available for duty in any colony in which they were required. The scheme would be financed from a fund to which all the colonies and protectorates would contribute according to their means, and the Empire Marketing Board would also be asked to assist. The proposal, if carried into effect, is calculated to cost £175,000 a year, of which, however, a considerable portion would be in replacement of existing expenditure on the salaries of scientific officers. The advantages attaching to the scheme, as set out in the report, are that the respective local Governments will be able to secure the services of first-rate scientific investigators, because an Imperial service of this kind with free facilities for transfer from one country to another will offer inducements and a career to scientific workers which are lacking in the present conditions under which a man may find himself side-tracked indefinitely in the particular colony to which he has been appointed. Further, the poorer colonies will not be hampered by the lack of funds, for although their contributions to the pool will be in proportion to their revenues, the assistance which they will receive in the solution of their agricultural problems will be governed only by their needs and by the resources of the service. Moreover, the results obtained in one colony will probably either be directly applicable to, or translatable to the conditions of, another.

This principle of the interchangeability of members of their staff has been applied by the Corporation from the start not only to their scientific research officers but also to their agriculturists, and several of them have already had practical experience in more than one cotton-growing country. The Corporation therefore naturally look forward with keen anticipation to the enhanced efficiency in scientific agricultural work which the members of the Conference believe will follow the adoption of the comprehensive reform proposed by them. The vital importance of such first-class scientific investigation to the extension and improvement of cotton cultivation is a subject

on which the Executive Committee have continually laid the utmost stress, and they accordingly trust that the special committee, which the Colonial Office have appointed to submit a detailed scheme, will be able without undue delay to frame suggestions that will prove acceptable to the Governments concerned. The Committee is under the Chairmanship of Lord Lovat; Mr. Ormsby Gore is among its members, as are also Sir John Farmer and Mr. Engledow, who are on the Corporation's Research and Training Committee.

(To be continued.)

DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, in their report dated July 30, state:—

Currants.—Slightly more activity was witnessed during the month, although there is still room for considerable improvement so far as actual business is concerned. Under the influence of reports of extreme heat a firmer tone prevailed, with lower qualities slightly firmer, and at one period very little was obtainable on the spot under 43s. Vostizza, on the other hand, has been consistently pressed for sale. As the month progressed, and under the influence of satisfactory crop news of the excellence and quality of the harvest, anxiety on the part of holders to dispose of their remaining stocks became more apparent, and closing prices show a decline. The weeks preceding and following the August Bank Holiday are usually looked upon as the quietest periods of the dried fruit trade, and therefore it is not surprising to experience an end-month period of slackness. Sales comprised Amalias 42s. 9d., Patras 43s., Zante 43s., Bags 41s., Gulf 43s., Vostizza 43s. to 48s. 6d., Small 42s. to 45s.

Sultanas.—Smyrna.—Notwithstanding the extreme heat experienced and reports of consequent damage to the crop, it is becoming abundantly clear that we are going to have a harvest considerably in excess of last season, and latest estimates are that we may expect a yield of about 45,000 tons. The small remaining stock has been persistently forced for sale, holders' one idea being to unload. Prices show a further decline, and good coloury fruit has changed hands at 51s. to 53s., fine 60s., choice 70s. Cretans 52s. 6d. to 58s.

Figs.—A few Genuines sold 24s. New crop some sales reported 22s. c.i.f.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended July 10 amounted to £E6,890, making the total from April 1 £E72,780.

Mr. Chadwich H. Moore, Managing Director of Moore's Modern Methods, returned to London last week from the Middle East. On his way out and back he used the air service between Egypt and Iraq.

The traffic receipts of the South Indian Railway Company for the week ended July 2 amounted to Rs.9,95,773, making the total from April 1 Rs.1,41,72,741.

So far a quarter of a million square feet of space have been let for the London and Birmingham sections of the British Industries Fair, 1928, and it is now certain that the Fair will be much larger than any previous one.

The launch took place recently at the Kingston Shipyard of Messrs. Lithgows, Ltd., Port Glasgow, of the steamer Jalabala, of 5,900 tons, which has been built for the Scindia Steam Navigation Co., Ltd., of Bombay. The launching ceremony was performed by the Hon. V. J. Patel, President of the Indian Legislative Assembly.

Company Meeting.

FURNESS, WITHEY AND COMPANY.

Danubian Interests.

Sir Frederick Lewis's Speech.

The thirty-sixth annual general meeting of Furness, Withy and Co., Limited, was held on July 27 at Furness House, Leadenhall Street, London. Sir Frederick W. Lewis, Bt. (chairman of the company), presided.

The Secretary read the notice convening the meeting, and Mr. Ralph T. Warwick, of Messrs. W. T. Walton and Son, read the auditors' report.

The Chairman, in moving the adoption of the report and accounts, said that conditions had in some respects been rather better than in the preceding period, and this was reflected in the accounts now before them. As against last year's figure of £523,044, the credit balance this year amounted to £603,511 after making provision for taxation, an increase of £80,467. That was the net figure after charging off all expenses of every description, and with the amount brought forward from last year's accounts, there was an available total for allocation of £753,814. The usual half-yearly preference dividends had absorbed £60,000, and the ordinary share dividends paid on November 1 and May 1 absorbed £200,000. They now proposed to pay the usual bonus of 2½ per cent. on the ordinary shares—namely, £100,000; to transfer £200,000 to depreciation, leaving the increased balance of £193,814 to be carried forward.

For many years past it had been their custom to make two half-yearly dividend payments and to declare a bonus when the actual accounts were before them at the annual general meeting. That practice had many objections, and, in fact, had in many instances led to misunderstanding. In addition, there was the minor question of the expense and labour involved in sending out three separate dividend payments to their shareholders who numbered some 10,000. They had therefore had under consideration an alteration in method, and in future they would in all probability declare in October an interim dividend, leaving the question of the final dividend to be determined when the accounts were ready for publication in July. That alteration in method would have many conveniences for them, and he hoped it would meet with their approval.

In his last address he referred to the contracts they had placed on the Clyde for four large twin-screw motor vessels for their United Kingdom/Pacific Coast of North America trade, and they had subsequently arranged for an additional two similar vessels. Unfortunately those vessels were still undelivered, as owing to the outbreak of the general and coal strikes they were almost completely held up for six months through the inability of the builders to obtain material from the steel works. The result of all that delay could well be imagined. The greater part of the resultant loss would be spread amongst ship and engine builders and the various other contractors, but upon them fell the loss of interest and of six months' trading with the vessels. When the last of those vessels was delivered their Pacific Coast trade would be operated by nine fast motor ships, fitted with refrigerated and cool air chambers for the carriage of fruit, etc. They hoped and believed that their faith in putting such a large amount of capital into that trade would be thoroughly justified by results.

Within the past few weeks he had made a tour of all their Danubian interests, and he was pleased to be able to report that, on the whole, the various businesses in which they were concerned were showing gradual improvement. The Danube Navigation Company—of which they were the managers, and which was formed at a time when he believed few, if any, anticipated the depreciation which subsequently occurred in the Central European currencies—had made substantial progress and was gradually resolving itself into an investment company holding a variety of investments in British and foreign Government securities, as well as industrial debentures and preference shares. In fact, practically half the capital was employed in that manner and in secured loans, in addition to which the com-

pany still held the principal investments in the Danube shipping companies, for the purchase of which it was originally formed.

While on the subject of the Danube, it was perhaps appropriate that he should refer to the Johnston Line service from Liverpool, Swansea, and Antwerp to Mediterranean and Danube ports. Economic difficulties were no doubt largely responsible for the fact that the volume of traffic had not recovered its pre-War dimensions, but that service, which was operated by a uniform fleet of modern oil-burning vessels, derived some benefit from the coal strike, inasmuch as the reduced volume of exports from this country was more than offset by the higher homeward freights obtained in consequence of the diversion of tonnage to the Transatlantic coal trade.

In the autumn of last year he appended his signature to a document which had subsequently become known as the bankers' manifesto. That document was intended to be a plea for the removal of restrictions upon European trade, and, although the majority of the signatories, numbering more than a hundred, were principally concerned with banking, manufacturing, and merchanting, his own signature was attached because the same problems which affected the free exchange of commodities between nations equally affected transportation, and there could be no doubt that European trade was being very greatly hindered by the economic barriers to which attention was drawn.

In the course of the tour to which he had just referred, during which he passed through the seven countries through which the Danube flowed, he had had the opportunity of seeing at first hand, in some small measure, how irksome and wasteful those restrictions really were, both as regards time and cost, and he was convinced that the picture drawn by the bankers' manifesto was not too highly coloured.

The report and accounts were unanimously adopted.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.)

EGYPT.

Diesel Engines.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection at site of Atf Power Station of four internal combustion Diesel Alternator groups and accessories required for the Public Works Ministry. October 12.

Machinery Tools, Etc.—The Director-General, Ports and Light-houses Administration, Arsenal, Alexandria, invites tenders for the supply of machinery tools and plants for Suez Workshops. August 29.

Raw Wool, Etc.—The Controller of Technical Education, Ministry of Education, Sharia Qasr el Aini, Cairo, invites tenders for the supply of raw wool, cotton yarns, etc., required for the Rug Factory at Assiut. August 31.

Uniforms.—The Chief Inspector, Direction General, Customs Administration, Alexandria, invites tenders for the supply of winter uniforms for guards and employees during 1927-1928. August 9.

Wagon Covers.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 1,000 impermeable wagon covers. August 16.

Diesel Engines.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection at site of Abul Menaga Pumping and Power Station of four internal combustion Diesel groups with flywheel alternators, three pumps and accessories, required for the Public Works Ministry. September 3.

Bridge Work.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of materials and works connected with the replacement of the superstructures of Mansourieh bridge and the adaptation of the pier and abutments to the new superstructures. August 15.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended July 27:—

Egyptian Futures.—Sakel Contract.—During the past week we have had very erratic fluctuations in both Liverpool and Alexandria. The Liverpool market in particular has been distinctly narrow and susceptible to sharp movements either way; contracts have been very scarce when required, and the offtake has had a habit of disappearing when sellers of even a few contracts have been about. During the earlier part of the week the Continent and Alexandria were prominent buyers, the market advancing again to 19.70d. for November; Alexandria invariably led the advance and Novembers there, on one occasion, were forced up to 40.00 dollars. Speculation in Egypt appears to have run riot during the last ten days, but Liverpool has not shown any great inclination to followed this sharp advance, which has resulted in a quick widening of the differences between the two markets. Alexandria at one time showed a premium of 35 points with Liverpool. Of course, with such violent fluctuations taking place, it has been largely a matter of luck to secure these prices and thus to be able to put on the straddle at such attractive differences. The high level reached in Alexandria was, however, short-lived, and prices broke sharply nearly a dollar per kantar on liquidation and fresh selling making its appearance at the high levels. During the last two days, liquidation has been more or less general, from most sources, and sellers have found the market rather hollow with little offtake. As a result, a sagging tendency has set in, all the advance recorded has been lost, and November has slipped back through 19.00d. The wide difference which existed in the early part of this week between Egyptian and American has also attracted a fair quantity of straddling, January being sold chiefly against purchases of American around 950 points, which seems a very fair difference for anyone willing to hold and await developments. At to-night's close, the market showed signs of recovery.

Upper Contract.—There has been no special feature in Uppers this week, and values have fluctuated more or less with the movements of the Sakel contract. A selling against "call" cotton has been witnessed, but buying of November against sales of November Sakel by Continental and Alexandria houses has more than counteracted this, and a firm undertone has been maintained.

Egyptian Spot.—The past week has produced distinctly disappointing results so far as spot cotton has been concerned. The erratic movements of the futures markets has undermined confidence in current values for the time being, and buyers have been inclined to hold aloof. This has been particularly noticeable in the medium qualities of both Sakel and Upper. As a contrast, owing to the good trade which is taking place up-country in the finer counts, rather more attention has been paid by spinners to the higher grades of Egyptian cotton. Sakel has shown an easier tendency, but Uppers have hardened slightly on the week. Rumours have been rife during the last day or two to the effect that the Egyptian Government were about to commence disposing of their holding of spot Sakellaridis, amounting, it is believed, to some 60,000 bales. Reports have been of a conflicting character, the Press here stating that Russia was a probable purchaser. These rumours, in spite of contradictions, have undoubtedly had a somewhat depressing effect on the market here, although, to our mind, if the Egyptian Government are in a position to dispose of their commitment in a line in this manner the result will be to remove an incubus from the market and clear up the situation from a "bullish" point of view.

Apart from the above, no feature of any importance has appeared. In Sudan Sakel, a steady business has been maintained and quotations are slightly easier, but firm at the decline. This cotton still appears remarkably

reasonable when compared with the equivalent qualities of Sakellaridis. White Sudan has been in fair request. Other Egyptian qualities have been neglected, with the exception of "inferior" and "scarto" cotton, which have met with rather more attention.

C.i.f. business has been very quiet. Forwardings to spinners for the week ending 22nd. inst., were returned as 4,883 bales Egyptian and 3,536 bales Sudan. Estimated spot sales, 1,200 bales Egyptian and 4,400 Sudan. Quotations of Sakel show a reduction of 35 points (Fine 15 points) on the week. Upper quotations have been advanced 15 points. F.G.F. Sakel to-day 19.60d. F.G.F. Upper to-day 15.20d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended July 21 state:—

Since our last report the Futures market has continued to be very active. Price fluctuations have been rather wild, and a fresh important advance has been registered. The week's summary of price movements is as follows:—Sakellaridis: July, 38.95 dollars, 1.65 dollars up; November, 39.05 dollars, 1.38 dollars up; January, 38.70 dollars; 1.30 dollars up. Ashmouni: August, 27.65 dollars, 1.50 dollars up; October, 28.35 dollars, 1.44 dollars up; December, 28.45 dollars, 1.54 dollars up; February, 28.55 dollars; 1.44 dollars up.

Sakel.—The market has been very excited this week, and we have had great fluctuations in prices. November, after having almost touched 40 dollars, rapidly fell away to about 37 dollars; towards the end of the week, a better tone prevailed once again and a good deal of the ground lost was made up. The cause of these wild price movements is to be found in the covering operations of the "shorts" and the liquidating of long positions. In each session thousands and thousands of kantars have changed hands, and such activity has not been witnessed since the season opened. The greater part of the present stock of cotton financed by the banks for account of native merchants is at present unhedged—the holders having bought back the contracts—and people who have absolutely nothing to do in the cotton business have entered the market operating on the long side. In consequence of the foregoing, the position has naturally become a little dangerous. For the rise to be maintained, much depends upon the course of prices of the New York market as well as upon the future attitude towards our cottons by the spinners. Latterly, the tone of the New York market has been a little uncertain, and a marked decrease in the trade demand is to be noted.

Uppers.—We have also had a series of active markets in this variety. Prices have more or less followed the fluctuations of the Sakel market. The difference between the two varieties is maintained at about 10½ dollars. We understand that the Uppers "long" positions are in stronger hands than the Sakel "long" positions. Many local operators of limited means are buyers of Sakel against sales of Ashmouni. It is reported that the long Ashmouni position is held by agencies with foreign connections, the purchases being hedged by sales in New York—an operation rather successful so far. The demand from abroad has been rather weak. The week's receipts amount to 16,288 kantars against exports, 51,864 kantars; the stock in Alexandria stands at 2,522,137 kantars.

The official figures of arrivals and exports for the period September 1, 1926, to July 14, 1927, as follows: Arrivals, Lower Egypt, 5,173,000 kantars; Upper Egypt, 3,188,000 kantars; total, 8,361,000 kantars. Exports: Sakel 2,954,168 kantars; Ashmouni, 3,709,545 kantars; various 482,506 kantars; total, 7,146,219 kantars.

Spot: We have again had a very quiet week, and sales

amount to about 7,300 bales, of which we estimate 3,500 bales Sakellaridis, 3,450 bales Ashmouni and Zagora and 350 bales Pilon.

Sakellaridis: There has been a moderate market with the bulk of the business concentrated on the medium grades. In spite of the rise in prices, holders of good style cottons have not shown much disposition to sell.

Ashmouni and Zagora: We would have had a very poor market indeed if it were not for one firm which bought steadily fair quantities daily; over one-third of the week's total sales of this variety has been bought by that firm. The basis of all grades remains the same as last week.

Pilon: There has been a small demand for good grades.

Up-Country: There has been a little more activity as a result of the fact that some growers seem to be satisfied with present price levels and are disposed to sell their crops.

Crop 1927:—Crop news received from up-country is, generally speaking, satisfactory. The plants are making normal progress and look very well. Leaf worm has totally disappeared in most districts. As we said in our last report, the damage caused by the attacks of this pest cannot be considered of great importance. Moreover, the plants which were attacked are everywhere pro-

ducing new leaves and flowers; the question resolves itself into a few days' delay, which can easily be regained with favourable climatic conditions. The pink boll worm has made its appearance, but it is too early to give any opinion at all on probable damage which may be caused. The water supply is rather irregular in some districts, but, on the whole, is satisfactory.

NEW COMPANY.

ANATOLIAN EXPLORATION.

Anatolian Exploration has been registered as a public company, with a nominal capital of £250,000 in 2s. shares, to acquire and turn to account lands, buildings, mines, mining rights, concessions of all kinds in Turkey, Asia Minor and elsewhere; and to carry on the business of miners, mine owners, etc. The directors are: F. W. Baker, Marlborough Chambers, Jermyn Street, St. James, S.W., solicitor; L. W. Harris, 4, Upper Grosvenor Street, W.1., member of the London Stock Exchange; and F. W. W. Gwynne, The Corner Cottage, Stanmore, director of public companies. The registered office is at 1, London Wall Buildings, E.C.2.

Notes of the Week.

The Anglo-Iraqi Treaty.

King Faisal of Iraq left Baghdad on August 6 for Europe, whither he is coming in order to be able to communicate his views to the British Government during the investigation of the possibility of modifying the Anglo-Iraqi Treaty. We have already suggested that greater stress may be laid in the forthcoming conversations on the problem of Iraq's defence than on the question of her admittance into the League of Nations—which may have been raised rather in the nature of a *ballon d'essai*. If that prognostication is correct, the discussions may be expected to centre mainly round the revision of the military and financial clauses of the Treaty. Upon the possibility of such revision departmental conferences are, we understand, now being held in London. It is naturally impossible to state whether the general tenour of the resultant recommendations will be in the direction of advising a formal relaxation of British control, and it would be equally idle to speculate whether the British Cabinet will subsequently adopt or reject the report of the departmental conferences. Sufficient is known, however, of the views of British Middle Eastern experts to suggest that the practicability of Conscription in Iraq is a subject on which convincing evidence has yet to be supplied; and, incidentally, it is well to remember that, as Mr. Ormsby Gore significantly remarked in the House of Commons the other day, Conscription is not an obligation for 1928 under the Anglo-Iraqi Treaty. But a voluntary Army in Iraq is undeniably expensive, and some way out must be found. Many educated and Nationalist Iraqis, headed by King Faisal and his Prime Minister, Jaafar Pasha, believe that, if, during the forthcoming discussions, they can obtain satisfactory amendments of the Anglo-Iraqi Treaty, the Conscription Bill, which was introduced at the end of the last session of the Baghdad Majlis, will not meet with insuperable obstacles when the Iraq Parliament reassembles in November. A few years ago the suggestion of imposing conscription upon the tribesmen of Iraq—most of whom, incidentally, are Shiah, although it is probably a mistake to suppose that the divergence of opinion in Iraq upon this question of conscription springs from religious differences—would have

been dismissed as absurd, but it is claimed by those who favour Conscription that the situation during these latter days has profoundly altered, with the establishment of "constitutional" government, the "representation" of the tribes in the Majlis, and so on. That may be so; the balance of British opinion, however, in so far as it is available, appears to grant the possibility of conscripting such towns as Baghdad or Basrah, but to deny it to the country at large.

Plots in the Hijaz and Najd.

The accounts of plots against the King of the Hijaz and Najd which have been received from Basrah are a little vague, but it seems certain that a plot was set afoot to murder King Ibn Saoud. It is stated that Abdul Ibn Jaluwi, Governor of the Hasa province, discovered this plot against his King in Najd, and if this is so, that magnificently faithful servant, who has ruled over Hasa since 1914, will once more have deserved well of his sovereign. That a plot should have been laid against his own life will certainly have seemed of less importance to Ibn Jaluwi than that his great chief's life should have been endangered; although the fact that he had executed all the ten hired assassins who attempted to murder him, but would not disclose the name of their hirer, is a characteristic indication of his merciless but effective methods. The story of the attempt upon King Ibn Saoud himself reads almost like a mediæval romance. Reports state that the plot originated in the King's own brother, the Amir Muhammad Ibn Abdur Rahman, who employed his son, the Amir Khalid, to kill King Ibn Saoud and his eldest son, the Amir Saoud. The Amir Khalid, however, was discovered, with some slaves, scaling the walls of the Palace at Riyadh, and the plotters were all captured and are now in prison at Taif. Such an event as this is, of course, no new thing in Arabian history; nor is this likely to be the last of its kind in the still primitive Arabian polity. The King and his son, however, in whom the security of this part of the world are inextricably wrapt up, are heartily to be congratulated on their escape. It is well, too, for the neighbours of the Hijaz and Najd that this plot against the one man

in Arabia who is at all capable of inducing the wild tribesmen to respect frontiers should have proved abortive. In the continuity of King Ibn Saoud's rule in Central and Western Arabia perhaps lies the main possibility of an Arab revival.

Dr. Millspaugh's Departure.

Dr. Millspaugh, who has administered Persian finances for the last five years, left Teheran last week, having finally rejected the new contract offered to him by the Persian Government. The disagreement appears, in general terms, to lie in the fact that, whereas the Persian Government in 1922 were willing that Dr. Millspaugh should be an Administrator-General of the Finances, in 1927 they wished Dr. Millspaugh to be a Financial Adviser. By the contract of August 14, 1922, Dr. Millspaugh was given general charge of the financial administration and the preparation of the Government Budget. By that contract, moreover, the Persian Government could neither grant any commercial or industrial concession, nor take any decision on a financial question without previous consultation with the Administrator-General. And of course, definite powers were assigned to Dr. Millspaugh which involved control over the personnel of the financial administration, over expenditure, and over the creation of financial obligations. Now it is precisely over these powers that the dispute arose which led to Dr. Millspaugh's departure from Persia. The Persian Government, though fully recognising the immense services of Dr. Millspaugh to Persia, were unwilling formally to renew these powers, which put the Administrator-General in some ways above the Minister of Finance; in other words, they wished the finances of Persia to be more generally under the control of the Majlis, as is the custom in Western countries.

The New Contract.

The clauses of the new contract which Dr. Millspaugh appears to have boggled at are as follows. Article IV states:—"The Administrator-General of the Finances shall, in obedience to lawful instructions and under the control of the Finance Minister, with due regard to the responsibility which Ministers have to Parliament, administer the financial affairs of Persia in accordance with present or future laws. He shall, under the lawful guidance and approval of the Finance Minister, draw up the annual national estimates and balance sheet in accordance with the law appertaining to Public Accounts, and shall reform the organisation of the Minister of Finance." And Article VI runs:—"The Finance Minister and the Administrator-General of the Finances have the power to see

that no financial undertaking or expenses are incurred which are not provided for in the estimates or credits approved by Parliament or the national laws. They, likewise, have no right to incur any expenses or enter into any undertaking not coming within the terms of the estimates or credits approved by Parliament. Further, no public expenditure or transferences of revenue may be made unless approved by the Administrator-General and endorsed by the Finance Minister." Now it seems obvious from the insertion of these two clauses that practices have been indulged in Persia which a country that boasts of a Constitution must have found it difficult to tolerate, and one cannot be surprised that the Persians should have considered themselves now to have reached a degree of stability and order that they can contrive their financial arrangements without the aid of what they may regard as a foreign "dictator." Not that there appears any reasonable opposition to foreign advice, as such; but it is advice, and not dictation, that educated Persians want. Whether it is Persia's real interest to have insisted upon a revision of the powers of the Administrator-General, and not to have let him continue in the task wherein he had achieved such remarkable results, is a matter on which two opinions are possible; but the Persian objection, as we have set it out, is at least comprehensible. It is to be hoped, for Persia's sake, that another Foreign financial expert will soon be forthcoming to assist in the development and security of the Shah's State.

Air Routes to the East.

The recent announcement by Imperial Airways of a reduction in fares for the Cairo-Basrah service has been followed by a statement that the Junkers Company are now running a London-Teheran trip for £50. This England to Persia journey is to occupy five days and the stages are from London to Moscow (Lufthansa), Moscow to Baku (Dernluft), and Baku to Teheran (Junkers). For some time the Moscow-Baku section of this route has been the stumbling block, but if this section has now been perfectly remedied, it is obvious that Imperial Airways will have a stern competitor for passengers wishing to journey to Northern Persia. It costs £32 from Cairo to Baghdad (another £9 to Basrah), and after that there is the not always too comfortable land journey by train and motor car to Teheran. The need of linking up Baghdad with Teheran by air, appears from the purely civilian point of view at any rate, to be imperative; it is most undesirable, in this aspect, that an agreement between the various authorities concerned, the Iraq and Persian Governments, Imperial Airways, and Junkers, should be indefinitely delayed.

The Greek Coalition Cabinet.

The indispensable Coalition Government in Greece does not succeed in passing many weeks without a crisis of greater or less severity. In nearly every case, whatever may be the ostensible cause, the crisis turns on the antagonism of Republican and Royalist. Both have agreed for the present to sink their differences for the common good of the country, but each in turn fears lest the other may turn this or that issue to the profit of his own particular school of thought or to the prejudice of his political opponents. The latest "incident" has arisen over the mission of M. Kaphandaris, Minister of Finance, and M. Michalakopoulos, Minister of Foreign Affairs, to Geneva, where the preliminary negotiations for a further loan to Greece were successfully concluded. On the return the Ministers rendered a report of their mission and received the approval of the Cabinet as a whole. Subsequently, however, M. Tsaldaris, Minister of the Interior, and leader of the Royalist Popular Party, decided that further information was desirable before Greece committed herself to all the demands made by the Council of the League of Nations, and in particular he wanted to satisfy himself as to the necessity for the modification of the National Bank's status, in which is to be the basis of the League's consent for a new loan. M. Tsaldaris's request for a particular document was resented by the

FOREIGN CAPITAL IN TURKEY.

The visit of the Turkish Minister of Finance to London and other European capitals has been the signal for much insistence in the local Press of Constantinople and Angora upon the Turkish point of view regarding the use and abuse of foreign capital in Turkey. In view of the very tight leading strings in which the Turkish Press is held, and as the writers are often members of the Grand National Assembly, whose opinions are supplied ready-made, these newspaper articles may be taken to reflect the attitude of those in authority, and for this reason are worthy of notice. Although there may be no fault to be found with the main thesis of the writers, that Turkey has the right to expect that foreign capital will respect all her legitimate and natural rights according to the custom prevailing in other civilised countries, it is evident from the line of reasoning which leads up to the insistence upon this point that the majority of Turks still have crude and muddled ideas on the subject of foreign capital. In the first place, the recognition now tardily accorded to the fact that Turkey stands in need of foreign capital does not seem to take into account the possibility that foreign capital may feel under no obligation to venture into Turkey. With characteristic *naïveté* it is taken for granted that Turkey has only to express the desire for foreign capital to bring about unlimited competition among capitalists abroad for the privilege of investing yet further sums in the country. At the same time stress is laid upon the sins and shortcomings of foreign capital in the past, and the potential investor is warned that the privilege about to be accorded him of lending more money to Turkey must be hedged about with elaborate restrictions. It is not difficult to realize what is passing through the Turkish mind; but the *naïve* inversion of cause and effect suggests that disappointment is still in store for the Turks, unless they clear away certain elementary misconceptions regarding the nature of capital and the responsibilities of those who avail themselves of its help.

Foreign capital, as far as can be judged from the Turkish Press, is conceived as a hundred-headed monster inclined to regard every country as a "colony," where everything should be had for nothing or next to nothing, thanks to exploited native labour, and sold at fabulous profits or converted into enormous "dividends," all destined for abroad without anything being done for the development of the country. Accordingly, the first warning issued is that Turkey "is not a colony." From this postulate the writer is led to expatiate upon the resources and achievements of New Turkey—the establishment of financial and industrial enterprises, the construction of railways, the aptitude of Turks for business, and so on—and to contrast with these achievements the attitude of foreign firms or undertakings "which drive their Turkish employees to despair by placing them on a footing of

revolting inferiority as compared with their foreign personnel." Here already is a confusion of thought, between the large sums of money that must be the main object of the Finance Minister's journey and the establishment of individual enterprises in Turkey by foreign subjects. In regard to the latter there is a tendency on the Turk's part to overlook the essentials of the situation. The old position that worked well enough before the War was the outcome of circumstances in which the Turks were not conscious of labouring under any injustice. They had developed no business instincts and were content to see their Greek and Armenian fellow-subjects run the business life of the country, either of themselves or by supplying the clerical staff for foreign firms. The events leading up to the creation of the Republic denuded the country, apart from Constantinople, of Greeks and Armenians, and the Turks became fired with a praiseworthy zeal to do things for themselves. Instead of allowing their young men time to serve a business apprenticeship the Turkish Government insisted that they must at once be taken into foreign business. The result was inevitable—on the one side sullen unhelpful acquiescence, on the other incompetence, with the conceit that handicaps learning. Pointing to a handful of business concerns that may be running successfully, the Turkish Press imagines that the Turks have nothing to learn about commerce, industry and finance. They may want capital, but they must have it on their own terms; if foreign interests will not at once unloose their purse-strings to every Turkish demand, it must argue an excess of villainy and unfriendliness on their part.

The real starting point, however, is that foreign capital has other ways of finding employment than in Turkey. It is, in the first place even more concerned with the country's financial history over the last forty or fifty years than with a few achievements, however praiseworthy in themselves, during the last four or five years. The settlement for the payment of the Turkish Debt has nothing in it to arouse enthusiasm abroad. The first adjustment, associated with the Decree of Muharram, represented the writing-down of Turkey's indebtedness by more than half. This new agreement entails yet further sacrifices on the part of those who originally lent Turkey money. It may be convenient to the patriots of the Turkish Press to forget or to ignore these inconvenient facts; they cannot be overlooked, however, by those who are called upon to lend money to Turkey. People who do not pay their debts cannot hope to enjoy the same peace of mind as those who do. For many years Turkey was a bad payer and a defaulter; the Ottoman Debt Control resulted. Since the War the financial policy of the Angora Government has not been such as to commend itself to hard-headed business men abroad. Some allowances have to be made, and are made, for the peculiar circumstances in which the Turkish Republic is situated. The new spirit actuating the Republican Government is recognized, and the hope is entertained that at least a genuine attempt will be made to develop the latent resources of Turkey, so that what has hitherto been a stagnant spot on the map of the economic world may become in due course a centre of productivity, contributing its quota to the well-being of the world at large. Financial interests, however, cannot be expected to base their judgment merely on the *couleur de rose* statements of the Turkish Press. They require plain cold facts, without which there can be no inducement for them to invest their money in Turkey. It will be better for the Turks to try to look at the subject from the point of view of these financial interests whose help they are anxious to have. They will not lend merely for the *beaux yeux* of Turkey but because they count on security and a satisfactory rate of interest for their money, as well as on building up further industries in the country, which in turn will mean fuller development for the good of Turkey and of the world as a whole. Everything that tends to weaken the required security must have its counterpart in adding to the onerousness of the terms on which Turkey can hope to borrow.

The Near and Middle East*

From Our Own Correspondents.

Cairo, August 1.

Irrigation Water.

Whether there is a general shortage of irrigation water in certain provinces, notably Behera, this year, or whether, through inefficient distribution of available supplies, either from departmental slackness or from undue favouring of certain lands, the quantity of water at the disposal of the irrigation authorities has not been used to the best purpose, is almost impossible to discover. Landowners in many districts are complaining bitterly of the impossibility of obtaining sufficient supplies for their cotton crops and of the breakdown, which they declare to be serious, of the rotation system. Allegations are frequently made, too, of favouritism. It is stated that senators and deputies and other politically important individuals have been given more than their fair share of water, with the consequence that their neighbours have had to go short. To these complaints the Ministry of Public Works replies that the water situation this year is normal, and that the complaints which have been made this summer are not more numerous nor more serious than those that are made every year by disgruntled farmers, who are never satisfied with their water supplies, however abundant. In face of such a conflict of opinion it is impossible, without personally visiting all the areas in which there is stated to be a water shortage, to know what is the real position. But it does seem clear that, even if the total quantity of water available this year is as the Minister of Public Works declares, about the same as the average of recent years, injudicious use has been made of some of it. Some time before Parliament rose the Minister informed the Chamber of Deputies that, owing to the excellent water situation, rice cultivation would be permitted on a much larger scale than usual. This announcement earned much applause and was regarded as something of a triumph for Moharrem Pasha, although, of course, the abundance of water could in no way be due to any efforts on his part. In the event it seems that he made a serious miscalculation, and that much of the water which has been used for rice irrigation could have been employed to greater advantage on the more important cotton crop. Moharrem Pasha is unlikely to be so warmly applauded when Parliament re-assembles in November, for even the Zaghoulouist Press is outspoken in its criticism of his administration.

Agricultural Problems.

Agriculture in its various aspects has been almost the sole topic of local interest during recent weeks. The water shortage, the boll worm scare, the passing of the

agricultural co-operatives law, and the fluctuations of the cotton market have monopolised public interest. This is certainly as it should be, and if Egyptian public men will continue to devote most of their attention to the country's two most pressing problems, the decreasing fertility of the soil and the increasingly serious state of affairs in regard to parasitic diseases, their country will be greatly the gainer. The Minister of Agriculture has just started on a tour of the country in the course of which he will address meetings in every important centre with a view to awakening interest in co-operation. Barakat Pasha began his campaign with a speech at Belbeis in which he referred in very plain terms to a tendency which everyone familiar with Egyptian conditions will agree is a very serious one. This is the growing habit of landowners to build for themselves fine houses in Cairo, where they spend the greater part of their time, only going at intervals to their estates, which are left in the hands of agents. Many causes combine to bring about this result. The sittings of Parliament necessitate the presence in Cairo for a considerable part of the year of hundreds of senators and deputies, the majority of whom are landowners. Even more general a cause of the drift to the towns is to be found in the rapid emancipation of Egyptian women. Egyptian parents in increasing numbers want their daughters to go to school, and schools for girls of the wealthier classes are few and far between in the provinces. And, whether they have been to school or not, Egyptian ladies and their daughters are less and less willing in these times to spend their lives vegetating on country farms. Egyptian rural life has none of the attractive features which make the English countryside so delightful, while for the womenfolk life in an *ezbeh* is almost incredibly dull. It is not surprising, therefore, that the women's influence is continuously exerted towards compelling the head of the family to acquire a Cairo residence and to spend at least a considerable part of the winter in the Capital.

Another disquieting symptom touched upon by Barakat Pasha was the apparent lack of interest in agriculture displayed by the sons of landowners. More and more of these young men are going abroad to complete their education, very few study agriculture in Europe, and very many, when they return, seem to have lost all taste for farming and rural life generally. Barakat Pasha declared that very many of the sons of well-to-do agriculturists hardly know where their fathers' lands are situated. The undesirability of this state of affairs is obvious, for in Egypt, as in England, the best fertilizer is still the master's overseeing eye. Moreover, if absentee landlordism becomes the rule in this country it may have eventually serious social results, for the fellaheen will not be for ever content to work long and arduous hours for employers whom they never see and who take no interest in their lands or the people whose labour renders them productive. And in Egypt, as elsewhere, it is the general experience that the landowner who leaves his estates to the entire control of an agent comes to regard his land merely as a source of money and to assess his agent's ability by his skill in squeezing a larger revenue from the lands in his charge. In such conditions sympathetic treatment of the workpeople is unlikely and the way is opened to discontent and, finally, agrarian trouble.

Alexandria's Growth.

Alexandria's growth during the past year is illustrated in the Municipality's taxing survey statistics, just published. With its suburbs the city of Alexandria includes 43,000 buildings of all categories, including 143,000 apartments and shops. Last year's total was 41,500 buildings with 140,000 apartments and shops. The total rental value during the year has risen from £E4,350,000 to £E4,600,000. In considering these figures it should

be borne in mind that the type of building now being erected is vastly superior to the vast majority of the structures which make up the city's total. Building is still proceeding apace in Alexandria (as well as in Cairo), the tendency being towards ever larger and larger apartment blocks. In view of all this new construction everyone expects rents to go down, instead of which they are steadily going up. There seems to be a steady demand on the part of all classes for better accommodation than that with which they have hitherto been content, and this, combined with the tendency, referred to above, for country families to acquire town houses, keeps up the rents of the new buildings.

The Exodus from Cairo.

In an earlier letter I mentioned that Cairo was this year very "empty." Official statistics show that some 40,000 people have gone abroad from Egypt this summer, 25,000 to Europe and 15,000 to Syria and Cyprus (chiefly to Syria). Another indication of the exodus is that at Gezira Sporting Club dinners are served only on two nights (Thursdays and Saturdays) each week, while at the Turf Club they are not served at all. The latter state of affairs is unprecedented in my experience, and I am unable to discover whether it has ever happened before, since all the "oldest inhabitants" are away in cooler climates.

Ljubljana, July 27.

Yugoslavia and Albania.

The most important recent event in Yugoslav politics was certainly the settlement of the difference with Albania. This was achieved by intervention of the Great Powers in Belgrade and Tirana, and the upshot of it was that the Albanian Government released the Yugoslav interpreter Jurashkovitch, and the Yugoslav Government withdrew the Note of protest, the wording of which had given such offence in Tirana. Diplomatic relations are thus re-established between the two neighbours.

The settlement of this difference with Albania did not give rise to special satisfaction in Yugoslavia. Rightly or wrongly, there remains the uncomfortable conviction that the course of the dispute with the Tirana Government was not so much a matter of relations between Belgrade and Tirana, as a consequence of the Tirana Pact whereby Albania has become the political ward of Italy. The average man in the Kingdom of Serbs, Croats and Slovenes is convinced that the arrest of Jurashkovitch, and especially his long detention by the Albanian authorities was due to a hint from Rome, and that Italian influence was likewise responsible for the dragging on of the dis-

pute which might have been settled far more promptly than it was. And so Yugoslav public opinion is dissatisfied with the situation; because it fears that similar conflicts may at any time break out needlessly and on trifling provocation.

The Elections.

Apart from this, Yugoslav public opinion has latterly been taken up with preparations for the forthcoming general elections. The appointed date for these is not until September 11; all the same, the electoral campaign is already in full swing.

The reason why the electoral campaign should begin so early, whereas it usually becomes acute only within the last four weeks before the elections are due, lies in the particular nature of this year's elections.

New tendencies have arisen in Yugoslav politics. Important groups and factors in the realm desires to introduce new personalities into the political life of the country and to relegate older politicians to the background. That is why leading men of both Radical and Democrat Parties have combined in the Government at the head of which stands the Radical Premier, M. Voukitchevitch; but in such a way that not one of these Government can say that he is backed by his own particular party. There are internal differences in the Democrat Party, no less than in the Radical, although neither so bitter nor so great in the former as in the latter where the difference between the Centre and the Pashitch group is already ancient history. Rent by dissensions, the Radical Party enters upon the electoral campaign with a distinct handicap. As often as not, the various factions are putting up opposing candidates in the same constituency.

The Government is accused of trying everywhere to influence the drawing-up of the electoral lists, of desiring to bring its own well-wishers to the fore, and of pushing less favoured men whether Radicals or Democrats, into less advantageous positions. The electoral campaign has begun very early, at the very drawing-up of the lists of candidates, because it is a matter of great importance to the Government who is going to stand for election. Consequently, the issue will turn rather on personal considerations, and not so much on party interest as hitherto.

But precisely because the Government is so strongly interested in individual personalities, its tactics are being narrowly criticised. D. Liuba Davidovitch, head of the Democrat Party, one of whose members—Dr. Voya Marinkovitch—holds the important post of Foreign Minister, considered it advisable to oppose these tactics in public, pronouncing them arbitrary and pointing out his own inability to continue to side with the Government unless the latter saw fit to chance its methods. In such circumstances, the Government itself cannot look upon its position as being too firmly established.

During the course of electoral preliminaries the Government has gained the support of only one compact party, viz., the Slovene People's Party, whose leader, Dr. Anton Koroshetz, has concluded a "pact of friendship" with it. The Government and Dr. Koroshetz have promised each other mutual support, not only for the electoral campaign, but also for the next new political era. All other parties remain in the Opposition.

NOTES OF THE WEEK

(Continued from page 162.)

Minister for Finance, and a major Cabinet crisis was at once staged, each of the main political groups affecting to see in the attitude of the other some subtle reaction on the still latent constitutional question, whether Greece is to remain a Republic or to revert to a Monarchy. Again the moderating influence of M. Zaimis had to be exercised to restore peace to the Government. The financial question is to be discussed once more with a view to removing M. Tsaldaris's doubts, and, it may be supposed, to bringing home to all the Ministers a fuller understanding of the country's financial standing.

Turkey's Latest Black List.

As was pointed out in last week's issue, the Turkish Government selected the moment of the departure of its Finance Minister to discuss the question of a loan in England for the publication of a "Black List" of Turks who had been found to have belonged six or seven years ago to a so-called "Anglophil Committee." The incongruity of this step would seem to have struck the Turkish authorities, and the Press has since been careful to point out that there is nothing in the measures now being taken against those Turks who declared their friendliness towards Great Britain of the conclusion of the Armistice that need worry the British people. The warning is superfluous, as people in Great Britain have no occasion now to distinguish between Turks and Turks; they are concerned only with the official acts of Turkey, and they will draw their own conclusions from the Government's action in seeking at this date to brand with a life-long stigma a handful of Turks who were courageous enough to believe and to admit that Turkey's hope in the future

lay in a close understanding with Great Britain. The formation of the Committee took place at the time when the real significance of Mustapha Kemal Pasha's movement could not have been appreciated in Constantinople, even if it had actually taken shape in Anatolia. The members, therefore, might well be excused if they regarded civil war in Turkey as an unsatisfactory means of securing the rehabilitation of their country in the eyes of Europe. They are, however, now condemned to life-long banishment from the service of the State—a sentence, which the press interprets to mean "the deprivation of their civic rights and a stigma of infamy and dishonour on their families and succeeding generations." Among the victims of this vindictiveness are several holding prominent positions in Government service, heads of departments in various Ministries, ex-Ministers and Valis. When they see themselves described by the press as "monsters" and "traitors," they may find some consolation in reflecting that the basis of their crime was the exercise of the faculty of thinking for themselves, instead of perpetuating the old blight of the Hamidian régime, when only one person in Turkey was allowed to regard himself as a man, and every one else was content with the rôle of either slave or parasite.

The Pending Elections in Yugoslavia.

In the welter of political strife that the approaching elections in Yugoslavia have aroused as a result of the serious divisions in the parties themselves as well as between the different groups, it is of interest to find one Yugoslav politician sounding a more peaceful note. Dr. Koroshetz, the Slovene Clerical leader, has made common cause with the section of the Radical Party that follows M. Voukitchivitch, the present Prime Minister, and expects as a result of the elections to co-operate in the new

Government. One reason that he gives for the understanding with the Radicals is that it was the only way of securing absolute freedom for the elections in Slovenia. His party presumably will be responsible for the elections, and Dr. Koroshetz is resolved to see that they are conducted fairly. To this end he calls on all his followers to abstain from disturbing the meetings of their political opponents, and he appeals to all Slovenes to sink their differences, so that the province may regard itself as represented in its entirety in the next Government. His party, he declares, stands for its Slovene programme, which aims at the betterment of conditions in Slovenia for all, regardless of party. At the same time Dr. Koroshetz holds out a friendly hand to Croats, but on the one condition that they dissociate themselves from M. Raditch. No party, he states, is to be found in the Kingdom that is willing to work with M. Raditch, who can be "neither trusted nor believed." It is, perhaps, the first time that this doctrine has been so clearly stated by anyone in the position of Dr. Koroshetz, and it will be of interest to watch whether the coming elections will record that M. Raditch's hold on the Croat peasants is as strong as before, or that even these simple people have at last grasped the disadvantage of being cut off from all influence in the Government of the country through the personal idiosyncrasies of an impossible leader.

THE ENGLISH HIGH SCHOOL: CONSTANTINOPLE.

The English High School for Boys at Constantinople, founded in 1905, passed through a difficult time after the evacuation of Constantinople by the Allies. The slump in trade and the large exodus from Constantinople reduced the number of pupils from 166 in 1921 to 46 in 1923; and the Committee, in order to keep the school open, has been compelled to draw largely upon the endowment fund which had been built up before the War.

This year the number of boys attending the School has increased to 127, and the deficit on the School budget for the scholastic year was only £278. A fresh effort is being made to build up the endowment fund again; and a small committee has been formed in England for this purpose, consisting of Sir Harry Lamb, G.B.E., K.C.M.G., Arthur Baker Esq., C.B.E., Alfred Silley, Esq., and Robert Rowell, Esq.

A most generous gift has been made to the School by Mrs. Doughty Wylie, who invested £4,000 in trust for the purpose of assisting to educate at the School the sons of British parents unable to pay the School fees. The beneficiaries will be known as Doughty Wylie Foundations, in memory of Colonel Doughty Wylie, V.C., who was killed at the Gallipoli landing. The trustees are the British Ambassador, the British Consul-General, and the Chairman of the British Chamber of Commerce.

NEWS IN BRIEF.

The text of an extradition treaty between the United Kingdom and Albania, signed at Tirana on July 22, 1926, is published as a White Paper (Cmd. 2920, price 3d. net).

According to the *Umm al Qura*, of Mecca, negotiations have begun between the Wahhabi delegates and the Zaidi Imam Yahya for the settlement of outstanding questions and are proceeding in a friendly spirit.

The death is announced of Mr. C. E. Town, of Barnet, Herts, who contributed largely to the success of the funds of the Serbian Red Cross, the Roumanian and Russian Red Cross, funds for British refugees in Turkey, and the Lord Mayor's Fund for Armenian Refugees.

The death occurred on July 31, at the age of 63, at Torquay, of Mr. Joseph Armitage Sykes, O.B.E., who went to Turkey forty years ago in connection with the development of the carpet export business at Constantinople. He was appointed by the Turkish Government one of the administrators of relief to British prisoners.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

ETON AND YUGOSLAVIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—England has long been famous for her breed of schoolmasters and owes much to them. While most of them confine their teaching activity to the schools to which they are attached, not a few do much to enlighten the outside darkness. Among these missionaries of culture Dr. Alington, the Headmaster of Eton, is prominent, and his articles in the *Evening Standard* have a value of their own in educating the nation. So when I saw that he had been for a short trip to the Dalmatian coast and, returning, had realised that for too many of his fellow-countrymen Yugoslavia was still a mystery, I rejoiced to see that he had made up his mind to "shed light" on it. And, considering his opportunities, he is able to say something. But not much. And what he has to say (*Evening Standard*, August 2) is not very valuable. He laments that, if an English post-office clerk were asked to forward a telegram to Dubrosnik (*sic*), "you are likely to be informed, with that frigid calm of which only post-offices possess the secret, that the message can only be accepted at sender's risk." But what other answer *could* be given? It seems also that Yugoslavia "clings proudly to her great harbours of Spalato and Catharo" (*sic*) but that "Italy holds Sebenico."

Might I suggest that Dr. Alington should set to work to "mug up" his subject a little more at home and that an excellent method of doing so would be to subscribe to *THE NEAR EAST AND INDIA*? I doubt not that much of the raw matter to be found in its columns could be used by him in his charming essays and so be made to reach an even larger public than it does now.

Incidentally the reputation of English schools for exact scholarship might be vindicated.—I am, etc.,

Beaconsfield. C. STEWART-WILSON.

COUNT TISZA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—May I be permitted to rectify a paragraph on page 75 of *THE NEAR EAST AND INDIA* of July 21, which states that Count Tisza, who was opposed to the declaration of war against Serbia in 1914—which opposition, however, did not prevent him from remaining at the head of the Government of his country during the greatest part of the War—was murdered during the communist régime.

The exact dates are the following: Count Tisza was murdered on November 3, 1918, whereas the communist régime was established in Hungary on March 19, 1919.—I am, etc., R. GERBER.

Paris, 84, boulevard St. Michel, July 30.

King Fuad, accompanied by the King of Italy, on August 4, visited the Accademia dei Lincei, Italy's foremost scientific institution, and later the Baths of Diocletian. A brilliant reception was given in the afternoon in his honour at the Capitol. King Fuad has sent 100,000 lira to the Governor of Rome to be distributed among the charitable institutions of the Capitol.

The death is announced of Lady Afsur-ul-Mulk, wife of Nawab Sir Afsur-ul-Mulk, Commander-in-Chief of the Forces of the Nizam of Hyderabad for the past 30 years. She accompanied her husband not only on visits to Europe, but also into the heart of Arabia, where they spent two months, involving some privation, despite the hospitality of the Arabs after performing the pilgrimage to Mecca and Madina.

The death has taken place, at the age of 72, of Mr. Christopher Edward Town, late of the London Chamber of Commerce. Mr. Town, who was for 25 years a teacher in elementary and secondary school, subsequently entered into business. He joined the staff of the London Chamber of Commerce in 1899 to take charge of the Commercial Education Department, and was appointed Assistant Secretary in 1919. He retired in 1921, when he was made an honorary member of the Chamber.

THE RUSSO-PERSIAN FRONTIER.

BY MIRZA FIROOZ KHAN.

Tabriz, June 30.

"There is no secret that will not be revealed" has been said by the wise of old; and the secrecy of the closing of Russo-Persian frontiers has just been revealed. During the winter of 1924-1925 all the grape-vines were frost-bitten; hence there was a scarcity of grapes—not one-tenth of the usual amount. *Sobza*, or dried and yellow raisins, went up five times its usual price. The usual price was krans four per batman (ten pounds). The increased prices varied from 19 to 21 krans, according to the quality of the fruit. The native merchant used to buy the fruit at that price, and of course, in selling it in the Russian bazaars he had to make some profit on it too! To avoid this high price an "alliance" was entered into by *Zag-gos-dorg* (Soviet State Commercial Firm) on one side and three native commercial houses on the other side. This commercial alliance, treaty or plain understanding (call it what you like), was supposed to be a *secret*, and was so for over a year; but at last it was revealed. The purpose, or object of the Alliance was simply this:—

1. The Soviet Government was to declare the frontier closed to Persian merchants and to Persian goods (especially *Sobza*).

2. The closing of the frontier would follow, inevitably, by a fall in the price of *Sobza*.

3. These native merchants allied to *Zag-gos-dorg* were to buy *Sobza* at a low price, and sell it to *Zag-gos-dorg* at a low price (adding a certain per cent. of profit), and thus a profit would be reaped both by the native merchant and also by the Russian State Firm and at the same time the Russian consumer would be supplied by *Sobza* at a very much lower price than would be the case, if the frontier were left "open" and the commerce in *Sobza* free; that is, if any one could take *Sobza* to Russian fairs and sell them at the owner's price!

But it has not been revealed as yet who invented, or who was the party who first proposed this fraudulent plan; *Zag-gos-dorg* or the three native firms. However that may be, the proposal has worked like a charm, to judge by its splendid results, so far as success of the plan is concerned.

Briefly, *Zag-gos-dorg* would buy *Sobza* of the said

three native firms only, ignoring all the big and small merchants; these three native firms were the only buyers in the market. Why? Because these three firms could consume their goods and had to fill in their store-rooms to supply the incoming demands. The others would not buy because their goods were rotting in the stores, and became food, partly for the birds and for the mice! At last the other firms, who were forming the majority, formed a "Committee of Defence" for the rights of the minor merchants, and declared:—

1. Not to sell any *Sobza* to *Zag-gos-dorg*.

2. Not to permit the three native firms to sell to *Zag-gos-dorg*; and

3. Not to permit any amount of *Sobza* to cross over the frontier secretly.

This measure of prevention did a good deal of damage to the merchants themselves, for, if they had not resorted to this measure, *Sobza* now would be commanding a price three times higher than the market price of to-day. But as it is, or as it was made, *Sobza* would not "move"; consequently its price went down daily. These steps were resorted to by Tabriz and Maragha merchants, while the merchants of Rasht and Port of Pahlavi (Anzali) resorted to still more daring measure—in one case for instance, they compelled the Russians to reload their goods into their ships and return them to their own country!

Regarding the managers of the three native commercial firms, who had had a secret and confidential understanding with the *Zag-gos-dorg*, a correspondent writing in *Tabriz* from Maragha, says:—"Men like these, who have become Bolsheviks and are selling our interests to Russians are traitors. These men should either be hanged, as a public warning to other would-be traitors, or their property and goods should be confiscated and their mouths filled with fresh stable manure. . . ." This is, of course, purely Persian and Oriental. No merchant could be hanged for being smarter than the other fellow. . . .

The only good plan is that *Zag-gos-dorg* should buy what she needs from all and every merchant, including the minor ones, instead of buying all her supply from those three firms only. This will be more "Bolshevist like," more "proletariat like" and will remove the enmity and jealousy now existing between the competing parties. As I said, the "Committee of Defence" have done a good deal of damage to themselves by their declaration. The declaration would be all right—in a degree—if every source and avenue of supplying *Zag-gos-dorg* by *Sobza* were closed! But this was not so. Binab, Ajabsheer and Urmi are selling *Sobza* to the Soviet firm freely, and up to any amount desired. Maragha can keep the doors of her store-rooms closed for years without hurting that firm a straw. But if an "alliance" had been formed with the other towns beforehand and the supply of *Sobza* to *Zag-gos-dorg* cut off entirely, that would be a slight means of persuading *Zag* to listen to reason, or even to dictate "terms of peace" to her. But unfortunately this has not been so. *Zag* has supplied itself from other sources, ignoring Maragha and Maraghayans as if they did not exist at all!

Mooshavvar-al-Mamalik, our Foreign Minister, went to Moscow over three months ago to attend to this frontier business, but has not returned yet. What he has done, so far, we do not know; when he is coming back, we do not know; what the Teheran Government is doing, we do not know; how long this state of affairs is going to continue, we do not know! It is said that the Shah, some weeks ago, invited the Russian Soviet Minister to the Palace, and inquired of him what progress had been made in the frontier negotiations in Moscow. The Minister is said to have replied: "You had better ask the Rasht and Tabriz merchants about it. . . ."

This reply of the Soviet representative, it is said, so angered His Majesty, that he ordered the cutting off of all further negotiations, and thought about declaring war against Russia. But his bosom friends and Mustaufi-al-Mamalik, Prime Minister, quieted him down, persuading him to have patience for a while longer. . . . This, at any rate, is how the story goes.

THE HOSPITALITY OF A BRIGAND CHIEFTAIN.

BY "POLDIST."

[The following article describes a scene which was familiar to a select band of Englishmen about five years ago.—ED.]

A well-mounted group of a dozen or so, clad in picturesque Kurdish costume. Loose, baggy, broad-striped trousers of gaudy colouring, rather like the "chaps" of the Western American cowboy but even baggier, and the same width down the whole length of the leg: vivid sash, from the folds of which peeps out the hilt of a dagger, worn over a bright-hued waistcoat that buttons up to the neck; loose outer jacket of the same pattern as the trousers; tightly-fitting goat's wool skull-cap round which the turban is twisted leaving just the peak of the cap exposed. A rifle slung over one shoulder and a well-filled bandolier over the other complete the picture. This is the escort of "Irregular Levies," for to-day is to be a holiday from office routine to be spent in visiting an Agha, or Chief of a Kurdish tribe; and in Kurdistan it is not healthy for a Political Officer to venture far from his headquarters without an armed escort.

The start is an early one, as we want to get back before dark the same evening; and the latter half of our fifteen-mile ride to the Agha's domain will be over slippery, mountainous tracks where progress can be only of the slowest. Good going is made across the open country leading gradually to the foothills, and the first seven miles are covered in rather less than an hour. Then the country changes abruptly, and the little cavalcade has to proceed in single file. Open fields dotted with early spring wild flowers have given place to precipitous, rocky slopes and fern-strewn glens; and the sure-footed little ponies delicately and cautiously pick their way along narrow paths where one false step might send rider and mount hurtling down several hundred feet of yawning chasm. The silence is unbroken save by the clipping of hooves on the flinty surface of the track, and here and there the rhythmic splashing of trickling streams. There is an eerie feeling as of shadowy forms lurking behind every boulder, and one cannot help occasionally reflecting how ideally the surroundings lend themselves to an ambush, and how easily the principal mark (oneself) could be picked off, by the first shot fired! For such has previously been the fate of more than one Political Officer, and the possibility of being the next can never quite be absent from one's mind while one is out on tour. So we breathe a sigh of relief when the turn of a bend suddenly brings us almost on top of the sheltered little valley in which our destination lies. The Agha is surprised but pleased to see us, but (as would many a European host in similar circumstances) he exclaims how well he would have prepared for our reception had he only known we were coming, at the same time apologising for the simple fare which is all he will be able to put before us. (The sumptuous banquet which in due course materialises makes us wonder what epicurean marvels would confront the guest who gave timely warning of his coming.)

We dismount; and our ponies are led away to water and feed while we accompany the Agha through the narrow, deeply-rutted and dusty or puddled lanes leading to his stone-built house, where we are regaled with hot tea, served without milk but well sweetened, in a little narrow-waisted glasses; a most refreshing beverage after a long ride. The tea is served from a Gargantuan pot of the Russian samovar type kept simmering on embers in a hollowed-out platform in the middle of the floor, and its supply seems inexhaustible. There is no limit to the number of glasses that can be consumed at one sitting, but when and not until the offer of a fresh glassful is refused, strong black Arab coffee, very bitter but by no means unpleasant, is passed round in little handleless china cups. Not more than one cup should be partaken of, but there is small chance for the uninitiated to be guilty of a breach of etiquette in this respect, as the rapidity with which the handing round of the cups is

succeeded by the ceremony of manual ablution leaves little time to dispose of the steaming contents and ask for more. Scarcely have we finished our coffee than one attendant approaches with a basin and piece of soap while another, carrying a ewer of water and a towel prepares to pour a thin trickle over our hands as we soap them above the basin. We are then ready for the midday meal, served much earlier than usual to-day on account of the guests whose time is limited. This has been laid out either in another part of the same room if it be a very large one, or in a different room altogether. The centre-piece, so to speak, of the "table," a raised dais in the middle of the floor, is a colossal tray containing a large roasted turkey or lamb picked of all its bones, stuffed with and surrounded by masses of boiled rice in which raisins and pistachionuts are freely mixed. A truly succulent dish! Flanking it are a dozen or so smaller dishes of various meat and other delicacies from the savoury *kabob* (a sort of highly-peppered rissole) to a delicious sweet of which the main ingredients are honey, cream and walnuts. Between dishes are flat pancake-like slabs of coarse unleavened bread. The guests dispose themselves on low stools forming a circle round the "table," and each man straight-away sets to on whatever he fancies, using his fingers for all except sloppy dishes for which he is provided with a wooden spoon. The meal proceeds in earnest and for the greater part of the time in silence, and is over for all concerned as soon as the principal guests indicates by calling for water to wash with that he has had enough.

Although the talk during these visits turns chiefly on the prospects of the coming harvest and kindred subjects of purely local interest, the conversation throws many an interesting light on Kurdish character and temperament, inter-tribal relations and recent history; and more can be learned of the psychology of the people in one such day as this than from months of office routine. The remainder of the visit will be spent in walking round and inspecting nearby crops, orchards or vineyards; or, if to bring a shotgun has been remembered, in having a few shots at the hares, and partridges of the *chikor* or *si-si* varieties, that abound in these hills. The time passes all too quickly and it is advisable, in order to counteract the delays inseparable from such occasions, to name the hour of starting on the homeward journey as considerably earlier than is really necessary. The Agha will do all he can to persuade his guests to defer their departure till the following morning and to spend the night under his hospitable roof, but in spite of strong temptation to give way to him, they can not do so, after definite arrangements have been made to return the same day. The invitation has, therefore, regretfully but firmly to be declined. While waiting for the ponies of the Agha and some of his retinue, as well as our own, to be saddled, more little glasses of tea are consumed; and eventually, much later than had been our original intention, the party sets out accompanied by the Agha and his additional escort as far as the mountainous country extends. By the time the plain is reached it is almost dark, but the ponies, glad of the change from narrow stony track to open yielding turf, respond willingly to the urge of speed. When about half the plain has been traversed a dozen almost simultaneous clicks denoting that the rifles of the escort are cocked and ready for action indicate that their unusually keen sight and hearing have detected movement ahead, and quietly detaching themselves from the remainder two or three push rapidly on in front. Anon, shadowy mounted figures loom up out of the gloom. They turn out to be a half dozen more of our own "Irregular Levies," come to meet us as the lateness of our return has caused some anxiety. A little later, and we are all securely tucked up in our beds, with sleepy memories of a perfect day behind us, and drowsily pleasant anticipations of similar ones to come.

M. Constantinopolous, Greek Minister of Justice, will submit to the Greek Cabinet, at its next meeting, Professor Capp's application on behalf of the American School of Archaeology in Athens for permission to excavate on the site of the Ancient museums.

NEAR EASTERN PRESS.

The Roumanian Regency.

The unrest immediately following the death of King Ferdinand has at least temporarily subsided. For the future much seems to depend upon the attitude of the Opposition parties and upon their acceptance or rejection of the Accession Act. A *Morgenblatt* Correspondent writes:—

"The attention of the European public which was absorbed in Austria owing to recent events in Vienna has now turned to Roumania through the death of the King. The situation in Roumania before the King's death was anything but rosy. Only very few days ago did we report the exodus of the Opposition from Parliament, whereby the Leader of the Peasant Party, M. Maniu, declared a ruthless fight against the Government. The Opposition is incensed, because the Government, through every means in their power, won a three-quarters majority in the elections, although it is well known that the Liberal Party of the Prime Minister, M. Bratianu, do not possess the sympathy of the people, which is rather given to the Peasant party. These facts were known to M. Bratianu, for which reason he made the following promise to Prince Stirbey Maniu: (1) The Peasant Party should have 120 out of the 378 Parliamentary seats; (2) they should be allotted 4 Ministerial appointments, 22 State Secretaryships; (3) they should hold one-third of the Prefectships. M. Bratianu, however, made the following stipulation to the Peasant Party: (1) Complete acceptance of the Act of January 4, 1926 (abdication of Prince Carol); (2) combined election campaign without competition. On this second point the Peasant Party were not agreed, because they feared loss of their popularity. Such is the situation, that the strongest Opposition Party which counts in its numbers the majority of the peasants do not formally acknowledge the abdication of Prince Carol, or, in other words, the young King Michael. Everything now hangs on this, whether the Peasant Party will abide by their non-acceptance of the Accession Act or will give in. At first incalculable consequences seemed possible, for instance, that General Averescu, who was thrown out of office with his following, must join on to the Peasant Party. A question arises in the attitude of Soviet Russia, who may not let this opportunity slide. It seems, however, that Soviet Russia will make the Roumanian parties prudent. According to the latest news from Bucharest quiet reigns, and no one is thinking of complicating the situation through ill-considered actions."

Bulgaro-Yugoslav Relations.

The possibility of a Bulgaro-Yugoslav understanding is much discussed in the Yugoslavian paper, the *Morgenblatt*. It would seem that Italian tentative suggestions for a similar *entente* with Bulgaria have urged Yugoslavia to forget her disputes with all speed, and to open up the way for an agreement with her neighbour.

The *Morgenblatt* diagnoses the opinion in both States as follows:—

The purely academic discussion of a Yugoslav-Bulgarian *rapprochement* is lasting too long. One grows impatient, for there is little noticeable progress, and impatience turns to doubt and pessimism. Notwithstanding the fact that the Bulgarians showed great understanding by the clever reserve of their Government in the conflict between Belgrade and Rome, and sanctioned Buroff's loyal attitude the preponderating majority of people would welcome the entire suspension of the present controversies and ill-feeling between Yugoslavia and Bulgaria, and the establishment of really friendly negotiations between Yugoslavia and Bulgaria. Thus those who were impatient and doubtful were wrong, for they have judged the case with partiality. They await a solution of the problem from official places, from professional diplomacy on both sides, which, for Bulgaria particularly, can but proceed slowly and with circumspection. But they overlook the other higher truer factor: the disposition of the people, their will, their convictions and their powers of accomplishment. That the desire exists in the majority of the Bulgarian people for reconciliation and brotherly understanding with the Serbs, that this desire also finds promising collaboration and an encouraging echo on the other side shows certain symptoms and facts which have perhaps no special political character, but which are of the greatest significance as social intelligence.

The appointment of M. Liuba Neshitch, a sincere and inspired follower of the policy of *rapprochement* for the important post of Yugoslav Minister in Sofia, was a happy choice, and being known to be such was gladly welcomed here. . . . At a recent congress of Slav doctors in Warsaw the friendly intercourse of the Yugoslav

and Bulgarian delegates was universally noticed and welcomed, and, above all, this solidarity showed itself significantly in that both delegations shared a wreath which they laid on the grave of the Poles who fell in the Great War. . . .

Some weeks ago the former Minister, Kazassov, now President of the United Bulgarian Journalists, spent some time in Yugoslavia in order to judge for himself of the situation in Belgrade, Zagreb, and so on. On his return M. Kazassov set forth his observations in a series of articles which, for solid reality and quiet tone were good and instructive in their effect. . . .

The last visit of the Slovene Party leader and excellent politician, Dr. Koroshetz, who was well received by the King, the Government, and in the Bulgarian Press, has a far-spread meaning for the further development of negotiations between the two countries.

Opinion in Belgrade circles, which at first tried to assert that the journey of Dr. Koroshetz would be a purely private affair, with which the Yugoslav Government had nothing to do, convinced no one, and as the Slovene Party leader immediately on his return went straight to the Minister for Foreign Affairs, Dr. Marinkovitch, one was no longer in doubt on the nature of his journey. . . . One also sees that the question of a *rapprochement* and agreement is making good progress. If official diplomacy is able to follow it up, according to the convictions of peoples on all sides, the case would be won from day to day, and would grow in extent and depth. If it were possible to lay before the Bulgarian people the following alternative: *Hic Italia hic Yugoslavia*, an agreement with Yugoslavia would certainly be voted for by an overpowering majority."

A CONFERENCE AT LAUSANNE.

Five hundred leaders of the Christian Churches assembled in the Cathedral of Lausanne on August 3 and prayed for divine guidance in their task of preparing the way for better understanding and greater harmony among their various denominations. The service marked the opening of the World Conference on Faith and Order, which will be in daily session until August 21. The programme, covering nineteen days, has been carefully arranged to give every denominational group a hearing. Dr. Alfred E. Carvie, of England, a Congregationalist, is Deputy Chairman of the Conference and will preside at the business sessions. Representation has been assigned to each denomination on a basis proportionate to the number of communicants, as follows:—*Anglican*—U.S.A., 7; Canada, 5; West Indies, 2; Argentina and Eastern South America, 1; England, 10; Ireland, 5; Scotland, 3; Wales, 4; India, 5; China, 2; Japan, 1; South Africa, 5; Australia and Tasmania, 10; New Zealand, 4. *Baptist*—Northern Baptist Convention, U.S.A., 5; Seventh Day Baptist, 1; Ontario and Quebec, Canada, 1; South Africa, 1. *Christian*—U.S.A., 1. *Congregational*—U.S.A., 10; Brazil and Portugal, 1; England and Wales, 3; North China, 1; South Africa, 1; Australia and New Zealand, 2. *Czechoslovak Church*, 4. *Disciples*—North America, 6; Great Britain, 1; Australia, 2. *Eastern Churches*—Ecumenical Patriarchate, 4; Patriarchate of Alexandria, 2; Patriarchate of Antioch, 2; Patriarchate of Jerusalem, 2; Greece, 6; Cyprus, 3; Roumania, 3; Yugoslavia, 3; Bulgaria, 3; Russia, 1; Poland, 3; Georgia, 3; Armenia, 3; Syrian Patriarchate of Antioch and Jerusalem, 1. *Friends*—America, 3; Great Britain, 2. *Lutheran*—America, 7; France, 2; Alsace-Lorraine, 1; Norway, 6; Sweden, 8; Denmark, 6; Hungary, 5; Slovakia, 4; Estonia, 3; Latvia, 3; India, 1. *Methodist*—Methodist Episcopal, 10; Methodist Episcopal South, 7; Methodist Protestant, 2; African Methodist, 3; Primitive Methodist, 2 (all the foregoing in U.S.A.); Wesleyan Methodist Conference (England), 5; United Methodist (England), 3; Primitive Methodist, 2 (all the foregoing in U.S.A.); Wesleyan Methodist Church in South Africa, 2; Australasia, 3; New Zealand, 2. *Mennonites*—Germany, 1. *Old Catholic Churches*—Germany, 3. *Protestant Churches of Germany*, 35. *Protestant Churches of Switzerland*, 1. *Presbyterian and Reformed*—U.S.A., 23; Canada, 4; England, 2; Ireland, 4; Wales, 3; Church of Scotland, 8; United Free Church of Scotland, 8; Hungary, 4; Bohemia, Czechoslovakia, Moravia and Silesia, 7; France, Alsace-Lorraine, 1; Belgium, 1; South Africa, 3; Victoria, 1; New Zealand, 2. *United Brethren*—U.S.A., 2. *United Church of Canada*, 8. *South India United Church*, 3. *United Church of Northern India*, 3.

Dr. A. C. Millsbaugh, Administrator-General of Finances in Persia, left Teheran for America on August 3.

According to *Al Ahram*, the Egyptian Cabinet has decided to proceed with the scheme for utilizing hydro-electric power from the Assouan dam.

Rome was decked with flags on August 2 in honour of the arrival of King Fuad of Egypt. King Victor, with Signor Mussolini, met him at the station, the former accompanying him to the Quirinal, where he was staying. The Duce paid a long visit to King Fuad soon after his arrival.

As a sequel to the Nablus road murder and robbery last May, when three motor-cars, including one occupied by the Bishop of Jerusalem, were held up in the Valley of Robbers and the chauffeur of one of the cars was mortally wounded, the Jerusalem Assize Court on August 4 sentenced two of the assailants to death and the third to 15 years' hard labour.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

NATIONALIST EGYPT.

"EGYPT." By George Young. *The Modern World Series.* Edited by H. A. L. Fisher. (London: Ernest Benn, 15s.)

Mr. George Young, author of this latest addition to the "Modern World Series," is a publicist of some note; his views are widely known, and his knowledge is generally respected. He is, however, a doctrinaire. Why he should have been selected to write what we must suppose purports to be a history of modern Egypt, must remain a secret in the catholic or omnivorous keeping of the Editor of this series, who already, in the matter of Turkey, had caused discerning readers to be wary of the substitution of "balanced surveys" for histories. This volume on Egypt is, frankly, propaganda in the Nationalist cause; it is infinitely to be regretted that Mr. Young's preconceived views are made to prevail against facts. The man who is ready at all times to suspect the integrity of his countrymen's motives in Egypt is himself suspect. Doubtless there is another interpretation than the usual British interpretation of events in Egypt, but it is not made more valid by belittling Englishmen. Not once to mention the standard of public life which was set for Egyptians by Englishmen in Egypt is something of a feat on the part of an historian of nineteenth-century Egypt. Objective and dispassionate analysis of events is, however, too slow a process for the quick, facile pen of Mr. Young. We repeat, this book is no history.

But it is an able compilation. Given the thesis that Nationalists in Egypt have always been in the right, Mr. Young seeks with the utmost freshness and pungency to make good his case. He certainly does not mince matters, and for so much we are grateful to him. His work may conceivably help to a better understanding by the more intelligent British of the peculiarities of the Egyptian problem, provocative as the author is; though whether his hope will be realised that Egyptians may be brought by this volume to readier and complete recognition of the part played by Britain in the history of Egyptian independence is more doubtful. The reverse side of the medal is one that insular men should more often gaze at, and contemplate; but we should be surprised if the majority of Englishmen, having looked at Mr. Young's version of the history of Egypt and at his statement of the Nationalist case, do not deliberately and finally turn round that medal to at least half of its more usual direction.

Intelligently enough Mr. Young begins with an attempt to discover the mainspring of modern Egyptian activity. He remarks that a century ago the word "Egyptian" had no precise meaning. "There was no Egyptian national consciousness inspiring the campaign of Mehemet Ali." His conclusion is that nationality, as a force which compels aliens to grant independence to a State, can precede national consciousness. It is certainly difficult to read the history of the unification of the mixed populations of Egypt in any other light than that afforded by this dictum. Another useful point that he makes is that whether Georgian or Arnaut or British ruled in Egypt, the thing that counted all the time was Egypt. Quite emphatically Mr. Young differs from the school of thought which affirms that Modern Egypt has been made by the British. "The general course of developments in Egypt," he says

would not have been so very different in its broad lines if the British Empire had never existed. In an earlier phase it made little difference whether rule over Egypt was, for the moment, in the hands of a Circassian like Ibrahim or of an Albanian like Mehemet Ali. And in a later phase it would have made no very great difference to the course of history in Egypt if, instead of a Cromer and a Kitchener, there had been a de Blignières or a Lyautey.

That is a point of view worth considering, and it must be admitted that the author, examining the history of North Africa in general, adduces several things in support of his contention. All the same, he recognises that had someone else than the Englishman been latterly in charge of Egypt, Egyptian history would have been made "not

in quite such a gentlemanly way, nor with quite such good results." Mr. Young does not spill generous words over the British achievement in Egypt, but he does emphasise the efficient administration during the Egyptian nation's minority, and the fact that Egypt has been spared the years of fighting for independence which would have been its lot had it come under one of the European Military Empires in North Africa.

Let us now skim through and summarise Mr. Young's historical section, always remembering his anti-British preconceptions.

Modern ideas first impregnated Egypt when the Napoleonic armies went to Egypt on a Empire-building enterprise. Napoleon of course subjugated Egypt, but the defence of Acre and the battle of Canopus (1801) ended his dream. Next came "another adventurer," Mehemet Ali, who really did appear to unite the inhabitants of Egypt behind him for the establishment of an Egypt independent of the Porte and of the Powers. He had Imperial schemes, it is true, and they failed; but it is a curious fact that through his ambitions came the possibility of national growth. And it is well to remember that Mehemet Ali (died 1849) "laid the foundation stone of the great Nile barrage that crowned his reconstruction of the ancient irrigation system of Egypt, and founded a new system that was to be completed by his enemies."

Then descended upon Egypt the period of "bankrupts and brokers"—the time of Abbas, Said, and Ismail. Abbas was an obscurantist, Said put Egypt into pawn, largely because of his personal extravagance (it was Said's megalomania which brought about the complication of the Suez Canal), and Ismail, though energetic and by no means unenlightened, plunged himself into a "morass of liability." This financial dependence of Egypt Mr. Young describes thus:—

The State loans placed with the Goschens (1862, 1864, 1866), Oppenheim's (1873), Bischofsheim's (1870), and Rothschild's (1879), show that for a liability of seventy-seven millions Egypt actually received about fifty millions. In one Oppenheim loan (1873), for a liability of thirty-two millions, involving an annual charge of three and a half millions, Egypt received less than eighteen millions. The less official transactions were even more leonine. Never has there been such a spoiling of the Egyptians by the chosen people.

This fact of Egypt's debt to European financiers is, of course, enormously important, although more political or military considerations are nowadays apt to occupy the greater attention in the public mind.

When he comes to the British Occupation of Egypt, Mr. Young draws a very sympathetic picture of Arabi. He paints him as a personification of the *fellaheen*, and believes that in overthrowing him "we lost the first and best opportunity of bringing Egyptian national sovereignty into permanent and peaceful alliance with British naval sovereignty."

The next phase of Egyptian history lay largely with British Liberalism: it was the time of Gordon and of the Mahdi. During this period Great Britain made it clear, according to Mr. Young, that she meant to have "a free hand" in the Sudan.

We cannot attempt to summarise what Mr. Young has to say upon the financial reconstruction of Egypt and of Cromerism. He is no admirer of Cromer. "At the end of Cromerism the capital value of the debt was much the same as at the beginning." He suggests that the policing of Cromerism was less effective than that of Ismail. In respect of Egyptian education Cromerism was an utter failure. In a word, Mr. Young condemns Cromer because he did not build sufficient bridges towards Egyptian self-government. And in so condemning him, the author makes the elementary error of reading history backwards. For ourselves we think that Cromerism will bear a very different interpretation from this; that, in fact, the policy now being pursued towards Egypt by Britain is but a logical extension of Cromer's wise principles.

To Sir Eldon Gorst our author is very favourable, and

in support of this view he tellingly quotes what Sir Ronald Storrs, Oriental Secretary to the Agency, wrote upon Gorst's death:—"He had fought his fight, and, where the world saw failure, had succeeded." In 1911 began the "well received régime" of Kitchener, though during his stay it became increasingly obvious that "the English were not in Egypt as officials and officers of an Ottoman Sultan or even of an Egyptian Khedive," but were there first, in an Imperial duty, secondly to develop the resources of Egypt, and thirdly, "to continue educating the Egyptians until they became English."

With the proclamation of the British Protectorate the Nationalist movement which is Mr. Young's *motif* ran underground, although the author believes that the sinister successes of the extremist Egyptians need not have been indulged in if the war-preoccupation of Great Britain had not obstructed Egyptian nationalist aspirations. He asserts that the rebellion of 1919 was "a natural development of the movement of the whole previous century." For the subsequent Declaration (February 28, 1922) he has the highest praise—Lord Allenby, in fact, is quite one of his lesser lights. His verdict upon the Declaration is worth quoting:—

It is a conveyance of straightforward common sense and courage. It is, indeed, a document worthy of a high place in our diplomatic archives.

Seeing that this same Declaration, which implied the granting of independence to the Egyptians *before* settling essential points, has been the main cause of all the trouble since 1922, one will understand that Mr. Young shows no circumspection in entertaining opinions contrary to those usually held.

Coming, with the aid of some uncomplimentary descriptions of King Fuad and Lord Lloyd, to the present position in Egypt, Mr. Young lays it down that, although he has seen clearly enough, and admitted, that Egyptian claims to the Sudan are Imperialist, not Nationalist:—

The sovereign rights of Egypt can only be a legal fiction, and its rights of self-government more than a licensed faculty, as long as an alien army occupies the seat of Government and an alien authority maintains such rights of intervention as might be construed into the reserved points.

In his examination of the solution of the Egyptian problem, Mr. Young thus defines the "Revised Points":—

(a) The security of the communications of the British Empire in Egypt—is verbiage for the Canal.

(b) The defence of Egypt against all foreign aggression, direct or indirect—is camouflage for the garrison.

(c) The protection of foreign interests and the protection of minorities—covers the High Commissionership and the Director of Security.

(d) The Sudan—is a complex of divergent interests respecting cotton and water.

He believes that all four points are soluble, suggesting that the British should evacuate Egypt and Egypt evacuate the Sudan, with the League of Nations coming in to get the guarantees required for British interests in the Canal and for Egyptian interests in the Nile. The Sudan he describes as a *hinterland* for Egypt, not a homeland. And for the contribution which Egypt has made towards the establishment of security in the Sudan, he suggests compensation in the form of rights in Nile water and in part of the Northern Sudan. This suggestion he seeks to derive from the award of the League in the affair of "Mossul" (his spelling of Oriental names is throughout unsatisfactory): an award which he summarises, carelessly enough, as giving the territory in dispute to Iraq, with compensation to Turkey in the shape of a share of the oil and a rectification of the frontier.

Thus at the end, as at the beginning of his work, Mr. Young is doctrinaire. He brings to an infinitely complex problem a mind that at once knows its solution—for that lies in the easy means of constant depreciation of one side. Even doctrinaires have their uses, however; and we would certainly not advise students of Egypt to miss this book. To remind them that it is *not* history will probably be superfluous. But we will do so, all the same.

HAM AND SHEM.

"A STUDY OF THE RACES IN THE ANCIENT NEAR EAST." By William H. Worrell. (Cambridge: Heffer and Sons 8s. 6d.)

Professor Worrell is careful to point out that, even at at the very earliest periods to which we can reach back, there are to be found none of the distinct families of the human race which we believe, from internal evidence, once to have existed. In the remotest past which we can reach these families have already begun to mix and the process has gone on ever since and still continues. Indeed, Professor Worrell goes so far as to say of the United States Negro that "in spite of laws forbidding intermarriage and the most pronounced and effective social pressure upon all who attempt social intercourse . . . in the course of time the Negro, who is now Anglo-American in speech and culture, will be more and more Anglo-American in blood." He believes the same to be true even of Jews. The striking resemblance of individual Jews to the various Gentile races among which they live is due, in part at least, to a gradual mixture of blood.

But this does not prevent us from distinguishing broadly certain human families, though it does prevent us from giving any one of them a really definite geographical habitat. Among these, the so-called Hamite and Semite families have long been differentiated. The first has been associated mainly with Africa and the latter with South-Western Asia. Professor Worrell takes it that the Hamite family originated in the once fertile Sahara and the mountains of Atlas, in which latter tract it is now found at its purest. It spread all over Africa, though the farther it reached from its original seat the more its characteristics became merged with those of former inhabitants. The same family occupied most of the Mediterranean lands, extending as far as the British Isles, where we are invited to regard the ancient Picts and their contemporaries during their flourishing age as Hamites. This our author seeks to prove from linguistic and monumental evidences, as well as from cephalic measurements. For instance, he claims that the Welsh language contains certain distinctly Hamitic elements.

So far we do not depart much from ideas which have been treated of by other writers. But Professor Worrell's main thesis is that the Semites are an early offshoot of the Hamite family who wandered off at a very early period to Arabia, whence the various Semite races known to us have, from time to time, issued, peopling Mesopotamia, Syria, Abyssinia, and other lands. We have not space here to enter upon the author's arguments to support this thesis. They are necessarily intricate and complex; mainly linguistic. They are to be found in this work and are worth studying. It is unfortunate that the book is based on lectures which were doubtless often intended for more or less "popular" audiences. In consequence too much space is given to matters which, in a book of this class, ought to have been taken for granted. At the same time the author's natural desire to conceal the medicine in the jam has led him to curtail and to simplify unduly the steps of proof for his theory. The result is a book consisting too much of scraps and notes, less consecutively logical than would have been desirable and thus failing to carry irresistible conviction. None the less, it is a stimulating piece of work. The influence of the Semite family on the human race, not only in the Near East but throughout the world, has been and is enormous, and study of their origins is clearly important.

C. S-W.

The Bulgarian Sobranie was prorogued on August 5 until October.

M. Miltchitch, the new Yugoslav Chargé d'Affaires appointed to Albania, left Belgrade last week for Tirana.

The King of Egypt, accompanied by the King of Italy, visited the University of the Sapienza (Rome), on August 5, and received the degree of Doctor of Jurisprudence (*Honoris Causa*). King Fuad also attended a reception at the International Institute of Agriculture, and witnessed a gala performance of *The Barber of Seville*. His State visit to the King of Italy ended on August 6, when King Fuad moved to the Excelsior Hotel for a few days before leaving Rome.

PERSONAL AND GENERAL

TO-DAY

August 11, 1927 (New Style).

July 29, 1927 (Old Style).

Saphar 12, 1346 A.H., of the Muslim Calendar.

Ab 13, 5687, of the Jewish Calendar.

Sir Alfred Mond, Bt., M.P., is staying at Aix-les-Bains.

Mme. Yovanovitch left London last week for the South of France.

King Fuad of Egypt was received in state by the Pope on August 7.

Sir Grimwood Mears arrived on August 5 at Marseilles in the Mongolia from Bombay.

Lord Sinha left last week for the Continent, and will not return to London for several weeks.

Lady Macnaghten, wife of Sir Harry Macnaghten, gave birth to a son at 10, Hyde Park Square, on August 3.

Sir Charles Metcalf arrived last week at the First Avenue Hotel, Hove, from Winkworth Hill, Godalming.

Major-General Lord Edward Gleichen and Lady Edward Gleichen left London on August 6 for Piestany, Czechoslovakia.

The British Consul-General at Constantinople and Mrs. A. T. Waugh are leaving London for Constantinople on August 18.

The Marquess of Reading last week joined the Marchioness of Reading and Viscount and Viscountess Erleigh at Deal Castle.

Viscount and Viscountess Inchcape left their residence in Hamilton Place on August 5 for Glenapp Castle, Ballantrae, Ayrshire.

Lady Sheila Jackson has left for Scotland, where she will stay until the end of August, before joining her husband in India the following month.

Mr. Robert Greg, British Minister at Bucharest, and Mrs. Greg are taking the cure at the Radium Spa, Bad Brambach, Saxony, and will remain there for a few weeks.

Lady Lloyd, wife of Lord Lloyd, High Commissioner for Egypt, has consented to open the Dundee Horticultural Society's Annual Show, which takes place on August 25.

Sir Victor Sassoon, Bt., left London on August 4 to join the P. and O. s.s. *Naldera* at Marseilles for Bombay. He expects to be out of England for the next eighteen months.

Dr. Ernest Barker is spending the month of August on the Continent, and on his return will remain in London until the end of December. He expects to take up his residence at Cambridge as Professor of Political Science about the end of the year.

The Amir Ghazi, Heir Apparent of the King of Iraq, left Cairo on August 3 by air for Baghdad, where he arrived the following day. His cousin, the Amir Talal, son of the Amir Abdullah of Transjordan, arrived in Cairo on August 3, and left two days later for Amman.

Colonel Edward C. Jury, C.M.G., M.C., will succeed in November Colonel R. M. Wetherell, C.M.G., as Assistant Adjutant-General of the British Troops in Egypt. Colonel Jury was G.S.O.I. in India from September, 1922, to June, 1926. Colonel Wetherell will take up the appointment of Officer-in-Charge of Records at Exeter in November.

A son was born to Mr. and Mrs. Norman Nairn at Beyrout on August 5.

Mr. Pandeli Ralli has left 17, Belgrave Square, for the Royal Crescent Hotel, Brighton.

At the Congress of Cities to be held shortly at Berne, Alexandria will be represented by Ahmed Seddik Bey, Director General of the Municipality of Alexandria.

Mr. H. E. Mayne, of the Telephone Administration, accompanied by an Egyptian official, will represent Egypt at the International Wireless Congress at Washington.

Lieut.-General Sir W. Gillman, K.C.B., K.C.M.G., D.S.O., who has been appointed Master-General of the Ordnance, in succession to General Sir J. F. Noel Birch, K.C.B., K.C.M.G., whose term of office expires on September 30, holds French, Russian, Italian, Serbian and Greek decorations. In 1919 he was appointed a member of the Army in India (Esher) Committee.

The King has given Major-General Sir Charlton Watson Spinks, K.B.E., D.S.O., Inspector-General, Egyptian Army, authority to wear the insignia of Grand Officer of the Order of the Crown of Italy; and to Major David Johnston Wallace, T.D., Territorial Army Reserve, Civil Secretary, Frontiers Administration, authority to wear the insignia of Commander of the Order of the Crown of Italy. These decorations have been respectively conferred on them by the King of Italy in recognition of valuable services in connexion with the Italo-Egyptian Agreement of November 9, 1926, concerning the Western Frontier of Egypt.

KING FAISAL'S VISIT.

King Faisal of Iraq, who has been invited by the Baghdad Cabinet to take charge of the negotiations with the British Government concerning the proposed amendments to the Anglo-Iraqi Treaty, left Baghdad by air on August 6. He alighted at Gaza the following day, and has proceeded for a short stay with his father, ex-King Husain, in Cyprus. His Majesty will then journey to France and later to England. He will be met in Paris by his Prime Minister, Jaafar Pasha al Askari, who will attend King Faisal in London.

During King Faisal's absence in Europe, his elder brother, Ali, will act as Regent.

Mr. Eumorphopoulos, of London, has presented a collection of 341 pieces of Chinese porcelain to Greece. The collection will be exhibited in a special collection at one of the Athenian museums.

Mr. Benjamin Lewis Rice, C.I.E., of Greenhalgh, Maxted Park, Harrow, who died on June 10, aged 90, left estate of the gross value of £2,435, with net personalty £97.

M. Tsaldaris, Greek Minister of the Interior, on August 1, accepted the Prime Minister's proposal for a rediscussion by the Cabinet of the activities of the Greek Mission in Geneva, thus averting the threatened Cabinet crisis.

Count Mitcha Kogui, Japanese Minister to Bucharest, arrived last week in Cairo to discuss with the Foreign Ministry the conclusion of the commercial convention between Egypt and Japan concerning which there have already been discussions between the Egyptian Government and the recently-appointed Japanese Consul-General in Alexandria.

SHELL

THE REAL INDIAN PROBLEM.

During the past session of the Legislature the members of both Houses have had one of those opportunities that come all too rarely of discussing the changing situation in India. Never were Parliamentary debates on India quite so important as at this time, when the capacity of the Indian peoples for self-government is being severely tested through an intricate system of reforms. The reforms, it cannot be too often stated, while steadily increasing the participation of Indians in the government of their country, do not diminish British responsibility. On the contrary, they rather enhance it, since they call for a greater alertness and keener sensitiveness to all these changing forces that are now so quickly changing India. A Parliamentary debate, whether in the House of Commons or in the House of Lords, is an occasion for registering, as clearly as may be, the state of British opinion on Indian affairs, and "for indicating in large measure the present tone and quality of our responsibility." It would, of course, be absurd to imagine that the many big problems now at issue can be discussed at all adequately in the course of the few hours allotted in the midst of a particularly busy Parliamentary session. That is not required. What is required is a display of sympathy in the broadest sense, coupled with a clear recognition of continuing responsibility. The years of British rule in India have produced results that no one could have foreseen, have started a variety of movements for which there is no precedent. Often the results are very bewildering. It is easy, and as unprofitable, to repine and regret the days when the peoples of India were more inert, and all their problems were infinitely simpler. But the strength of British rule in India has always lain in the firm recognition, in policy and in action, of every new situation as it arose. It requires, perhaps, a more patient effort and a more intelligent sympathy to face the facts in the more complicated situation of to-day. That the effort will be steadily made is beyond question. The prior necessity must be to ensure that the sympathy is not misdirected, or in some not unimportant respects even misplaced.

The latter thought is prompted particularly by a more leisurely study of the last House of Commons debate. It would be a matter for profound regret if its undignified ending were allowed to overshadow what might otherwise have been accounted one of the most interesting of the series. We frankly recognise that on matters of religion in relation to India, it is becoming to speak warily, and not to speak at all without clear warrant or genuine impulse. The British Government have rightly observed in their administration a very great restraint and a very strict neutrality in regard to the religious beliefs of the Indian peoples. This restraint and this neutrality do not, of course, imply indifference to the religious principle in whatever form it may be manifested. Nobody is better qualified to deal with that particular aspect of the Indian problem than the present Viceroy, whose direct and sincere appeal to their deepest

convictions has created such a profound impression on the leaders of Hindu and Muhammadan thought and opinion—even if unhappily it has failed as yet of its more immediate purpose. Lord Irwin, in the famous Simla speech, went, as is his way, directly to the heart of the problem, the need for unity, for Hindu and Muslim, Brahman, and non-Brahman, to cultivate a community of interests in the greater welfare of the whole. It was, however, left to Lord Winterton, a year later, to deal with what, in our judgment, is an essential corollary—whether any administration, whether autocratic or not, which does not share the religious ideas of the people, but stands nevertheless in the relation of a trustee for their economic and material welfare, is justified in leaving the whole department of traditional social usage, founded in the main on these same beliefs, severely alone. Clearly such a course is the only safe ground, but in such a matter as child-marriage, for example, through excess of caution held, rightly or wrongly, to be proper to the regime under which it works, it may be actually perpetuating and stereotyping customs which the better mind of India might be brought, after the necessary period of struggle, to modify.

The authors of the Montagu-Chelmsford report were not without hope that the reforms would themselves help to provide the remedy. "A Government," they wrote, "in which Indians themselves participate, invigorated by a closer touch with a more enlightened popular opinion, may be able with due caution to effect with the free assent or acquiescence of the Indians themselves, what under the present system has to be rigorously set aside." And yet, on the eve of the appointment of the statutory Commission which is to determine whether the existing degree of self-government is to be extended, modified or restricted, Lord Winterton felt constrained to emphasise once again that the great barrier to a general improvement in material prosperity was the imperfectly realised apathy of Indians to mundane concerns, and their fervent attachment to customs such as the caste system and child marriages, against which Mr. Gandhi himself invigilant as strongly as anybody. Had he gone further, and added that so long as the Hindu or Muslim displays intolerance of the other's religious practices, so long as the resistance to disease of a large part of the population is permanently enfeebled by religious beliefs, so long as the higher castes refuse to admit the children of low castes to schools which their own sons attend, or so long as caste exclusiveness takes even harsher shapes, "any form of self-government to which India can attain must be limited and unreal at best," the Under Secretary of State would have had the authority of the late Mr. Montagu, Lord Chelmsford, and countless others, Indian and British, for every word he spoke. This contrast between the Western and the Indian conception of society lies at the root of the Indian problem, and we congratulate Lord Winterton for breaking away from the unwritten convention that such matters, so vital to the real welfare of the community, are not proper subjects for Parliamentary debate. At the same time we gladly testify to the

existence of signs that a gradual change is coming over the Indian attitude. An increasing share of the task of ensuring in detail the welfare of the Indian peoples is now incumbent upon their representatives, whether in the executive governments, legislative councils, or local bodies. Much has been done, but as Sir Frank Nelson reminded the House of Commons, "there are certain problems and aspects of Indian life which are just as much unchanged to-day as they were two or three generations ago." The lot of the reformer is hard, be he Indian or British, and his particular obstacle orthodox prejudice or popular superstition, but more than all the constitution makers or constitution breakers, his task is the most important of all that lie to the hand of the real friend of India to-day.

CURRENT TOPICS.

Flying to India.

The sympathy of all interested in the future of civil aviation, whether they have direct connexion with the land which formed the objective of the flight or not, will be extended to Flight-Lieutenant Carr and his companion. Though ever since the former made his two previous attempts, it was known that preparations had been going forward for a third flight, few people had any idea that the attempt was in immediate contemplation. All the information available pointed to the fact that it would not be until towards the middle of September at the earliest. The decision to leave so much earlier, and secretly, was we understand only reached a few days previously, when Flight-Lieutenant Carr resolved to take advantage of the full moon. The airmen's desire, in the light of previous events, to accomplish their formidable task before any news of their intention was abroad is understandable and to those in charge of the preparations it certainly seemed that there was an excellent chance of the ambitious project succeeding at the proverbial third attempt. Meanwhile aviation in India itself continues to make great progress. Already flying clubs are in an advanced state of organisation at Karachi, Calcutta and Bombay. Sir Victor Sassoon, who has taken such a prominent part in the movement, and left London last week on his return to India for an extended stay, was accompanied by Squadron-Leader T. S. Impey, who will be associated with him in the promotion of the formation of an aero club, the headquarters of which will be at Delhi.

A Gold Coin for India.

Nominally held in camera, the recent session of the Joint Select Committee on the Gold Standard and Reserve Bank of India Bill, like the earlier Bombay meeting, has apparently provided enterprising reporters with all the "news" they could reasonably expect. If, as has been suggested, Sir Basil Blackett has met his critics half way on the question of the capital constitution and the board of management of the new institution the position regarding the reported insertion of a clause providing for the minting of gold mohur valued at 20 rupees, in such quantities as the Governor-General may from time to time direct, is still obscure. In the memorandum addressed to the members of the Select Committee towards the close of the Bombay session the Finance Member again set out in considerable detail the reasons why the provision of a gold currency for India is impracticable under existing conditions.

In view, however, of the Joint Committee's reported decision it is interesting to recall that while the majority of the evidence taken by the Currency Commission in India indicated a strong desire for the minting of a gold coinage for India there was very considerable difference of opinion as to what the rupee value of the coin should be. Some demanded the sovereign; others a fifteen rupee gold mohur; others again a ten rupee gold piece but the volume of opinion in favour of a coin of as high a denomination as twenty rupees was comparatively small, and in many cases conditional upon the failure of another attempt to overcome the Treasury's objections to the minting of sovereigns in India.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, July 21.

Sir Stanley Jackson's Speeches.

His Excellency the Governor of Bengal was entertained at a dinner given in his honour by the Calcutta Branch of the European Association last week. In the course of his speech, the Governor made an appeal to Indians for statesmanship; "There has never been a time," he said, "when greater opportunity offered itself to Indians to produce statesmen who can show their countrymen the way which leads to the fulfilment of their reasonable aspirations." (Commenting on this remark *Forward* says that "Indian leaders are inspired by a genuine desire of promoting the lasting benefit of their countryment by securing self-government for India, but the impression has gone abroad that no amount of self-sacrifice and statesmanship on the part of the leaders would lead to the evolution of Swaraj, as long as the relaxation of British control would be regarded as detrimental to the interests of Britain.") His Excellency also said that he felt he had arrived in India at a moment of exceptional interest when the future welfare and destiny of British India may be directly affected by the course events may take over the next few years. His praise of his predecessor was loudly applauded, as was also the deserved tribute paid to the European Association's broadminded aims. It appears from what His Excellency said about the Howrah Bridge, which he called "a perfectly appalling obstruction over a great and beautiful river," that a permanent and solid structure would meet his approval. He asked Calcutta to think again before deciding that it could not afford the cantilever structure recommended by the experts. Replying to an address presented to him by the Bengal Mahajan Sabha, the Governor said: "I am convinced that the solving of the problem of communal difficulties is more likely to be attained by a genuine expression of goodwill and understanding between the two communities. This will only come when religion is clear of political influence, and when the communities think more of their duties towards each other and to the nation as a whole, rather than of what they regard as their rights." His Excellency found a suitable and satisfactory reply to all the grievances exposed by the Sabha: the economic distress of the people; the establishment of an administration that had caused the imposition of fresh taxes; the expensive unsuitability of diarchy; the increasing adulteration of foodstuffs, against which Government had, so far, taken inadequate steps, and the hyacinth peril. Referring to the serious state of unemployment among the middle-class young men in Bengal, Sir Stanley assured the Indian Chamber of Commerce that the Government of Bengal were studying how best to co-relate education with the avenues of employment open for middle-class boys." Useless to say that these utterances do not satisfy the people who want the doors of military life to be open to the educated young men of Bengal, and who clamour for employment in the mercantile marine, and for a new policy of industrialisation. Sir Stanley Jackson, addressing the officers and men of the Police Force and Fire Brigade, said he could, without any hesitation, declare that they are worthy of their fine reputation. That was, of course, from their appearance and bearing on parade, though the Fire Brigade's efficiency is well known and can compare favourably with that of any similar body. And it is a fact that the police are often faced with difficult and exacting situations, and many have earned the much-coveted King's Police Medal, which the Governor pinned on their breast. Indeed the Governorship of Bengal is no sinecure!

Sinking of the Shahzada.

The sensational event of the week is the sinking of the Asiatic Steam Navigation Company's steamer *Shahzada*, in the Bay of Bengal, on Thursday last. The news began to spread on Saturday. The ship was on her way to Akyab (from Calcutta) when, fifty miles from the Sand-

heads, it sank without apparent cause. She was carrying coal and had no passengers on board, but seven Europeans—the chief engineer, the second, third, and fourth engineers, an apprentice, the wireless watcher and the purser—were drowned, with fourteen members of the crew. Among the fifty survivors are Captain Carvalho, the captain of the *Shahzada*; the chief officer, the second officer, the third officer, the wireless operator, an apprentice and 44 members of the crew. The steamer *Clintonia* picked up the survivors who had been paddling in a life-boat for a whole day and a whole night before sighting any ship. Only one life-boat had come off the side of the ship and was drifting away. Someone went to fetch it back. Most of the victims were drowned in their sleep. The accident occurred at about four in the morning. There was no explosion.

Dinner to Sir Alexander Muddiman.

A *feu d'artifice* of rather flippant compliments took place at the dinner offered by the Chelmsford Club to the retiring Home Member, who was one of its founders. Sir Bhupendranath Mitra, proposing the toast of Sir Alexander, said that farewell functions had a depressing effect on him but that there was a silver lining to the present cloud of depression, since Sir Alexander was not leaving India for good, and those present could share the hope of having the honour of paying homage to the Governor of the United Provinces, when they visited Lucknow or Naini Tal. Perhaps they would have the honour of paying homage to a gracious lady as well. There those present laughed loudly, for Sir Alexander is an unmarried man. After paying a tribute to the British qualities of the best type of I.C.S. man represented by Sir Alexander, whom he found thorough, straightforward, kind-hearted, sincere and ready to help, as well as most generous in his hospitality, the speaker said that those qualities had endeared Sir Alexander to his friends in Simla, not only of the sterner sex, but also of the fairer one. He (Sir Bhupendranath) had reason to believe that the latter had a peculiar partiality for their honoured guest; the proof of this was in the fact that there were several applications from ladies to attend that dinner. As President of the Club, the speaker would have been pleased to grant them the concession but the "die-hards" among the club members had turned down the very idea. (There were cries of "shame.") Responding to the toast, Sir Alexander Muddiman said that while coming to the banquet, he wondered in his mind what particular line of attack Sir Bhupendranath Mitra would choose. He was prepared for a speech on the communal situation, or a discourse on the Reforms, or an attack on his well-known views on Finance. But the Chelmsford Club brought Indians and Europeans together in the most desirable way. They met socially, and that was one of the great solvents in the difficult positions that arose in this country. Persons differing in views and ideas could meet there and discuss things in a friendly manner. He very much deprecated the opinion that because A dines with B, A necessarily agrees with B. Sir Bhupendranath had suggested that the speaker's relations with the softer sex were apparently abnormal; he was therefore seriously considering taking action against Sir Bhupendranath. He had been asked to undertake legislation that was not always approved, though necessary, but he could not imagine anything more necessary than a Bill to protect bachelors from such attacks. A pathetic note was struck when Sir Alexander spoke of the friends who had gone away to England, and of some whom they would never meet again. Among retired friends were Sir William Vincent, Lord Sinha, Sir Ali Imam, and Sir George Lowndes (a most tactful nomenclature!).

Here and There.

Mrs. Annie Besant's paper, *New India*, has gone back to Madras. It is found more convenient to keep there than in Bombay. The decision will not in any way affect the policy of the paper. Mr. Shivarao remains co-editor

with Mrs. Besant, and Mr. D. K. Telang is the honorary manager, as before.

Plans are in preparation for the construction of a Buddhist temple on the site of the old and dilapidated one in Burra Bazar. Mr. S. Coomar has been entrusted with the designs. It will be in the best Buddhist style of architecture. There will be a sort of caravanserai attached to it, to receive Hindu and Buddhist pilgrims visiting Calcutta, free of charge. The three-storied building will be in harmony with the temple, as far as the style of architecture goes, but it will have modern arrangements for accommodation and lighting. Many Hindu merchants of Burra Bazar have contributed to the cost, which will not be less than fifteen lakhs of rupees. People will do for strangers what they would never dream of doing for their neighbours.

There is a probability that in the near future the foreign mail arriving in Calcutta every week will be sent by air to Dacca, then to Chittagong, and later to Rangoon. Calculations and reports are seriously compiled to ascertain whether the foreign mail service by aeroplanes is feasible.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, July 22.

The Eve of What?

To-morrow promises to be a red-letter day both for Bombay and for the whole of India, for it marks two great developments—the inauguration of the beam wireless service between India and England, and the inauguration of wireless broadcasting on a large scale in Bombay. And the past week has seen wonderful activity on the part of radio firms, and in lesser degree the public in general, to celebrate the occasion fittingly. The presence of His Excellency the Viceroy sets the seal to these two great schemes which have been carried to a successful conclusion by local industrial magnates, a fact which gives Bombay just cause for considerable pride in the achievements. The immediate prospects are rosy enough, but what of the future? The beam wireless need cause little or no anxiety, for its commercial value to a commercial country like India will ensure its success, but broadcasting is a horse of a different colour.

Wireless Broadcasting.

The future of broadcasting in this country is hardly so certain. In Europe and in America, and to a lesser extent in Australia, it has boomed to an extraordinary degree during the past five years, but in South Africa it has nearly, if not entirely, failed. In India its success undoubtedly hangs upon two inter-connected factors; the attitude of the public and the popularity (or otherwise) of the programmes sent out. The latter is the real snag, for there are so many different classes to be catered for that a really remarkable variety of artistes will have to be secured and consequently the number of programmes will also have to be increased to cater for each class each day, or in such proportion as to keep everyone satisfied. Fortunately in Mr. Eric Dunstan the Indian Broadcasting Company have a managing director who has quickly grasped the difficulties ahead and has a vast number of ideas ready to overcome them. No mention of the inauguration of broadcasting in India would be complete without a word of praise for Mr. Sultan Chinoy and Mr. F. E. Rosher—to the former for his foresight in forming the companies that are controlling these two great ventures, and to the latter for the wholehearted manner in which he has gone about educating the public to their advantages.

Tata Iron and Steel Co.

The slump recorded in Tata Iron and Steel shares towards the close of last week, which I referred to in my

last letter, has eased somewhat during the present week. The major shareholders, apparently, have decided to hold on for a bit and watch developments, and the consequent lack of sellers has resulted in the shares recovering to a slight extent. Meantime, the war between the company's agents and the brokers and shareholders continues. The latter's strongest point is that the agents failed to represent to Government the inadequacy of the protection proposed by the Tariff Board, despite the fact that they were warned that this would be necessary by a shareholder at the last general meeting. Instead, they allowed their lapse to be made capital of by the Government spokesman in the Assembly, and finally tried to cover up their fault by issuing a statement which was, to say the least, quite uncalled for.

The Probable Outcome.

This statement has caused no end of heart-burning so far as the shareholders are concerned, and the share-brokers of Bombay naturally gave vent to their feelings in no uncertain terms. Indeed, Messrs. Forbes and Lund, a leading broking firm on this side, made public its intention of calling for the resignation of certain of the directors at the next meeting. The agents lost no time in replying, and the brokers then came forward to refute all the new arguments brought forward. To the man in the street that is the situation that exists at present, but behind the scenes the war continues unabated. It is understood that among the many proposals to be put forward at the next general meeting will be one to reduce the depreciation fund to such an extent during the next couple of years as to provide for the payment of a dividend to both ordinary and deferred shareholders, and to then increase it later to such an extent as to make the average meet the requirements outlined in the Tariff Board's protection proposals. It is an interesting proposal that merits attention.

Unemployment.

A rather curious report made its appearance recently—a report dealing with an inquiry conducted by the Labour Office into middle-class unemployment in the Bombay Presidency. As a basis on which action might be taken to alleviate the distress it was worse than useless, for it was based on very little data of any consequence and made no suggestions as to what was to be done. That unemployment is reaching a high figure is only too patent—and the root of the whole trouble seems to lie at the doors of the present educational system. Each year sees somewhere about a thousand graduates launched into the world of business to find jobs; and since these "gentlemen" are averse to taking off their coats and getting down to it, they naturally join the army of unemployed. Let us have an inquiry, therefore, which will examine this problem thoroughly and suggest a means of solving it.

Racing at Poona.

During the last few months rumour has been busy regarding the very moderate racing that would mark the Poona racing season this year, but it is pleasant to record that the prospects at the present moment do not substantiate these forebodings. On the contrary, the stage seems to be set for a very successful season indeed, and punters are anxiously looking forward to opening the fray to-morrow week. A particularly bright spot is the entry for the Atlantic Stakes—one of the most heavily endowed stakes in India—for which a very good field is promised. Among the big owners, H.H. the Maharaja of Rajpipla has five representatives, including last year's winner Gardyloo, Mr. C. N. Wadia has three, Mr. Eve (Sir Victor Sassoon) has no less than seven; H.H. the Aga Khan also seven and the Maharaja of Kolhapur eight, including seven new importations. Though the entries are likely to dwindle between now and September, when the race is decided, it looks like providing a contest that will be remembered.

AGRICULTURE IN INDIA.

Overshadowed by the more spectacular developments in the political sphere, the work of the Royal Commission on Indian Agriculture has scarcely received the attention that its importance warrants. After spending the summer in England the Commission leaves again for India at the beginning of October, and its tour programme includes visits to Karachi, Burma and other parts of the country which had necessarily to be excluded from its previous itinerary.

Although several volumes of evidence taken in India have already been published, the views of witnesses examined during the recent London session have only been available in the form of condensed newspaper summaries. In so far as the evidence related chiefly to the quality and condition of exports of Indian produce reaching the European and American markets a note submitted by Mr. H. A. F. Lindsay, Indian Trade Commissioner in London, on the experience gained in that connexion during his long and very successful tenure of that office is of more than passing interest.

Mr. Lindsay, who was joint author of the memorandum on "Agriculture and the International Economic Crisis," drawn up by the Agricultural Sub-Committee of the Preparatory Committee for the International Economic Conference, explains that the duties of a Trade Commissioner are two-fold. He acts, first, as a link between the Government he represents and business men; and secondly, as a link between markets. His objective in both relationships is to stimulate the demand for the products of the country he represents.

"As Indian Trade Commissioner in London, I am concerned," Mr. Lindsay proceeds, "with the markets for Indian foods in Europe and America, and my chief function is to introduce exporters in India to importers requiring goods such as India produces. As trade passes normally without the intervention of the Trade Commissioner, I find myself most frequently asked to assist in abnormal situations—for example, by the importer here who cannot get from India exactly what he requires or by the Indian exporter who has difficulty in selling his goods. In this way the natural course of my duties brings me (as a doctor is brought) into close contact with symptoms of commercial ill-health. The disease may vary from mere ignorance of the right market or of trade practice to the more extreme cases in which markets or prices are missed because the commodity produced is not exactly the commodity in demand.

As a result of four years' experience as Indian Trade Commissioner, certain definite conclusions have forced themselves on my notice, which may be of interest to the Royal Commission on Agriculture on the marketing aspects of their inquiry:—

(a) European and American markets in general are more critical of the quality and condition of the goods they buy, than they were before the War.

(b) This is due partly to keener competition and the necessity of eliminating waste and reducing raw material costs and partly also to higher costs of labour and the necessity of obviating unnecessary trouble and expense in manufacture.

(c) In general, Indian goods conform to these altered conditions, but in some instances they do not.

(d) The particular instances I have in mind, and on which I am prepared to give evidence, if required, are:—Cotton, jute, hemp, kapok, tobacco, ground-nuts, hides and skins, rice, beans, oilcake.

(e) In regard to some of these, for example, jute, the difficulties experienced in foreign markets are very slight. In regard to others, as for example, cotton, great progress has already been made. Yet others, for example, hemp, would benefit considerably by the introduction of improved methods of cultivation and preparation in India.

(f) The subject is important, for every producer

must in his own interests study the demands for which he caters. The prices which India obtains for her exports, and thus the foreign credits against which she secures her imports, could be increased if greater care were exercised in the preparation of certain exports for foreign markets.

The main factor in the situation, as viewed from European markets, appears to be the overwhelming need for still wider and better organisation of India's agricultural resources. It is true that immense progress has already been made, thanks chiefly to the efforts of India's agricultural experts and the response evoked from zamindars and cultivators alike. Further efforts are called for, not merely in research, but also (and perhaps more particularly, from the commercial point of view) in demonstration. The kind of organisation required is one which will fit in with existing market conditions and will make its influence felt on every link of the long chain which connects the primary producer with the ultimate consumer.

As a member both of the Imperial Economic Committee and of the Empire Marketing Board, I have taken part in investigations of the United Kingdom markets for meat, fruit, dairy produce and oilseeds and have assisted in schemes of publicity which help to make Empire produce better known in the United Kingdom. What emerges particularly from these inquiries is the fact that the vendor who secures top prices is invariably he who knows and can meet the exact requirements of the consumer. If we compare the position of the Indian exporter with that of the overseas importer, we find that the latter is in a strong position. He can insist on contracts which stipulate for exactly what he requires and which penalise failure to comply. In some trades, claims for failure to attain a given standard are the rule rather than the exception. The Indian exporter is forced to quote a price which covers this risk, and in his turn to pay to the local or upcountry dealer a price which leaves himself a sufficient margin to meet any subsequent claims. India thus loses twice over—first in missing the premium on good quality and secondly in paying a premium by way of insurance against possible claims. From this brief summary the following conclusions suggest themselves

I. The need for an organisation in India which can negotiate on level terms with the overseas importer.

II. It must also exercise a direct influence for the improvement of upcountry methods of production and preparation for market.

III. It must fit in with existing market conditions in India.

IV. It should preferably be an organisation by commodities or by closely allied groups of commodities; that is to say, by groups similarly produced and liable to export under similar contracts.

I do not wish to give the impression that India's difficulties in the markets of Europe and America are unique. Dominion producers and shippers find themselves similarly handicapped—indeed, their difficulties are even greater because the goods they handle are chiefly perishables. The Dominion solutions of their difficulties are many and varied. Canada has formed its wheat pools, New Zealand its Control Boards, Australia its Producers' Organisations. These may all be described roughly as attempts to ensure uniformity of grading and economy of handling in the home country and, in some cases, by means of agents abroad to reach out as far as possible toward the overseas consumer, obviating unnecessary transfers of ownership. Those organisations are most successful which are most careful to set their own house in order and to provide for good quality, condition and packing before pushing into foreign markets. I understand for example that the Irish State has introduced stringent regulations penalising careless grading in their egg trade with the United Kingdom and that their agents here watch all consignments and report infringements that come to their notice.

I do not quote Dominion example as one which India

should necessarily follow. The need for organisation is the same in both cases, but the types of organisation will not necessarily be identical. As a matter of fact, India has developed her own type in the Indian Central Cotton Committee which has already done so much to improve the quality and reputation of Indian cotton."

Before the Commission went out to India last autumn Mr. Lindsay furnished a memorandum containing the outlines of a scheme for such organisation. Its basis is the imposition of a small export duty or cess on agricultural produce shipped from India. The revenue, he maintains, should not be included in the official revenues of the Government of India, but after collection by State agency in the ordinary way be organised as a fund for the improvement of Indian agriculture.

The proposal has the merit that it would not constitute a new departure in principle. Since 1903 there has been a small export duty on Indian tea, which has provided the Indian Tea Association with funds for advertising and has thus set free other resources for research. The proceeds of the Indian cotton cess are handed over to the Indian Central Cotton Committee for research work, and also for the organisation of the cotton industry generally. The export duty on jute is at present absorbed in Government revenue and Mr. Lindsay contends that it is only reasonable that some definite proportion of the revenue drawn by Government from the export of raw and manufactured jute should be handed back to the industry, since funds are necessary for further research and demonstration in jute cultivation. The case of rice is another instance in point, although open to the objection that owing to the dimensions of rice exports something like half the total of the fund would be provided by the province of Burma.

The organisation required to control the expenditure of the annual proceeds, estimated, on the basis of the tentative schedule of rates submitted, at Rs. 163 lakhs, or say £1,222,500, would, under Mr. Lindsay's plan, examine very carefully schemes of research and demonstration. It would, as far as possible, finance rural banks and co-operative societies which arrange for advances to individual cultivators for the use of improved seed, manures, and better implements and agricultural methods generally. Mr. Lindsay suggests the creation of some form of Agricultural Development Commission which would be central for the whole of India and would work through local committees, the latter representing local and trading interests under the control of provincial departments of agriculture. In a word, Mr. Lindsay contends that the way in which the Government can best help the trade is by helping it to organise.

INDIAN MAIL.

The Ubiquitous Boll Weevil.

Reference has been made already in the NEAR EAST AND INDIA to the substantial quantities of American cotton being imported into India. In the past there has always been the risk that with such cottons that dreaded pest, the Mexican boll weevil, would be introduced into India, and should this occur the damage to Indian cotton growing might be very great. With effect from December 1, 1925, all American cotton imported into India is required to be fumigated. For the present, its importation is restricted to a single port, viz., Bombay, and fumigation is effected by means of hydrocyanic acid gas, special equipment and staff having been provided by the Government of India for the purpose, the cost being covered by the fumigation fee charged to the importer. Prior to the issue of the notification the Indian Central Cotton Committee's investigations had shown the practicability and efficacy of such fumigation and had clearly indicated the conditions under which it should be carried out. The large American crops of 1925 and 1926 have led to the assumption in some quarters that the boll weevil damage in America has been

passed, and it has even been suggested that there is no longer any need to place any restrictions on the importation of American cotton into India.

That is not, however, the opinion of Dr. D. Clouston, the exceptionally able Agricultural Adviser to the Government of India. In his annual review of agricultural operations in India in 1925-26, Dr. Clouston points out that by means of somewhat drastic modifications in cotton cultivation, particularly by the replacement of old-established varieties by quick-maturing types and by chemical warfare against the pest itself on a scale never before attempted in the world, aided by favourable seasons, the damage done by the boll weevil in the United States has, it is true, been reduced. But a comparison of the yields now obtained with those obtained in pre-weevil days does not indicate that the pest is by any means negligible, and in point of fact the danger of the introduction of the weevil into India has been but slightly reduced. It is particularly satisfactory to record that the experimental work undertaken by the Central Cotton Committee resulted in a practicable working scheme for the fumigation of all American cotton and that the scheme has worked successfully, the success in practical working being due in no small measure to the cordial co-operation of the Bombay Port Trust, acting in this matter as agents for the Government of India.

The Defence of India.

The *Pioneer* understands that there is not the slightest foundation for the report that a deadlock has resulted from the discussion of military problems by the authorities in England and India. In view of the impending visit of the Secretary of State for War to the North-West Frontier, it is interesting to note that the same paper also finds no ground for the assertion that there is a variance of opinion on the subject of the defence of India. The latter problem is dealt with at some length in a leading article in which it is pointed out that the rupture with Soviet Russia must draw very pointed and close attention to the very area which Sir Laming Worthington-Evans is to visit in the autumn. "An implacable campaign," the paper states, "is declared against Great Britain and the British Empire as the bulwark of so-called Imperialism. The flamboyant threats have not been thrown out without action indicating a willingness to implement them . . . and it is plain that the one spot where Russia can challenge the British Empire and make her challenge effective, is on the North-West Frontier of India. For the last seven years the Russians have been pouring arms and ammunition into Afghanistan. Taken into conjunction with the declared policy of the Soviet rulers and with their action in China, the reason for this is obvious."

After discussing the position of the King of Afghanistan the *Pioneer* says that "the danger threatened in the infiltration of Russian subjects into Northern Afghanistan and the Soviet propaganda in those districts cannot be ignored. As more and more arms, munitions and aeroplanes, with Russian personnel, are poured into the country Russian influence may so predominate that even the King himself may find it exceedingly difficult to withstand its baneful effects." The paper pertinently concludes: "These considerations make the problems of the defence of India particularly living issues to-day. Strict economy—going beyond the danger point as Lord Rawlinson admitted—was necessary during the years of acute financial stringency, but the present political situation outside India obviously demands a reconsideration of the whole question. A strong and wholly efficient army must be assured at all costs and efficiency cannot be sacrificed on any consideration whatever. The Indian Army must not be allowed to relapse into a position of a second-line army. Its present state of efficiency is high, though its equipment is lamentably deficient in certain vital items. In short, the defence of India must be made so attack-proof that nobody would venture lightly to attempt the rash experiment of invasion, and that if they did attack could be beaten off without any dislocation of the peaceful administration behind the walls of the defenders."

NEWS IN BRIEF.

The details of the Indian Budget for 1927-28 have been published by H.M. Stationery Office as a Blue-book (No. 85), price 3s.

The death is announced of Lady Afsur-ul-Mulk, wife of Nawab Sir Afsur-ul-Mulk, Commander-in-Chief of the Forces of the Nizam of Hyderabad for the past 30 years.

The Government of India have decided to remit perpetually ten and a half lakhs (£78,750) of the thirty-five lakhs of rupees (£262,500) paid annually by Mysore to the Central Government.

The London County Council, on the recommendation of its Improvements Committee, has accepted the offer of the High Commissioner for India to rent for £6,000 a year, on a 999 years' lease, a site in Aldwych at the junction with Montreal Place. The land has an area of about 12,450 square feet, with frontages to the two streets of about 134 feet and 103 feet respectively.

The Secretary of State for India in Council has sanctioned, on the recommendation of the Governor-General in Council, the grant to Sir Montagu Sherard Dawes Butler, K.C.S.I., C.B., C.I.E., C.V.O., C.B.E., I.C.S., Governor of the Central Provinces, of leave of absence for urgent reasons for private affairs for four months, with effect from August 19, or such subsequent date as he may avail himself of it.

The King has been pleased to approve the appointment of Mr. John Thomas Marten, C.S.I., I.C.S., to hold and execute the office of Governor of the Central Provinces during Sir Montagu Butler's absence.

WILLS.

Mr. William Rutter Stikeman, C.I.E., of Onslow Gardens, Kensington, S.W., formerly chairman of the Burma Chamber of Commerce and vice-chairman of the Rangoon Port Trust, who died on June 3, aged 73, left estate of the gross value of £38,484, with net personalty £34,191.

The Most Hon. Henry Charles Keith Petty-Fitzmaurice, fifth Marquess of Lansdowne, K.G., P.C., G.C.S.I., G.C.M.G., G.C.I.E., of Bowood, Calne, Wiltshire, and of Derreen, Kenmare, Co. Kerry, a former Governor-General of Canada, Viceroy of India, Secretary for War, and Foreign Secretary, who died on June 3, aged 82, left unsettled property provisionally valued at £1,044,613 gross, with net personalty £1,020,427, "so far as at present can be ascertained."

Mr. Stewart Binny Murray, C.E., of the East India United Service Club, St. James's Square, S.W. (net personalty, £13,731), left £13,756.

Mr. Julian James Cotton, of Lakeside, Tegnampet Cathedral, P.O., Madras, Curator of the Madras Records and Editor of the *Provincial Gazetteer*, and for 17 years a District and Sessions Judge, who died on June 20, left unsettled English estate of the gross value of £1,129, with net personalty £1,086.

Lieutenant-Colonel Charles Eckford Luard, C.I.E., Indian Army (retired), the foremost authority on the history of the States of Central India, who died at Oxford on May 17, at the age of 57, left estate of the gross value of £10,531 (net personalty £10,926).

Mr. George Gilbert Anderson, The Owlery, Tarves, Aberdeen, and late of London and Calcutta, East Indian merchant, formerly of Messrs. Williamson, Magor and Co., and Messrs. George Williamson and Co., of London and Calcutta, left personal estate in Great Britain valued for probate at £125,843.

Mr. George Walker, Lincoln House, Basil Street, S.W., and Leadenhall Street, E.C., East India merchant, connected with Messrs. P. R. Buchanan and Co., left £66,540, with net personalty £65,437.

The will of Brig.-General Arthur Watson Pennington (Indian Army), Frimley Green, Surrey, has been proved at £12,000.

OBITUARY.

The death, on July 28, of His Highness Maharao Raja Sir Raghubia Singh, of Bundi, G.C.S.I., G.C.I.E., G.C.V.O., is reported in a Reuter telegram from Simla. The Maharao succeeded his father, the Maharao Rajah Raun Singh, in 1889, at the age of 30, and his thirty-eight years on the "gadi" were marked by two of the most disastrous famines in the history of modern India. For his services in connexion with relief measures his Highness was made a G.C.I.E., his other distinctions being gained on the occasion of the Coronation, Durbar and in recognition of his generous support of the British cause in the Great War.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

The Turkish Debt Settlement.

While it would be idle to suggest that the Turkish debt settlement will be viewed with other than lukewarm approval by the bondholders in general there can none the less be a feeling of satisfaction at the termination of the long-drawn-out negotiations. A settlement even if it does call for very substantial concessions is better than no settlement at all will no doubt be the feeling of the vast majority of the bondholders. The details of the agreement have already been given in these columns, and there are only one or two points to which further reference is necessary. Provision is made for the resumption of interest payments on June 1 next, and from that date to 1935 the payments will represent 38 per cent. of the interest on the loans taken together, and it will not be until after 1951 that the bondholders will receive the full rate of interest. Preferential treatment is to be accorded in respect of the Unified Debt, and holders of these bonds will receive approximately 48 per cent. of the interest as against 35 per cent. in respect of the other loans. It is not difficult to realise why the Turks at long last have been willing to agree to a settlement. The country's need for foreign capital is beyond question, for while a certain amount of development work has been carried on, notably in connection with the railways, progress has been very slow compared with that of other countries who have not had to depend on their own resources for reconstruction. So long as there was no settlement of the debt question it was hopeless for Turkey to look to the foreign money market, and this development will pave the way for foreign assistance which will be the more readily accorded since Turkey has throughout abstained from the inflation of her paper money.

Future of Debt Council.

The settlement has to be ratified both by the Turkish National Assembly and by the bondholders, but it is not to be expected for the reason I have indicated above that there will be any difficulty in respect of its ratification by Turkey, and it is significant in this connexion that a representative of Angora was present at the concluding stages of the negotiations. As regards the bondholders it may be taken for granted that their approval will be forthcoming on the principle that a settlement which falls short of anticipations is better than no settlement at all. An important question raised by the Turks which might have delayed an agreement if it had not been left for separate settlement is the future of the Council of the Ottoman Public Debt. It is the wish of Angora that in the future this body should represent not the Governments of which the bondholders are subjects but the bondholders themselves. On this subject there is a measure of disagreement among the countries concerned, some being prepared to accept this change readily, others being antagonistic to it. The only point that matters in any change that

is effected is that the interests of the bondholders should be adequately safeguarded. Given that that is the case there is not likely to be any opposition on the part of British bondholders.

Conditions in Roumania.

At the general meeting of the Bank of Roumania a comprehensive review of trade conditions during the past year was given by the Chairman, General Sir Herbert Lawrence. As regards Roumania's finances there is a considerable increase in the expenditure in the Budget for 1927, the total being 33,390 million lei as against 28,250 million lei for 1926, but while the 1926 Budget only excludes the railways that for 1927 also excludes the postal, telegraph and telephone services, so that the increase is relatively more than would appear from the figures. It is, of course, largely due to the country's commitments in respect of debt settlements. In 1926 Roumania had a substantial favourable balance of trade, the value of the exports being 38,011 million lei as against 34,100 million lei for imports. These figures compare with 29,025 million lei for exports and 30,098 million lei for imports for 1925. Dealing with the trade between Great Britain and Roumania, Sir Herbert Lawrence pointed out that there was an increase in the exports from Roumania to Great Britain, the figures being £2,663,000 as against £2,278,000. On the other hand there was a marked decline in the value of Roumania's imports from Great Britain, the figures being £2,596,000 as against £3,071,000.

The Oil Industry.

Dealing with Roumania's staple products Sir Herbert Lawrence commented on the development of the oil industry, the production of which in 1926 was 3,241,000 tons as against 2,313,000 tons for 1925 and a pre-War record of 1,885,000 tons. The export of oil products in 1925 was 784,500 tons, and this was roughly doubled in 1926, the figures being 1,494,000 tons. In recent months the fall in oil prices has altered the outlook for many companies, but as regards Roumania Sir Herbert Lawrence is of the opinion that the revision of the export tax on oil and of the railway charges should materially assist in off-setting the reduction in the world price of oil. As regards grain the conditions in 1926 were favourable, and he pointed out that while the quantity of grain exported was double the previous year's figures, more might

have been exported but for the fall in prices in the international market. With regard to the present season the wheat and barley crops are estimated at 20 per cent. below those of last year's but the quality is superior.

Improving Rubber Outlook.

It will doubtless not have escaped notice that during the past week there has been a significant strengthening in the market for rubber shares, while this movement, paradoxically, has been accompanied both last Monday and this by further increases in the London stocks of the commodity. Obviously the movement is to be read as an anticipation of the probable current of events. There is unquestionably a growing demand for the commodity in Europe as well as in America, and the view is clearly taken that the absolutely unexpected development of the continuance of the restriction percentage at 60 for a further period of three months will result shortly in considerable reductions in the existing stocks. That is a very probable result, but, as I have already pointed out, the chief point at issue is what is going to happen after the export again reaches the 100 per cent. mark.

COMMENTATOR.

The construction of lines in Belgrade this year by the Municipal Tramways Company will involve an outlay of some 13 million dinars.

Steaua Romana (British), Limited, are advised that the production of the Steaua Romana Company, Bucharest, for July was 52,180 tons.

Mr. Sydney Parkes, joint manager of the City Office of Lloyds Bank, has been appointed an assistant general manager of the bank.

The number of tourists who have visited the Yugoslav Adriatic coast this season is stated to be 50 per cent. more than last year.

The Bulgarian State Railways are being allocated credits of 3,450,000 levas for railway and port construction.

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

Sofia, July 29.

The Economic and Financial Situation.

During recent months the political situation has improved in several respects. The general election, the result of which confirmed the Government majority, has dissipated the atmosphere of nervousness which had previously prevailed. The Inter-Allied military control has been raised; the last representatives of the Military Commission have left Sofia.

The economic situation is less satisfactory. The tobacco crisis is being solved slowly. The purchases made by the foreign Régies have not been of the importance that was hoped. This year the yield of attar of roses has not been good; the poor yield of the flowers has brought about a rise in the net cost which will not facilitate the sale. The export of eggs is affected more and more severely by Yugoslav competition. The wheat and barley crops have been abundant, and have been gathered in excellent climatic conditions, and the produce is selling well. The extreme dryness which has favoured the harvest during the second half of June and the first half of July has, however, been detrimental to the crops of maize and haricots.

The country's financial position also leaves something to be desired, although the Budget situation should be improved compared with the past year. For the year 1926-27 the deficit was considerably below that of the year 1925-26, and that improvement will be continued in the current year owing to the measures taken by the Minister of Finance to make the monthly expenditure harmonise with the receipts, to stimulate the payment of taxes, and to effect economies. At present the Treasury is still in a very difficult position; it has, however, been

able so far to meet requirements without exceeding the total of the advances that the National Bank can grant to the State.

Despite these difficulties the attention of foreign financial groups has not ceased to be drawn to Bulgaria. The establishment of the Banque Hypothécaire has appeared to interest greatly a number of the most important groups. They are equally interested in the financing of which the Banque Agricole de Bulgarie has need, since by the terms of the law which came into force on January 1, 1927, that institution can no longer count on the support which it had previously obtained from the National Bank.

The establishment of the Banque Hypothécaire appears likely to be entrusted to a group at the head of which is the Biais Bank. The draft of the law modifying the mortgage legislation and the draft of the contract between the group and the Bulgarian Government have been submitted to the study of commissions. They cannot be presented for the approval of the Sobranie before the next session, in October or November. There is talk of linking the question of the Banque Hypothécaire with that of the financing of the Banque Agricole.

There is further the question of a large loan which the Government desires to negotiate abroad. The need of Bulgaria for foreign capital for development and for the stabilisation of the currency is incontestable. It may be asked only if the time is well chosen to launch on the market such an extensive operation.

EMPIRE COTTON GROWING CORPORATION.

(Continued from page 156.)

The Sudan.

The Sudan Government asked the Corporation if they would increase their contribution to plant breeding and research in the Sudan by paying for a second assistant to Mr. Bailey, the Corporation's plant breeder. The Corporation decided to accede to the request in so far that they would offer a post on their staff to Mr. Kenchington, who has been undergoing a special course of training under Mr. Bailey during the past year. They have, however, informed the Sudan Government that although they are willing to attach Mr. Kenchington to Mr. Bailey's staff for the present, the need that exists for trained plant breeders in several cotton-grown countries of the Empire renders it necessary for them to reserve the right to transfer him elsewhere later, although they have no intention of doing so at present.

Transport.

The Assistant Director was able at the last meeting to hold out hopes of an important advance in the attack on the African transport problem. A memorandum had been prepared by the Corporation's Transport Sub-Committee at the request of the Colonial Office, and this memorandum was considered by the Conference of Governors and representatives of Crown Colonies, Protectorates and mandated territories at a meeting which members of the Corporation's Transport Committee were invited to attend. The Corporation's Transport Committee had suggested in their memorandum that in view of the importance of the mechanical transport problem to the development of tropical Africa, it was desirable

that some central body should be set up, financed by inter-colonial funds, to continue and extend the work initiated by the Corporation, and to study every aspect of mechanical transport. The Conference expressed the opinion that the work and experiments that had been done by the Corporation were extremely valuable and that the Corporation ought not to be asked to continue it single-handed.

The question was referred to a sub-committee, whose findings are of such far-reaching importance that no apology is needed for reproducing them in full in this report. They are as follows:—1. That a Council entitled "The Council for Mechanical Transport in the Colonies" be appointed to control the necessary investigations into, and improvements of, new forms of mechanical transport with a view to their adaptation to the requirements of undeveloped tropical territories. 2. That the Council should consist of the following members:—A Chairman to be nominated by the Secretary of State, a representative of the Council Office, a representative of the Crown Agents, a representative of the War Office, Mr. R. H. Brackenbury, Mr. G. H. Baillie (Members of the Corporation's Transport Committee), Brig.-General F. D. Hammond, C.B.E., D.S.O. And that the Empire Marketing Board, the Sudan Government Railways and the Empire Cotton Growing Corporation should each be invited to nominate a representative to the Council. 3. That the Council should have power to co-opt such other members as may be advisable, due regard being paid to the desirability of securing the co-operation of such bodies as the Institutions of Civil, Mechanical, and Automobile Engineers. 4. That a Secretary to the Council should be appointed by the Secretary of State. 5. That the Council should be responsible to the Secretary of State for all funds placed at its disposal. 6. That the actual work of investigation and experiments should be carried out by an Executive Committee composed of experts, who should be appointed by and be responsible to the Council. 7. That the Executive Committee should be small and composed of the most suitable and experienced persons available, and that any payments found necessary to secure their services should be regarded as a proper charge on the funds at the Council's disposal. 8. That the investigations and experimental work of ascertaining the most suitable forms of mechanical transport should be undertaken on a considerable scale, both at home and abroad, with a view to results being obtained as early as possible. 10. That an initial sum of £50,000 and thereafter an annual sum of £20,000 should be placed at the disposal of the Council, this annual sum to be reconsidered from time to time as may be necessary in the light of future developments. 10. That the Institutions of Civil, Mechanical, and Automobile Engineers, the Empire Cotton Growing Corporation, the Sudan Government Railways, and any commercial or manufacturing concerns interested, should be invited to contribute towards the funds required for the work; and that the Empire Marketing Board should also be invited to make a grant, preferably of a lump sum towards the initial funds needed, and that the balance of the money required should be contributed in proportion to their revenues by those Dependencies likely to benefit from the operations of the Council. 11. That experi-

ments should not be confined to one Colony or area; and that the Colonial Governments contributing to the funds should be prepared to co-operate with the Executive Committee in the work of conducting the local trials necessary to ascertain the suitability of the types of vehicle under experiment in relation to local conditions of road construction and transport. But that while the actual working of the vehicles and the local carrying out of the experiments should be in the hands of the Executive Committee, their representatives in the Colonies should, for purposes of local administration, be placed under the Government concerned. 12. That the Council should from time to time disseminate to the different Colonial Governments concerned full information as to the progress which is being made in the various experiments undertaken both by the Council and by Foreign Governments.

The Conference approved in principle the Committee's proposals, but considered that the proposed Council should include a representative of the Department of Scientific and Industrial Research and a second representative of the War Office. They recommend also that the report should be referred to the Empire Marketing Board with a request that the Board should take up in fuller detail the question of financial assistance towards the proposed experiments, and should explore the various sources from which contributions might be forthcoming, whether from Dominion or Colonial Governments or from private enterprise. It was recognised that the composition of the Council would be liable to modification as a result of the Board's investigations in the matter of contributing sources.

An Exhibition of Agricultural Machinery will be held at Damascus during October.

It is stated that this year's hop harvest in Yugoslavia will be below last year's yield.

The production of the Anglo-Egyptian Oilfields for the week ended July 29 was 3,309 tons.

The gross production of crude oil of the Phoenix Oil and Transport Company for July was 36,632 tons.

The value of Yugoslavia's imports for the first three months of this year was 1,664 million dinars, that of the exports being 1,547 million dinars.

An order has been placed with Thomas Piggott and Co., Birmingham, by the Bombay Gas Company for a three-lift vertical gasholder, of a capacity of 1,500,000 cubic feet, with steel tank.

The traffic receipts of the South Indian Railway Company for the week ended July 9 amounted to Rs.11,41,452, making the total from April 1 Rs.1,70,48,724.

Branches of Barclay's Bank (Dominion, Colonial and Overseas) have been opened in Uganda at Kampala and Jinja, and in Kenya Colony at Kitale.

CHESS.

By "CARO-KANN."

The solution to last week's end-game is as follows:— 1, R (R5)—R3, R (K3)—Q3 (there was no other satisfactory move); 2 R (R1)—R2, K—K3; 3, P—K3, P—B4; 4, R—B2, PxP; 5, PxP, K—B3; 6, P—B4, PxP; 7, PxP, R—Q8; 8, P—Kt5, PxP; 9, RxP, R—Kt8; 10, P—B5, RxP; 11, R—Kt6, RxR; 12, PxR, R—Kt5; 13, R—B6 (ch), K—Kt2; 14, R—B7 (ch), K—B3; 15, P—Kt7, P—Kt5; 16, R—KR2, R—Kt6 (ch); 17, K—K4, P—Kt6; 18, RxP (ch), K—Kt2; 19, R—Kt6, RxP; 20 RxP and draws.

I give this week the conclusion of an off-hand game. White has an easy win, of course, owing to the gain of a bishop but the interest lies in the way in which the mate is obtained.

White to play and win.

The winter season in London will open earlier than usual this year. During the first two weeks of September a tournament is to be held at the St. Bride's Institute, when the competitors will include many of the leading London players, while in the latter part of October an international masters' tournament is to be held. So we look like having quite a surfeit of chess this year.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Circassia for Bombay (Birkenhead, August 25). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mandasor for Calcutta (Birkenhead, August 30).

Bibby Line.—S.s. Warwickshire for Port Said, Colombo, and Rangoon (Birkenhead, August 24).

British India Line.—S.s. Dalgoma for Bombay and Karachi (London, August 20); s.s. Hatimura for Colombo, Madras, and Calcutta (London, September 3).

Cunard Line.—S.s. Phrygia for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool August 20, and Swansea August 23); s.s. Brescia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement (Liverpool, Glasgow and Swansea, August 27).

Johnston Line.—S.s. Jessmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 3).

P. and O. Line.—S.s. Mantua for Bombay (London, August 12); s.s. Perim for Colombo, Madras, and Calcutta (London, August 27).

Prince Line.—S.s. Sicilian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, August 13); s.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, August 27).

THE WEEK'S FINANCE.*(By Our Financial Expert.)**London, August 9.*

Holiday influences have been predominant in the stock markets during the past week, and the volume of business has been on the small scale traditionally associated with the first week of August. The break in security prices in Wall Street which followed Mr. Coolidge's statement that he did not intend to stand again for the Presidency of the United States, had no repercussion in Throgmorton Street, as would probably have been the case in pre-war days, though there was a little weakening in American and Canadian Celanese. Gilt-edged stocks, indeed, have been remarkably firm on the slight improvement in the monetary situation, but Home rails, after a slight burst of optimism following last week's dividend announcements, have relapsed into dullness, the market attracting no public attention whatever. As anticipated, the flow of new capital issues has practically dried up, and this is affording an opportunity for the more comfortable digestion of last month's surfeit.

Gilt-Edged Stocks.

A feature of the Stock Exchange in recent weeks has been the firmness of the prices of gilt-edged stocks. This is remarkable in view of the monetary situation and of the heavy volume of new capital issues made in the past month or so, and is especially remarkable since in the last week or two there were unmistakable signs that the new capital market was suffering from indigestion. A comparison of prices indicates the manner in which gilt-edged stocks weathered this storm. Thus $4\frac{1}{2}$ per cent. Conversion Loan, which stood at 96 at the beginning of June, is now 97. Again, 5 per cent. War Loan was $100\frac{1}{2}$ at the beginning of June, in contrast with the present price of $101\frac{1}{4}$. Of course, allowance has to be made for accrued interest, but even so the prices are higher than they might have been expected to be. This is doubtless welcome to holders of gilt-edged stocks. It is, however, even more welcome to the Treasury, for a certain amount of debt falls due for redemption in the autumn and arrangements will have to be made to meet it. The Treasury's arrangements have recently been the subject of rumour, but at the time of writing nothing definite is known. The improvement in the

monetary position in the past few days, as reflected in the Bank of England's purchase of gold and the greater strength of the New York Exchange, provides an added stimulus to gilt-edged stocks. There is no assurance, however, that this buoyancy will be maintained in the coming months. The financing of the autumn imports and the resumption of activity in the new capital market are potential depressing factors.

Home Railway Dividends.

With the exception of the announcement by the directors of the London and North-Eastern the dividends of the home railways declared at the end of last week were up to the best market expectations, and that of the Great Western, indeed, exceeded them. This company declared an interim dividend for the first half of 1927 at the same rate as was paid for the first six months of 1925, namely, $2\frac{3}{4}$ per cent., the directors making the significant statement that no withdrawals had been made from reserves. For the first half of 1926 the dividend was $1\frac{1}{2}$ per cent., while for the full year the rate was 3 per cent., and £2,100,000 was taken from reserves. The London, Midland and and Scottish paid an interim dividend of 2 per cent. against $1\frac{1}{2}$ per cent. at this time last year and $2\frac{1}{2}$ per cent. for the corresponding period of 1925. The directors made no reference to the question of reserves, but stated that economies in working expenses had been offset by the lower income from investments, owing to the large reduction in reserves in the two previous years. The Southern made no change, the full 5 per cent. being paid on the preferred ordinary stock, the dividend on the deferred ordinary being left as usual until the end of the year. The directors of the London and North Eastern not only pay nothing on the preferred ordinary stock, but pass the interim dividend on the Second preference stock. They anticipate, however, that they will be able to pay the full dividend at the end of the year, and it is probable that some small distribution will also then be made on the preferred ordinary stock, as was the case last year, in order to maintain the "trustee" status of the preference stocks. The market was much disappointed with the North Eastern dividend statement, and there was a sharp fall in the junior stocks which spread weakness to the prices of those of the other lines. The outlook, however, is not gloomy, and to the outside observer the pessimism in the home railway market during the past week appears to have been overdone.

The Decline in Brewery Profits.

The accounts of a number of brewery companies published in recent months show a decline in earnings as compared with recent years. This tendency is apparent in the reports of two large companies available this week. The accounts of Arthur Guinness, Son & Co. show that the sales of stout and sundry products for the year ended June 30 amounted to £11,504,600, as compared with £12,232,000. The net profit is the smallest since 1918-9. The bonus, it will be remembered, was reduced from 8 per cent. to 4 per cent., thus making the total distribution 28 per cent., against 32 per cent. The balance sheet continues to show a position of great financial strength, but shareholders will doubtless be somewhat anxious to know whether the decline in profits is anything more than a temporary phase. The accounts of Bass, Ratcliff and Gretton for the year ended June 30 also show a reduced income from sales of ales, stout and allied products. The net profits, however, are higher. It will be recalled that in December last the company entered into an agreement under which its interests were united with those of Worthington and Co., the arrangement being carried through by the purchase and interchange of ordinary shares; the arrangement came into force as from the beginning of 1927. The net profit, including "sundry rents, interest and dividends" is £320,250, against £277,749. The balance-sheet shows important changes, which are pre-

sumably due in part to the transaction with Worthington and Co. The directors evidently view the future with considerable confidence, for they have raised the dividend by 2 per cent. to 15 per cent. free of income-tax. It is difficult, however, to make a useful estimate of the outcome of the brewery companies' trading in the present year, but no doubt they stand to benefit by the improvement in the country's economic position in 1927.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.)

EGYPT.

Switchboard and Switch Gear.—The Director-General, State Domains Administration (Commercial Service), Savoy House, Sharia Qasr el Nil, Cairo, invites tenders for the supply and erection of a switchboard and switch gear. September 10.

Leather, Etc.—The Director of Stores, Ministry of Education, Sharia Qasr el Aini, Cairo, invites tenders for the supply of leather, canvas, and other materials for saddlery and shoemakers required for Model Workshops and Trades Schools during the year 1927-1928. August 31.

Clocks, Forges, Etc.—The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of clocks barracks, forges field portable, machines barley crushing, gymnastic articles, chairs, and safes money to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. August 31.

Diesel Engines.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection at site of Atf Power Station of four internal combustion Diesel Alternator groups and accessories required for the Public Works Ministry. October 12.

Machinery Tools, Etc.—The Director-General, Ports and Light-houses Administration, Arsenal, Alexandria, invites tenders for the supply of machinery tools and plants for Suez Workshops. August 29.

Raw Wool, Etc.—The Controller of Technical Education, Ministry of Education, Sharia Qasr el Aini, Cairo, invites tenders for the supply of raw wool, cotton yarns, etc., required for the Rug Factory at Assiut. August 31.

Diesel Engines.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection at site of Abul Menaga Pumping and Power Station of four internal combustion Diesel groups with flywheel alternators, three pumps and accessories, required for the Public Works Ministry. September 3.

Wagon Covers.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 1,000 impermeable wagon covers. August 16.

Bridge Work.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of materials and works connected with the replacement of the superstructures of Mansourieh bridge and the adaptation of the pier and abutments to the new superstructures. August 15.

British Consular Reports

II.—EGYPT.

The following extracts are taken from the Report on the Economic and Financial Situation of Egypt, dated May, 1927, by Mr. E. Homan Mulock, British Commercial Secretary at Cairo:—

Egypt is gradually emerging, thanks to the recuperative power derived from the accumulated reserves of preceding years of prosperity, from the economic and commercial depression which characterised the greater part of the four closing months of 1926. This, coinciding as it did with the period of the year when the cotton crop movement is normally at its zenith, was more widespread in its effects than might otherwise have been the case.

Owing to the fact that some 70 per cent. of the population are directly concerned in, and most of the remainder more or less directly affected by, Egypt's cotton industry, any radical fluctuation in cotton values is bound to have an immediate and far-reaching effect on the economic situation; but, although the final slump in cotton prices constituted the prime mover in the economic depression of 1926, its driving power was greatly stimulated by the high cost of living and excessive agricultural rents. But for these two potent factors it is doubtful whether the material effect on the fellahen, and the moral effect on the commercial community, of the decline of cotton prices to what must, sooner or later, be accepted as a normal post-war level, would have been sufficiently acute to create economic depression.

Favourable trade balances and a total foreign trade of over £E.100 millions have been so marked a feature of the post-war years that any departure therefrom is looked upon in some quarters as abnormal and disastrous to a degree. The actual trade balance and foreign trade (excluding specie) in 1926 were as follows:—Imports, £E.52,400,059; exports, £E.41,759,391; and re-exports, £E.1,371,055—together a total of £E.43,130,446, leaving an unfavourable trade balance of £E.9,269,613 in a total foreign trade of £E.95,530,505.

There is no excuse for pessimism regarding Egypt's present economic and financial situation if only it is realised that for the quinquennial period 1922-26 there is a net balance of trade in Egypt's favour, over the period 1910 to 1926, of £E.37,968,000.

Purchasing Power.

So far as the relation between the decrease in imports and a decline in purchasing power is concerned, it will be seen in the course of the general remarks on imports that the decrease therein is chiefly attributable to other factors. Further, there are several important features of the economic and financial situation which cannot be reconciled with a serious decline in purchasing power. One of the most striking of these features is the general imperturbability of the local stock and share market in the face of fluctuations in cotton prices, and particularly of the final slump. Thus local stocks and shares stood, on the whole, at the same level, some being higher, on Monday, December 6, as that existing on December 3, in spite of the fact that on December 4 the prices of Sakellarides and Ashmouni dropped to the lowest levels recorded either in 1926 or in the present cotton season (up to April 26, 1927), viz., 23 dollars 36 cents. and 15 dollars 5 cents. respectively. Other such features are the large imports of luxury articles, such as Persian and Turkey carpets, costly motor cars and household furniture, precious stones, wines, silks, etc.; the immigration from the Mousky of traders whose prosperity has raised their standard of living and stimulated the demand for new flats in the European quarter; the consequent high rents asked, and paid, for living accommodation, which make investment in land and the construction of new buildings so attractive a proposition, and constitute so important a factor in the prevalent high cost of living; the circulation of money resulting from an influx of tourists estimated at 40 per cent. above pre-war levels;

the reduction by half, by March, 1927, of the total quantity of accumulated stocks of piece-goods in the bonded warehouses in March, 1926; the increasing investment of capital in local gilt-edged securities; and the yearly exodus to Europe of wealthy people for the summer.

There is also a tendency to exaggerate the lasting nature of the adverse effects of the economic depression of 1926, such as the diminution in the demand for, and the circulation of, bank notes; the substantial increase in the number of cases of bankruptcies and the deposit of books which totalled 329 and 128 respectively in 1926 as against 202 and 77 in 1925.

In view of the foregoing considerations, it seems reasonable to conclude that the purchasing power of the country has not been seriously affected, and to diagnose the decline in imports during the last three months of 1926 as commercial indigestion, set up by the moral effect on wholesale importers of a tardy realisation, thanks to economic depression, of the plethora of stocks, particularly of textile goods, accumulated during preceding years of prosperity. Finally, if the absorption of accumulated stocks of goods leads to a steady demand for replenishment; if the increase in commercial failures is to any extent due to the disappearance of mushroom firms on the one hand and to exaggerated credits on the other; if those who are responsible for the maintenance of high rents, high prices and the high cost of living will only realise that what is really happening is a general readjustment to a more or less normal state of affairs—then the economic depression of 1926 will prove to have been a blessing in disguise.

The root of the evil so far as the fellah is concerned is to be found in the disproportion between present agricultural rents and the prevailing low cotton prices. That these rents are generally excessive was recognised in Parliament in the course of the debate on January 11 and 12, 1927, on a proposal that they should be reduced and fixed by law. So long as nothing is done to check excessive rents and the consequent artificial market value of agricultural land, economic depression among the fellahen would seem to be a foregone conclusion every time cotton values fall unduly low. It is not necessary to seek any other explanation of the inability of the fellah, under existing conditions, to enjoy the benefit which should be secured from a lint yield per acre very high in comparison with that which provides a subsistence for the cultivator in the United States and India. The comparative figures of yield in lbs. of lint per acre for the three countries in 1926 were:—Egypt: Sakel, 275 lbs.; others, 529 lbs. United States, 179.7 lbs.; and India, 79 lbs.

The Government and Cotton.

The foregoing anomaly cannot be attributed, when all is said and done, to any failure on the part of the Egyptian Government to render direct financial assistance, whatever the merits or demerits of the methods employed, both to the fellah and the cotton industry at large. During the period January-August, 1926, Government expenditure on purchases of cotton amounted to £E.2,862,785, which includes rent,

The Cotton Congress.

Official delegations from Austria, Belgium, Czechoslovakia, England, France, Germany, Holland, Hungary, Italy, Yugoslavia, Norway, Spain, Sweden, and Switzerland, and locally appointed delegates for Brazil, Japan, and the United States, attended the Seventeenth Congress of the International Federation of Master Cotton Spinners' and Manufacturers' Associations, held in Egypt from January 25 to February 5, 1927, under the patronage of H.M. King Fuad I. Lectures were given on work on cotton by the Royal Agricultural Society, the Cotton Research Board, and the State Domains, and conferences were held on the following subjects:—

(a) Recent work on the improvement of Egyptian cotton by seed breeding. (b) Cotton seed distribution. (c) Destruction of pink boll worm in cottonseed. (d) Commercial history of Egyptian cotton. (e) Economic problems relating to Egyptian cotton—cost of handling, production, and manufacturing, etc. (f) Government crop forecasts and the crop recording system. (g) Irrigation and drainage system in Egypt. (h) Aims and objects of the Alexandria General Produce Association. (i) Organisation of the Royal Bourse in Alexandria. (j) System of cotton purchase in the interior and the ginning of cotton. (k) Spinners complaints in relation to Egyptian cotton. (l) Defects in yarn and cloth. (m) Reply to Spinners' complaints. (n) Review of meetings held in Egypt.

The financial assistance referred to above and the legislative or administrative measures described below, afford ample proof of the anxiety of the Government to foster and assist the staple industry of the country which, *ipso facto*, comes in for the lion's share of attention in the maintenance of a policy dictated primarily by the desire to encourage local industry in general. Legislative or administrative measures designed to help the cotton industry in various ways during the period under review took the following forms:—

September 1926.—Law No. 4, prohibiting the mixture of different varieties of cotton, and Law No. 5 governing the control of cottonseed.

September 16.—Reduction of tax on ginned cotton from 25 piastres to 20 piastres per kantar.

October 19 and 20.—The opening of a credit of £E.4 millions for advances to the small cultivator on the security of any quantity of cotton ranging from 5 to 200 kantars. These advances, which ranged according to the variety of, all January Sakel and December and February Ashmouni to 22.50 dollars per kantar of Sakel, for G.F. and F.G.F. upwards, were made valid for four months, and carried interest at 4 per cent. per annum. The cotton was to be weighed and stored free of charge to the borrower.

November 21.—Loans on the basis of 15 dollars per kantar of Sakel and 10 dollars for Ashmouni, etc., were authorised for F.F. grades.

November 30.—The maximum quantity of cotton on which loans could be granted was increased to 400 kantars.

December 17.—Intervention in the "Futures" market in the form of a decision to purchase, and insist on delivery of, all January Sakel and December and February Ashmouni contracts offered at 23.50 dollars, and 15.50 dollars per kantar respectively. This has since been extended to May Sakel and April Ashmouni contracts, but the necessity to act on this decision has not so far arisen.

January 10, 1927.—Law No. 1, restricting the area under cotton in 1927, 1928 and 1929 to one-third of each man's holding.

January 12.—Parliamentary decision to form the Conciliation Boards referred to earlier.

March 21.—The renewal of loans on cotton for a further four months was authorised, provided that the borrower first pays up the interest to date, and authorises the ginning of the cotton and the sale of the seed.

Other measures still under consideration are:—Improvement of the regime of the "Futures" market with

the object of safeguarding it against speculative manoeuvres, and ensuring more efficient control; modification of the regime of the "Spot" market, and a draft law prohibiting the sale of cotton without fixing the price; and a co-operative scheme for agricultural credit to organise the marketing of the cotton crop.

Various resolutions were passed, of which the following is a *résumé*:—

The Congress hopes that the competent authorities will make every effort to improve the quality and increase the yield of Egyptian cotton, and to maintain and improve the drainage system.

The Congress favours the formation of a Permanent Joint Committee of seven representatives each of Egypt and the International Cotton Federation for the consideration of any problems relating to Egyptian cotton.

The delegates urge upon the cotton merchants of Alexandria who are parties to the agreement prohibiting them under penalty of a fine to sell cotton with a maximum degree of moisture, to abolish this agreement.

In view of the increasing amount of impurities found in Egyptian cotton, the delegates respectfully request the cotton merchants of Alexandria to use every effort towards the elimination of this very grave peril.

The delegates draw the attention of the cotton merchants of Alexandria to the disadvantages resulting from mixing cotton of different varieties in the same bale and request them to take drastic action to prevent such mixture.

Trade.

As a result in the main of the effect (a) on imports from Great Britain, both of manufactured goods and coal, of the seven months coal stoppage in 1926; (b) on imports from Italy, of the appreciation of the lira; and (c) on the demand for cereals, of increased local production, the total imports declined from £E58,224,895 in 1925 to £E52,400,059 in 1926. A glance at Appendix 1925 to £E52,400,059 in 1926. The categories in which the chief decreases occurred are cereals, flour, etc., wood and coal, and yarns and textiles. In the case of cereals the decrease of £E1,149,000 was chiefly accounted for by lessened demand for wheat, wheat flour, and maize; coal accounts for £E275,000; railway sleepers for £E120,000, and timber for £E104,000, of the £E505,000 decline in the "wood and coal" category; while of the total decline of £E4,334,000 in the value of yarns and textiles, the five categories of cotton piece-goods accounted for £E3,015,000, of which the United Kingdom was responsible for £E2,188,500, and Italy for £E841,000. In other words the decreases in these three categories are not properly attributable to the decline in purchasing power that the relation between exports and imports would appear to indicate. In the first place, the combined decreases in question more than account for the total drop in imports of £E5,824,836. Secondly, a decline in purchasing power is not easy to reconcile either with substantial increases in spirits, beverages and oils, metals and metalware and tobacco, or with the fact that more than half of the chief suppliers of Egypt's requirements have increased their exports to that country. Taking a minimum contribution of £E900,000 as the qualification to rank as one of the chief suppliers of Egypt's requirements, eight of the fifteen countries so classified show increased exports to Egypt.

In 1925 the area devoted to tobacco in Roumania was 35,723 hectares, as compared with 31,310 hectares in the previous year, but the production fell from 22,013,081 Kg. to 17,268,631 Kg.

For the first five months of 1927 the value of Bulgaria's imports was 2,496 million leva, that of the exports being 2,148 million leva. These figures compare with 2,181 million leva for imports, and 2,148 million leva for exports in the corresponding period of 1926.

Bulgaria's exports of tobacco in 1926 totalled 27,463 tons of the value of 76,825 million leva; those of maize were 98,618 tons of the value of 14,397 million leva, while those of wheat were 36,181 tons of the value of 10,548 million leva.

Company Meeting.

BANK OF ROUMANIA.

Review of Trade Conditions.

The ordinary annual general meeting of the Bank of Roumania, Limited, was held on August 5, at Winchester House, E.C. General the Hon. Sir Herbert A. Lawrence, G.C.B., presided.

The Secretary (Mr. F. P. Carrington) having read the notice convening the meeting,

The Chairman, in moving the adoption of the report and accounts, said:—Before proceeding with the business of the meeting I must first express our deep regret at the recent death of his Majesty King Ferdinand of Roumania, and convey our respectful sympathy to the Roumanian Royal Family and the Roumanian people.

The directors also deeply regret the death of their colleague, Lord Oranmore and Browne, which took place on June 30, and desire to place on record their high appreciation of the valuable services which he rendered to the bank.

As you will see, the balance available, after making provision for bad debts and income-tax, amounts to £12,622 4s. 11d. An interim dividend of 3s. per share, less income-tax, was paid on December 16 last, and the board now recommends the payment of a final dividend of 3s. per share, less income-tax, which will absorb a further £6,000, and that the balance of £622 4s. 11d. be transferred to contingency account.

Our earnings in sterling were still adversely affected by the rate of exchange at which we had to convert our lei profits, and the increased cost of living in Roumania kept our working expenses at a high figure.

The exchange on London, which in January, 1926, was 1,050 lei to the pound, reached 1,460 in May, but fell to 930 per pound at the end of the year. Since then the rate has been more steady at about 800.

The Roumanian Government continued its policy of non-inflation and the note circulation of the National Bank only slightly increased from 20,126 million lei on December 31, 1925, to 20,950 million lei on December 31, 1926. The money scarcity of 1925 became more acute during the course of last year. The increased demand for money for industry and financing the harvest absorbed a large amount of capital and contributed to the scarcity of money.

Deposits in the principal banks diminished, capitalists finding better returns in other directions. This necessitated a somewhat severe curtailment of our business and, of course, reflected itself in our profits.

The Budget for 1927 not only excludes the railways, as last year, but also the postal, telegraph, and telephone services. These services have a separate expenditure and revenue. The new Budget provides for an expenditure of 33,390 million lei, as against 28,250 million in 1926, an increase due to the greater expenses in all departments owing to the increased cost of living and the greater commitments for interest on, and amortization of, public debts.

The revenue for 1927 is estimated at the same figure as the expenditure, and the increase of about 5 milliard lei over the revenue of the previous year is provided for by an additional 2,000 millions from direct taxation, and 1,000 millions from State monopolies. In accordance with the agreement made with the National Bank for the regular amortization of the State debt to that institution, a sum of 560 million lei has been earmarked in the Budget for this purpose.

Turning now to the commerce of Roumania for 1926, it is satisfactory to see that the exports exceed the imports. The value of exports from Roumania to all countries was 38,011 million lei, as against 29,025 millions in 1925. The Chief exports were: Grain to the value of 14,600 million lei, and oil to the value of 9,440 million lei. The value of imports into Roumania from all countries in 1926 was 34,100 million lei, as against 30,098 millions in 1925.

Trade between Great Britain and Roumania showed an increase of exports from Roumania at £2,663,000 last year, against £2,278,000 in 1925. There was a falling off in the quantity of goods going into Roumania from Great Britain, the total being £2,596,000, against £3,071,000 in 1925.

The weather prevailing in 1926 was generally favourable for all crops. Without realizing quite the abundant results at first expected, the agricultural production showed marked progress, and the year 1926 may be considered the best since the war. The maize was very abundant and of exceptional quality.

Our manager at Bucharest, in a telegram received within the last few days, informs me regarding the present harvest that "The quantity of wheat and barley is 20 per cent. less than last year, but quality and price are superior, thus equalizing values. Export prospects are fair. It is too early to estimate maize, but a reduced crop is anticipated owing to lack of rain."

The activity of the oil industry brought about a production of 3,241,000 tons in 1926, as against 2,313,000 tons in 1925. The best year before the war produced 1,885,000 tons only. Last year I remarked that it was anticipated the exports of oil would be doubled in 1926, and this result has been realized, the total having increased from 784,500 tons to 1,494,000 tons. Recently a revision of the export tax on oil and railway charges was effected by the Roumanian Government, and this should materially assist in off-setting the reduction in the world price of oil.

The Government under the leadership of General Alexandre Averescu, which came into power in the early part of 1926, resigned on June 4 last and a provisional Ministry, headed by Prince Barbu Stirbey, controlled affairs until the Liberals with Monsieur Ion Bratianu as Prime Minister took over the reins of Government. A General Election followed, which resulted in a large majority in favour of Monsieur Bratianu's party. This Government was in power when King Ferdinand died on July 20. Under the constitution a Regency has been formed, which will act until the new King, Michael, attains the age of 18 years—that is, in 1939. There is no reason to suppose that the death of King Ferdinand will disturb the economic or political development of the country.

Before resuming my seat, I desire, on behalf of the board, to thank the managers and staff, both here, and in Roumania, for their loyal co-operation in carrying out the affairs of the bank. (Hear, hear.)

The resolution was carried unanimously.

The production of the Dacia Romano Petroleum for July was 3,000 tons. 13 wells were in production, six are in drilling, and one is being fitted up.

The provisional figures of the area sown in the spring in Roumania with various cereals are as follows (in hectares):—Wheat 3,046,621, rye 273,507, barley 1,712,254, and oats 1,063,465. For the previous spring the figures were:—Wheat 3,327,487, rye 295,623, barley 1,554,567, and oats 1,078,419.

The Commercial Treaty between Turkey and the Soviet Union which was signed at Angora in the spring, and is now in force, provides for most-favoured-nation treatment in respect of commerce and industry generally, also in respect of employment, with national treatment in respect of taxation. National treatment is also extended to ships and their cargoes, and the most favoured-nation treatment to crews, but exception is made in the case of the coasting trade, the due protection of the national maritime commerce, fishing in territorial waters, towing, pilotage, port services, and river navigation. Russian imports into Turkey get most-favoured-nation treatment. Turkish goods specified in lists annexed to the Treaty imported into Russia are to receive most-favoured-nation treatment, and definite percentage reductions in the Russian duties are prescribed for certain classes of Turkish goods. Free transit of goods is provided for under condition of reciprocity, and Turkish goods are granted free transit via Batum. The trade activities of the Soviet Delegation in Turkey are defined and made subject to Turkish law, and similar rights to the establishment of a corresponding delegation in Russia are given to Turkey.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended August 3:—

Egyptian Futures.—Sakel Contract.—During the earlier part of the week the market remained fairly steady. Novembers fluctuated between 19d. and 19.50d., the Continent and Alexandria still appearing as buyers on any breaks, although profit-taking from both these sources was noticeable whenever an opportunity occurred. On Friday last, scattered liquidation and fresh selling made their appearance; the market appeared to be very hollow, and Alexandria closed decidedly weak. Novembers here broke through the 19d. level again, a conspicuous lack of buyers being noticeable. As was to be expected, with both markets in such a nervous state, the straddle difference between Liverpool and Alexandria has been very erratic, Liverpool at times showing a premium of as much as 20 points over Alexandria, whereas for some weeks now the reverse has been rather the case, Egypt generally being over Liverpool.

Later in the week decidedly "bearish" influences developed and during the past two days the Liverpool market has been under heavy pressure with very little show of resistance noticeable up to the present. Briefly, the initial decline was brought about by the sharp break in the American markets over the holidays; which reacted with demoralising effect on Alexandria, where a large and weak "Bull" interest had accumulated. Trading there became decidedly panicky, and values fluctuated as much as 2 dollars during a session, on two occasions. There has been a lack of trade support here, and aggressive short selling on the downward movement has, at times, been accentuated by the uncovering of stop-loss limits and straddle selling against purchases of American. The off-take has been practically limited to down-scale short covering and a little American buying. Some "fixing" of cotton on the decline has also been noticeable.

Upper Contract.—This contract has also been under heavy pressure this week, the poor Alexandria advices and small scattered selling orders combining to depress values. Continental and Alexandria houses were the chief sellers, whilst profit-taking by American houses on the way down supplied the support, although really there has been comparatively little business passing.

Egyptian Spot.—Confidence amongst buyers has not been strengthened by the latest and most serious decline which we have witnessed this season. Added to this we have had the intervention of the August holiday, during which our market was closed for two days. Hence, it is not surprising that business in actual cotton has been kept down to a minimum. Owing to the surprising fluctuations which have occurred in the Alexandria market during the past two days shippers have found it dangerous to make offers for any length of time, and per contra, spinners have found the process of making bids to such markets an unprofitable one. Much depends on the issue of the first U.S. Bureau Report, due on the 8th inst., and we fear that until that is out of the way, and the situation becomes a little clearer, there is not likely to be any recovery in spot business. As we write, all markets seem to be swamped with selling orders, and "bullish" propaganda is no longer heard. Basing our remarks on past experience, however, we venture to predict that this decline (like the recent rise) will be overdone, and we consider that those spinners who have the courage to enter the market at round about the present level will have cause to congratulate themselves later in the season.

The local inquiry has shown little change—Sakel at about 11d. to 14d., and Uppers at from 12d. to 14.50d. have been in evidence, and there has been an occasional request for the Best Upper. Sakel at anything over Good Fair has been out of favour. The rest of the inquiry has

been largely occupied with Sudan. American seed cotton at from 150 to 325 on has continued to be popular and the medium qualities of the Sakel variety have also received some support. On the whole, however, business, both spot and c.i.f., has been very quiet.

Forwardings to spinners for the week ending 29th ult. were returned as 6,870 bales Egyptian and 3,167 bales Sudan. Estimated spot sales, 900 bales Egyptian and 1,700 bales Sudan. Quotations of Sakel have been reduced 150 points and those of Uppers 100 points. F.G.F. Sakel to-day, 18.10d. F.G.F. Upper to-day, 14.20d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended July 28, state:—

Since our last report the futures market has again shown much nervousness. The week's summary of price movements is as follows:—Sakellaridis: November, 38.55 dollars, 0.50 dollars down; January, 38.20 dollars, 0.41 dollars down. Ashmouni: August, 27.48 dollars, 0.17 dollars down; October, 28.32 dollars, 0.03 dollars down; December, 28.42 dollars, 0.03 dollars down; February, 28.62 dollars, 0.07 dollars down.

Sakel.—We have again had this week a series of sessions with heavy fluctuations. November touched 40 dollars on the 23rd inst., but this level induced profit taking, with the result that prices fell rapidly to 38 dollars. Since this heavy reaction, the market has been somewhat quieter, but the tendency remains uncertain.

On the 26th inst. the Government offered a few lots out

THE LIVERPOOL COTTON EXCHANGE.

Liverpool Cotton Association

LIVERPOOL

The Greatest Spot Cotton Market in the World

MEMBERS OF THIS ASSOCIATION
OFFER FACILITIES FOR THE SALE,
PURCHASE AND FINANCE OF
EVERY GROWTH OF COTTON.

The World follows Liverpool Cotton Quotations daily.

GROWERS AND SHIPPERS SHOULD
SEND THEIR COTTON TO LIVERPOOL.

All information may be obtained from the Secretary.

of their stock on the spot market at Minet el Bassal, and we understand that they sold some fifty bales. The news unfavourably affected the market and some native newspapers blamed this action of the Government; as a consequence, the latter again withdrew their cotton from the market. There was no official communication on the subject of the sale of the Government cotton, consequently all the rumours spread about are based on mere suppositions or hopes of interested parties.

The demand from abroad has only been moderate this week. Perhaps we would have seen more business if the offering on the Minet el Bassal market of desirable qualities had been more liberal. Decent cotton is difficult to find—no matter what price is paid—and naturally export houses are very reserved in their offers to spinners.

At the third July tender, 3,520 kantars dockets were issued. The total of the three tenders this month amounts to 14,250 kantars.

Uppers.—Fluctuations registered in this variety have not been so pronounced as those of Sakel. The tendency has been firm and this must be attributed to the steady tone of the New York market, where prices have again slightly advanced. The demand from abroad has been rather limited.

The week's receipts amount to 10,916 kantars, against exports 141,222 kantars; the stock in Alexandria stands at 2,391,831 kantars.

The official figures of arrivals and exports for the period September 1, 1926, to July 21, 1927, are as follows:—Arrivals: Lower Egypt, 5,180,000 kantars; Upper Egypt, 3,192,000 kantars; total, 8,372,000 kantars. Exports: Sakel, 2,997,184 kantars; Ashmouni, 3,762,034 kantars; Various, 490,220 kantars; total, 7,249,438 kantars.

Spot: We have had a very poor market this week at Minet el Bassal. Total sales amount to about 5,000 bales, of which we estimate 1,900 bales Sakellaridis, 2,900 bales Ashmouni and Zagora, 150 bales Pilion, and 50 bales White.

Sakellaridis: It was thought that the Government had decided to sell some of their stock, but after selling 53 bales of Fully Good Fair to Good they withdrew from the market. The bulk of the business during the week has again been done in the medium and lower grades. A few lots of poor style Sakels have changed hands at very reduced prices.

Ashmouni and Zagora: Practically unchanged from last week, with a slightly increased demand for the better grades.

Pilion and White: Are neglected.

Up-Country: The increased activity mentioned in our last report has been maintained, perhaps even further developed. Fairly important operations have been concluded, especially in Upper Egypt. We are informed that

a few sacks of cotton picked from early-sown fields have arrived at Abou-Tig and were sold at 35 dollars per kantar.

Crop, 1927: The news which we have received this week is somewhat contradictory. In very many districts the progress of the crop is entirely satisfactory, but in others it is not what one could desire as a result of scarcity of water and/or delay caused by the leaf worm attack. The pink boll worm is reported everywhere, but the damage from this pest is, at the moment, of little importance. The Wadi Halfa gauge registers a regular rise, and it is hoped that the water supply in the Delta during the first week of August will show a distinct improvement.

NEAR EASTERN PRESS.

Roumanian Trade.

Trade in Roumania shows signs of a slight improvement. It is noteworthy that the commercial relations between Roumania and Germany are considerable, and have given rise to a desire for a political understanding. Protection for home industries is still looked for anxiously, and attention has been drawn to the lack of a petroleum exchange. It is difficult to obtain official prices, resulting in complaints abroad. Concerning Roumano-German interests, a writer in *L'Indépendance Roumaine* says:—

I think that the time is drawing near when it will be possible once more to talk in Roumania of friendship with Germany, a friendship which, moreover, for forty years, was appreciated by Roumania many a time.

Indeed, recently, one read in *L'Indépendance Roumaine* that M. Vandervelde, Minister for Foreign Affairs for Belgium, had declared that official circles of the Reich had recognised, in principle, the Belgian rights concerning the recovery of stocks in marks. This is a question which is of great concern to us, seeing that we are also disputing with Germany the matter of our notes of the Banque Generale. Once the Belgian right to the stock in marks is recognised, we do not see how it is possible to deny Roumania her rights on the subject of the notes of the Banque Générale, for the origin of these rights is the same, both in the question of the means of payment as in other matters. We cannot but rejoice to see removed one of the greatest obstacles to the re-establishment of negotiations between our country and the great German power, thus leaving the road open for agreements which will be of advantage to both countries.

The second fact which proves that a *rapprochement* would be easily brought about, lies in the attitude adopted by Dr. Stresemann on the question of the Hungarian declarations. *L'Indépendance Roumaine* mentioned at one time the article in the *Tägliche Rundschau*, a newspaper which one would suppose friendly to the German Minister for Foreign Affairs, an article in which the newspapers took the Hungarians' part in this much discussed question, which is yet so clearly in our favour.

Dr. Stresemann, in denying the paragraph in question, expressed his desire to see a better understanding between the two countries in the matter of existing disputes.

According to recent statistics, trade between Germany and Roumania has considerably increased. The result of this exchange has been in our favour, seeing that we have exported to Germany about 1,300 millions of lei more than Germany has imported into Roumania. This result is even better when it is taken into consideration that Germany before the War imported much more into Roumania than Roumania exported to Germany. It must also be pointed out that in this balance the value of the material delivered by Germany on account of reparations has not been taken into consideration, the value of which had reached in 1926 9,200,000 marks. According to the details given by M. V. Geormaneanu, our Commercial Attaché in Berlin, the following are the figures for the trade between the two States: The total of general imports for 1926 reached 721,159.2 tons, and for 1925 309,117.2, which represents in value 153,699 R.M. in 1926, against 93,551 R.M. in 1925. The total exports reached 98,985.1 tons in 1926 and 83,699.8 tons in 1925, which represents a value of 121,369 marks in R.M. for 1926, and 103,756 R.M. for 1925. These figures show a considerable increase in exports and imports for both countries in 1926. We are in possession of interesting details for the first quarter of 1927. . . . Germany has imported from Roumania in these 3 months 53,075 millions of marks of merchandise, and has exported to Roumania merchandise to the value of 30.3 million marks.

Notes of the Week.

The Greek Coalition Government.

After a troubled existence extending over some eight months the Coalition Government in Greece formed by M. Zaimis on December 5, 1926, came to an end last week. Of the immediate cause of the Ministerial crisis it can at least be said that there were underlying questions of principle and that the issue was not a merely personal quarrel between rival politicians. To the credit side of the Coalition Government have to be reckoned the passing of the new Constitution, the ratification by the Chamber of the Debt Agreement with Great Britain and the handling of the vexed question of Greek finance in such a way that the League of Nations has considered itself justified in recommending that Greece should have under certain conditions a further loan of nine million pounds. It is in connexion with this latter question that differences of opinion have arisen in the Ministry, unfortunately between Ministers representing the two opposed schools of thought on the constitutional problem. The League of Nations has stipulated, as an antecedent condition to the issue of a further Greek loan, that the National Bank of Greece should cease to combine the functions of a bank of issue with its other operations, and that a separate Bank of Issue should be formed. This recommendation was perforce accepted by the Greek Government; but in arranging the details for the formation of the new Bank the Minister of Finance decided that the National Bank of Greece should be indemnified for the gold cover which it has hitherto held and will now hand over to the Bank of Issue by the payment of the equivalent in paper currency. M. Tsaldaris, Minister of the Interior, brought his opposition to the Finance Minister's policy to a head by making it a matter of principle that the gold cover is connected entirely with the note issue and cannot, therefore, be regarded as the private property of the National Bank, for which the latter has to be compensated when the cover is transferred with the right of issuing notes.

An Attenuated Coalition.

When the Greek Cabinet met to consider this question, M. Tsaldaris and his fellow Ministers of the Popular Party

refused to give way on a matter of principle and announced their intention of resigning from the Coalition. This step led inevitably to the resignation of the whole Ministry which had lost its status as an "Oecumenical" Government. In the circumstances the President of the Republic has followed the obvious course of calling upon the four remaining parties of the late Government to continue to form a coalition—without the Popular Party—under M. Zaimis. The point at issue is, possibly, too technical to allow judgment to be passed at a distance without fuller knowledge of the facts than exists at present in this country. It would, however, be thought that the origin of the gold cover held by the National Bank of Greece was sufficiently established to enable the question to be decided whether it was acquired by the Bank in connexion with its normal banking operations, and as such could be regarded as the property of the shareholders, or whether it was essentially an adjunct to its privileges as a bank of issue and, therefore, the property of the State, of which the Bank had the usufruct. If the latter, the Bank as a private enterprise would undoubtedly be doing a good stroke of business, if it received from the State the equivalent of the gold cover in paper money when it was called upon to hand over the cover to a newly-formed Bank of Issue. It is perhaps, unfortunate that the question should have been made a matter of party politics. On the Cabinet's attention having been called to the point, it should have been possible to refer the subject to expert arbitration, preferably foreign, and to have allowed the rest of the scheme drawn up by the Minister of Finance to be put through by a united Government. The existence of a Coalition Ministry was a guarantee that Greece would be spared for the time being the worst aspects of party rivalry. By going into opposition the Popular Party will consider it necessary to justify itself, and may, therefore, be led to ignore the fact that Greece still stands in need of a political truce, while the work of reconstruction on practical lines is being begun.

Angora and Constantinople.

In view of the prolonged stay of Ghazi Mustapha Kemal Pasha in Constantinople and of the general exodus

to the Bosphorus of Ministers and leading officials from Angora it is not surprising that some people in Turkey should have been tempted to wonder whether the latter town is beginning to lose its hold on the stern idealists associated with the foundation of the Turkish Republic. If comparisons between the old and the new capital are instituted, there can be little doubt as to the one in which the average Turkish official would prefer to reside. Between such a selection and the formal transfer of the political and official centre to Constantinople there is a wide gulf. The President's mode of living in Dolma Bagtche Palace, with daily excursions by land and sea, will have brought home to him, as never before, the shortcomings of Angora as a State capital. If he has benefited by his stay, he may realise that there are two sides to the question of imposing too continuous a strain on the Turkish official. It was a saying in Angora that the officials there did more work than they had ever done before, if only for the reason that there was nothing else to do. That was in the days when it was almost heresy, or at least unpatriotic, to leave Angora for Constantinople. As time passed, the idea of closer touch between the two towns gradually took root; with the result that there was soon a considerable amount of coming and going between Angora and Constantinople on the part of higher officials, deputies and others. An improvement in the railway communication followed. Last of all came the President himself; and he has found it possible to remain for two months, without, we may be sure, detriment to the constant progress of the Republic. With its faculty for legislating on every considerable subject under the Turkish Crescent, the Grand National Assembly may in time regulate the number of days to be spent each year by deputies and others in Constantinople; but there can be little doubt that after this summer the last has been heard of any boycott of the city on the Bosphorus on the part of Angora.

The Turkish Sabbath.

It is the usual course of reforms in Kemalist Turkey to announce them in the Press before establishing them, and there can be little doubt that the statements to the effect that there is now in Turkey a current of thought in favour of taking the Christian Sunday instead of the Muslim Friday as the national day of rest indicate the intentions of the Angora Administration. Nor need there be any surprise. It would indeed be illogical if Nationalist Turkey,

having adopted the calendar of the West, failed to observe an essential detail of that calendar, namely, the choice of the Sabbath day. From the commercial point of view the Turks have everything to gain and nothing to lose by bringing their day of rest into conformity with the practices of the greater part of the civilised world. But for that section of Turkey which keeps to its old faith, the projected change may cause considerable inconvenience. A dogmatic belief, however, on the part of the Kemalists that the call to Friday prayers can be made just as efficaciously on a Sunday will no doubt sweep the country. It is to be hoped that, as a result of this change, no undue possession of the "Monday morning feeling" may be the boast or complaint of those who wish for another *jour férié* than that which has served Islam in the past.

Turkish Parliamentarism.

There is a story of a cynical Western observer who calculated to two decimal points the percentage of self-help which the party in power were enabled to exercise in Balkan politics when general elections came along. Nothing, in fact, so perplexes the Balkan politician when watching elections in the country which is called the home of Parliaments as the indisputable fact that voting, at any rate, is free. In the Balkans the party in power can lose seats only by the abnegation of "privileges" traditionally and unanimously assigned to it. Calculations are, therefore, possible, although the employment of a greater degree of liberty, as, say, in Yugoslavia, or a less degree, as, say, in Roumania, may upset official or party prospects. In Turkey, however, there has been since the Kemalist revolution not even the contingency of a miscalculation. The results of Turkey's present elections are to be published in October; but those with inside information they are known already. Quite openly it is announced that an Opposition is not wanted; and the undesired in Modern Turkey has short shrift. The Deputies will, of course, have to belong to the Popular Party, that is, the Party whose dictator is Mustapha Kemal Pasha. It seems a quaint proceeding to elect them at all, but as half the present Deputies are superfluous—presumably they are clogs on the inexorable wheels of progress—they must be replaced by more youthful, more energetic, but also more pliable men. Now Turkey is by no means alone in so fashioning Parliamentarism, and Western observers would be profoundly mistaken were they to suppose that the Ghazi's swift electoral methods in any way shock the consciences of neighbouring or nearby Oriental peoples. Of a truth the East has taken to itself the forms of the West, but their final shape may well be recognisable by their inventors. What matters in Turkey is that, while electors come and electors go, the revolution of Westernisation goes on for ever.

The Perso-Turkish Frontier.

It is generally recognised that the inclination on the part of the extreme north-west corner of Persia, where the Turkish influence is considerable, is apt from time to time to be one of impatience towards the Central Government of Teheran. In Azerbaijan, in fact, there are always the germs of a Separatist movement, although the tendency outside Persia may be to exaggerate the dimensions of such a sentiment. Recently, however, unrest, manifested by acts of brigandage, appears to have been increasing along the Turko-Persian frontier, so much so that the impetuous Persian Press has actually accused Turkey of fomenting discord and of cherishing hostile designs against Persia. Now it is the accepted rule for native journalists in the Middle East to explain local unrest, whenever they can, by a reference to official malevolence, and more evidence is needed before Turkey can be credibly accused of fostering bad relations with her Shiah neighbour. But the seriousness of the charge and the unpleasantness that it has caused in Turko-Persian relations may be gauged from the fact

that the Turkish Ambassador to Persia, Memduh Shevket Bey, has returned to Angora, in order, among other things, to report to his Government upon the anti-Turkish attitude of the Persian Press. If the statements ascribed to the Ambassador be correct, there may be something in this affair, for tirades of the Persian Press against any particular Power are in themselves scarcely sufficient for diplomatic action, being so common and so often ill-founded. This event, coming so soon after the signing of the Turko-Persian Treaty (April, 1926), is certainly one to be watched. We notice that the Turkish *Jumhuriyet* suggests that either Russia or Great Britain is responsible for the alleged new attitude of the Shah's subjects towards those of the Ghazi. It is just possible, of course, that the Soviet authorities for reasons of their own may have endeavoured still more to undermine the position of Azerbaijan, but no proof of such design has so far been supplied. While awaiting details one is probably more justified in ascribing the dispute to the long-standing possession of pro-Turkish sentiments by a section of the inhabitants of Persian Azerbaijan. But to suppose that the Angora Administration has official designs on the integrity of Persian Azerbaijan would require very much more evidence than has as yet been forthcoming.

The Druses and Syria.

It is stated—and it is impossible at present either to confirm or deny it—that the Druses have informed M. Ponsot, High Commissioner for France in Syria, that they do not desire to be united with the State of Damascus (Syria), but wish their country to be independent under a French Governor. In the report itself there is nothing improbable, convenient enough to present French policy though it be. From Turkish times the Druses have claimed and asserted a certain independence, and now that they have been defeated in the field through what they may possibly imagine to be the shortcomings of the Syrians they may well prefer dealing with their victims direct to subordination under their Syrian brethren. But quite probably what may be good for the Druses may not be good for the complete State of Syria, or, to be more precise, the State under the French Mandate. The Druses have no more business to be an *imperium in imperio* than, say, have the Kurds in Iraq. If the French mandataries are not too proud—it seems, incidentally, to be a considerable hypothesis—to take a lesson from their British *confrères* in Iraq, they will study well the history of Southern Kurdistan since the end of the War before they grant to the Druses this alleged request. It is fantastic to suppose that the Druses, able and educated men though there be among them, could construct a stable or self-supporting State, and the more they are encouraged in their idea of independence the farther off is the realisation of France's intention and of the the league of Nation's trust: the complete independence of Syria. There is not the slightest need, nor, we may add, the slightest probability, of the absorption of the Druses into the rest of Syria, but, as with the Kurds in Iraq, amalgamation is the principle upon which the Mandatory Power should wholeheartedly work.

France and the League.

The resignation from his position on the French delegation to the League of Nations of M. Henri de Jouvenel, formerly High Commissioner for Syria, arises mainly, of course, from his dissatisfaction with the fulfilling of the responsibilities of France to the world at large. Apparently M. de Jouvenel does not think that France is "playing the game" by the League of Nations. Now with this larger question we have nothing to do here; but it would be interesting to inquire how far M. de Jouvenel's experience in Syria has influenced his decision. It will be remembered that M. de Jouvenel appeared before the Permanent Mandates Commission of the League of Nations in June, 1926, when he strongly supported the suggestion that Syria should adopt Iraq as a model; that is, that there should be a treaty between Syria and France. He is even said to

have stated that the French Government itself favoured such a solution of the Syrian problem. How the French authorities have avoided making such a solution, and how, therefore, they are not in a position yet to be in way of fulfilling the ideals of the League in regard to Class "A" Mandates, all our readers know. On France's own general attitude towards the League we are not called upon to say anything, but it is fairly obvious that on the question of Syria France has not availed herself of M. de Jouvenel's advice. Nor is the matter one that concerns France and Syria alone; for it is conceivable that the failure of the Mandatory Power to lead Syria along the lines indicated by the League may have an influence when other States which are now under the nominal tutelage of the League are presented for membership to Geneva. In that sense, therefore, this signal step of M. de Jouvenel may serve to call attention to France's international obligations in respect of Syria.

Italy and Egypt.

The recrudescence of Italian activity in Cyrenaica gives considerable point to the complaints now being made in the Italian Press that ratification by the Egyptian Parliament of the Treaty concerning the Libyan frontier which was excluded at Cairo on December 6, 1925, has been unduly delayed. No doubt the occasion was taken of King Fuad's recent visit to Rome to explain the Italian position in regard to the precise relations between Egypt and Cyrenaica. The Fascisti are protesting against the supply of contraband arms and food, which, according to them, are passing from Egypt to Cyrenaica, and they pertinently suggest that if the Egyptian Parliament were to ratify the Jarabub Treaty, such passage would cease. It is more than probable that this matter will be closely investigated on King Fuad's return to Egypt, which country would be ill-advised to follow in the wake of other Oriental countries which have made agreements and have subsequently failed to ratify them. If the facts of the case are as the Italians represent them, the Egyptians, however little their fears of Fascist activities may have decreased in the last two years, would do well to honour their obligations under the Italo-Egyptian Agreement. Smuggling of arms in support of co-religionists is admittedly a Badu habit that it is not easy to stamp out suddenly, but some attempt at its suppression should be made.

PEACE AND THE TREATIES.

Various circumstances have combined to direct attention these days to the general situation in Central and South-Eastern Europe. The equivocal position of Austria, where the economic conditions created by the Peace settlement have produced a forcing ground for social unrest, the restlessness of Hungary and the failure of the Balkan States to make any headway towards political and economic co-operation have given rise to the conclusion that a very small spark is all that is required to start another large conflagration in Europe. To avoid this catastrophe, it has been urged in some quarters that no time should be lost in revising some of the Peace Treaties. However well-meaning in their intentions, experience, it is urged, has proved that many of the clauses of these Treaties are unworkable. They were designed, in the best of good faith, to counteract the evil, personified in the old "ramshackle" Austro-Hungarian Empire, of subjecting peoples with a highly developed sense of nationality to alien rule. To this end nationalism was to be the guiding principle in the delineation of the Succession States, and where there had to be any deviation from this principle elaborate safeguards were devised for the protection of minorities. In practice the arrangement has not responded to the good intentions of the originators, for two reasons: Austria in its present form, with a "top-heavy" capital out of all proportion to the size and productivity of the country, is shown not to be a workable proposition, and in no single case is a minority found to admit that either the letter or the spirit of the Treaties has been acted upon in regard to the rights that were to be assured to it. In these circumstances the two alternatives that present themselves are, to muddle along as at present with recurrent crises and the uncomfortable sensation of sitting on a volcano in the hope that ultimately all will be well, or boldly to acknowledge that mistakes have been made and to summon all the good will available to effect salutary changes by agreement. The mere suggestion of the second alternative suffices to marshal all the Succession States in fierce opposition to any change. Not one of them is conscious of having achieved the solidarity that ought to belong to a nation that has achieved unity after so much common suffering and sacrifice, and the proposal to touch in any single particular the Treaties that brought them into being, and constitutes, as it were, their charter of independent existence, is enough to conjure up the worst fears of disruption. They are, therefore, unanimous in the maintenance of the *status quo*, and resent the insinuation that the minorities in their midst have any cause for complaint.

In the present temper of the States concerned it is unlikely that any of them could be persuaded to agree to

an amicable revision of the Peace Treaties. The chances of any early improvement of the conditions of minorities are in all probability equally remote. On the other hand, if change there is to be, it might be more reasonable to look for it in the treatment of minorities than as a result of the accession of the statesmanship required to realize how the common interests of all would be served by the elimination of friction between the States. In the case of minorities there is always the chance that one party or another in the country will take up their cause, if not from humanitarian motives, at least from the advantages likely to accrue from the political support of a grateful section of the people. Moreover, there are signs that the national conscience in one or more instances is being aroused. In spite of what Macedonians themselves might say on the subject, there is reason to suppose that there has been of late an amelioration in the lot of their compatriots in Southern Serbia. In South Eastern Europe, off the more beaten tracks, the truth is not easy to come by, whether the statements in question are official or otherwise. It is generally accepted, however, that the sudden increase of territory to which the various States were subjected after the War found them quite unequal to their task from an administrative point of view, with the result that an unsuitable type of official had to be employed to the grave prejudice of minorities and the State's good name. The abuses to which this state of things gave rise could not indefinitely escape the attention of the Central Government, and in time the worst abuses have been removed. In few cases will the standard of treatment approach the canons of Western Europe; but then neither do the ethics of election-making as practised by every political party in turn, and Europe in forming judgment of the actual state of affairs is not called upon to set a standard that is beyond the present grasp of the people concerned.

The Succession States will do well to bear in mind that the demand for a revision of the Peace Treaties is the natural corollary to their own failure to make good in their respective countries and must be raised in an increasing extent in Western Europe, if the present unsatisfactory state of affairs in Central and South-Eastern Europe continues indefinitely. They have the remedy in their own hands. In quarters that are best informed regarding conditions in this part of the world there is a readiness to make allowance for the difficulties that beset the different States; but the total absence of constructive statesmanship and the apparent content with which politicians allow themselves to be absorbed with purely domestic affairs are a disappointment to those who want to see the Balkan States as a whole occupy a position more consistent with their extent, resources, and geographical importance. Even to this day—nearly nine years after the conclusion of the War—no definite attempt has been made to prepare the ground for a Balkan Confederation. Prominent politicians in all the States affect to be in agreement with the theory, but do not try to disguise their belief that it is impossible of realisation. Yet the ground for such a federation has never been seriously explored, and the politicians seem satisfied to delegate their duties in this respect to an irresponsible Press. The first step should be the appointment by each of the Balkan States of two or more "elder Statesmen," to meet similar representatives of the other States in a round-table conference for a friendly discussion which will in no way bind the respective countries. Only when the Governments are in possession of details gleaned without the intervention of the fire-eaters among their peoples will they be in a position to consider usefully the extent of the concessions that will have to be made to bring about a Balkan federation and to weigh the advantages that their States stand to gain by presenting a united front on European questions.

The Near and Middle East*

From Our Own Correspondents.

Cairo, August 7.

Full Waters.

With the arrival of the full flood in Cairo during the next few days the Minister of Public Works will be spared a continuation of the criticism to which he and his Department have been subjected during the past few weeks. With the new season's supplies of water coming down in full force there will be enough and to spare for everyone, and past deficiencies will be forgotten in present plenty. So far as can be judged, the flood promises to be about the average. Most of the gauges have during the last fortnight been giving readings slightly below those at the same date last year, but the trifling discrepancy is not serious and may easily be counterbalanced by a substantial, if late, rise during the next few days. Meanwhile, the condition of the cotton crop, except where there has been damage due to insufficient water, is reported to be good. The very hot weather of July, which made conditions so unpleasant for human beings, was just what the cotton needed, and good progress was everywhere made during the month. The crop is earlier this year than usual, and picking will probably begin in some of the most advanced districts in the Delta during the last few days of this month, which will be from a week to ten days earlier than in 1926. The first of the many estimates, official and unofficial, which are made of the season's yield places the probable total crop this year at 6,250,000 kantars. The Government, which last week caused something of a panic on the Alexandria bourse by offering a few bales of its cotton, has now issued a statement to the effect that it has no intention of disposing of its holdings at the present time. This has been done in response to the indignant protests of the cotton growers' organisations, which charged the Ministry with attempting to deprive the growers of the benefit of the recent rise. The fact that the market dropped over two dollars on the mere rumour of the Government's intention to sell confirms the belief of most people that present cotton prices are uneconomically high. The outcry of the agricultural syndicate, too, strengthens the belief that the Government will find it very hard indeed, without incurring much unpopularity, to sell the cotton which it has been buying during the past three years. As soon as there is the least hint of selling an uproar of protest goes up which frightens the Cabinet into protestations that nothing was ever farther from its thoughts than disposing of its stocks. It looks as though all this cotton, the purchase of which, it is now fairly generally agreed, had little or no effect on the market, will have to remain in Government stores forever, failing the occurrence of some world cotton crisis which shall make its disposal possible without alarming the growers.

Assuan Dam and Electricity.

Local newspapers have recently reported that the Government has decided to proceed with the long-discussed project for utilizing the outflow of Assuan Dam for the generation of electric current. In actual fact this report seems to be a little premature. What appears to have happened is that the Italian engineer whom the Government appointed to investigate the possibilities of utilizing Assuan Dam for this purpose has reported favourably and the Ministry of Public Works has sent the Director of its Mechanical Section, Abdel Latif Moharrem Effendi, to Rome, to discuss the subject with the Italian expert. Between this position and the creation of a huge hydro-electric power station at Assuan there is even more than the usual number of slips which divide proverbial cups and lips, for, apart from the difficulties of getting a continuous output of power, there are grave obstacles in the way of utilizing the power, in an economic manner, if and when it has been generated.

Tourist Cruises.

Summer tourist cruises to the Mediterranean from America appear to be growing annually more popular, to judge by the visit of the s.s. California, which has come and gone during the past week. Chartered by Messrs. Thomas Cook and Son, she brought over four hundred visitors to Alexandria on Tuesday, and during the next four days the streets of Cairo were filled with hurrying motor-cabs, rushing from Sphinx to Citadel and back again to the Museum in order that Egypt's "guests" might see the maximum number of "sights" during their brief stay. Some few venturesome spirits even went as far as Luxor and braved the fearsome ride up the Valley of the Kings, an excursion which, in summer, is a terrible ordeal for strong men used to the sun but which elderly American ladies seem able to accomplish without serious consequences. A novel feature of this year's cruise was the boxing competition on board. The early rounds had been fought off during the voyage and the finals were staged at the Metropole Cinema in Cairo on Friday evening, being sandwiched into a programme in which the chief attraction was a ten-round contest between Seaman Hall, once of European fame, and the leading local lightweight, who went the full time with the ex-champion and secured a draw on points.

Epidemic Diseases.

The next two months are the worst in the year in the matter of epidemic diseases and once more the returns of typhoid, dysentery and infantile diarrhoea fatalities are exhibiting their annual upward trend. The number of cases of typhoid last year caused some alarm to the authorities for a while, and this summer the incidence of the disease is even greater than twelve months ago. The should not be taken as suggesting that a serious epidemic is likely, but only that the returns are sufficiently disquieting to cause the authorities to issue special warnings regarding useful precautions. The rising Nile, in other respects so beneficial, is at the bottom of the trouble. The damper atmosphere and the water-logged soil, accompanied with lower temperatures, provide the necessary conditions for the intensive breeding of flies, which do not like either the extreme heat or the comparative dry-

*Under this heading appear weekly or at regular intervals, communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

ness of the earlier summer. Once again we are in the the period of Tennyson's "stench of old offal decaying, and infinite torment of flies," a time of great anxiety to parents with young children and to persons who suffer from that common Egyptian complaint, a throat that is hyper-sensitive to chills, dust and other irritants. Official advice upon the best methods of combating flies is given in circulars which make their annual appearance at this time of year, but this way of meeting the menace is feasible only to the comparatively minute proportion of the population which lives in fairly hygienic conditions. So long as Egyptian villages and even the poorer quarters of towns are entirely innocent of latrines, parasitic and insect-borne diseases will flourish. I have many times in the past said and written, but feel that I cannot write or say too often, that here is Egypt's real problem, besides which all others are insignificant. The provision of filtered water and of sanitarily efficient latrines in every village is this country's paramount need. Compared with it everything else, education, irrigation, roads, telephones, all the amenities of mechanical civilization, are scarcely worth considering.

ROUMANIA.

Bucharest, August 3.

The Death of King Ferdinand.

It must have been a relief to most serious-minded Roumanian patriots to know that at the moment of the death of King Ferdinand, whose heir is a minor, a strong Government had been established in power. As a matter of fact, the necessary parliamentary formalities had been completed only a couple of hours before the late King's decease at a sitting of the House which lasted until midnight of July 19. Had this not been so, it would have been necessary to call a meeting of the old Averescan Parliament to confirm and proclaim the succession of Prince Michael, and, in view of the differences of opinion current in this regard, such a situation might have led to endless complications, if not to serious trouble. As things are, the succession of Prince Michael has never even been publicly questioned, and there is no trouble whatever to be feared.

In regard to the late King Ferdinand himself the feeling which predominates in the expressions of the press of all shades of opinion is one of affectionate loyalty and gratitude for his self-abnegating devotion to the interests of his adopted country. There is no doubt that he was

universally loved and respected, and not least by those who came into closest contact with him. Rumour has it that Queen Marie has purchased a chateau in France, and intends to settle there, and it seems not improbable that this may be true, though no doubt she will often visit her Roumanian residences. Some of these are hers in her own rights, while one of the Sinaia residences has been left by the will of the late King for her use during her life time. Altogether King Ferdinand's will strikes one as a model of rectitude and forethought.

The Election Campaign.

The election campaign has, as usual, excited party feeling to fever heat, and the press of the Opposition is full of indictments against the Government for acts of violence during the polling. But acts of violence appear to be the order of the day on these occasions, and unless Opposition candidates adopt a very modest demeanour and refrain from irritating the Government party agents by a too bold assertion of their opinions and of their opposition, they are liable to be set upon and beaten, and thus placed physically *hors de combat* until the polling is over. It is no exaggeration to say that incidents of this kind are by no means rare in the rural districts, where free fights often take place before the polls. The writer knows of a case in which the former Prefect of a small district was so badly knocked about that the landlady of a small inn, where he took refuge in a fainting condition, was constrained to intervene and prevent his aggressors from carrying out their apparent intention of finishing him off. She called a doctor and the gentleman was removed to his home. Such incidents are, of course, attributed to the fiery temper of the Roumanians as a nation, and not directly to party machinations, but their frequent occurrence should surely be an inducement to any Government with a love of order to take steps to prevent their repetition, and to protect the persons of its law-abiding citizens.

From the practical point of view, however, the effect of the measures (or lack of measures) taken at the recent elections, has been that an enormous majority has been returned for the Liberals, and not a single candidate of the Averescan party (which gained a Government majority only a year ago) has obtained a seat in the Chamber. The main Opposition is represented, therefore, by the National Peasants' Party of M. Maniu, which stands for the bulk of political opinion in Transylvania and Bessarabia, and which has a growing number of adherents in the old Kingdom. There seems little doubt that the influence of this party will grow, and will have to be seriously reckoned with in the future. Its principles are ultra-liberal, and are considered dangerously advanced on the subject of land-ownership.

Agriculture.

No one visiting the rural districts of Roumania during the harvest season can fail to be impressed on the one hand by the amazing fertility of the soil, and on the other by the astonishing primitiveness of the agricultural methods employed. For instance, the writer has never seen a reaping and binding machine at work in this country, although he is informed that such machines are employed in some parts of the country. But even the owner of a reaping machine prefers to send out an army of reapers to cut the wheat with small hand sickles, because, he says, they cut closer, and less grain is knocked from the ears. Thus it takes days and days to mow fields which a mower would have finished in half the time, and the ripe grain is exposed for an unnecessarily long period to the vicissitudes of the weather. This, at least, is the unprofessional view of the writer, and colour seems to be lent to it by the frequent lamentations of the farmers over grain which has been ruined by an untimely rain!

The crop in Roumania this year is reported to promise well, and some recent local rains, less favourable to the newly mown wheat, have given a tremendous impetus to the maize.

CYPRUS.

Nicosia, July 26.

Town Water Supplies.

The water supply of the Capital, Nicosia, has often been the source of trouble both in quantity and quality; and once more the question of drinking water is the subject of discussion. So far as quantity is concerned, there seems to be no cause for complaint, and there is even a good surplus for gardens and orange plantations. The Water Board appears to carry out its duties with zeal. Some anxiety, however, is always felt and expressed in the mid-Summer Season when various maladies are prevalent; and it is now urged that steps should be taken by more frequent inspections and analyses, to prevent contamination. It is also said that distribution is not all that could be desired; the chief requirement being that the neediest of the poorer classes who cannot afford to have water brought to their houses, should have fuller access to ample and convenient supplies in all quarters.

At Famagusta experiments in boring for "semi-artesian" water are proceeding satisfactorily, and at several points water is being obtained at depths between 100 and 200 feet. Should results continue to be favourable, abundance of good water should soon be available to augment the twon supply, which is inadequate.

Tourists and the Customs.

Complaints are made in a leading Nicosia paper of alleged needless worry and annoyance to which visitors to the island—especially passengers not of first-class—are subjected, at the ports, by Customs officials, before they can obtain free pratique. Arriving, perhaps fatigued, and looking for rest and amusement, instead of being able to start forthwith to enjoy the attractions of the island, they are, it is said, put to pitiless and petty delays, their baggage being unceremoniously handled. So much so that many repent of having come to Cyprus for a holiday, which they are not likely to repeat. Others, having heard of the trouble experienced, rather than disembark have resolved to return by the vessel that brought them. If these complaints are well founded, no doubt the authorities will take the necessary steps. There appears to be, at last, some movement to encourage the development of a Tourist organisation.

Motors and the Public.

The rapid increase of automobile cars is very noticeable, and does not point to straitened circumstances in the towns. As might be expected, complaints are now beginning to be made respecting the many dangers to pedestrians, especially in narrow and often tortuous streets in the towns, and to laden animals in the roads. Accidents have been, as elsewhere, unavoidable; but it cannot be said that there have been many or very serious ones. The control and carrying out of regulations and licensing are in general satisfactory. Much new work is thrown upon the Police, which, with its multifarious duties and calls, has always been, and is, an excellent and efficient force.

Kykkou Monastery.

The Governor has paid a visit to the principal Greek Monastery, that of Kykkou, which is perched in the picturesque heights of Mt. Troodos. The Abbot is one of the chief ecclesiastics of the island, and holds rank next to the Bishops. He has a residence at Nicosia where he spends the greater part of the year.

TURKEY AND THE HIJAZ.

Mahmud Nadim Bey, formerly Commander-in-Chief in the Yaman and now Councillor of the Turkish Representation in the Hijaz, who, according to our Jidda Correspondent, recently left Jidda on leave, has been interviewed by the *Jumhuriyet* in Constantinople. This very picturesque personality said:—

"I am here on leave and I cannot tell you how long I shall stay. Sickness has obliged me to leave my post. Our Ambassador is at Jidda, like the other representatives of foreign Powers. But King Ibn Saoud resides at Mecca. As non-Muslims cannot enter Mecca, they stay at Jidda.

Relations between our Government and that of the Hijaz are very friendly. The authorities of the local Government give us great facilities. Soon the Hijaz Government is going to send to Turkey a Consul-General accompanied by a secretariat, and negotiations will be set on foot for the conclusion of a Treaty between the two countries."

In conclusion, Mahmud Nadim Bey denied the reports of hostilities between King Ibn Saoud and the Imam Yahya, and also stated that the report was false that pilgrims had been attacked by *badawin*.

NAVARINO CENTENARY.

The Greek "Byron Committee" in London has decided to contribute to the celebrations of the centenary on October 20 next of the Battle of Navarino by the organisation of a Commemorative Exhibition, including objects dealing not only with this memorable event itself, but also with Philhellenes and Philhellenism of that epoch and generally with the Greek War of Independence, of which the Battle of Navarino was the concluding phase. By permission of H. E. Monsieur Caclamanos, Greek Minister in London, this exhibition will be held from October 20 to November 10 at the reception rooms of the Greek Legation. The Greek "Byron Committee" would be grateful to any person, and especially to British Philhellenes holding "mementos" such as portraits, engravings, manuscripts, and original books) of the period to which the exhibition refers, and disposed to lend them to the organising committee of the exhibition, if they would communicate with the Secretary of the Greek "Byron Committee," 51, Upper Brook Street, London, W.1.

The Royal Egyptian Legation in London desire to draw attention to the fact that no connexion exists between the Medical Congress which the Egyptian Government proposes to organise in Cairo about December of 1928 and what is called "Les Journées Médicales" (Medical Days), organised on the private initiative of the "Directeur de la Reue de Médecine Tropicale de Paris," M. Zeitoun.

THE HOUSE IN THE WOOD.

A Sketch in the Julian Alps.

By F. S. C.

That is all the name it has. And it is not so much in the wood either, but only on the edge of it, half-way up a narrow pass somewhere in the Julian Alps. I know another house, deep-set among the pines, its roof gleaming like a moonstone on green velvet in the dawn light, but it has a name of its own which says nothing of the wood. The House in the Wood is sheltered by the last outposts of the forests that flows up from the valley—beautiful larches and pines, picked out by the mountain fairies for their perfection and set apart on a little green terrace under a scree. The House was really built during the War to be the headquarters of the officers in command of the Pass. But it is the least warlike-looking of houses in the world, a woodland cottage, cosy and pretty as though love had gone to the building of it. The timber part is solid and well-finished; the raftered ceilings are a model of simple good taste, the furnishings all to match; the lower stone walls and foundations good sound masonry. Oh, there is no scamped work about the House in the Wood. I marked it down for one of my haunts one sunny afternoon when a large party of us halted there for tea. It is not a house for a large party.

Facing it there rises a monster crag, the north face of the old Prisoynik, one of the great among the Julian Alps. Prisoynik means "He who can be seen through," and he gets his name from his Window, which is a natural tunnel right through the upper part of him. He is a good mountain from the cragsmen's point of view. His north face gives them a nine hours' thrill. As it is quite useless to explain to an outsider why anyone should want to spend nine hours hanging on by his toes and finger-tips to the face of a crag (that, I suppose, is how it would appear to the said outsider) we will leave it at that. Cragsmen will understand, and they are not men of words, anyway. There is also a climber's track marked along the ridge, safe enough, but stout people had better take a guide!

The morning had been glorious. Every Alpine village was in holiday mood. Friends foregathered from far and near and spoke of the feats they were setting out to perform to-morrow—forgetting the will of God and the favour of the mountains. Two months ago at Whitsuntide* there had been just such a day. And before the next day's dusk in snow and tempest, three that had set out in careless glee were borne homeward dead from the mountains, and one forewandered ramblert† was sought for far and wide for many a day to come—in vain. His last night on earth he slept at the House in the Wood.

The little pane in the door which he broke to get at the latch is not yet replaced.

The village below the Pass‡ was crowded with a gathering of touring clubs. There are many to whom it is pleasanter to take their ease at the inn, there to extol the values of mountaineering and toast the bold cragsmen in speeches which are best composed on the level, than to share risk and triumph with those that love the heights. With me was a friend who likes crowds as little as I do. We looked at the sky and saw it cloud over for the night. "Let us go to the House in the Wood," said we; "there we shall have peace."

A broad road leads up to the House and past it. A road that winds in zig-zags up the pass, to the hem of the snows on the crest of the pass, and by the House that stands amid the last of the pines and then farther on, across the frontier.

The Russian Prisoners' Chapel, Vershitch Pass, Slovenia.

(Photo. by Yanko Ravnik, Ljubliana).

The ramblers love that Upper House. The level of it is respectable; they can collect its stamp upon their postcards. They even go up an easy mountain and then come back to listen to the real mountaineers boasting of the conquest of Walls. There are plenty of walls close by—sheer, forbidding looking crags, like petrified drapery.

We turned up the road towards the darkness of the forest. The dusk crept with us from the valley. Below us the gorge; beyond the trees the great grey crags. None spoke but the mountain torrent, brawling and gossiping beside the road for a while, then leaping down by short cuts of its own, while the road winds wearily on where the slope is easiest.

That road is a War Memorial.

Oh, no! Not such a memorial as those unveiled all the world over these days. Devout and well-dressed, well-fed crowds. Priests and prayers. Civic officials and military bands. A few seedy-looking ex-soldiers, and a real general to perform the ceremony. You know, don't you? Heaven forbid that we should

withould our reverence; but they seem cheap and cheerful to me besides this road. It was built in an incredibly short time by thousands of prisoners of war, sons of far away Russian plains. The Empire of those days did not shine in its treatment of prisoners. Perhaps it wasn't altogether the Empire's fault. When there is scarcely enough food to go round, prisoners cannot expect full rations.

Every place and thing tells its own history to those who know how to listen. The winding road to Vershitch Pass speaks of anguish and misery, of forced labour against time, of death by starvation, disease, cold, by avalanches, and weapons of War; and the stream confirms it all with voluble wrathful scorn. The trees wag their heads in marvelling disapproval. Why should man flay the turf from off the hillside, leaving an ugly snake-

*1926. †Councillor Lubetz.

‡Kranyska Gora.

like scar upon the green—so much disfigurement, and wrought at the cost of wrath and tears beyond estimate?

During the War the road was a great artery of traffic to and from the heroic Isonzo front, the true story of which will never be known at large. But since the War it has been deserted and neglected. Terraces of debris are settling down upon it from the embankment. Grass sprouts between the kerbstones, and blue campanulas flourish in the roadway. A rusty barbed wire entanglement stretches across it at the new frontier. For all the use it is now, it might as well never have been built.

The clouds dropped lower. A fine drizzle turned into rain. Straight up into the wood ran a path which might very well be a short cut. A moss-grown path. Presently a clearing. A few gaunt wooden crosses, ghost-like in the gloom; and beyond—yes! I had seen pictures of it already. On a well-taken photograph it shows like a stately edifice set about with lofty trees, a church built in the ornate byzantine style characteristic of Russian architecture—the Chapel built by the wretched Russian prisoners, the slaves of the Road, for their own worship. There it was, not fifty yards away from us, and I realised with a shock, that the surrounding trees were but storm-stunted deformities, and the poor shrine itself a dwarf, the piteous caricature of churches loved and revered in a world of peace and home sunk far below the horizon of lives burning dim in captivity. What showed like masonry is only ill-fitting, slipshod woodwork faced with bark. The ornamental tiles are shingles; the tracery, slats of wood arranged in patterns. Frail, perishable material, peeling and rotting. Not only dwarf, but diseased, leprous, the unhappy thing looked me, looming there in the failing light. Suddenly panic gripped me. As a rule, I do not in the least care at what hour of the day or night I wander through the woods of this country. Any fears I may know are of a strictly practical kind. Only once before I felt a similar thrill.

We had come to a certain Alpine Hut about sundown, and while we waited for supper, I strolled out into the surrounding woods. All at once a sickening sense of distress came upon me, a sense of "something done long ago and ill done." I fled back to the Hut, and greatly perturbed my guide by asking him, point-blank, whether any one had died an unhappy death hard by? His impatient negative was cut short by the hut-keeper, who said in her most matter-of-fact voice: "Why, yes; that is where they shot the Russian prisoners. A lot of them got away, but they were caught, and made to dig their own grave and then shot beside it. A memorial to them is to be unveiled next Sunday. . . ."

I don't pretend to understand Russians. But I know that they make good psychic conductors of unhappiness, never of joy. So I left their chapel behind in indecent haste and pressed forward into the darkness of the trees. Fitful flashes of lightning showed our path growing more and more derelict. Most certainly it was the old road of the days before the War. On and on we hurried, night closing in, and the rain increasing. The trees thinned. Above us was the bleak gap of the Pass. And then the thunderstorm came upon us in earnest. Now I have a very wholesome respect for lightning on a barren height. In fact, I have no use for it at all, especially when I am carrying an iron-shod tool like my ice-pick. That is one of my practical fears. We were obviously far above our goal. I faced resolutely about. "I am going back to where we left the Road, and then—without short cuts—to the House in the Wood."

Diffident a moment before, my companion followed, and I defy any two lads to have covered the ground faster than we did. Again we passed the chapel, poor lonely little monster squatting desolate among its dead. Now we were back on the winding Road and within a very few minutes we had reached and entered the House.

There we found a party of climbers; also the three men who were at the time constructing the new rock trail up the north face of Mount Prisoynik, and a couple of frontier policemen, good-natured lads who at once restarted

the fire in the kitchen stove for our benefit. They were all true gossips of the hills and gave us the latest news.

The last victim of the great Whitsuntide storm had been found the day before on the flank of Prisoynik. An avalanche must have swept him off the path and down a gully where his body lay hidden till the receding snows left the remains exposed and a shepherd caught sight of them by chance. They had been taken down to the village at the foot of the Pass and would be buried to-morrow, on the day of the Alpine Gathering.

All night the storm raged, and the next day likewise. The rain whitened to snow, and the snow fell till it covered the ground and weighed down the leafy boughs of the beeches. The wretched cattle, scared by this untimely winter, came lumbering down from their upland pastures in ungainly haste. A report, louder than thunder, warned us of a landslide somewhere above us. Knowing we should see nothing, we nevertheless all peered out into the smother. Within the House, we were warm, quiet, and pleasantly cut off from the world.

Towards evening, fair weather or foul, we had to go—back to our work in town. In the valley we heard of landslides, and floods, blizzards and cloudbursts—found Nature disporting herself among the works of man; making havoc of them as a kitten does of the contents of a workbox; washing away bridges, roadways and houses, blocking railway lines. Drenched to the skin, we waited in the open near the wreck of the station beside a temporary torrent or a relief train. And, being mountain-born no less than the storm above us, we defied the elements with songs. . . .

Incongruous among the crowd of tweed-clad mountaineers stood a sad little group of women shivering in draggled black chiffons and thin shoes and stockings. These were the chief mourners at the funeral of the Whitsuntide dead. He had been buried in the mids of just such a tempest as that which cost him his life.

Bright sunshine and goodly company be the share of him whom fate may lead in our tracks! He will find small traces of the great storm. The river bed is a little wider in places than before, and at one point a rusty, disused track disappears over the edge of the bank. He will find the new rock trail up the Prisoynik crag complete, safeguarded with bolts and wire ropes—fit and passable for all. As he hoists himself from ledge to ledge, let him pause between whiles to look down into the grim depths below and remember the bold cragsmen who climbed here before the track was made, whose feet, perchance, will seek the cliffs no more.

On the flower-studded south side of the mountain he will pass near the spot where those poor bones were found. There bloom the mountain ladies,* tall, velvety and white. Do not rob the hillside, but content yourself with a flower or two for a keepsake. Into the mellow afternoon you will wander down the white and winding road, over the Pass. Think then of those who sorrowed here and died—not sadly, for they are beyond all griefs; but kindly, reasonably, that the peace of the valley be not disturbed, nor your thoughts troubled as you take your rest at the House in the Wood.

**Planike*, the Slovene name for edelweiss.

Mr. Capps, former Minister of the United States at Athens, and the Greek Minister of Instruction on August 9 signed an agreement in accordance with which excavations can be carried out in the Agora at Athens, and the work will begin after Mr. Capps, who left Greece on August 10 for America, obtains the approval of the donor of his fund. He hopes to return in October.

The King of Yugoslavia left Belgrade on August 9 for Munich to consult a physician there.

M. Shtylle, former Secretary of the Albanian Legation in Yugoslavia, returned to Belgrade on August 8 as Chargé d'Affaires, and called at the Yugoslav Foreign Office. Direct diplomatic contact has been resumed between Albania and Yugoslavia after an interruption of two months.

The Coptic Patriarch of Egypt and Abyssinia, Mgr. Kyrillos V., who died on August 7 at the age of 96, was buried in Cairo the following day.

CAPITULATIONS IN PERSIA.

BY MIRZA FIROOZ KHAN.

[We publish the following article as reflecting a certain local point of view upon Justice in Persia.—Ed.]

Tabriz.

In former, pre-Constitution, days, when Shahs like Nasr-ud-Din occupied the Throne of Nushiravan and Gambyses, when one-man rule existed not only in the capital, but also in every city, town or village, when the offices of the Governor, Judge, collector of taxes, manager of Royal property, commander-in-chiefship of the city "army," the chief of police, the chairmanship of aldermen and city councilship, the town clerkship and so on, all centred in the person of one and the same man—the Governor, or Governor-General, Viceroy or the Valiahd, the wheels of State machinery used to turn more smoothly and more rapidly. The State Treasury used to have more money, and no debts; the people used to pay fewer taxes and had more liberty of speech and of travel, if less security, which was artificial, the insecurity being created by a fallen Governor to defame his successor and to prove the latter's stupidity as Governor—a very useful instrument in many places and in most cases, and not seldom successful in causing the downfall of a competitor or opponent! In those happy days the Governor was both judge, jury, advocate-lawyer, the barrister; in fact, everything! And as for his decisions—if "give," you must give; "go," you must go; "come," you must come! No "Superior Courts," no "Courts of Appeal," no objections, no protests, no change (except by bribe). His decisions were a plain and simple case of "what is written, is written!"

"Karguzars."

This applied to all those who were Mussulman and Persian subjects. It was different for foreigners. Armenians, Jews, Fire-worshippers (Gobr), and so on, in fact, all those who were not Mussulmans, but were Persian subjects, were included in the list of "foreigners." In other words, Persia regarded her own people and subjects as "foreigners" because they had a different faith from the State, or Mussulman religion! For this purpose were created the *Karguzar-Khanéhs*, which could be found in every city and small town. The *Karguzar* was the foreigner's judge, and not only the foreigner, but also the non-Mussulman natives. The cases of foreigners and non-Mussulmans were examined, or judged, in *Karguzar-Khanéhs* by the *Karguzar* himself. No lawyers, no advocates! Each man was to defend his own case; while in the case of *Ferangi* (or real) foreigners, the defence was backed up by the proud presence of the Dragoman of his Consulate! The presence of this Dragoman in the case of European foreigners was necessary. In a Court of Justice, where both Judge, porter, orderly, and jailor were thirsty for silver, in order to win the case, you had to have either plenty of silver, or a powerful "club" to lean upon. The presence in the *Karguzar-Khanéhs* of the Dragoman of any Consulate, was the "club" of the defence of the foreigner!

The differences of an Armenian with an Armenian, Jew with a Jew, Gobr with a Gobr, Armenian with a Jew, or a Jew with a Gobr, or even an Armenian with a real Mussulman Persian were all referred to *Karguzar*, because one party to the dispute was a "foreigner." Even foreign Consuls used to have most of their business transacted in the *Karguzar-Khanéhs*, the case being referred to the Vali,

or the Governor-General, only in the most grave circumstances.

Nevertheless the world moves! And old Iran, too, moved! A Constitution was given to Persia. "Courts of Justice" were created to do justice to the people, which should have been quite different from the justice of the former despotic "the whole-things." In the former days of the Constitution up to the entry of Shuja-ud-Daula into Tabriz by the aid of Russians (1911) these "courts of Justices" were known as *Anjuman*.

"Anjuman."

Anjumans, in turn, like the former despotic governors, centred the whole affair of the city in their own hands. They were the whole thing. *Anjumans* were created in the smallest village of the country, but, of course, these villagers had a very crude idea of what an *Anjuman* was. The writer was in a village in 1907. To his inquiry what the villagers understood by an *Anjuman*, the "President" replied at once: "Oh, we have expelled our agha (landlord) from the village and our chief *Anjuman* in Tabriz has told us not to pay any more taxes hereafter to the Government! We are a free people now. We have an *Anjuman*!" The villagers were given to understand that Constitution and *Anjuman* meant liberty and that, hereafter, they were to sow and reap all for themselves, without paying a cent to the State Treasury in the shape of taxes! The "big" *Anjuman* in Tabriz, in order to strengthen the feel of the newly born Constitution, had evidently made some "extra-territorial" promises to the villagers and nomads of the tents and mountains! Reformers as a rule, go to the extreme!

Anjumans of large cities consisted of twelve "judges," all of them mollahs with a huge white turban. Later on, however, gentlemen with black lamb-skin hats were introduced as members. This was possible through either the candidate's personality, his relationship to other mollahs (by marriage) or his immense wealth! In the beginning, all were eager for justice! But not later on. Cases would come up before the *Anjuman* to be examined or judged, and, of course, one of the party to the quarrel would be related to one of the members of the *Anjuman*, or would have some other "pull" with this serene and serious House of Justice, and there would come in the debate and difficulty, and, at last, the bending of justice!

In the former "one-man" rule days, if a bribe were necessary, one single man was bribed; but in the days of *Anjuman*, each one of the twelve members was to be bribed, and this meant that one had either to give up his case, or must open the mouth of his purse wide enough to go around for all the twelve! This "going around" was to be repeated at least once in a week, and this would burst any liberal man—not the loss of silver, but the pain and anguish of being compelled to bribe the favour of the mollah much lower—as a class—than yourself. (The aristocracy of Persia, while paying the highest honour and offering him the highest seat in a gathering, consider a mollah, man to man, much lower than themselves.)

"House of Peace."

Still later on the "Houses of Peace" (*Soolhiéhs*) and the "Houses of Justice" (*Adliéhs*) were created. *Anjuman* was to perform the duties of the City Council, while *Adliéhs* was to attend to the complaints of the people and remove and abolish oppression and bribes! "The House of Peace," or *Soolhiéhs*, as its name indicates, was to make peace between parties, was to attend to smaller complaints, smaller quarrels, and—in money matters—could not interfere in a case where the quarrel was for a sum larger than one hundred tomans (£20). *Anjumans* usually were located in a palatial building, while a cheap house, or a vacant shop or two was rented and turned into "House of Justice." One of the rooms was occupied by the clerks, the other by the judge! Judge, clerk, orderly, or janitor, now had no salary from any source. The petitioner, in order to have his petition entered into books, had to pay

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscription £1 per annum.

Further particulars may be obtained of

E. H. Keeling.
Hon. Sec.
74, Grosvenor Street, W.1.

—for stamps—three krans. The lawyer got, in advance, one half of what was due to him at the end. While the judge got a still larger sum—in advance—for the expenses of the “Court,” not counting the one-tenth of the total sum, when the quarrel had been settled. In some cases, according to a secret agreement between the petitioner and the judge, two or even three tenths, or even one half of the total sum was promised to the judge if he used his influence and decided the case in favour of the petitioner! The orderly got his income from errands. He was sent to call in a certain person, who had a case in the Court to be examined. That man had to pay a small fee to the orderly for taking him the message of the Court. This small fee, repeated many times during the month, amounted to a quite respectable salary, as salaries of native Persians went.

The wealthier would hire more than one lawyer; the poor could not pay for one. The result would be a defeat by the poor, or a defeat (in most cases) of justice and right by silver. It is not a defeat either. A definite defeat would be quite welcome. In many cases the hearing drags on for months, even for years, without a final decision, and, tired and sick of this endless dragging and useless expense you decide to drop the case, as the best thing in the world! The writer has known a case lasting for eight years, and it has not been settled up to date! There are many cases like this one, and in every town or city you will find more than one person—scores of them—complaining of the bribery and injustice of *Soolhiéh* which the oppressed have smartly dubbed as “*zoolmiéh*” (*zoolm*—oppression—House of Oppression).

It was this state of *zoolmiéh*, all over the country, that compelled the leaders of the nation to call a halt, to revise the laws of the land, and to introduce the Western model of justice. But simply to have a Western model of justice is not enough! As the Editor of THE NEAR EAST AND INDIA remarks in his notes on Capitulations in Persia (May 12, 1927), it is not the Western model, but “the Western interpretation and execution of the law that will give confidence to Europeans in Persia.”

Like Abyssinia, Persia also is a one-man country. That man is Riza Pahlavi, but, as the Persians say, “one flower does not make a spring,” nor, indeed, can one strong Riza Pahlavi make out of Persia an England! The Western model of justice is not enough; nor will the Western interpretation of it be enough! It is the execution that will give the required satisfaction and fill in the gaps; and it is that execution that Persia lacks and, in my opinion at any rate, will lack for a long time to come. The execution of Persian justice is like the native saw, which will gather the saw-dust always towards the man using it; towards self!

To erase the name of Persia from the list of backward nations is nice; to have the name of Persia entered into the list of civilized nations is nicer; to have the Persian justice executed on a Western basis is the nicest thing of all for Persia! Do not hurry, Nadir; after you have learned how to do justice, Capitulations, like the darkness of the night, will disappear of themselves. After you have learned the execution of justice no foreign Consul will pay and keep a Dragoman to watch you do justice which you ought to do without his presence; and if you had the correct idea, the correct interpretation and correct execution of justice, you ought to consider the presence of a foreign Dragoman in your Courts of Justice an insult to your self-respect and dignity. But not before that.

*Adliéh*s in smaller towns were closed in order to re-organise the laws and the staff of both lawyers and judges! Recently a native “lawyer”—an old acquaintance of mine—inquired of me whether I knew why the *Idareh* (Department of Justice) was closed. I told him I knew.

“Why?” he repeated vaguely.

“Because,” I said, “the *Idareh* is going to ‘fire’ lawyers like you!” He smiled; then he laughed; and then, becoming quite serious, he begged me:—“Upon my beard, tell him the truth, why?”

I told him that the *Idareh* of Justice, like the *Idareh* of Finance, was going to be managed by Americans, and that meant that ignorant and long-headed lawyers like himself would be forbidden to practice his high profession, of the dignity of which he had no idea!

“*Man olum*” (let me die), he said, “is that true? Do not joke please; I am serious in this matter.”

I assured him positively. Then, naming the chief judge of his town, he inquired:—“Is he, also, going to be ‘fired?’”

“Yes, he also,” I said.

“Good.” He shouted for joy and almost jumped up from his seat. “If he also is going to be ‘fired,’ I do not mind a straw my own ‘firing!’”

This incident itself is a side-light, proving how the advanced class of Persians themselves are sick of the widespread and extensive, but secret, injustice which prevails all over the country, but which they have no power to reform, and are overjoyed to hear that a Western nation is going to come to save them from this chaos and from the wilfulness of the despotic native “judge.”

1. *Man-olum* (let me die) is the strongest appeal to one to get the truth.

2. *Karguzar-Khanéh* means literally:—*Kar*—work; *guzar* *guzash-tan*—to act, to pass to solve. *Khanéh*—house. In other words, a house where business is transacted.

King Fuad of Egypt left Rome on August 9 for Cortina d’Ampezzo.

Preliminary returns show that at this year’s census the population of Cairo was 1,059,000, and that of Alexandria 570,000.

It is announced in Madrid that as a result of negotiations Spain and India will grant each other the most-favoured nation treatment.

King Boris of Bulgaria, who has been staying at Zürich, after a visit to his sister Nadéjda, wife of Duke Albert Eugene of Wurtemberg, at Karlsruhe, left at the end of last week for Paris, on his way to London.

Professor Sorabji, of Balliol and Allahabad, is continuing his series of addresses from the Toc H. platform on Tower Hill on Tuesdays at one p.m.

The police have discovered at Philippopolis another organisation of Anarchist-Communists conspirators. Searches were carried out during the night of August 10 by the authorities and led to the arrest of 15 men and women who were active members of the organisation.

The excavations on behalf of the Hebrew University of Jerusalem and the Jewish Exploration Society undertaken by Dr. E. L. Sukenick have disclosed remains of an important Canaanite town, the site of Tel Jereisha (known as Napoleon Hil) near the banks of the Auja, three miles north-east of Jaffa.

Shaikh Abdul Rahman Gosaibi of Bahrain Island arrived in Egypt on August 8 after making a pilgrimage to Mecca. Wishing to reach home as early as possible, he booked seats in an Imperial Airways biplane leaving for Basra on August 19 and chartered the same machine to carry him on to Bahrain.

The Company transacts, either direct or through its Allied Companies, all classes of Insurance Business in all parts of the World.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

"THE OUTLOOK IN PERSIA."

To the Editor of THE NEAR EAST AND INDIA.

Sir,—It is still thought in some places—though I trust I have contributed adequately to the explosion of the myth—that Continental peoples, especially French and German authorities, know their East much more intimately than British authors and administrators. As a matter of fact, even in ancient Indian literature the services of Englishmen are unsurpassed, though Germany pours out perhaps larger volumes of books and periodicals on Vedic, Sanskrit and Prakrit languages. I am gratified to find support to my view in the article on "The Outlook in Persia" by Sir Arnold Wilson contained in your issue of June 30. That article could have been written only by a person with profound knowledge of the past and present of Persia.

There can be no gainsaying the fact that Persia has a religion which is clearly differentiated from that of Islam as we know it at its source. The Shiah form of it with the *takaiyya* or permissible falsehood, the *Segah* or temporary marriage, and the worship of the innumerable Imam-Zadehs, could hardly be brought in line with the original faith. Whether the religion as it is preached and practised in Persia is Islam or not must be left to authorities who are born Mussalmans. But from my constant contact with Persians and by my travel, I have been convinced of the accuracy of Sir Arnold Wilson's observations. Young Persia yearns for some form of faith which is far removed from the creed which Mullahs and Akhunds call Islam. It refuses to accept Christianity because of its political implications, and it appears that Zoroastrianism does not make a very powerful appeal owing to certain current usages of Zoroastrians. Persia never took seriously to the new religion imposed from Arabia after the fall of the Sasanians. The simple cause of it is not that the masses were too faithful to the older faith of Zoroaster, but because they resented the new religion as issuing from the hated people of Arabia. To this day I am surprised to see the intensity of aversion for things Arabian noticeable in Persia. The instances furnished by Sir Arnold Wilson may be supplemented by a few others. There is the movement to remove words of Arabic origin from the Persian dictionary—a very lamentable, and, to my mind, futile effort. The hatred of the Arabs goes to the very alphabet which has been accepted for the Persian language since the Semitic invasion in the 7th century. One or two learned Iranis, Muslim and not Zoroastrian, seriously proposed that the old and cumbersome Avesta alphabet might be substituted for the modern Arabic script. At present the new-born Persian, male or female, is named after the pre-Islamic notabilities of Persia. The surnames adopted according to the new and very rational system are after the Sasanian and Kayanian appellations. The tolerance evinced by leading periodicals like the *Iran-Shahr* of Berlin

and even the *Ayandeh* of Teheran is incompatible, I do not say with original Islam but with the religion as understood and exercised in Iran for the last thousand years. Nothing exceeds or can exceed the nobility of Reza Shah's objective—which is perfect equality of all his subjects whether they call themselves Muslim, Zoroastrian, Christian (Armenian) or Jew. And assuredly, though in the days of the Abbasides the non-Muslims did attain to highest secular positions, in reality, the generous practice of equality was never exalted into an abiding principle for future guidance. Reza Shah's code, on the other hand, aims at a noble cultural revolution which will excel the exceptional edicts of Mamun and Rashid.—I am, etc.,

Book Review

THE BEGINNINGS OF BRITISH INDIA.

"THE ENGLISH FACTORIES IN INDIA, 1668-1669." By Sir W. Foster. (Oxford: Clarendon Press, 18s. net.)

The new volume of Sir William Foster's summary of the records relating to the East India Company shows no falling off from the high standard of workmanship with which students are familiar, and the matter dealt with in it is of exceptional interest. Apart from the regular business of the Company, the year 1668 was marked by the transfer of the Island of Bombay, which the Crown had been administering for some years with indifferent success, and nearly a third of this volume is devoted to that transfer, and to the establishment of the Company's administration in the new possession. In this region, and to a less extent on the other side of India, one notes the beginnings of the "Anglo-India" of a more recent period. Questions of organising the Service come into prominence: seniority is formally recognised as giving a claim to promotion: ladies are coming out to join their husbands, and disputes over precedence give rise to some heart-burning; while quarrels of a social or personal nature intertwine themselves in the Company's business to an extent which leads to suggestions for sending some of the ladies back to England. The book contains an enormous amount of detail, but, with the aid of such incidents, as we have noted, Sir William Foster manages to make it interesting for a wide circle of readers, while it is, of course, indispensable for every serious student of the period.

In ordinary circumstances it would be needless to say more, but the circumstances are far from ordinary, for, as the preface tells us, this is the last volume of the series to be expected from Sir William Foster's pen. The series stands before us as we write. Starting with the "First Letter Book," published in 1893, when "William Foster" appears on the title-page as assistant to Sir George Birdwood, we then have the six volumes of "Letters Received," almost entirely Sir William's work, and then the 13 volumes of "English Factories," which are wholly his, in addition to the parallel series of "Court Minutes," in the preparation of which he has taken an important part. The whole forms the definite record of the first seventy years of England's contact with India, and the present generation, finding all the facts so ready to its hand, can scarcely realise the magnitude of the achievement. It takes an old man to do that; and those who, like the reviewer, learned what passed for the history of India in the text-books current in the 'eighties, and who have watched the gradual transformation, as, volume by volume, the light of day came to disperse the twilight-gloom they had wandered in, are in the best position to appreciate what has been done for England, and still more for India, by the rare combination of talents which Sir William has devoted to the task. We have not yet heard who is to be responsible for continuing the work, and can only express the hope that Elijah's mantle will, on this occasion, fall on worthy shoulders.

PERSONAL AND GENERAL

TO-DAY

August 18, 1927 (New Style).
August 5, 1927 (Old Style).
Saphar 19, 1346 A.H., of the Muslim Calendar.
Ab 20, 5687, of the Jewish Calendar.

Mr. William Linskill Bond has been appointed British Consul at Tangier.

The Raja of Pudukota left the Berkeley Hotel on August 11 for Le Touquet.

Sir Ludovic Porter arrived at the end of last week at the Grand Pump Room Hotel, Bath.

Sir John Seymour-Lloyd left London on August 12 in the P. and O. liner Chitral for Port Said.

Sir Ernest Jackson and Sir Binode Mitter arrived on August 13 at Marseilles in the Ranpura, from India.

M. Vintila Bratianu, who last week arrived in Paris, intends to take a cure at one of the watering places in Central France.

Abdel Aziz Rashid Pasha, Egyptian Envoy Extraordinary to Turkey, has been appointed Consul-General for Egypt in Angora.

Sir Percival and Lady Marling have left Stanley Park, Gloucestershire, for a month, and gone to Pistany, Czechoslovakia.

The Hon. Joseph C. Grew, American Ambassador to Turkey, and Mrs. Grew, who arrived recently at Southampton in the Leviathan from New York, leave London this week for Constantinople.

Lord Plumer, High Commission for Palestine, and Lady Plumer returned to Jerusalem on August 11. Owing to the damage done to Government House, they are occupying temporary quarters at Tantur, between Jerusalem and Bethlehem.

Lieutenant-Commander H. F. Thomas, recently in the experimental section of the Signal School, Portsmouth, has been appointed as from August 15, in charge of the wireless station at Aden, where Telegraphist Lieutenant H. Blanden has been serving for two years.

The announcement—first made by the Jidda Correspondent of THE NEAR EAST AND INDIA—of Mr. Hugh Stonehewer-Bird's appointment as his Majesty's Agent at Jidda and Consul for the Eastern Coast of the Red Sea, has been officially confirmed.

King Fuad of Egypt arrived at Venice on August 13. He was met by Count Volpi and the Podesta of Venice and received a warm welcome from waiting crowd. Later the King crossed the lagoon to the Lido, where he is making a short stay.

King Faisal of Iraq, who has been visiting his father, ex-King Husain, in Cyprus, left Port Said by the Macedonia on August 15 and is due to arrive at Marseilles tomorrow (August 19). Muzahim Beg Pachachi, the Iraq Diplomatic Agent in London, left yesterday to meet his Majesty in France.

Mr. Geoffrey Evans, C.I.E., M.A., has been appointed principal of the Imperial College of Tropical Agriculture. He is a graduate of Cambridge University, and was in the Indian Agricultural Service from 1906 to 1926, having been principal of the college at Nagpur 1906-7, deputy director of agriculture for the Central Provinces 1907-1917, and director of agriculture in Bengal 1919 to 1922. During the War Mr. Evans served in India and Mesopotamia. He was director of agriculture to the Mesopotamia Expeditionary Force from 1918 to 1919.

Sir Maneckji Dadabhoy left London on August 11 to join the P. and O. s.s. Mantua at Marseilles for Bombay. He is returning to India for the Autumn Sessions of the Council of State at Simla. Sir Colin Jardine, Bt., and Sir Arthur and Lady Froom left Marseilles on August 12 in the Mantua for Bombay.

General Sir Charles Harington (upon relinquishing his appointment as General Officer Commanding-in-Chief, Northern Command, and upon his appointment as General Officer Commanding-in-Chief, Western Command, India,) had the honour of being received by the King at Buckingham Palace on August 10.

GREEK POSTAGE STAMPS.

The Times states that special postage stamps have been issued by the Greek Government in commemoration of the centenary of the raising of the siege of Athens in the War of Liberation. There are three denominations: 1 drachma red, 3 drachma blue, and 6 drachma green, all presenting a view of the Acropolis, with a laurel-framed portrait bust inset. The head is that of the French General Fabvier, who, entering the service of Greece at a critical period, inflicted by his strategy numerous reverses on the Turkish forces under Reschid Pasha, and finally succeeded in relieving Athens, thus enabling the Greeks to make contact with the allied navies of France, Great Britain, and Russia at Navarino Bay. The commemorative stamps have been finely printed in London in large traverse rectangular format. They will be followed in October by a further series commemorating the naval victory of Navarino.

TURCO-PERSIAN RELATIONS.

Memduh Shevket Bey, Turkish Ambassador at Teheran, who passed through Constantinople on his way to Angora last week, stated in an interview with a Stamboul journalist that the attacks by the Persian Press on Turkey (to which we refer in our "Notes of the Week") were of from six to eight weeks standing. He added, however, that he had returned to Turkey from Persia for the benefit of his health; and, of course, it is the rule for Turkish representatives abroad to return home once a year to consult with the Central Government. It is reported that a prominent Persian is proceeding to Turkey to discuss the "crisis" that has arisen over this alleged change of attitude on the part of Persia towards Turkey..

IMPERIAL PREFERENCE.

The popular impression abroad that Indian public opinion is solid against the introduction of the principle of Imperial Preference in the Indian tariff is incorrect. The accidental raising of the question in the Tariff Board's last report on the most efficacious and economical method of continuing the protection of the Indian steel industry made that point plain, even to those who had no knowledge of the previous history of the question. As a matter of fact it was an Indian member of the Imperial Legislative Council who first pointed out the fallacies underlying the famous Minute and Despatch of Lord Curzon's Government, which adopted an attitude of such uncompromising opposition to the idea that the question was again not seriously debated, until ten years later, the Hon. the Sir Gangadhar Chitnavis moved a resolution in the Council recommending "the desirability, in view of the loss of opium revenues, of considering financial measures of strengthening the resources of Government, with special reference to the possibility of increasing the revenue under a system of preferential tariffs with the United Kingdom and the Colonies." Economic facts are stubborn things and while there is no doubt that a large number, if not all, of those whose objections to the principle of Imperial Preference are based on other than political grounds are animated solely by regard for the welfare of their own country, and not in the least by animosity against England or British industry, there are indications that even their attitude has lately undergone a perceptible change. A proposal to introduce in the Legislative Assembly a motion for the adoption of a measure of Imperial Preference in the direct interests of the textile industry, is accordingly made the occasion by the *Times of India* for a forceful plea for a more businesslike view of the whole problem. "We should not at this stage," the paper says, "examine in detail the intrinsic merits of the plan in regard to its direct bearing upon the current troubles of the Bombay textile industry. It is admitted that the unfair overseas competition from which Indian mills, and particularly Bombay mills, suffer is not from England. An increase in the import tariff, but with a preference for countries of the Empire, would have this great advantage over the all-round increase recommended by the majority of the Tariff Board: that it would place a definite handicap upon the "unfair" overseas competition and yet would not raise the cost to the consumer of every yard of cloth, imported or Indian-made, as the Tariff Board majority proposal would, of course, immediately do. From the viewpoint of the consumers' interests, upon which so much stress was rightly laid by the Indian Fiscal Commission, the Preference method has in comparison with the other a great deal to recommend it, while from the standpoint of the industry its effect would be equally useful."

The purpose of this necessarily brief review of a wide problem is to suggest that there is from the standpoint of India a practical business view of the question of Imperial Preference which deserves more thoughtful study in the light of present day conditions than responsible public

opinion in the country at large has hitherto been prepared to apply to it. The majority report of the Indian Fiscal Commission laid considerable stress upon the fact that while the signatories did not ignore the material side of the policy of Imperial Preference, they believed that the sentiment with which it was associated was even more important. On that point there will be general agreement whatever the standpoint of the individual observer. But the Commission, while it marshalled the arguments for and against the policy, on both grounds, with commendable fairness and lucidity, and also tried to indicate certain principles which should govern its application, if adopted, was debarred by its terms of reference from considering that policy as anything else but a principle to be accepted or rejected *in toto*. Much play has been made in the Indian Press with such slogans as "introducing Imperial Preference indirectly" or "through a side door," but an unbiassed analysis of the particular circumstances in each case has only shown that the facts are that a system of preferential duties on British imports has proved itself in practice the most economical and most expeditious way of achieving the particular end in view. The Textile Tariff Board is not the first or the only body of its kind to find itself precluded, in existing circumstances, from recommending a method of protecting the Indian industry, which from every aspect other than the political one, has immense advantages over any alternative proposals. The incongruity of such a situation must be patent to all but the most obdurate adherent of the Congress creed and may in time, unless more reasonable counsels prevail, prove a serious obstacle to the smooth realization of the programme of discriminating protection itself.

That Imperial Preference is still, however, viewed primarily as a political rather than an industrial issue is evident from the reception accorded by the extremist Press to the latest development. Although in the past the observation would have applied as unreservedly to the millowners themselves as to the professional politicians, the lukewarm attitude of the *Indian Daily Mail*, the Bombay organ owned by one of the most prominent members of the Committee of the Millowners' Association, suggests that doctrinaire belief and political prejudices are being slowly undermined by the economic needs of the moment. Meanwhile a suggestion has been put forward which affords grounds for hope that a settlement on the lines we have indicated may yet be found practicable. If, as is generally conceded, the real, if not the only, objection to a preferential tariff is the belief that for purely political reasons it would not be to India's advantage to adopt the policy of Imperial Preference at this stage, and that, in fact, its acceptance must follow, not precede the country's attainment to the status of a self-governing dominion it is held that the concession should be granted, in the present instance, for a period of three years only. By that time, on the one hand, Japan may be expected to have brought into effective operation the new labour legislation, and, on the other, Indo-British relations will come under review in connexion with the findings of the forthcoming Statutory Commission, and the legislation re-

quired to give effect to their recommendations. Clearly, it is urged, a preferential tariff subject to revision at a specified date need involve no permanent commitment affecting either fiscal relations with Japan or political harmony with this country. It only remains to add that the Indian Fiscal Commission observed that in any case the grant of Imperial Preference must stand or fall by the vote of the Indian legislature. As one of the European members rightly pointed out in the steel debate, it was not raised by British initiative, and the free vote of the Assembly, now, as on the earlier occasion, must be the determining factor.

CURRENT TOPICS.

The Statutory Commission.

We are not surprised to learn that there is no truth in the rumour that the Viceroy's address at the opening of the Simla Session of the Legislature this week is likely to contain some definite reference to the impending Statutory Commission. The unwritten convention which requires that all important announcements of mutual concern shall be made simultaneously in India and this country lends colour, on the other hand, to the more recent suggestion that the terms of reference to, and personnel of, the Royal Commission, will not now be disclosed until early next year and that the momentous statement will be communicated to the House of Commons at the same time as it is delivered at Delhi. Meanwhile speculation is rife concerning the probable composition of the Commission, the latest report being that it is likely to consist of seven members. That the President will be a high judicial authority may be regarded as almost a foregone conclusion, but the selection of the remaining members, particularly the Indian element, presents very much greater difficulties. According to the Calcutta correspondent of a leading London journal half the seats will be occupied by members of the two houses of the English legislature and the remaining three by representatives of the non-official European, the Hindu, and the Muhammadan communities, respectively, though a body so comprised is scarcely likely to command the approval of even the most moderate Indian politicians.

Mofussil Banking.

The shareholders of the Imperial Bank of India have unanimously endorsed the proposed new agreement between that institution and the projected Reserve Bank, in the event of the Imperial Bank Amendment Bill being passed at the forthcoming Simla Session. The telegraphic report of the meeting makes no reference to any modification of the original draft but it appears that the Joint Select Committee determined, at its recent Calcutta Session, upon two important alternations, namely the reduction of the period from 25 to 20 years, and the disallowance of the concession of free balances in the case of new branches. In view of the suggestion made recently in these columns that the Imperial Bank's services to trade and industry are wholly disproportionate to the advantages it derives from the present agreement a memorandum prepared by Sir Basil Blackett, for the information of the members of the Joint Committee, is not without interest. According to the statement the cost of conducting the Government's business in the mofussil amounts to Rs. 16.75 lakhs per annum, making with the estimated deficiency on account of branch development of Rs. 16.20 lakhs, a total annual loss of Rs. 32.95 lakhs. In the latter connexion it was reported that out of 107 new branches opened by the Imperial Bank, 26 are on a paying basis, 18 are expected to be on that basis from next year, 32 may be paying their way in 1931, and 31 are never likely to be conducted at anything except a loss. On the other hand the remuneration which the Imperial Bank earns from the Government is estimated at Rs. 32.75 lakhs, of which Rs. 2.81 lakhs is stated to be the profit on the administration of the public debt and Rs. 32.91 lakhs interest on the Government balance at bank rate. Under the terms of the agreement proposed to be entered into between the Reserve

Bank and the Imperial Bank, the remuneration was calculated at Rs. 30 lakhs, Rs. 18 lakhs being the estimated commission on Government business in the mofussil on an approximate total of Rs. 328 crores, and Rs. 12 lakhs as the value of the free balances. It was added that Rs. 30 lakhs would be the profit in the first five years only and that in the second and third quinquennium it would be reduced to Rs. 28 lakhs and Rs. 26 lakhs, respectively, and be as low as Rs. 24 lakhs in the last ten years.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, July 28.

Sir. Stanley Jackson's Tour.

His Excellency the Governor of Bengal and the Honourable Lady Jackson accompanied by the Chief Secretary and staff have started on their monsoon tour in the Eastern districts of Bengal. From Khulna they went to Barisal and were given a public reception in both places. It is remarkable that many of the welcome addresses contained, among other grievances of local interest, the mention of the inadequacy of the Muhammadan element in the State Services; but to this Sir Stanley has replied that no Government can override the claims of efficiency to secure proportionate representation, adding that it should be our aim to attain a position where it shall no longer be necessary to secure by safe-guards special representation of any particular community. At Dacca, His Excellency showed sympathy with local grievances and has promised Government's support in many instances. His Excellency said that he had been impressed by the obviously genuine desire of responsible leaders of both communities that a spirit of goodwill should replace that of recrimination. A formula has to be found through which they can live and let live. It is eminently desirable that the two communities may at last live together in harmony. As regards anti-British feeling, it is to be hoped that Lord Lytton has "left his successor a clear field for the development of constructive and harmonious relations," as expressed by the *Statesman*. Sir Stanley's task is one that requires more than tact and a non-committal attitude.

The Reserve Bank Bill.

Views widely differ regarding the appointment of Directors for the Reserve Bank. The majority naturally was in favour of giving control of the Bank to Indians, mostly legislators, in spite of the warning of Sir Basil Blackett and Sir John Bell on the danger of allowing political influence to come into play in the formation of the Directorate. Experience and events have clearly shown that the choice of directors for a bank must be guided, not by politics, not by religion or party preferences, but by the financial qualifications of the candidates. An efficient business man will prove more useful on a Bank Committee than a legislator. And we all know that few Indians are efficient business men, and therefore poor bankers. *Forward* deplores the "lamentable lack of banking sense" among the vast majority of Indians and remarks that the industrial life of India depends to a large extent upon a sound and well-organised credit structure, and that it will be nothing short of a national disaster if the facilities for the foreign business are increased at the sacrifice of the indigenous interests. A great responsibility seems to rest with the Committee. The agreement with the Imperial Bank is considered as "the most reactionary feature of the Bill" as it gives the Imperial Bank a banking monopoly in India. The Bill provides: (1) The Imperial Bank shall act as sole agent of the Reserve Bank in places where the Reserve Bank has no branches. (2) The Imperial Bank will receive a commission of one anna for every hundred rupees it receives or pays out up to Rs. 250 crores. Above that amount, it will receive half an anna only. This means at least Rs. 15½ lakhs per annum. (3) The Reserve Bank undertakes to keep for 25 years a

minimum balance of 3 crores with the Imperial Bank. During the first five years no interest will be charged. As all Government control over the Imperial Bank is to be removed, it will be free to engage funds in all sorts of business, including foreign exchange, so that in time, some think, most of the branches of the Indian Joint Stock banks and Exchange banks will have to close and the Imperial Bank will become the sole purveyor of banking facilities in India, with almost unlimited means. An ambitious scheme.

European Education in India.

In the course of a lecture on European Education in India, Col. Gidney condemned the Cambridge examination introduced in European schools as a substitute for the Matriculation examination of the local Universities, the latter being considered below the standard of the requirements of European and Anglo-Indian education. The Cambridge standard, he says, has made it necessary to equip the European schools with onerous English staffs, so that education has become more costly without giving results that justify the expenditure. Besides, Anglo-Indians are deprived of the opportunity of becoming teachers. Col. Gidney urges the unification and standardisation throughout India of the Anglo-Indian community's educational system, with the Matriculation examination as portal, for the adoption of the Cambridge examination is not only a handicap in professional careers, but is also of little utility by itself, since it only enables Anglo-Indians to obtain subordinate positions in mercantile offices.

The Statutory Commission.

Sir Tej Bahadur Sapru, lecturing on the coming Statutory Commission, said that India needed to be prepared for it. The speaker was of opinion that the great problem was not so much the selection of the Commission's personnel, as the mentality of the educated classes, who had not as yet gone beyond what was called at one time the theological temperament of India. The time had come, he said, when the younger generation ought to rise above this "theological vice," and before the conference with Government took place, there should be one among themselves. He hoped the leaders would call a conference, and apply their minds to the question of the Constitution. Referring to the personnel of the Statutory Commission, Sir Tej Bahadur Sapru did not believe that what was wanted was a commission of judges, but men with a broad outlook and political sagacity, and men accustomed to deal with practical problems of administration. It is evident that the main obstacle in the way of constitutional progress is the stubborn and tacit refusal of the two communities to settle their differences and unite in their efforts towards national progress. The "theological vice" is perhaps not so much at the base of the strife, which seems to be more political than religious, as could be proved, if the names of the originators of some of the outbreaks were known.

Here and There.

Within a few days, Karachi will be able to ring up Calcutta. One can already speak from the Central Telegraph Office to Karachi via Multan and Sukkur. The Lahore-Karachi telephone will also be opened to the public next week. People are already talking daily with persons in Peshwar, Bombay and Simla. They say that the voice can be heard more distinctly from Bombay than from Ballygunge. There must be some slight exaggeration.

His Excellency the Viceroy inaugurated the Indian Radio Telegraph Company's beam wireless service to England on the 23rd, sending a message to the King, five thousand miles away, and receiving a reply within five minutes. This is a wonderful age, but it is also one of anachronisms for which India can be given the palm.

The names of the seven Europeans drowned in the Shahzada disaster are R. C. Lynam, chief engineer; C. Hunneyburn, second engineer; V. L. Andrews, third engineer; D. Hayes, fourth engineer; D. J. McLaren, apprentice; D. E. Duff, clerk; E. G. Hainworth, assistant

clerk. It will be remembered that the ship sank last week about 50 miles from the mouth of the River Hooghly on her way from Calcutta to Akyab.

Monsieur Champion, Administrator of French Chandernagore, has gone home on long leave. Monsieur Parnon will officiate pending the appointment of a successor.

The Police Report for last year reveals the comforting news that there has been a decrease in the number of criminal cases during 1926. It is proposed to open a home and industrial school for juvenile offenders. There were many newspaper prosecutions, for defiance of law and order and seditious articles.

The Mayor's Fund for the rescue of minor girls is getting on, after a lull. Lord Lytton had headed the list of subscriptions with Rs.1,000 and Sir Stanley Jackson subscribed the same sum, as did also Sir Rajendranath Mukerjee, Kumar Monmathanath Mitter, T. C. Goswami, G. D. Birla (who paid most of Dr. Tagore's expenses to Java) and Kumar K. K. Mitter. Many others subscribed lesser sums, the total amounting to Rs.18,851.

Those who have enjoyed the joy rides in the "Moth," Captain Vetch's graceful aeroplane, may thank their star that they were spared the accident which has caused the machine and its pilot to be badly injured at Shillong a few days ago. The plane got entangled in telegraph wires. The same thing happened some time ago at Lahore, to an aeroplane piloted by Mr. Leete, when its pilot and a passenger escaped with a severe shaking.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, July 29.

Water, Water, Everywhere.

With the restoration of partial communication between Bombay and Ahmedabad we are being inundated with reports of the enormous damage that has occurred in Gujarat and Kathiawar as a result of the excessive rainfall and consequent floods that have assailed that area during the past week. As a matter of fact, however, the reports are really mere rumours, for even now many places are still entirely cut off from the rest of the country, and Baroda in particular. Even so, it goes without saying that such floods as Gujarat has experienced cannot but leave the whole of the northern Division of the Presidency undergoing untold suffering and distress, for we know that several hundreds of villages have been washed away, thousands of houses demolished and the cotton and other crops ruined beyond repair. It can safely be assumed, therefore, that the damage will run into several lakhs of rupees. A slight idea of the situation may be gained from the fact that Ahmedabad's annual rainfall is only about 29 inches; but it received that amount within 48 hours a couple of days back, and in four days received somewhere about 46 inches of rain!

Question of Relief.

The most surprising feature of the floods, however, is that no organised effort at relief has as yet been essayed. When a similar situation arose in Malabar not so long ago, the Servants of India Society immediately got busy, money was collected, and parties of workers were despatched at once to the affected area to succour those in distress. While admitting that in the present instance it is not possible to reach the worst affected areas owing to the breaches on the Bombay, Baroda and Central India Railway, yet it is not too early to commence a fund in aid of the sufferers. A statement from Government was anticipated, and was made in the Council at Poona to-day—but private as well as official effort will be needed, and the sooner the public is organised the better.

Our Legislators.

The Bombay Legislative Council has been kept busy during the past week with official Bills, and on the whole the proceedings of this august body have aroused little or

no public interest. Thus, in quick succession, the Aden Administration Bill, the Registration of Documents Bill and several others have been disposed of, the only one that roused any real interest being the University Reform Bill, a feature of the debate on which was the wise rejection of an amendment suggesting that the Chancellor's post should be elective. The sponsors of this amendment got the worst of the debate, and it is to be hoped that they have learnt a lesson in education reform and control. The new Bill has amply guarded against any possibility of the University becoming a one-man show—which was apparently feared by the mover and supporters of the amendment—by providing for a Senate thoroughly representative of all interests and a body of experts in the upper body of control working under the eye of the Governor as Chancellor.

Malaria Survey.

That dread of the East, malaria, is nowhere more prevalent than in Bombay, and it is therefore all the more unfortunate that the scheme for a malarial survey of Bombay put forward by Dr. Bentley is not yet to be put into operation. As my readers will probably remember, it was suggested that the cost be met principally by the Government and the Municipality, with smaller contributions by the larger interests in Bombay, such as the railways, the military, the Port Trust and the Improvement Trust. The first three of these bodies, however, have refused to have anything to do with the scheme, and it must be placed to the credit of the Municipality that it immediately agreed to meet half the cost of the deficit provided Government met the other half. Should Government fail to come up to scratch, away go all our hopes of making Bombay at least a trifle less malarious than it is at present, and incidentally a vastly better place to live in.

Health Statistiss.

Apart from malaria, however, Bombay has a very proud record in regard to its public health for the past quarter, the death rate having decreased remarkably. Indeed, the latest figures are the lowest, with the exception of 1915, when the population was depleted by the War, since 1893, when Bombay was not nearly so congested as it is to-day. The actual death rate is 25 per 1,000 of the population, and it is hoped that, as a result of the recent improvements that have been taking place with regard to public health, the figure will go on becoming less and less from quarter to quarter. However, we must not crow too soon, for cholera is prevalent in epidemic form not far from us, and should it once get into the city there is no knowing when or where it will stop, for August is our worst month and is yet before us. Up to the present we have avoided it, and if the continual tales one hears of "just having been inoculated" are true and not just made to be in the fashion, we should be able to go on doing so.

Overworked Judges.

How very much overworked our High Court judges are, was graphically demonstrated the other day when Mr. Justice Blackwell—who acted as vacation judge recently, and was kept pretty busy during the period—collapsed in court during the hearing of a case, which had to be postponed. The collapse, fortunately, was not serious, but let us hope that the Government of India has heard of it, for it might then appreciate the protests that Bombay has been continually making with regard to the shortage in her judicial staff.

The Bank Rate.

As was anticipated a few weeks ago, the Bank Rate has been further reduced, this time to four per cent. Easy conditions have been prevailing in the money market and call money has been available at $1\frac{1}{2}$ to 2 per cent. Now that the reduction has been made, it is expected that Sir Basil Blackett's hopes of cash subscriptions to the new repuee loan will be entirely fulfilled. In any event the lower rate will be welcomed by the mill industry in view of the recent rise in the price of cotton.

THE CASE FOR THE TEXTILE TARIFF BOARD'S REPORT.

[Since the following article was written the Government of India has reaffirmed its earlier conclusion that it is impossible to approve the majority recommendation of the Tariff Board of a Bounty on the spinning of the finer counts of yarn or a differential duty against Japan, but has agreed that the cotton-spinning industry can fairly claim additional assistance from the State. It contends that a specific duty of one and a half annas per pound would neutralise the unfair competition of the Japanese mills where the competition is most injurious to the Indian cotton-spinning industry. The Government has therefore decided to bring before the Legislature a Bill providing that up to 31st March, 1930, the duty on cotton yarn, irrespective of the country from which it is imported, should be one and a half annas per pound, or 5 per cent. ad valorem, whichever is higher.]

While it is satisfied that the effect on the handloom industry is unlikely to be very serious, to minimise the burden and to facilitate the diversification of mill production, it has decided at the same time to reduce from 15 to $7\frac{1}{2}$ per cent. the duty on artificial silk yarn and also to expand the list of mill stores, machinery and dyes, which are to be admitted free of duty.]

Speculation is rife in India as to the probable outcome of the campaign which is being waged to secure a revision of the Government of India's decision on the Textile Tariff Board's report. According to the brief official statement issued after the meeting the deputation from the Bombay Millowners' Association, supported by representatives of the textile industry in other centres, which recently waited on the Viceroy at Simla received an assurance from Lord Irwin that their views would have the most careful consideration of the Government.

The object of the deputation was to protest against the Government of India's refusal to accord the industry the protection against foreign competition for which it had asked, even to the modest extent proposed by the Tariff Board. In a representation made to the Commerce Department before the interview took place the millowners, it will be recalled, described as untenable, the Government's conclusion that the handicap to the Indian industry directly attributable to the unfair Japanese competition, is more than covered by the existing 11 per cent. duty.

As the next step must be to persuade the members of the Central Legislature, now assembling for the Autumn Session, to endorse this view the Committee of the Bombay Millowners' Association have decided to issue a series of brief pamphlets placing their case before the public of India in as impartial a manner as possible. While primarily designed to remove all misconceptions and misunderstandings that may exist on this subject and to make every section of the people all over the country to arrive at a right decision, "it is naturally hoped that those who are satisfied, on the facts presented, of the justice of the millowners' claim will lead their support and active assistance in obtaining a reversal of the Government's decision." The course taken is a wise one, and the first two statements to reach this country are admirably adapted for the purpose in view.

The first pamphlet is appropriately devoted to a concise and dispassionate examination of the reasons which led so old-established an industry to apply for protection. It is generally admitted, the millowners state, that a boom period such as was experienced in the years 1920 and 1921 is usually followed by a period of depression. Such reaction has taken place in other countries and in other industries, and the Indian textile industry proved to be no exception. Whereas, however, in other countries when the reaction came, or even before its effects were felt, their

respective Governments promptly took steps with a view to minimise its inevitable consequences, the Government of India took no such action. The effects of the depression in India which, so far as the textile industry was concerned, were greatly ascertained by unfair Japanese competition, began to be felt in 1923. The question of Japanese competition, it is true, was not so acute at that time, but the Millowners' Association was not slow to recognize that it had an important bearing on the state of the industry, even at that period.

Early in 1924 it became evident that competition from Japan was unfair owing to the inferior labour conditions in that country. The need for early and effective action to counter the menace was forcibly urged in a representation made by the Bombay Millowners' Association to the Government of India in February, 1924, on the subject of the excise duty, but Sir Charles Innes, the Commerce Member, replied, at the September Session of the Legislative Assembly that a *prima facie* case for protection had not been made out. In the meantime another factor had come into play which reacted still more unfavourably on the industry and made the situation worse. The Japanese exchange began to depreciate in terms of the rupee and fell from 147 in January to 114 in October, and declined to 105 at the end of the year. Through the year 1925 the exchange rate varied from between 107 and 118, and as a consequence imports from Japan began to assume considerable and progressively greater dimensions.

After describing the various attempts made during the ensuing period to impress upon the Government the gravity of the situation, the statement deals in detail with the Government of India's letter dated March 26, 1926, in which the latter at last admitted that a *prima facie* case had been out for an inquiry, and, inferentially, it is contended, held out a definite assurance that if a case for protection were established to the satisfaction of the Board, the Government would be prepared to act on the Board's findings. The concluding pages describe the course of the subsequent negotiations down to the appointment of the second (Textile) Tariff Board in June, 1926.

The second pamphlet summarises the findings of the Tariff Board. After surveying the progress made by the industry from 1899-1922 the Board, the millowners state, arrive at the conclusion that there was expansion in every direction, especially in weaving, during this period. Other features mentioned by them are: "The loss of the export trade in yarn; the decreasing dominance of Bombay in the home industry and the increasing share of Japan in the import trade." After considering the three world factors that have contributed to the present depression, the Board, it is pointed out, discussed the extent and incidence of the competition from Japan, and, after reviewing the question from every standpoint, definitely state:—"Our conclusion, therefore, is that unfair Japanese competition is an important cause of the present depression in the cotton textile industry."

After examining other circumstances which have also affected the industry at large, including those which the Board recognised were special to Bombay, the latter in Chapter IX. suggest various remedial measures—first by way of internal economies, and then as regards improvements in the organisation of the industry as a whole. In Chapter XI. the Board examine the protective measures suggested by the Millowners' Association and their own major recommendations. Their conclusions are:—

(1) High protective duties on the scale advocated by the Bombay (17½ per cent.) and Ahmedabad Millowners' Associations cannot be justified. While discussing these duties, they make the following interesting remarks as regards the burden on the consumer: "It should be pointed out that, even if no countervailing duty is levied, a rise in price is inevitable since it is to Japan's interest, once she has established herself in the Indian market, to allow prices to rise to the level at which other competitors can sell without loss, but which would yield her larger profits."

(2) The case for a small all-round increase in the import

duty on cotton manufactures other than yarn is strengthened by the undoubted temporary handicap to the industry by the stabilisation of the rupee at 1/6 in the opinion of the majority.

(3) A moderate measure of protection both for yarn and cloth can be justified so long as labour conditions in Japan continue as they are.

(4) A majority of the Board consider an additional duty on yarn undesirable in view of its effect on the handloom industry and believe that such assistance can best be given in the form of a bounty.

(5) The Board condemn specific duties and the majority prefer an additional duty on *all* cotton manufactures other than yarn.

(6) Import duties on cotton mill machinery and mill stores should be removed.

After citing the Board's opinion that: "In view of the dangers, financial and industrial, which are inherent in the continuance of the present conditions, the case for as effective a measure of State aid as possible does not appear to require alteration," the statement summarises the majority recommendations, including the suggestion that the cost of the proposals should be met by an additional import duty of 4 per cent. on all cotton manufactures other than yarn, for a period of 3 years. While the President, it points out, differs from his colleagues in regard to the grant of a bounty on the ground, *inter alia*, that an artificial stimulus to the development of the springing of higher courts is neither necessary nor desirable, and is therefore not a favour of an all-round increase in the present 11 per cent. duty on cloth. "Mr. Noyce, too, admits the unfair nature of Japanese competition, and the report proceeds to state: 'We are agreed that an industry may legitimately ask for protection against unfair foreign competition beyond what is accorded to it by any existing revenue duty.' He therefore recommends the imposition of a differential duty of 4 per cent. on all cotton manufactures imported into India for Japan, to offset the unfair advantage derived by that country and to be imposed at the earliest possible date compatible with the provisions of the Anglo-Japanese Convention of 1905. The report also points out that the difficulties arising from the existence of the Convention could be obviated, and the industry at the same time protected against unfair competition without the imposition of a general duty if an additional duty were imposed on cotton manufactures for all countries outside the British Empire."

While the millowners contend that even the majority recommendations fall short of the actual needs of the industry, they conclude: "We are confident that hardly any person who has carefully perused their findings and the recommendations based thereon will come to the conclusion that after all this labour of the Tariff Board all its major recommendations should be thrown overboard." Yet that, they maintain, is the present attitude of the Government of India which they propose to examine in the next pamphlet.

INDIAN MAIL.

"A False Cry."

As might be expected, Press comments in India on the necessarily brief telegraphic reports of the proceedings at the meeting at the London Chamber of Commerce last month are of a varied nature. While it is clear that the movement is viewed in some quarters with a suspicion that, so far as it is inspired by political motives, is not likely to be removed by the fuller accounts which will by now have arrived by mail, many responsible journals are obviously awaiting the text of the individual speeches before committing themselves to a definite expression of opinion on the details of the scheme.

Characteristically the extremist organs are more concerned with the knocking down of a bogey of their own invention than with the plain object of the meeting, namely, to ensure that any fresh constitutional changes shall only

be devised with the full appreciation of the economic issues at stake. It is begging the point to argue, like the *Bombay Chronicle*, that "What the Indian people refuse to tolerate is the claim of the British vested interests in this country for favoured treatment at the hands of the authorities at the expense of Indian capitalists and manufacturers. As the Indian commercial community has always justly complained, the economic and financial policy of the Government of India is regulated by the unjust demands of the British vested interests in the courts." While the *Indian Daily Mail* is prepared to welcome the idea of co-operation between India and European commercial interests, "provided the motive behind it is not to use the latter to put a spoke in the wheel of India's progress," the *Bombay organ*, in its leading article, headed, with commendable candour, "A False Cry," can only see in the proposed League an attempt to secure "a further period of undisturbed iniquitous privileges to the British trading interests," and regards it as nothing less than a tragedy that "Indians should be found ready to ascertain themselves with such a body."

The proper sense of perspective is restored by *The Pioneer*, which reiterates the emphasis laid by all speakers at the meeting on "the need for the association of British and Indian commercial interests in a joint endeavour to impress on the Statutory Commission the views of men who can point to constructive work done for the progress and prosperity of this country." The *Allahabad Journal* goes to the heart of the project, and points to one factor which is likely more than any others, to afford the greatest hope of its ultimate success. So far from being a racial issue, it observes, "the racial note is sounded in the field where political intransigence is at a premium. For it is in the great commercial enterprises in which Englishmen and Indians work together, that there is less racial antagonism and more mutual respect than perhaps in any other sphere of activity in this country." No one with practical experience of Indian trade and commerce will deny the truth of that contention, nor in fact to endorse the no less sound advice with which the paper concludes. "The chief aim (of the organisation) should be to attract to its support that very important section of educated opinion which, at present, is insufficiently local, having been overshadowed by the exponents of political wisdom whom the peculiar character of the present constitution has specially favoured. And for this purpose its promoters will do well not to lay too much stress on 'the stake in the country' plea. There are many men of good standing, of prudent judgment, and of patriotic outlook, who might perhaps not come within the category named, but whose co-operation would be invaluable."

"A Ditcher's Diary."

The veteran author of "A Ditcher's Diary" in *Capital*, the old-established Calcutta weekly, is a master of his craft and his latest contribution to the study of the vexed question of the personnel of the forthcoming Statutory Commission is at any rate refreshing and stimulating. "England," he says, "is accused of deliberately pursuing a policy of *divide et impera* to prevent India becoming a nation strong enough to oust the invader. There is really no reason for such machiavellianism. The Indians themselves are so divided by religion, caste, and sentiment that they have failed in the short span of thirty years to maintain the integrity of the Indian National Congress which was started with a great flourish of trumpets in the viceroyalty of Lord Dufferin, and grew to vigorous adolescence in its first decade, inspired and nurtured by liberty-loving Britons like Allan Hume, William Wedderburn, and George Yule. To-day it is not a representative institution, albeit there is a rump too ridiculous to be considered by any serious politician. England is conscious of the source of her strength, and the House of Commons, however constituted, will do nothing to destroy it no matter what Radicals or Labourites say when out of office."

"Given an acceptance of this position there is still

cause for deep resentment among Indians in the gratuitous assumption that it would be better for the country if Indians, however distinguished, were ineligible as members of the Statutory Commission. A much more conciliatory plan would be to have only Indians in the Commission, set the limits of their investigation, and submit their confection to a board of expert political cooks for a verdict on its feasibility. England will not, indeed she cannot if she would retain India, surrender control of defence in the slightest particular, so the military budget may be a topic of discussion but its fate must never depend on a party vote. Except for this reservation there is no reason why the next dose of home rule should not include financial freedom in the domestic budget. The indigenous confection may not be quite agreeable to the taste of the rulers, but it will be the aspiration of subject peoples, and therefore a far more reliable pointer than the theories of academicians and the perversity of vested interests. England cannot let go the country, but she can make the partnership a little more real by allowing the intellectuals to order the internal affairs with authority and responsibility. I assume, of course, that the Indian Commission would be fully representative."

CORRESPONDENCE

JUSTICE IN INDIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—The mischievous charge by Mr. Tom Shaw, M.P., of denial of justice to Indians as against Europeans is based on utter ignorance of the system of justice as administered at the present day in British India. Few people in England are aware that in India the administration of justice has virtually passed out of the hands of Europeans, and that judicial appointments of every class up to the highest are mostly held by Indians, and that these Indians are in a position to administer justice as competently, evenly and fearlessly as any judge in this country.

At Madras the portfolio of Justice is held by Sir P. Ramaswamy Aiyar, an eminent lawyer whom it would be grotesque to suspect of subservience to Europeans, while most of the Judges of the High Court are also Indians, and they hold their appointments on the same conditions as the Judges of the High Court of Justice here and are, therefore, so placed as to have nothing to fear from any European, even Governor or Viceroy. Still more to the point is the fact that at present all the Stipendiary Magistrates of the town of Madras, that is to say, the officers before whom complaints would have had to be made in the case reported by Mr. Shaw, are Indians. If an Indian in the City of Madras fails to seek redress against a European for assault or any other offence, it may be taken as certain that his inaction is not the result of any fear or apprehension that he will not be able to obtain justice.—I am, etc.,

L. A. CAMMIADÉ.

Late Chief Presidency Magistrate, Madras, 7, Hillside Road, N.

The Rev. William Joseph Richards, D.D., formerly a distinguished agent of the Church Missionary Society in Travancore, died at his residence at Cuckfield, Sussex, on August 10, aged 79.

The Secretary of State for the Colonies has appointed a Special Commission "to visit Ceylon and report on the working of the existing Constitution and on any difficulties of administration which may have arisen in connexion with it; to consider any proposals for the revision of the Constitution that may be put forward, and to report what, if any, amendments of the Orders in Council now in force should be made."

The Commission will be constituted as follows: Lord Donoughmore (Chairman), Sir Matthew Nathan, Sir Geoffrey Butler, M.P., and Dr. T. D. Shields, M.P. Mr. P. A. Clutterbuck, of the Colonial Office, has been appointed Secretary to the Commission which is expected to proceed to Ceylon towards the end of the present year.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

Yugoslav Debt Settlement.

The expected announcement of the conclusion of a debt agreement with Yugoslavia was forthcoming last week. The agreement, details of which will be found on another page in this issue, covers not only the War Debt to Great Britain of which the amount is approximately £25,500,000, but also the Relief Debt, the amount of which has been agreed at £2,068,843. The War Debt is to be repaid by 62 annuities ranging from £150,000 for the current year to £600,000 for the years 1924 to 1988 inclusive, while the Relief Debt will be repaid with interest at 5 per cent. by annual payments over a period of fifteen years ranging from £100,000 to £240,000. The settlement has been received with great satisfaction in financial and business circles here, for it is felt that the agreement will pave the way for closer relations between Great Britain and Yugoslavia, while this particular settlement practically marks the conclusion of Great Britain's participation in the solution of one of the most difficult of the post-War problems the settlement of War Debts. The concluding stages of the negotiations which have had such a satisfactory outcome were conducted in London by a Yugoslav mission under the direction of M. Voyin Juritchitch, Manager of the State Mortgage Bank, and the discussions dealt with the questions of Serbia's pre-War debts to British creditors. The amount involved in this case is only a matter of a few hundred thousand pounds, and if, as there is reason to suppose will be the case, a settlement in the one case is followed by a settlement in the other it will do much to enhance Yugoslav credit in this country.

Fruit Growing in Palestine.

In the search for industries which will enable Palestine to become a self-supporting economic unit, particular attention is being devoted to fruit growing and especially to the extension of the area under grapes, as viticulture, it is held, offers special promise. Some interesting figures are given in an article in the current issue of the *Palestine Commercial Bulletin* by the Director of Agriculture and Forests, who points out that the area under table grapes has rapidly increased in the last few years. For 1926 the estimated production was 13,000 metric tons, and it is anticipated that the yield this year will be much greater. Curiously enough while the production of grapes is thus being increased the export figures have shown a fairly regular tendency to decrease since 1922. The quantities exported (in metric tons) have been 1,334 in 1922, 1,019 in 1923, 950 in 1924, 516 in 1925, and 216 in 1926. It is clear therefore that the increased production has so far been consumed locally, but it is increased exports that Palestine needs, and the prospects for this industry depend on the development of adequate markets abroad. The Director of Agriculture and Forests is of the opinion that considerable possibilities exist for the establishment of an important export trade, and in this connexion mention may be made of the steps

taken to despatch a trial consignment to Great Britain. The problem to be solved is one which has to be faced in regard to all Palestine fruit—the placing of the fruit on the market in the best possible condition.

Power from the Jordan.

Work has recently been commenced on the first section of the comprehensive scheme for the utilisation of the water resources of Palestine. This part of the plan provides for the utilisation of the fall between Lake Tiberias and Jisr-el-Mujamieh. The first Jordan power house will be at Jisr-el-Mujamieh, and its capacity will be 24,000 h.p., divided into three units of 8,000 h.p. with a fourth unit of the same size in reserve. The work on the first section which will include the construction of two dams, two canals, and a pressure reservoir, will, it is estimated, take from two or three years to complete, and subsequently the other sections of the scheme will be proceeded with.

Egypt's Recovery.

We give this week further extracts from the comprehensive report on the economic and financial situation of Egypt of Mr. E. Homan Mulock, British Commercial Secretary at Cairo. The report as a whole is most encouraging. As everyone knows the slump in cotton prices affected Egypt seriously and the Government found it necessary to have recourse to various expedients to cope with the situation. Egypt, however, is noted for her recuperative powers, and as the report points out she has had at her disposal the accumulated resources of years of prosperity, and now that owing to a variety of circumstances the cotton position has vitally altered the situation in Egypt has taken on an entirely different aspect. The reason why the fall in cotton prices should have had so sudden and severe an effect—an effect, moreover, which has not been without a pronounced influence on neighbouring countries—is to be found in the fact that some 70 per cent. of the population of the country are concerned directly or indirectly in the great industry of the country. The trade returns of 1926 plainly reflected the slump, there being for that year an unfavourable balance of £E9,269,613, but against that it must be pointed out that for the five years 1922-26 Egypt had a favourable trade

BANK OF ROUMANIA LIMITED

(FOUNDED 1866).

Head Office: 123, OLD BROAD STREET,
LONDON, E.C.2.

Branch — 11, CALEA VICTORIEI, BUCAREST.

Directors :

E. W. H. BARRY, Esq.
C. De CERJAT, Esq.
SIR JOHN P. HEWETT, G.C.S.I., K.B.E., C.I.E.
General The Hon. SIR H. A. LAWRENCE, G.C.B.
Lieut-Col. SIR ALBERT STERN, K.B.E., C.M.G.

Bankers :

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.

A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

balance of £E37,968,000. Mr. Homan Mulock points out that the country is gradually emerging from the depression, and that it is reasonable to conclude that the purchasing power of the country has not been seriously affected by the developments in 1926. It may, I think, be taken for granted that if the cotton situation develops as it promises to do the recovery of Egypt will be very rapid, and a good cotton season, followed by another good tourist season, should place the country in an enviable position.

Roumania's Progress.

Another of the annual British Consular reports of special interest has also just made its appearance—that on Roumania by the Commercial Secretary to the British Legation at Bucharest. Here, too, there is much that is encouraging, especially when it is borne in mind that Roumanian reconstruction has hitherto rather lagged behind the progress made by other Near Eastern countries. The Commercial Secretary is able to state that during the last twelve months a noticeable improvement was observed in the economic conditions of Roumania. One of the outstanding needs at the moment is for the stabilisation of the currency, and during the year the principal financial feature was the Government's effort to hold the currency in hand. The country's main asset is, of course, its oil, and the fact that for 1926 the production reached record figures speaks for itself. Commerce in oil as in other products has been very seriously hampered by the high export duties and freight charges, but these have now been very considerably reduced, and it is believed that the effect of the reduction will be largely to compensate for the fall in world oil prices. It can at any rate be said that in her oilfields Roumania has resources which will ultimately enable

her to attain a far greater measure of prosperity than she ever enjoyed before the War.

The Rubber Position.

I had not intended to refer to rubber again this week, but developments have been such that it is practicably impossible to avoid doing so. Once again yesterday, for the third week in succession, there was an increase in the London stocks—again a slight increase admittedly—but despite these increases the price of the commodity has tended to become firmer, while the share market during the past week has been extremely active, with prices moving upwards every day until yesterday when the inevitable reaction took place. The explanation of this development is to be found in the belief that the continuance of the exportable quota at 60 per cent. means an inevitable and very marked change in the position before many weeks have passed. It is believed that we are now practically at the end of the weekly increases in the London stock, and that henceforward substantial inroads will be made in them with the natural influence on prices. That is all very likely, but even so it does nothing to dispel the doubt as to what is likely to happen say in a year's time. It would be futile to suggest that at the moment there are any signs of a development of a world demand which would be commensurate with the possible world output of rubber, and until that is the case there must be a very marked element of doubt in the situation.

COMMENTATOR.

Yugoslavia's exports in June amounted to 340,578 tons, of the value of 43 million gold dinars.

According to reports received by the Belgrade Chamber of Commerce, the wheat harvest in Yugoslavia will be 30 per cent. below that of last year.

329 immigrants entered Palestine during April, while 51 emigrants and 150 returning immigrants left the country permanently during the month.

Hamilton's Oil Concessions (Roumania)—Production for the week ended August 5, 20 tons. Well No. 8 cleaning continues. New well No. 12 lowering casing.

Orders have been placed by the Director-General, India Store Department, London, for switches, fittings, and crossings with the Darlington Railway Plant and Foundry Company, Darlington, and for crossings with the Anderson Foundry Company, Middlesbrough.

Coupons due September 1, next on the bonds of the Egyptian Guaranteed Three Per Cent. Loan will be paid by Messrs. N. M. Rothschild and Sons on that day and on each succeeding business day (Saturdays excepted) between the hours of 11 and 2.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended July 20, amounted to £E7,445, making the total from April 1, £E80,235. The figures for the corresponding periods of 1926 were £E7,944 and £E89,231.

The traffic receipts of the South India Railway Company for the week ended July 6, amounted to Rs. 11,33,234, making the total from April 1, Rs. 1,81,81,958. The figures for the corresponding periods of the previous year were Rs. 10,82,832 and Rs. 1,80,05,769.

Considerable extensions are now being carried out at Fort Dunlop to cope with the largely increased business in all departments. New buildings are being erected to supplement the mixing mills, moulding and curing shops, and a new four-story office block is being built for the clerical staff. The water supply will be augmented by a 15-in. diameter main capable of supplying water at the rate of 400,000 gallons per hour.

Exports and Imports

To assist its customers, the Westminster Bank has prepared a booklet explaining the many ways in which the commercial man may use the Bank for the furtherance of his business, how he should proceed in order to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and so combine security and caution with progress and enterprise

Copies will be issued on application to the Secretary at Head Office

WESTMINSTER BANK

Near East Markets

AGRICULTURAL MACHINERY EXHIBITION AT DAMASCUS.

H.M. Consul at Damascus reports that an exhibition of agricultural machinery will be held at Damascus during October. The territory of the State of Syria is very largely agricultural in character, and the prevailing system of large estates gives scope for the introduction of machinery.

The types of machinery which it is considered could be usefully displayed are as follows according to a memorandum furnished by the Agricultural Adviser to the Minister of Agriculture and Commerce, Damascus.

Ploughs.—The weakness of Syrian draught animals, which is a consequence of light build and underfeeding, calls for ploughs of light construction. The local plough has only one handle and it would be well to conform as far as possible to local customs in this matter. The beam should be jointed in such a way so as to be adjustable for cattle of different height (oxen or mules), whether the draught is by yoke or trace and swingle-bar.

Harrows.—The most satisfactory are light zig-zag type harrows.

Sowers.—Should be of small dimensions, to be drawn by two animals.

Reapers and Binders.—The same applies.

Seed Blowers and Sorters.—Their introduction should be insisted on in connection with seed cereals.

Threshing Machinery. Threshing by the job has been tried with some success in the plain of Amk; unfortunately threshing machines are too expensive for sale to isolated farmers. Community threshing should be encouraged.

Norag.—It would be well to substitute for the customary Syrian "Jarjar" the steel "Norag" used in Egypt, which has a large output.

Hoes, Grubbers, Weeders.—These should be encouraged in every way so as to destroy weeds, which harbour parasites and compete for the humidity of the soil."

PALESTINE CROP PROSPECTS.

The Director of Agriculture and Forests in Palestine in his report on crop prospects in July says:—In the coastal section of the southern circle the prevalence of hot weather was counteracted to some extent by abundant dewfall and high atmospheric humidity. In the hills districts there was less dewfall and east winds set in on July 4. In the north weather conditions during June were more favourable. Only two days of extreme heat were recorded with a shade temperature at Beisan of 126 degrees F. There were no east winds and south and south-westerly breezes brought heavy dews at night. Summer crops thus benefited and cultivators have been able to take advantage of the cool weather to hasten the threshing of winter crops.

Southern Circles.

Wheat and Barley.—Harvesting is complete and the crops are being threshed. In the Jaffa-Ramleh area the yield is generally above normal. In the Gaza area, where tithe estimation is in progress, the figures available indicate an increase in the wheat production of 10 to 15 per cent. and a decrease in barley production of 30 per cent. In Jerusalem and Hebron wheat is yielding fair returns while barley yields are reported to be slightly above average.

Kersenneh, helba, vetch and peas are returning slightly increased yields.

Lentils, gelbaneh, lupine, oats and chick peas all show a considerably decreased production.

Durrah and Sesame.—These crops are making satisfactory growth in Jaffa and Ramleh. They are fair from Khan Yunis to Gaza and very good between Magdal and Yebna. In the Jerusalem district durrah is reported as a

much better crop than last year, but sesame did not germinate well and promises only a fair return.

The field melon crop is generally excellent.

Citrus fruits.—Orange groves are being cultivated and irrigated. Numerous power ploughing outfits are at work preparing land for new groves. Present indications point to a fair yield at Jaffa, Ramleh and Jericho.

Bananas.—Satisfactory yields are being obtained.

Grapes.—The crop both of wine and table varieties is generally abundant. In Jericho and Gaza grapes began to ripen at the end of June. A packing demonstration organised by the Department at Jaffa was well attended.

Apples.—A fair crop is being marketed but the quality of the fruit is inferior.

Apricots.—Very fair crops of good quality were marketed. The Utras village in the Jerusalem district produced a very fine variety of large sized fruit suitable for export to Egypt and Europe. Trial cases despatched by the Department to Port Said and Haifa elicited trade enquiries for larger supplies.

Figs.—The crop is generally promising. Plantations at Ramallah sprayed by the Entomological Service appear to be free of scale infestation this season.

Olives.—A satisfactory crop is expected.

Almonds.—In the Jaffa area the crop is better than that of last year except at plantations damaged by hail during the blossoming period.

Northern Circle.

Durrah is in ear throughout the northern circle. The crop is in a flourishing condition and an excellent yield should result.

Maize.—The condition of the crop is the same as that of durrah.

Sesame.—The crop is in flower, growth is generally good and a heavy yield is expected, provided the fields are not attacked by "wilt" disease.

Tobacco.—Only a small area has been cultivated, but the crop has developed under exceptionally favourable conditions and should yield from 70 to 80 kilogrammes per dunam.

Grapes.—Excellent yields are expected throughout the circle. Early varieties are being marketed from colonies in the Emek.

Pomegranates.—The crop should be heavy and be on the market by the end of July.

SUDAN GUM ARABIC.

Messrs. Boxall and Co., of Khartoum, report as follows under date July 20:—

Arrivals of Kordofan Hashab from June 25 to July 20 showed a decrease of about 52 per cent against the same period last year. It is noteworthy that whilst arrivals in Kordofan markets from January 1 to the end of April were about 1,150 tons more this year than last, for the period January 1 to July 20 they were about 870 tons less, besides which we estimate a shortage of approximately 2,000 tons for the inferior qualities of Hashab.

Taking El Obeid as the standard, prices opened on June 26 at about the same price at which they closed on

JOHNSTON LINE

Mediterranean, Black Sea and Danube.

REGULAR SAILINGS from:

Antwerp, Swansea and Liverpool to: Piræus, Syra, Volo, Salonica, Smyrna, Constantinople, Bourgas, Varna, Constanza, Sulina, Tulcea, Galatz, and Braila.

For Freight and other Particulars, apply:

JOHNSTON LINE, LTD., 6 Billiter Street, London, 9, Mount Street, Manchester, and FURNESS, WITHEY & CO., Ltd., Royal Liver Building, Liverpool.

the 25th and fluctuated daily within the limits of 6d. until July 12, after which they steadily rose and closed on July 20 at about 1s. dearer than on June 26. The price of 71 piastres, i.e., the highest attained since the beginning of this year, was paid on July 14. Demand for the first week of July was good but afterwards was generally quiet.

NEAR EAST MARKET REPORTS.

The current issue of the Monthly Review of Barclays Bank, Ltd., contains quarterly reports on Egypt, the Sudan, and Palestine, from which we give the following extracts:—

Egypt.

From a market standpoint, the period under review is one of the slackest quarters of the year, due in the main to lack of funds on the part of cultivators, who are wholly occupied, financially and otherwise, in the cultivation of the growing cotton crop, and partly to the absence in Europe of important operators.

The wheat crop, which was large, is still mostly in the hands of the farmer, prices being so low that they are loath to part at a figure that will hardly cover the cost of production. In consequence, the purchasing power of the Interior has been further curtailed and an unfavourable reaction on the general trade of the country has resulted. On the other hand, the floods in the Mississippi valley have encouraged local speculators to organise a bull campaign on cotton in Egypt, and as the bulk of the damage in America seems to have been inflicted on the long-staple crop, operators have naturally concentrated on the Sakellarides futures, with the result that the July-November positions have been forced up about 8 dollars per kantar (4d. per lb.) with no resultant trade activity. In fact, spot cotton has not followed the rise at all and is very difficult to dispose of. The Ashmouni contract, which, logically, should have been affected, has made progress, although not to the same extent as Sakel, while the Ashmouni spot is in good demand and easily saleable. Should spot cotton come into favour and the money which it represents be released, an appreciable improvement in the general trade of the country might occur. Cottonseed, after a good advance at the beginning of the period, has again fallen into disfavour and prices have declined considerably from the highest.

The Sudan.

There has been little change in the situation during the period under review, trade being at its lowest ebb owing to the continued high price of durra and to general financial stringency. The early rains have proved satisfactory, but much depends on the later rains during August and September. Movements were unimportant in the import market from January to May, arrivals of cotton goods amounting to £125,000 and of sugar to £94,000; both showed decreases on last year's figures, but imports of tea at £18,000 and coffee at £10,000 revealed expansion.

Gum arrivals have fallen off and prices average Piastres 60-68 per kantar at El Obeid, as compared with about Piastres 80 per kantar last year, but as demand is poor and prices low, production may be curtailed, and consequently there is some possibility of a shortage. Exports from January to June were 12,945 tons, as compared with 13,793 tons for the corresponding period last year.

The Gezira cotton crop totalled 474,000 kantars on 100,000 feddans, as compared with 385,000 kantars on 80,000 feddans last season, while the Kassala crop was 54,000 kantars, as compared with a total of 22,500 kantars a year ago. Tokar cotton also showed a decided improvement, the figures being 32,400 kantars, as compared with 9,500 kantars last season. Sakellarides has shown a healthy increase and the total yield for this season may be taken as 566,500 kantars, against 423,000 kantars last year. A free sale of this cotton at Liverpool should help to relieve the existing financial stringency felt

in the whole of the Sudan, liberate more funds and help the purchasing power of the country.

Palestine.

The dullness in trade conditions during the past quarter is chiefly due to the absence of ready cash. The immobilization of large sums in building activity during the last five years has been partly responsible for the acute shortage of capital. Another important feature which has affected the market is the failure of the orange season. In spite of the trade depression, however, traders continue to stand the strain satisfactorily, and very few financial failures have taken place. Merchants are exercising more caution in their dealings when granting credits to their customers, and, in particular, the restriction of credit facilities has prevented overtrading and overstocking. Probably the reaction will, in the long run, be advantageous to the country as a whole and, provided fresh capital is brought into Palestine, the near future should witness a recovery in trade.

Statistics of imports and exports now available for the first quarter of 1927 compare most favourably with those of the same period in 1926, showing a decrease of 6.5 per cent. in imports, but an increase of 80 per cent. in exports. The total imports for the first quarter in 1927 amounted to £1,550,459, in comparison with £1,049,578 in the corresponding period of 1926.

Total exports for the first quarter of 1927 amounted to £703,359, as against £389,778 for the first three months of 1926. The rise was largely due to the increased exports of barley, olive oil, laundry soap, woollen carpets, cigarettes and cement, this revealing a notable expansion not only in exports of agricultural products but also in the exports of manufactured goods, and affording some indication of industrial progress.

Palestine exports for the first quarter of 1927 show an increase to most destinations, shipments to the United Kingdom amounting to £345,700, as against £240,703 in the first quarter of 1926, and goods valued at £6,585 were exported to other parts of the British Empire, compared with £3,421. The increase in exports to Egypt, consisting chiefly of soap, was mainly due to the improvement in the economic conditions in that country. During the period January to March, 1927, exports to Egypt amounted to £218,395 and were greater by £133,366 than in the same period of 1926.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Circassia for Bombay (Birkenhead, August 25). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mandasor for Calcutta (Birkenhead, August 30).

Bibby Line.—S.s. Warwickshire for Port Said, Colombo, and Rangoon (Birkenhead, August 24).

British India Line.—S.s. Dalgoma for Bombay and Karachi (London, August 20); s.s. Hatimura for Colombo, Madras, and Calcutta (London, September 3).

Cunard Line.—S.s. Phrygia for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool August 20, and Swansea August 23); s.s. Brescia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement (Liverpool, Glasgow and Swansea, August 27).

Johnston Line.—S.s. Jessmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 3).

P. and O. Line.—S.s. Rajputana for Bombay (London, August 26); s.s. Perim for Colombo, Madras, and Calcutta (London, August 27).

Prince Line.—S.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, August 27).

Ellerman and Parayanni Lines.—S.s. Serbino for Gibraltar, Malta, and Alexandria (Liverpool, August 25); A Steamer for Jaffa and Haifa (Glasgow, August 29); S.s. Algerian for Gibraltar, Malta, Patras, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna and Constantza (Liverpool, September 10); S.s. Polo for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona, Venice, Trieste and Fiume (Liverpool, September 3; Swansea, September 8).

Sir Rabindranath Tagore, who is at present at Singapore en route for the Far East, has accepted an invitation to deliver the Hibbert lectures in England in 1928.

The Anglo-Catholic pilgrimage reached Jerusalem at Midday on August 12. The party, which numbers 89, including 30 Americans, visited the Mount of Olives and the Church of the Holy Sepulchre, and in the evening attended an official reception given by the Anglican Bishop.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, August, 16.

Although the holiday season is in full swing, the Stock Markets are maintaining a fairly good tone. There has come, of course, a distinct lull in the output of new capital issues, and this has provided an opportunity for digestion of the large quantity absorbed during June and July. Considerable amounts of some of the loans issued in July had to be taken by underwriters and by the end of the month the quotations of many of the scripts were at a substantial discount. But the recent reductions in many of these discounts point to the fact that the absorption process is proceeding steadily. The gilt-edged market is remaining remarkably firm, partly, no doubt, because of the removal of the competition of new capital issues, but also because of the improvement which has taken place in the monetary situation. The recent lowering of the New York Federal Reserve Bank's rediscount rate from 4 to $3\frac{1}{2}$ per cent., though, of course, not likely to be followed by a similar movement by the Bank of England, in view of the approaching autumnal pressure on the exchanges, makes less likely in the immediate future an increase in Bank rate. A month ago it seemed possible that August might see a raising of Bank rate, for the Bank was failing to add to its gold reserves at a time when additions were desirable, and the tendency of the foreign exchanges was against this country. Now, however, the movement of the exchanges is favourable and the Bank is adding to its stock of gold. But the monetary situation still holds a good deal of uncertainty.

Textile Shares.

Last week's somewhat spectacular rise in the price of cotton, following the publication of an official forecast of the American crop which estimates it at a smaller quantity than had been expected, has stimulated a demand for textile shares, as distinct from those of the artificial silk companies. Owing to the scarcity of supply of stock this rather sudden demand, which is said to emanate largely

from the provinces, has resulted in a sharp advance in prices. Last year's substantial fall in the price of raw cotton meant that many companies, which were carrying heavy stocks, were obliged to write off large sums out of profits to meet depreciation. With the prospect of a rise in cotton prices, which may possibly be more than temporary, it is probable that depreciation losses will not recur in the current year's trading. Moreover, in many cases future requirements may have to be filled at low prices, with a corresponding benefit to profits. It is, however, too early yet to attempt to foresee whether the higher level of cotton prices established this week will be of a permanent nature.

Rubber Speculation.

Certain market interests have been making a determined effort during the past week to revive public interest in rubber shares. But, quite apart from the fact that August is always a poor month for the speculative sections of the Stock Exchange, there appear no real reasons for an upward swing in rubber share quotations. It is not, therefore, at all surprising to find that the bulls have failed in their efforts to stimulate activity and investors would be well advised not to pay much heed to idle talk of a prospective "boomlet."

The outlook for the rubber industry is very obscure. Restriction may have proved a boon to producers, but it has at the same time invested the share market with uncertainty. The only hope for the industry is in (a) the wider use of rubber in the manufacture of articles of every day use, (b) still further expansion in the motor-car business, with a resulting increase in tyre consumption and (c) the amalgamation of the smaller estates, with the object of reducing costs. Until the demand for rubber improves, no artificial methods to bring greater profit to the producer can permanently succeed. If demand is slack prices must decline to a level which tempts the buyer. If production be curtailed in order to stave off such a price fall, buyers are certainly not encouraged to take more rubber. Rather are they inclined to purchase less. That is a hard fact, but it must be faced by rubber shareholders.

Chilean versus Synthetic Nitrate.

Reports from Valparaiso state that the Chilean Government is considering modification of the export duties which are proving such a handicap to producers of the natural fertiliser in that country. There is no official news available, however, and investors should proceed with caution. As a matter of fact the chances of action by the Chilean authorities seem less likely at present than for some time past. It has been clearly stated that the Government of the country prefers to postpone any revision of duties until the industry has explored every reasonable avenue of escape from its present difficulties. At the moment "free-selling" is being tried in the world's markets. If at the close of the current season this new policy has proved a failure we may see the producing companies' burdens lightened; but no relief is probable in the meantime.

Even if the export duties are lowered it will take some years of effort before the various companies regain anything approaching their former prosperity. At one time the Chilean producers supplied the world with the bulk of its fertilisers, but synthetic products now hold the field and a hard and incessant struggle will be necessary if former markets are to be recaptured. The task will be rendered the more difficult since many of the Chilean concerns have only inadequate reserves to draw upon. There is one hopeful factor: the Chilean Government derives the major portion of its income from the nitrate duties. If these show signs of permanently dwindling to any great extent, it is reasonable to assume that remedial measures will be instituted.

Major-General Lochinvar Alexander Charles Gordon, C.B., C.S.I., of Snowhill, Midhurst, died in a nursing home at Llandrindod Wells on August 7 at the age of 63. Gazetted to the Royal Artillery he served during the Great War on the Staff in France and Belgium and afterwards in Mesopotamia.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.)

EGYPT.

Diesel Alternator Groups.—The Egyptian Ministry of Public Works invites tenders for the supply at site of the Aft Power Station, of four diesel alternator, groups and accessories, including alternators, switchboard, transformers, power station auxiliaries, hand-operated travelling crane, workshop equipment (including machine tools, lathes, drills, etc.) mechanical and electrical testing instruments, station electric lighting. October 12 (D.O.T.).

Switchboard and Switch Gear.—The Director-General, State Domains Administration (Commercial Service), Savvy House, Sharia Qasr el Nil, Cairo, invites tenders for the supply and erection of a switchboard and switch gear. September 10.

Leather, Etc.—The Director of Stores, Ministry of Education, Sharia Qasr el Aini, Cairo, invites tenders for the supply of leather, canvas, and other materials for saddlery and shoemakers required for Model Workshops and Trades Schools during the year 1927-1928. August 31.

Clocks, Forges, Etc.—The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of clocks barracks, forges field portable, machines barley crushing, gymnastic articles, chairs, and safes money to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. August 31.

Diesel Engines.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection at site of Aft Power Station of four internal combustion Diesel Alternator groups and accessories required for the Public Works Ministry. October 12.

Machinery Tools, Etc.—The Director-General, Ports and Light-houses Administration, Arsenal, Alexandria, invites tenders for the supply of machinery tools and plants for Suez Workshops. August 29.

Raw Wool, Etc.—The Controller of Technical Education, Ministry of Education, Sharia Qasr el Aini, Cairo, invites tenders for the supply of raw wool, cotton yarns, etc., required for the Rug Factory at Assiut. August 31.

Diesel Engines.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection at site of Abul Menaga Pumping and Power Station of four internal combustion Diesel groups with flywheel alternators, three pumps and accessories, required for the Public Works Ministry. September 3.

TURKEY.

Telephone Sets and Bells. The Post and Telegraphs Department at Constantinople are calling for tenders for the supply of telephone sets and bells. September 15 (D.O.T.).

BULGARIA.

Tin.—Tenders are invited by the Ministry of Railways, Sofia, for the supply of 180,000 kgs. of tin in blocks and 900 kgs. in rods, to the value of about 3,654,000 levas, or say £5,450. August 26 (D.O.T.).

Twenty-three Bridging Constructions.—Tenders are invited by the Bulgarian Ministry of Railways for 23 bridging constructions. It is understood that the value of the contract will be in the neighbourhood of 15 million levas, say £22,500. August 26 (D.O.T.).

Lieut.-Colonel T. S. A. Harcourt, who had served more than thirty years in the Indian Army, died on August 11 in an Aberystwyth nursing home at the age of 54.

CHESS.

By "CARO-KANN."

White to play. What result?

The solution to last week's end-game is as follows:—1, R—B8, P—Kt4 (there is no other move); 2, P—B5 (!), P—Kt5; 3, P—Kt4 (!) and wins. It is quite a problem like ending, and a very good illustration of the amusing positions which arise in off-hand play.

The net profits of the Imperial Bank of India for the half-year to June 30, 1927, amounted to Rs. 76,15,230, as compared with Rs. 74,27,354 for the first half of 1926. The dividend is maintained at the rate of 16 per cent. per annum, tax free, the reserve fund receiving Rs. 7,50,000 and the pension fund Rs. 3,00,000 leaving to be carried forward Rs. 30,14,831.

For the first four months of this year Great Britain's exports to the Sudan amounted in value to £E619,176, which represented 32.2 per cent. of the Sudan's imports, while her imports from the Sudan amounted in value to £E2,267,448, or 82.5 per cent. of the Sudan's exports.

The exports of gum from the Sudan in May via Port Sudan were 32 tons of bleached of the value of £E1,812, 1,798 tons of hashab of the value of £E59,794, and 149 tons of talk of the value of £E2,977. From January 1 to May 31 the exports of gum from the Sudan totalled 11,130 tons of the value of £E356,463. For the same period of 1926 the figures were 11,775 tons of the value of £E464,700. The exports to Great Britain for the first four months of this year amounted to 3,034 tons of the value of £E100,719.

British Consular Reports

II. EGYPT.

(Continued from page 188).

The coal stoppage led to an appreciable decrease in imports from the United Kingdom in Egypt in 1926, the percentage of the total falling from 25.2 in 1925 to 21.8 in 1926. The Empire's percentage of the imports amounted to 38. in 1925, and to 33.3 in 1926, the percentage for the rest of the Empire (other than the United Kingdom) being 12.8 and 11.5 respectively. The decline in the actual contribution of the rest of the Empire from £E7,477,523 in 1925 to £6,045,459 in 1926 was chiefly due to the decreased imports of wheat and wheat flour from Australia and British India, and, in the case of the latter country, also of other cereals, jute, piece goods and cotton yarn.

Two outstanding examples of the effect on trade and industry in Egypt in 1926 of Government support, other than direct financial intervention, are afforded by sugar and leaf tobacco. In the case of sugar, the result of the assistance given to the French company which, in the absence of competition of a more serious nature than that of small native factories, enjoys a practical monopoly of sugar refining in Egypt, is that imports of raw cane have dropped from 21,259 metric tons in 1925 to nil in 1926, and of refined cane from 19,603 tons to 5,373, while the import of beet sugar, which amounted in 1926 to 50,665 metric tons, was only 8,778 metric tons in excess of 1925.

So far as leaf tobacco is concerned, the steps taken by the Egyptian Government to raise the quality and restore the reputation of Egyptian cigarettes by discouraging the admixture of large quantities of cheap and inferior leaf from China and Japan, instead of concentrating on the better quality and more expensive Greek and Turkish growths, have been abundantly justified, judging by the following comparison between the quantities imported from the four countries in question in 1925 and 1926:—

		Kilogs. 1925.	Kilogs. 1926.
China	...	2,262,078	1,113,361
Japan	...	1,287,678	622,906
Greece	...	1,904,244	3,006,510
Turkey	...	546,703	1,642,515

Competition.

Italy has fallen from the position of the United Kingdom's nearest and keenest competitor, to third place, the second position having been taken in 1926 by France. The effect on the Italian percentage of the imports was a decline from 10.53 in 1925 to 8.7 in 1926.

The eight countries referred to above as having increased their exports to Egypt are arranged in descending order of their 1926 totals; France, Germany, U.S.A., Belgium, Roumania, Turkey, Czechoslovakia and Greece.

Owing to the 7 months stoppage in the United Kingdom the total imports of coal in Egypt fell considerably. The coal imported into Egypt for commercial and industrial purposes during the stoppage came from Germany, India and South Africa, and one shipment arrived from Australia just after the dispute had terminated. The Egyptian State Railways ordered quantities of coal from the U.S.A. during the strike, which accounts for the increased imports from that country. Stocks were, however, kept low in the hope of the stoppage ending, since a very large proportion of the foreign substitutes for United Kingdom coal was of very inferior quality. The German and American coal, which was supposed to be a substitute for Cardiff, failed to give satisfaction. There are considerable stocks of Russian coal in the country, but sales do not seem to be frequent in spite of the fact that it claims to correspond to Cardiff, and is quoted at P.T.165 per ton f.o.r. as against Cardiff quotations of P.T.184 and P.T.189 at Port Said.

Imports of patent fuel increased from 50,447 metric tons in 1925 to 56,867 metric tons in 1926, of which Germany

furnished 47,769 metric tons, representing more than double her share of the trade in 1925. The value of the total imports in 1926 was £E110,181, of which she secured some 90 per cent. A considerable quantity of briquettes is produced from imported materials by the one local factory at Port Said, so that the importers of these products have to quote prices that will compete with the local industry.

Total imports of iron and steel manufactured goods rose to £E2,854,939 in 1926, from £E2,446,833 in 1925, but this apparently healthy advance must to a certain extent be qualified by the consideration that an appreciable portion consisted of deliveries of material ordered by the Egyptian Government in 1925, and in some cases in 1924. The largest proportion of these deliveries was in respect of orders by the Egyptian State Railways for replacement of material in accordance with their renewals programme.

As usual, builders turned to Belgium, France, and to a lesser extent, Germany, for their steel requirements, so that the United Kingdom's share of this trade is insignificant. The satisfactory figures representing her share of the trade under such headings as constructed or partly constructed iron or steel works, girders and joists, rivets, bolts and nuts, sheets and plates, etc., consists almost entirely of material for the construction at Dessouk of a 10 span railway bridge by Dorman Long and Co., Ltd., who achieved an engineering triumph in fulfilling in the short space of less than thirteen months, a contract involving the demolition of the old bridge, the erection of the new one, and the recapping of thirteen piers, and this in spite of the appalling obstacles occasioned by the coal stoppage.

Imports from all sources of constructed or partly constructed iron and steel work were valued at £E149,601 in 1926, as compared with £E73,178 in 1925. The British shares of these totals were respectively £E86,114 and £E28,872, whereas Belgium supplied only £E19,525 and France £E17,869. A certain quantity of material required for the construction of the new station roof at Alexandria—the contract for which was obtained by a Belgian firm—has been arriving; but it is understood that the completion of this work will be considerably overdue.

Machinery Imports.

With very few exceptions, business in all lines of machinery suffered a reaction in 1926, following a comparatively good season in 1925. Merchants on the whole are still experiencing difficulty in regard to encashments, but generally speaking the opening of 1927 showed signs of a slightly awakening market. Compared with imports for 1925 of machinery, other than transport vehicles, the value of the deliveries to Egypt during 1926 declined by over 20 per cent., and total imports of agricultural machinery from all sources fell by about one third. The sale of steam plant (portable and ordinary steam engines) has fallen away during the past 3-4 years to almost nothing, practically all the engines of this type in use in Egypt being now oil driven.

Of a total import in 1926 of 1,693 stationary internal combustion engines valued at £E425,014, as compared with 2,656 worth £E649,675 in 1925, the United Kingdom supplied 1,000, worth £E215,065, as compared with 1,757 (£E371,488) in 1925. The share of Germany, her nearest competitor, fell from 574, worth £E122,589 to 445 (£E115,063). Swiss imports decreases from 234 valued at £E135,257 to only 65 worth £E55,139. Italy, France and Belgium, however, increased their respective volumes, though prices were lower than in 1925.

Practically all buyers, apart from the Egyptian Government, demand greatly extended credits, but some United Kingdom firms have not subscribed to these conditions of business, chiefly owing to difficulties in effecting encashments. Continental firms, on the other hand, irrespective of nationality, offer extended credits in some cases of an exaggerated scale. A recent example of this was

afforded by a sale by an Austrian firm, who allowed 5 years credit. In general, prices of Continental material have been lower than those of corresponding United Kingdom goods; German prices both in the general market and for Egyptian contracts, have in most cases been quite 20 per cent. below United Kingdom quotations. In spite of these facts and of the difficulties caused by the coal stoppage, United Kingdom trade has given proof of surprising tenacity, and it is satisfactory to note that the present indications point to a slight revival in trade if only British manufacturers can quote competitive prices and offer facilities in cases where they are suitably represented. Much depends upon good and reliable representation, but when this is available, United Kingdom manufacturers could often safely collaborate on more generous lines than has hitherto been the case in this kind of business.

The value of imports of power pumps into Egypt during 1926 declined slightly, being £106,309 as against £111,136 in 1925. The United Kingdom continued to predominate in the supply of this form of machinery, her share amounting to £48,214 as compared with £52,196 in 1925. France, her nearest competitor, supplied goods to a value of £23,534, which represents an increased trade of £2,700 over 1925, and, owing to the low prices asked, a considerable increase in volume of business. (Statistics of engines and pumps from the United Kingdom do not include pumping plant and motors ordered in connection with a Government contract valued at some £53,000 for the Main Drainage Department at Amria, as this material, though ready well within the time specified has, by order of the Egyptian Government, not yet been shipped owing to the fact that the building for housing it had not been completed by the end of 1926 by the Continental contractors concerned).

Motor Vehicles and Motor Cycles.

The continual increase in motor traffic throughout the country, and the opening up of new roads, have naturally had their effect upon imports of motor vehicles; but this development of trade was somewhat retarded by commercial depression during the year under review. It is, however, anticipated that the market for motor vehicles will recover shortly, although consumption will probably tend to favour the cheaper lines in most cases until normal

financial conditions are more widely prevalent in Egypt.

The recent formation of desert touring clubs, the many private expeditions, most of which have been undertaken by British residents in Egypt in light cars of British manufacture, and the proposed extension of motor services between Port Said and Kantara, with the object of saving travellers to and from Palestine nearly three hours, owing to trains not connecting, are eloquent of the local desire to encourage motor-road traffic.

Exclusive of tractors, the total number of motor vehicles imported into Egypt during 1926 amounted to 4,762, of a value of £747,024, as compared with 5,491 worth £764,423 in 1926. The U.S.A. was the chief contributor, with 2,421 vehicles, valued at £262,144, consisting for the most part of Ford products, with a fair sprinkling of more expensive cars, and representing a decrease of 1,043 in number and £37,600 in value, as compared with 1925. United Kingdom imports amounted to 270, valued at £61,172, compared with 302, worth £73,618, in 1925. Italy's contribution was 1,156, valued at £222,589, which constitutes an increase in numbers of 132, and in value of £2,104 over 1925. French imports also increased, viz., to 752 valued at £167,504, from 648, worth £154,171. Belgian imports—which were mostly confined to Minerva cars—increased; but so far this competition cannot be looked upon as formidable.

It is satisfactory to note that imports of motor-cycles from the United Kingdom, increased in number, although values were very slightly reduced. Out of a total import of 241 valued at £11,351 the United Kingdom supplied 168, worth £7,983. Imports from all sources declined in value by £1,463, as also from the United Kingdom's chief competitors France and Germany. It is a point of interest that while competing countries are stocking their agents fairly heavily in proportion to the market demands, United Kingdom products appear to sell much more steadily.

This is, unfortunately, not the case with the British motor-car and lorry trade. It is true that many United Kingdom motor manufacturers have at last awakened to the necessity of making some kind of concession to the peculiarities of the Egyptian market, but in general the British exporter has yet to make a much greater effort to satisfy local demand and adjust himself to local requirements before he can really hope to do more than hold a small section of this market in the face of the determined and enterprising methods adopted by leading foreign competitors.

Cotton Piece Goods.

The outstanding feature in the cotton piece goods trade has been a marked decrease in volume and value of imports, due primarily to the coal stoppage and the appreciation of the lira, and to some extent to the decline in the purchasing power of the Egyptian consumer as a result of the depression in raw cotton prices. As the great majority of the population is directly or indirectly dependent upon a healthy cotton export trade, encashments were most difficult during the year under review. Contributory reasons for the decline in imports of textiles have been the following: general weakness of demand as a result of lack of confidence and tightness of the local money market; wide fluctuations in Continental exchanges; restriction of credits and forced liquidations; decline in cloth valuations in producing countries.

Merchants and manufacturers were both disheartened as a result of the year's trading, but it is matter for some satisfaction that present indications all point to a steady revival and improvement of the Egyptian market, though nothing in the nature of a boom can be expected.

The total import into Egypt of cotton piece goods, dutiable on the basis of weight per square metre, in 1926 amounted to 168,590,910 square metres, worth £5,297,428, as against 233,293,546 square metres, valued at £8,294,209, in 1925. The United Kingdom supplied in 1925 as much in quantity as the total import from all countries in 1926, and her share declined from about 72 per cent. of the cotton piece goods trade in 1925 to about

66 per cent. in 1926. Although merchants are not hurrying to replace stocks in bond, it is nevertheless encouraging to note that buyers in such lines as bleached, dyed in the yarn, dyed in the piece, and printed goods, are again looking to the United Kingdom for their supplies of qualities for which Italy has held the market for the last two years, and are sometimes obtaining the British article at competitive prices.

A notable feature of the year's trading has been the steady decline in the severity of Italian competition, particularly in articles dyed in the piece. The reduction in volume of the total dyed in the piece imports amounts to 27.5 per cent., but while the United Kingdom's share of this trade declined by about 20 per cent., the reduction in Italian imports was approximately 45 per cent.

Exports.

The decline of £E17,439,271, nearly 30 per cent., in the value of Egypt's exports, is entirely accounted for by the low level of cotton prices during the first eight months, and the slump in the last four months of 1926. This naturally affects the export of cotton by-products, and although an increased export of 411,429 kantars of raw cotton is reflected in the greater volume of cottonseed, cottonseed cake and oil, and cotton waste, exported, as compared with 1925, cottonseed oil alone also increased in value. In addition to the decline in value shown by raw cotton (s.c. yarns and textiles), three categories accounted for a further decrease of over £E one million, due respectively to eggs (as a result of restricted export in January-March, 1926); cottonseed, cottonseed cake, rice and onions; and sugar. This was, however, almost entirely set off by increases in the value of four other categories, produced respectively by hides and skins; cottonseed oil; phosphates; and metallic ores and gold bullion. Except as concerns the Empire, Syria and Turkey, the total values of, and consequently the decreases in, Egypt's exports to the principal countries are largely accounted for by raw cotton.

So far as the Empire is concerned, it is of interest to observe that, in spite of a drop in the value of purchases by the United Kingdom of nearly £E7,250,000, which is more than accounted for by decreases in cotton, £E6,817,000; cottonseed, £E270,000; eggs, £E183,000; onions, £E104,000; and cottonseed cake, £E69,000, the respective shares of the Empire and of the United Kingdom in the total value of the exports have risen from 45 per cent. to nearly 48 per cent., and from 44 per cent. to 45 per cent in 1926.

THE YUGOSLAV DEBT SETTLEMENT.

An agreement for the settlement of the Yugoslav War Debt to Great Britain was signed in London on August 9 by the Chancellor of the Exchequer and by the Yugoslav Minister. Under the terms of this agreement the Serb-Croat-Slovene War Debt, which amounts to approximately £25,000,000, will be funded and repaid by sixty-two annuities of the following amounts:—1927, £150,000; 1928, £200,000; 1929, £250,000; 1930 to 1935 inclusive, £300,000 a year; 1936 to 1939 inclusive, £350,000 a year; 1940 and 1941 £400,000 a year; 1942 to 1988 inclusive £600,000 a year.

An agreement has also been reached for the settlement of the Yugoslav Relief Debt to Great Britain. The amount of those debt has been agreed at £2,668,843, and it will be repaid in full, with interest at 5 per cent., over a period of fifteen years. The annual payments amount to between £100,000 and £150,000 per annum during the years 1927-31, and thereafter will be approximately £240,000 per annum for the years 1932-1941. The annuities in respect of the War debt have been scaled down during the years up to 1942, in order to take account of Yugoslavia's liability for the relief debt.

Company Meeting.

CYPRUS ASBESTOS COMPANY.

Production Doubled.

The ordinary general meeting of the Cyprus Asbestos Co., Ltd., was held at Amiandos on July 30.

Mr. C. F. Jenkins, Managing Director, who presided, said:—

Gentlemen,—I am glad to be able to inform the shareholders that production continues to be maintained at double last year's figures. We are now steadily averaging 500 tons weekly, and expect to reach the estimated figure of 12,000 tons before the end of the season.

The compressor plant has been completed, and the pneumatic drills in the quarries are giving the results anticipated.

Inexhaustible Supply of Ore.

We have now reached a very interesting stage in our history. Troubles and difficulties have been left behind. We have moreover an inexhaustible supply of ore, a good market for our products, and year by year an increasing margin of profit, and in course of time a very strong position should be built up.

Each successive year shows an improved ratio between issued capital and the value of asbestos produced per annum, and I hope that it will not be many years before the annual value exceeds the total capital employed.

The main factor in connection with production increases is the quantity of ore which can be produced by the quarries during the year. Development work in the quarries is expensive, and if indulged in beyond a certain point would entail capital expenditure which might be a burden later on. It is considerably cheaper to develop the quarries in a small way in the first instance, and continue development by milling the overburden, although, of course, progress is slower than the more expensive method.

We are very pleased that a number of shareholders from England were able to visit us this year, and hope others will also come to inspect their property, which has many features of interest not to be found in any other part of the world.

King Alexander returned on August 13 to Bled from his tour abroad.

Two persons were killed and 13 injured on August 10 in a collision between a passenger train from Belgrade and a goods train from Nish near a village about 120 miles south of Belgrade.

Aeroplanes of the Imperial Airways Limited are reported to have covered 10,183 miles in 114 hours on the Cairo-Basra air route in July with uninterrupted regularity at an average speed of 102 miles an hour.

On August 7 at Zara (the Italian enclave in Dalmatia) a crowd demonstrated in front of the Yugoslav Consulate, but was dispersed by troops and police. The demonstration was arranged as a counterblast to the festivities held by Yugoslav Sokols on the other side of the frontier.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended August 10:—

Egyptian Futures.—Sakel Contract.—The weakness referred to in our last circular culminated last Thursday morning when a further decline brought in heavy liquidation and uncovered stop-loss orders, the movement not being arrested until November broke through 17d. At this period both Alexandria and American markets showed considerable weakness; later in the day, however, prices commenced to react and, with free buying from practically all quarters, especially from Continental sources, values recovered $\frac{3}{4}$ d. per lb. before the close. Trading over the week-end was mainly of an evening-up character prior to the Bureau Report, and fluctuations were on a more normal scale than those previously witnessed. The low production and condition figures published by the United States Department of Agriculture came as a complete surprise to the market and induced some panicky short covering, values rapidly advancing 250 points to subsequently react on profit-taking practically $1\frac{1}{4}$ per lb. Since this, the tone has been rather unsettled, and with little trade activity in evidence prices have at times shown an easier tendency, to-night's close being 135 to 144 points dearer for near and 139 to 142 points for distant months since our last report. With crop reports mainly of a favourable character, and the majority of consumers fairly well covered and having orders in hand for some little way ahead, the immediate course of our market would appear to be mainly bound up with the ruling conditions in the American department. At the present juncture, we consider that extreme caution is called for. At the same time, it must be borne in mind that the staple position this season is likely to become difficult later on, and on this account for those who are prepared to exercise a certain amount of patience, purchases on any pronounced reactions are to be recommended.

Upper Contract.—This contract has been rather neglected during the recent sessions, but it was noticeable that both trade and local speculators were buyers at the low levels touched just prior to the Bureau Report. Some purchases of new crops against sales of American at the narrower difference recorded were a feature during the earlier days of the week. More recently, some profit-taking has been in evidence, but, in spite of this, the undertone remains very steady, prices showing gains at to-night's close of 104 points on the week. The Alexandria General Produce Association's monthly crop report for July describes the condition as very satisfactory. There has not been much trade support in evidence, and no doubt it will take some little time for both spinners and manufacturers to readjust themselves after the recent sharp advance. In comparison to competitive varieties, the Upper basis does not appear unreasonable, and provided American values stabilise round the present level, some further hardening may be witnessed.

Egyptian Spot.—With the approach of the first of the American Bureau reports, interest in spot cotton declined to very small proportions. The report, when it did arrive, provided such a shock that the trade has not yet had time to adjust itself to the changed conditions, and business remains almost at a standstill. There was very little buying noticeable before the Bureau, and since its publication it has become fairly evident that a considerable proportion

of the trade had either sold short or else had deferred purchasing in the hope that markets were about to come under the pressure of "bearish" influences. At the moment, the position appears to be that everyone is waiting to see if prices will hold. If they do, then we shall probably see a fresh buying movement taking place. If, on the contrary, prices show a tendency to fall away, trade support, as far as this country is concerned, is likely to be entirely withdrawn.

The small local spot inquiry has presented no features. Uppers at about $14\frac{1}{2}$ d. to $15\frac{1}{2}$ d. have attracted a small amount of attention, and Sakel has been tested in most qualities, but in such small lots as to be almost negligible. Pillion has been neglected. In Sudan Sakel cotton, a very limited business has been transacted. Prices have been raised, but not proportionately with the Egyptian growths. White Sudan, at from 150 to 275 on American contracts, has been in fair request.

C.i.f. business has been very quiet. Forwardings to spinners for the week ending 5th inst., were returned as 3,529 bales Egyptian and 4,325 bales Sudan. Estimated sales 90 bales Egyptian and 1,170 bales Sudan. Quotations of Sakel have been raised 100 points, and those of Uppers 130 points on the week. F.G.F. Sakel to-day, 20.05d. F.G.F. Upper to-day, 15.50d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended August 4 state:—

Since our last report the futures market has been very excited and price fluctuations rather erratic. The week's summary of price movements is as follows:—Sakellaridis: November, 34.62 dollars, 3.93 dollars down; January, 34.25 dollars, 4.04 dollars down. Ashmouni: August, 24.75 dollars, 2.73 dollars down; October, 25.45 dollars, 2.87 dollars down; December, 25.63 dollars, 2.79 dollars down; February, 25.85 dollars, 2.77 dollars down.

Sakel: The expected reaction took place this week, the weakness of New York being the principal cause. Thus in a few sessions prices lost all the advance which a well planned speculative manœuvre made them gain during the month of July. In consequence of hurried liquidation, a kind of panic was provoked and during this morning's session November was transacted at less than 33. dollars. This low level induced heavy purchasing on the part of the trade, and the market recovered rapidly bringing November once again into the neighbourhood of $34\frac{1}{2}$ dollars.

We do not think that all the speculative long positions have been covered, but there is no doubt that the liquidations of the last two or three days have improved the technical position of the market and have rendered it stronger to resist any fresh weakness in New York.

The demand from abroad has been a little better this week, and this morning's firmness is due principally to fairly important purchases by spinners.

Uppers: The market for this variety has been as wild as that of sakel, but the decline registered has not been so great. The demand from abroad has been rather poor. At the first August tender 17,250 kantar dockets were issued. The week's receipts amount to 7,532 kantars against exports 120,526 kantars; the stock in Alexandria stands at 2,278,837 kantars. The official figures of arrivals and exports for the period September 1, 1926, to July 28, 1927, are as follows:—Arrivals: Lower Egypt, 5,187,000 kantars, Upper Egypt 3,193,000 kantars, total 8,380,000 kantars. Exports: Sak., 3,049,381 kantars, Ashmouni 3,813,068 kantars, various 498,180 kantars, total 7,360,629 kantars.

Spot: This week there has been some improvement in the spot market. Total sales amount to about 6,500 bales.

of which we estimate 3,000 bales Sakellaridis, 2,800 bales Ashmouni and Zagora, 650 bales Pilon and 50 bales White.

Sakellaridis: The demand this week has been slightly better; it covered principally the grades medium to good.

Ashmouni and Zagora: The bulk of the business has been in deliverable grades; there is no great change to report in the basis.

Pilon: There has been a decided improvement in the demand, chiefly for fully good fair and above. White: Very quiet.

Up-Country: The important decline registered this week has caused the cessation of the activity reported by us in last week's circular. The fellah seeing November so easily pushed to 40. dollars was expecting a good deal more than these prices for his cotton; the drop has not, for the time being, disheartened him and he refuses to sell at anything round present levels.

Crop, 1927: During the whole week the weather has been normal. Water supply has been more abundant general satisfactory. Pink boll worm is reported everywhere, but the development of the attack to date has only been normal. Water supply has been more abundant and, with a few exceptions, no complaints from growers have been heard.

NEWS FROM ALL SOURCES.

The production of the Anglo-Egyptian Oilfields for the week ended August 12 amounted to 3,614 tons.

Orders have been obtained by the Vulcan Foundry, Newton-le-Willows, for 27 locomotives for the Madras and Southern Mahratta Railway and for 20 locomotives for the South India Railway.

Showcards in nine languages, including Arabic, have been despatched abroad by the Department of Overseas Trade as part of the publicity scheme for the British Industries Fair, 1928.

Sir W. G. Armstrong, Whitworth, and Co., Newcastle-on-Tyne, have obtained a contract from the Egyptian State Railways for 20 locomotives for use in hauling mineral and passenger trains.

The production of petroleum in Roumania for the first six months of this year was 1,757,753 tons, as against 1,506,352 tons for the corresponding period of 1926, or an increase of 16.7 per cent. Exports amounted to 837,249 tons, as against 588,213 tons in 1926, an increase of 42.3 per cent.

Notes of the Week.

Treaties and Minorities.

Although many weeks have passed since the suggestion was made that the peace of Europe would rest on a surer foundation, if the Treaty of Trianon were to be revised in favour of Hungary, loud and indignant protests are still being made in the so-called Succession States, the countries that have benefited territorially from the dismemberment of the Austro-Hungarian Empire. Possibly the manner in which the suggestion was originally put forward was crude and designed for effect. If, however, it ignored one essential to revision, so also have those who protest against any such course—that treaties so elaborately framed as were the Peace Treaties after the Great War can be modified only by general agreement, if they are not to be torn up by another world struggle. The general sanctity attaching to treaties does not necessarily make them the quintessence of wisdom in all their clauses. The conditions under which the various Peace Treaties were elaborated are well known, and in view of all the circumstances they may have represented at the moment the best arrangements that could be made. To recognise this is far from admitting that modifications could not be introduced with advantage, in the light of the experience which Europe has to-day, but did not have in the years or months following the Armistice. The object of revision, however, would be to produce improvements and not to make things worse than they are. Consequently the question of revision or non-revision should be discussed entirely without animus and be decided solely on the merits of the case with special reference to the definite improvement of existing conditions. Only when such improvement can be shown to be attainable without any setback in any other direction can a case be said to have been made for revision.

The Answer to Revision.

Austria-Hungary was voted a "ramshackle Empire" and the condition of the subject peoples was held to be a stain on Europe's honour. Consequently when the Dual Monarchy was defeated in a general war the decision was taken to replace it by a number of smaller States which would be based as far as possible on the principle of

nationality. It was found in practice that the principle could not be introduced in its entirety. Although there was no question of subjecting a majority of aliens to the jurisdiction of a minority, yet in certain instances the extent of the minority was large enough to make it in turn a claimant for the right of self-determination. To avoid a *reductio ad absurdum* some limits to the principle had to be set; but as a precautionary measure, to ensure that things would be better than they were before, minority clauses were incorporated in the Treaties. With this action Europe imagined, or at least hoped, that she would be able to wash her hands of the matter and that all would be peace for the future in Central and Eastern Europe. The results have not come up to expectations. In addition to complaints quite as loud and quite as insistent as those heard formerly in Austria-Hungary there are the economic difficulties which leap to the eye and cannot be explained away as the imaginings of wicked people who deserve no sympathy. That Central Europe to-day, with its multiplicity of national units, the economic dislocation, its high tariffs and traffic restrictions, is worse off in respect of its contribution to the general well-being of the world than it was before the War admits of no doubt. When on the top of this obvious fact come complaints that bear a strong resemblance to those urged against the Austro-Hungarian Empire, can it be wondered that some people begin to ask themselves whether the system of the Peace Treaties is, after all, an improvement on the state of affairs before the War? When, therefore, suggestions are made outside the Succession States, to overhaul the Peace Treaties the countries concerned may be sure that it is done only because the conscience of Europe is being troubled as it was in the days of the Dual Monarchy by the existence of injustice and oppression in its midst. If the existing system can be applied in a spirit of genuine toleration, without the entailing of hardships to any considerable section in a country, no serious voice will be raised abroad for the revision of the Treaties. As soon, however, as persecution raises its head, so soon will the conscience that claimed the break-up of the Austro-Hungarian Empire be roused to demand an end to unfair discrimi-

The New Greek Ministry.

With the fall of the "Oecumenical" Government—a coalition of the five principal parties in Greek politics—M. Zaimis has had to have recourse to a coalition of four parties, while the Royalist Popular Party under M. Tsaldaris, who held the office of Minister of the Interior, goes into opposition. The Ministerial declaration read at the first meeting of the Chamber after the reconstruction of the Cabinet bears evidence of an attempt to meet the wishes of all the parties comprising the new Government. Special attention is promised to the suitable organisation of agricultural credit by the foundation of an Agricultural Bank; this step is the first on the list of demands of the Republican Union, but other parties challenge the proposal to form a separate bank and would prefer to see an Agricultural Credit Department attached to the National Bank. For the rest the programme outlined is necessarily a full one, and the Chamber will require several years of hard unremitting labour to enable it to work through the Ministerial proposals. It is of good augury that the Popular Party has undertaken not to raise the question of the régime; as Greece's immediate need is a series of practical measures for the betterment of the country in a variety of spheres, and it is sounder policy that there should be for the present no attempt to raise afresh the constitutional issue.

A Model Conference.

Reference in these Notes to the Conference of Churches that has recently been in session at Lausanne is justified on two grounds, the prominent part taken by the Eastern Orthodox Church and the object lesson that the Conference has provided for a political conference of the Balkan States. To take first the latter point, which can best be explained by a number of sentences from the statement of the Chairman in presenting the Preamble that embodied the results of the Conference. Bishop Brent said: "There is an avoidance of compromise, and as strong a recognition of differences as of agreements. The differences which our reports present are the material for that careful study which must be the new starting-point in our quest." The Preamble stated: "We, the representatives of many communions throughout the world, assembled to consider, under the guidance of the Holy Spirit, the things wherein we agree and the things wherein we differ, receive the following series of reports as containing subject-matter for the consideration of our respective Churches in their common search for unity. This is a Conference to consider matters of Faith and Order. It is emphatically not attempting to define the conditions of future reunion. Its object is to register the apparent level of fundamental agreements within the Conference and the grave points of disagreements remaining; also to suggest certain lines of thought which may in the future tend to a fuller measure of agreement." It is a conference on these lines that we would fain see the Balkan States initiate without delay as an essential preliminary to the co-operation and federation that all claim to desire. Until this preliminary work has been done, it may be doubted whether the time will ever be ripe for negotiations "to define the conditions of future reunion." What is wanted is that the fundamental agreements and the actual or apparent disagreements should be set out side by side, in order that the cost of removing the disagreements should be weighed against the manifest advantages to be derived from federation. The negotiators would not bind their respective States; but by being aloof from party politics in their own countries they would be able to approach their subject from a national point of view, unhampered by considerations of the effect of their action on their political status at home.

Uncompromising Orthodoxy.

One of the notable features of the Lausanne Conference of the Churches was the strong line taken by the Greek Orthodox delegation in rejecting all attempts at compromise, and to their attitude would seem to be largely

due the insistence in the Preamble on the preliminary character of the Conference. In the discussion on the wording of the reports the Greek Orthodox delegation inveighed against the drafting "on a basis of compromise between what, in their opinion, were conflicting ideas with conflicting meanings in order to arrive at an external agreement in letters only. In matters of faith and conscience there was no room for compromise. The mind of the Orthodox Church was that reunion could take place only on the basis of the common faith and confession of the ancient, undivided Church of the Seven Oecumenical Councils and of the first eight centuries." This outburst impressed the Conference, but did not defeat the skill of the drafters of the reports and Preamble. When the delegation went on to say that the most the Greek Orthodox Church could do would be to enter into co-operation with the Christian Churches in the social and moral sphere on a basis of Christian life, there must have been many in the Conference who felt that their hopes for reunion had been built on sand. Some, no doubt, will have expected to find a scheme of reunion the only possible road to the end in view, social and moral co-operation. The value of the latter must always be problematical so long as the Orthodox Ministry is recruited on existing lines, which produce priests as ignorant as the peasants around them and archbishops who lend themselves to political propaganda and to anathematising political opponents.

A Russo-Persian Treaty.

It would be interesting to know the precise reasons that have induced Russia—if a statement in the *Berliner Tageblatt* may be taken as accurate—at last and at this moment to conclude a comprehensive treaty with Persia. For over eighteen months Persia has been sorely tried by the embargo which the Soviets placed upon the import of Persian goods into Russia; for a considerably longer period she has suffered anxiety and loss in the matter of the Caspian Sea fisheries; and for an even longer period—since 1903, in fact—she has endured the injustice arising from the preferential treatment accorded to Russia in the question of tariffs. Last year, it will be remembered, the Teheran Government sent a Court emissary, Sardar Muazzam Taimur Tash, to Moscow in an endeavour to regulate the most urgent problems existing between the two countries; but this statesman, after a prolonged sojourn in Russia, returned to Persia having accomplished nothing. With some magnanimity the Teheran Government, about four or five months ago, sent yet another emissary: a man no less than the Foreign Minister, Mushavvar ul Mamalik. The weeks passed, and nothing happened; Persians began to fear that the fate of their Foreign Minister would resemble that of Taimur Tash. It has just been stated by the *Berliner Tageblatt*, however, that a treaty is on the point of being signed. This is said to provide for an increase in the annual value of the commodities crossing the Russo-Persian frontier in each direction, for certain transit rights, and for a fisheries agreement. It is said that on the whole Russia has made concessions to Persia, but it is preferable to await particulars before endorsing that statement. If it is proved to be correct, close investigation must be made into the reasons for the adoption by Russia of an attitude which will be in extraordinarily marked contrast with that which she has adopted in recent years towards the Persian Government and people.

Its Effect upon Iraq.

One of the more important indirect effects of the signing of a treaty between Russia and Persia will concern the trade between Iraq and Persia. Insufficient attention has been drawn to the very "realist" commercial policy which the humane Bolsheviks have been pursuing among their oppressed brothers in the Middle East. Take sugar, for instance. A Sugar Department was instituted by the Moscow Government with the avowed intention of capturing the Persian market, to the detriment, naturally,

of the Baghdadi traders. In their aim the Russians have been very successful. At Hamadan, Kermanshah, and Isfahan they are stated to have accomplished their designs, and now Russian sugar is on sale even in the Persian Gulf, where it competes with the Indian commodity. And sugar is only an example. Obviously much of the success of this campaign is due to the tariff terms which Russia secured in 1903 and which the high-souled Bolsheviks have been careful never to renounce. One of the results of this campaign is that a considerable section of Iraq's trade with Persia has been effectually killed. If, therefore, provision is made in this Treaty—and no details are yet available—for the abrogation of this unequal Customs arrangement, Persia will not be the only country to benefit. But it will have been very "realist" to launch the successful campaign and capture the market before making a "gesture."

The Problem of Kurdistan.

Considerable obscurity still surrounds the situation in Kurdistan, which, as we remarked last week, has caused strained relations between Persia and Turkey. Or, as perhaps it would be fairer to say, obscurity surrounds the reasons for the Press campaign begun about two months ago in Teheran against Turkey and recently reciprocated in the Angora journals. The only clear fact about this "tension," as it is journalistically called, is that it derives from events in Kurdistan, whether Persian or Turkish it is difficult to say. It is quite possible that Persia has had fresh trouble in Kurdistan, and it is again possible that, rather than accuse the Soviets of fomenting trouble against the régime of the Shah, she seeks to attribute the blame to her North-Western neighbour, Turkey, who, of course, has also a Kurdish problem. Persia has always chosen her own way of dealing with her particular Kurdish problem, and is stated, credibly enough, to have rejected Turkish offers of collaboration in dealing with the common problem presented by the Kurdish race. But we profoundly regret to see Turkish journalists so misled by prejudice as to suppose that British villainy is responsible for the present strained relations between the Persian and Turkish peoples. Last week we recorded the suspicion which was published by Yunus Nady Bey, in the *Jumhuriyet*, to the effect that either Russia or Great Britain was responsible for this imbroglio over the Kurdish problem. Now, however, Yunus Nady Bey is convinced that England is responsible; and from what does his rapid conviction arise? From nothing more than a statement, made by the London Correspondent of the *Neue Freie Presse*, that Great Britain is seeking to undermine American prestige and power in Persia, and, by implication, that she is virtually responsible for the termination of Dr. Millspaugh's contract! Really, if Turkish public men possess no greater sense of responsibility than that manifested in a journal which is supposed to possess the confidence of the Ghazi himself, what are we to make of the vaunted "Western mentality" of Kemalist Turkey?

Misconceptions on Iraq.

We should have thought that everyone who has heard of Iraq knew that King Faisal's forthcoming visit to England, in so far as it is political, was concerned with the possibility of decreasing, not of increasing, Great Britain's responsibility for Iraq. The youngest student of the history of Anglo-Iraqi relations would have been aware, we should have imagined, that the whole tendency of Iraq Governments is in the direction of asking for less formal British control, and, by implication, for less British expenditure either on or in Iraq. But we are wrong. For we learn, from a leading article in the *Daily Express* of August 19, that "King Faisal's journey to England can only be to extract more money from British pockets and to ensure the continued presence of British soldiers in his kingdom." How stupid of those observers, therefore, who gathered that King Faisal, on the assumption that in 1928 Iraq was to be responsible for her own

defence and security, is wholeheartedly in favour of conscription for his Kingdom! We learn, again from this same authority, that the British Prime Minister, fresh from his experiences in Canada, will explain to King Faisal at Aix-les-Bains how the British Treasury is "compelled to cut down on all the lavish luxuries of other days such as pouring millions into swamps and chasing Kurdish sheiks." It would be amusing, would it not, if the Prime Minister were, instead, to tell the King of Iraq the history of the Canadian Pacific Railway, an enterprise which the Lord Beaverbrooks of the day condemned as a lavish luxury and one that could not possibly pay its way? For our own part, we think that Mr. Baldwin will talk of neither of these things. But we do wish that such organs as the *Daily Express* would study the real nature of Iraq; one does so tire of this endless and futile talk of "swamps" and the "chasing of Kurdish shaikhs."

The Shaikh of Muhammarah.

The Teheran Government will earn many friends in this country when it announces that the liberty which the Shaikh of Muhammarah is said to be enjoying in Teheran can be enjoyed in his own domains in Southern Persia. Quite frankly, this long detention in the Persian capital of one who has time and again proved his friendship to the British cause is causing considerable uneasiness among British wellwishers of Persia. Few English observers in the Middle East imagined that the Shaikh of Muhammarah, to whom at least certain sections of the British Government were under obligation, would suffer the fate which he is now enduring. We do not doubt, of course, that the Foreign Office attitude of absolute neutrality concerning the domestic affairs of Persia is a correct one, and certainly no interference is called for. But the delay with which matters are being settled as between the Teheran Government and the Shaikh is not a reassuring sign. Over a month ago in the House of Commons Sir Austen Chamberlain explained that the British Government had repeatedly urged Persia "to put into practice her frequent categorical assurances that the Shaikh's affairs should be justly and equitably settled."

DEATH OF ZAGHLOUL PASHA.

As we go to press, the news of the death of Zaghloul Pasha reaches London. A fuller reference to Egypt's most outstanding personality of recent years will appear in our next issue.

POLITICAL MAKESHIFTS IN GREECE.

The temporary solution of the Cabinet crisis in Greece has been the only one possible in the peculiar circumstances of the case, which require that the Government should be able to send a delegation this week to Geneva to inform the League of Nations that its antecedent conditions for a further Greek loan have been fulfilled. Fortunately, the differences of opinion that arose in the late Ministry, although in some respects fundamental, turned on a question that was exclusively of Greek concern and did not affect the conditions laid down in Geneva. Accordingly, the country's representatives will be able to assure the League that the financial programme mapped out by it for the completion of the scheme of Refugee Settlement and for the stabilisation of Greek currency has been adopted in its entirety. The new Government's majority in the Chamber is composed of the two essentially Republican parties, the Liberal Union, under M. Kaphandaris, and the Republican Union, led by M. Papanastassiou, together with the Party of Free Opinion, the followers of General Metaxas, who, although Royalist at heart, has accepted for the time being the verdict of the nation on the constitutional issue. Even if M. Tsaldaris, the leader of the Royalist Popular Party, had been in a position to defeat in the Chamber the Government's financial programme, it is unlikely that he would have carried his opposition to the point of compelling Greece to forfeit the timely help offered by the League of Nations. On the other hand, his contention that the public funds should not be used to swell the dividends of the shareholders of the National Bank is one that will make a strong appeal to the people as a whole, and in a free vote in the Chamber would inevitably cut athwart party divisions. As far as can be gathered from the published reports, this particular matter has been left for subsequent settlement, and in this case will come up again for discussion, dissociated from the all-important question of Greece's acceptance of the general outlines mapped out by the League for the readjustment of her finances.

A Government formed under these exceptional conditions can hardly be said to rest on a stable foundation, and it is to be feared that Greece is still not out of the wood of political upheavals. By going into opposition on a question of principle M. Tsaldaris has created a strong position for himself in Greek politics and has pegged out a clear claim to be regarded as the head of any alternative

Government to the present Coalition Ministry. This move on his part is in itself disconcerting to the other party leaders, each of whom will probably have accepted the idea of a Coalition in the belief that all the rivals were equally prevented from stealing a march upon one another. Now while the others are saddled with the responsibility of administration under conditions that are not conducive to making them popular, owing to the difficult times through which Greece is passing, M. Tsaldaris alone is free to call attention to the Government's shortcomings and to make his appeal for wider support at the next elections. The best hope for the immediate future lies in M. Zaimis' skilful handling of the political situation. The Government has gained in cohesion by the withdrawal of the leader of the Popular Party, who had not proved himself a very easy colleague, and the latter's presence as head of an official Opposition in the Chamber will act as an incentive to the present Ministers to pull together harmoniously. The general attitude of the Greek electorate, which is no longer minded to play the part of mere pawns for the sport of political leaders, may also exercise a steadying influence on Greek politics. M. Tsaldaris has been wise enough to choose a definite issue on which to break up the Coalition, and he will probably be the first to realise that it would be a tactical mistake to attempt to push his advantage too far. A Coalition Government remains the best solution for the time being of Greece's political difficulties, and the electorate will acquiesce in its removal only for good reasons of national importance and not merely for the advancement of an individual political leader.

From the point of view of a constructive programme the new Ministry can, if so minded, start with much in its favour. The further loan under the auspices of the League of Nations will go far to set Greece on her feet again, if the problem of financial stability is dealt with firmly and consistently. The numerous public works which have recently been put in hand—water, power and traction schemes—together with a large programme of road building—will place the country ahead of its neighbours in the general reconstruction towards which all the States of the Balkan Peninsula are striving, and will enable the Greeks to derive the full benefit of the valuable accession of productive power that they have secured in their refugees from Turkey. If the Chamber can make up its mind to regard itself not as a party machine, but as representatives of the nation charged with the duty of furthering the interests of the country as a whole, and therefore entitled to keep the Government up to the mark, a fruitful session may follow. One of the first steps must be the staging of General Pangalos's trial. The failure to do this has been a serious blot on the record of the first Coalition Government. Only last week yet another conspiracy to organise a rising in the ex-Dictator's favour was reported to have been discovered in Athens. This is the third or fourth attempt to secure General Pangalos's release, but in spite of them the Government has made no attempt to hasten a trial which on the ground of justice and humanity as well as in the interest of internal peace ought to have been concluded many months ago. There is room in the Chamber for an enlightened and patriotic Opposition which will place the national interests of Greece first and help to make the Government do the same.

The Near and Middle East*

From Our Own Correspondents.

Cairo, August 14.

Excitement over Cotton.

Local interest has again this week centred in the cotton market, which, in sympathy with the American market's excitement over the unexpectedly small American crop estimate, has been very lively. Prices jumped 5 dollars the kantar in the course of a single day, and although profit-taking at the close caused a slight reaction there has been no considerable slump from the highest levels reached. These sudden violent fluctuations are not regarded here as an unmixed blessing. Almost everyone likes to have good prices ruling for cotton, but nearly everyone would prefer stabilisation at or around price levels considerably below the highest reached of late to the continual violent movements which have been so conspicuous in recent weeks. There is an inclination here to discount the American estimate, since hopes built on these official forecasts in the past have so often proved illusory. At the same time, there is a general feeling of confidence and of expectation that business generally throughout the coming winter will be brisker than for several years past. The local stock exchanges have reacted sympathetically to soaring cotton prices, and there is as yet little sign of the all-round decline in values which is usually a feature of the summer months, when many people are disposing of holdings of small parcels of shares to provide money for business or holiday trips abroad. Tourist interests share the general optimism, and the Egyptian Hotels Company, which now owns or operates practically every important hotel in Cairo and Upper Egypt, is carrying out expensive alterations with a view to providing extra accommodation for the expected thousands of visitors.

Imperial Airways.

Among the organisations which will seek to expand their business during the coming winter will be Imperial Airways, Ltd. Since the inauguration, six months ago, of the Cairo to Basrah service steady progress has been achieved, the number of passengers carried each journey has shown a satisfactory tendency to rise, and, best of all, perhaps, for a service in its early stages, 100 per cent. regularity has been maintained. Inhabitants of Iraq, following the example of their King, have been quick to appreciate the advantage of air travel. So have Arabs from the Persian Gulf area, as was instanced this week by a Shaikh, Abdul Rahman al Gosaibi, reutrnng from the pilgrimage to Mecca. Not caring for the long voyage via Bombay to his home in Bahrain, Shaikh al Gosaibi travelled by the regular weekly air mail machine from Heliopolis on Wednesday afternoon, was in Basrah the following evening, and at home in Bahrain, having taken the machine on from Basrah on private charter, well before lunch on Friday. The journey was a rather expensive one,

but not much more so than the alternative sea route, the difference in cost being much more than compensated for by the immensely greater comfort and the tremendous saving in time.

Egyptians have not yet acquired the air travel habit to any great extent, while tourists visiting Egypt are also not fully aware of the facilities which the Imperial Airways' services offer for rapid and comfortable trips to Palestine and Iraq. Last winter Mr. Samuel Untermeyr, the well-known American lawyer, chartered an air-liner for a week-end visit to Palestine and was thoroughly pleased with the experience—his first of air-travel. With a view to encouraging air travel amongst tourists as well as residents of this country, Imperial Airways, Ltd. are now planning to spend a fair amount of money on advertising on both local publications and those which are issued annually with a view to attracting visitors to Egypt. It is to be hoped that the result will justify the outlay, for the air services to Palestine and Iraq have already proved to be of the greatest convenience to business men and others, having to cover a large area of Middle Eastern territory in the shortest possible time, and the more freely these services are used, the more frequent will they become, with a resultant increase in their utility to the public.

Egypt and the Orient Express.

Another travel innovation will begin on November 1. next, when the Simplon Orient Express service will be extended to Angora and Assuan. Mr. Garcey, Commercial Manager of the International Sleeping Car Company, has recently visited this country from Paris, and together with Mr. Janig Chaker, the Company's manager for Egypt, Palestine and Syria, visited Aleppo and Beyrout to discuss with the managements of the Chemins de fer Nord Cilicie and Damas, Haleb et Prolongations, the details of the new services. The Simplon Orient express will run three times a week from Haidar Pasha, and will be divided at Eski Shehr into two sections, one going to Angora and the other to Aleppo and Tripoli. From Tripoli an express motor car service will take passengers to Haifa, where they will entrain for Egypt and, if they wish, right through to Assuan, changing at Kantara and Cairo. The distance from Calais to Assuan will be covered in 130 hours, but it is expected that most travellers using this route will prefer to break the journey at Constantinople, Aleppo (for Antioch), Baalbek, Damascus, and various places in Palestine. A regular itinerary for tourist-passengers, giving them ample time to see the various places of interest en route, will be arranged. With the comfort of the sleeping and dining cars of the International Sleeping Car Company all the way, this service ought to prove popular. Iraq will, it is hoped, be linked up by an air service from Aleppo to Baghdad, the distance being covered in a single day, thus reducing to six days the Paris-Baghdad journey, which cannot at the present time be done in less than nine days.

Queen Nazli's Visit to Europe.

The Egyptian royal yacht "Mahroussa" returned to Alexandria harbour last Wednesday and is now undergoing a minor overhaul before Her Majesty Queen Nazli

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

*Under this heading appear weekly or at regular intervals, communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

embarks for Europe, where she will join King Fuad and with him return to Egypt. The Queen will doubtless be very glad of the opportunity for the change, for although she frequently visited Europe before her marriage, she has not been out of Egypt since she became Queen. Her children, the oldest of whom, Prince Fuad, is growing up into a strapping lad, will doubtless benefit by the change as much as their mother.

The Coptic Patriarch.

A venerable figure disappeared a week ago in the person of the Coptic Patriarch Kyrillos, who was nearly a 100 years old, and who sat on the Patriarchal throne for nearly half his life. A rugged, uncompromising figure, he first gained notoriety through his refusal to submit to the degree passed by Riad Pasha's Government in 1892, laicising the Coptic Church's Wakf properties, which bring in an annual income, at the present time, of nearly a quarter of a million pounds. The rebel Patriarch was exiled for his intransigence, but triumphed in the end, for popular agitation compelled the Government to recall Kyrillos and cancel the degree. Lately it has seemed that there might be a repetition of the historic struggle, for a law, passed just before Parliament rose, and since given the Royal signature, effects the change in control of the Wakfs which was attempted 35 years ago. The Patriarch had declared that he would "die before submitting to such a law." His words were prophetic. There is a good deal of speculation on who will be nominated as *locum tenens* pending the election of a new Patriarch—which will probably not take place for twelve months. The Orthodox Copts are divided into two parties, the reformers (who have been largely responsible for the movement which has led to the passing of the new law) and the conservative—or reactionaries, as their opponents term them. The occupancy of the Patriarchal throne in the interval before the next election is of importance, as experience has proved that the temporary head of the church stands a much better chance of election than any other candidate. Hence the present anxiety of both groups that their nominee shall be chosen.

Trying Weather.

I have previously this summer written about the weather. It is again most trying. The Nile is in full flood and the atmosphere consequently very damp. Temperatures, too, are high, for last night the thermometer stood at 94 degree F. at 9.30 p.m. There is also much typhoid about, so that, altogether, those of us who are seeing the summer through are feeling rather subdued.

ALBANIA.

Valona, August 10.

Relations with Yugoslavia.

The nightmare of Albano-Yugoslav relations has at last come to an end. Diplomatic relations have been resumed, the Albanian *Chargé d' Affaires* has arrived in Belgrade, and the Yugoslav *Chargé d' Affaires* is already in Tirana.

By common consent the recent incident has been of the "regrettable" order, and everyone is well satisfied that it should now be closed. If there is anything still lacking it is that a little more order should be restored to the relations between the two countries. It might be possible, for instance, for Yugoslavia to take advantage of the unfortunate rupture in order to meet Albanian opinion by suppressing some of her Consulates in Albania—those at

Koritza and Skutari, which, rightly or wrongly, the Albanians regard as centres from which emanates the poison that saps good relations between the two States. It will be noticed that, whereas Albania maintains no Consul on Yugoslav territory, Yugoslavia finds it necessary to keep three regular Consulates in Albania, at Durazzo, Koritza and Skutari, together with another, irregular or disguised, at Valona.

Italian Activities.

The number of Italians in Albania continues to grow. They are now estimated at over 2,000, but there is reason to suppose that even this figure is below the mark, to judge from the numbers that one meets in the principal towns. Already the three best hotels in Tirana are in Italian hands. For the last two weeks we have had the Fascist organisation represented in Albania in the following centres: Durazzo, Valona, Saranda (Santi Quaranta), Skutari, Tirana, with 350 Fascisti, in addition to 20 women Fascists at Durazzo. The Fascist headquarters is at Shiak, between Durazzo and Tirana, which serves as the centre for the Italian exploitation of the lands leased by Italy for 20 years.

In connection with lands leased by the Italians it may be mentioned that report has it that Skevket Bey Verlaci, whose daughter is engaged to be married to Ahmed Bey Zogu, is in negotiation with an Italian company for the lease (a euphemism for sale) of all his farms, 25 in number, for a sum of 600,000 gold francs. Shevket Bey is regarded as one of the biggest landholders, and possibly the richest man, in Albania.

Italian activity may also be recorded in other directions. The Albanian air service, that of the Adria Aero Lloyd, established in 1924 by a German company, has passed to the Italians, who have bought all the shares. The new personnel of this service arrived the day before yesterday at Tirana to take the places of the German manager and the German pilot.

The big French metallurgical company, La Société Five-Lille, has been at work in Albania since 1922 engaged in the construction of metal bridges. It has been responsible for the beautiful bridge at Shiak over the Arzen, and at the present moment its engineers are at work on a big bridge at Lekli, near Tepelena. Suddenly, however, it is announced that the Five-Lille contract has been cancelled. The work is to be given to an Italian company.

For the last eighteen months Italian officers have acted as instructors of the Albanian artillery. Other Italian officers have arrived during the last six months to command the machine-gun company and two battalions of infantry.

There is also an Italian Geodetic Mission at Tirana, with which the Albanian Government has concluded a contract for the drawing up of a cadastral survey of Albania, this survey is to be finished within 10 years.

Petroleum.

There is no longer any mention in the country of petroleum; reference to it would seem to have gone out of fashion. The different companies continue to dig wells, or at least to sink bore-holes, but nothing has apparently happened to inspire fresh hope. The Standard Oil, which has so far not sunk any well, has just abandoned its concession. On the other hand the Anglo-Persian and the Italian company have recently applied for an extension of two years for further prospecting.

The Civil and Penal Codes.

As is known Albania has retained in force the Ottoman Codes pending the promulgation of new Codes adapted to her needs. Two Commissions have been appointed comprising judges of the Court of Cassation and jurists for the compilation of a Penal and a Civil Code. The former has already been completed and will shortly be put in force. The Civil Code is borrowed from the French Civil Code, almost without change. It is expected to be completed within a few months.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.
Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscription £1 per annum.

74, Grosvenor Street, W.1.

E. H. Keelling,
Hon. Sec.

Teheran, July 29.

Dr. Millspaugh's Departure.

The question of the renewal of Dr. Millspaugh's contract, which has now expired after five years, has loomed large before the public during the past month or more, when nothing much else of political interest has occurred, this being the month of mourning, Moharram. Long and acrimonious correspondence between the Minister of Finance, Prince Firouz, and the Administrator-General of the Finances, has been published in the papers, and last Sunday the matter came to a head when the question of who was to take Dr. Millspaugh's place during the three months' leave which he has decided to take, as stipulated in his contract, was placed before the Majliss. When the American Financial Mission first came out five years ago and drastic measures were needed to put Persia's financial house in order, Dr. Millspaugh was given powers according to his contract which, now that things have been put on a sound footing and are running smoothly, (a fact to which the satisfactory state of the financial affairs of the country bears sufficient witness), the Government are no longer willing to grant him, wishing to subordinate him more to the Council of Ministers and Ministry of Finance. It is hardly to be wondered at, therefore, that Dr. Millspaugh, in view of the unquestioned success of his administration during his term of office, has objected to such curtailment of his powers, and has rejected the amended contract offered him. Incidentally some of the local papers have described his powers as "dictatorial," whereas they should have been purely advisory. The Government last Sunday proposed that the Treasurer-General, Mr. McCaskey, should carry on in Dr. Millspaugh's place during the month and a half that remained until his own contract expires in September, but this met with opposition from the Deputies on various grounds, and finally, on Thursday, the Majliss appointed the Prime Minister, Mukhber es Saltaneh (Hedayat) as Acting Administrator-General of the Finances for a period of about two months, presumably until the Government have time to find a suitable successor to Dr. Millspaugh. It will be interesting to see what effect this appointment will have on the members of the American Financial Mission, who, of course, understood that they would work directly under a fellow-countryman as Administrator-General.

The Russo-Persian Agreement.

The negotiations for the commercial treaty with Russia still continue to drag on in Moscow where the Foreign

Minister, Moshavar ul Mamalik (Ansari) has now been for several months, and agreement seems no nearer being reached in spite of periodical optimistic telegrams from Moscow in the papers. Two months ago the Government sent the Belgian Inspector-General of Customs to Moscow, in connexion with the proposed new Customs tariff, but apparently not much headway has been made in this direction, and he will shortly return to Teheran.

The Abolition of Capitulations.

The question of the abolition of Capitulations is, of course, of absorbing interest to foreigners out here, and the subject of much comment. This step on the path of progress and towards the political independence of the country has the sympathy of all well-wishers of Persia; nevertheless, apart from the very doubtful legality of Persia's unilateral denunciation of "perpetuity treaties," to advise foreign Powers of its intention to abolish capitulatory rights within a year is one thing, whereas to convince them that the reorganisation of the Ministry of Justice and of the Courts of Law has advanced to such an extent as to justify the abolition and ensure a just trial and fair treatment for foreign non-Muslim subjects is quite another matter. As a first step the Cabinet has decided on the dissolution of all Karguzaris (representing the Foreign Office) in provincial towns—which took effect from July 7—and has entrusted their duties to the local Governors, who will represent the Ministry of Justice; until May 10, 1928, the date on which all foreign treaties will expire and Capitulations be abolished. The Ministry for Foreign Affairs has communicated this decision to the Karguzars, who will now be transferred to the Ministry of Justice, and foreign Legations have also been notified to the above effect.

Railways.

Work in connexion with the proposed railway line from the Caspian to the Persian Gulf, via Teheran, is apparently progressing satisfactorily, and a bill has been submitted to the Majliss for the engagement of another fourteen American engineers. A dozen others came out a few months ago, so the American community is increasing by leaps and bounds.

Government Officials.

The Majliss recently passed a bill prohibiting Government officials from standing as candidates for Parliament in the districts under their jurisdiction, and prohibiting Deputies from being given Government posts unless they have resigned their seats three months previously. The Bill, which also provides that Ministers and Under-Secretaries cannot be elected to the Majliss, is an interesting measure, and should have a far-reaching effect on internal politics. It should go a long way towards stabilising the existence of future Cabinets.

Earthquake Shocks.

We had an unusual experience the other day when a distinct earthquake shock was felt all over the town and up country; it lasted several seconds. It was just after seven in the morning before most of us had got up, when the furniture in the rooms suddenly began to wobble, the

beds to rock, and the water in the tanks in the garden to be violently agitated! People were somewhat diffident about mentioning it, thinking it might be imagination, until they found it was a subject of general conversation later in the day, for seismic disturbances are a rare occurrence in Teheran. Similar shocks were felt in other places, but apparently no serious damage was done.

The Weather.

The weather deserves a few words, for in the middle of July we had the greatest heat most of us can remember—in fact it is said to have been the highest temperature for over twenty years, touching nearly 108 degrees in the shade, which is exceptionally high for Teheran. A similar heat wave was apparently experienced in other parts of the country. The temperature has fortunately dropped considerably during the past week, a great relief, for most of us were feeling distinctly “under the weather.”

IRAQ.

Baghdad, August 12.

The King.

His Majesty King Faisal left Baghdad for Europe on August 6, travelling by Imperial Airways to Gaza and thence to Cyprus, where he will spend some days with his father, ex-King Husain. He is expected to stay some time in France for the sake of his health, before going on to England to take part in the discussions regarding the new Anglo-Iraqi Treaty. Jaafar Pasha, the Prime Minister, is to meet the King in Paris. In the absence of the King, his brother, ex-King Ali, will act as Regent. The Crown Prince, Amir Ghazi, has come to Baghdad for his summer holidays, arriving here two days before his father's departure. His first year at Harrow is reported to have had excellent effects on his health and general development.

The Government.

The Ministry of Agriculture and Irrigation has begun to function, the appointment of Abdul Husain Chalabi as Minister having been approved by the King immediately before his departure on Saturday. This appointment, with that of Saiyid Alwan al Yasri to the Ministry of “Comworks,” brings the needed Shiah element into the Cabinet. Amin Zaki Beg is transferred from Communications and Works to Education.

The problem of Naji Beg al Shaikat Pasha, referred to in my last letter, has been solved by his transfer from the mutasarrifiyah of Mosul to that of Baghdad, in exchange with Abdullah Beg Sana. This amounts to a reinstatement of an injured and excellent official.

A special committee has been formed by royal *iradah* to supervise the working of the new income-tax law.

Subih Beg Nashat, a former Minister of Finance, has been appointed the Government's representative with the Turkish Petroleum Company.

The Naqib Question.

The succession to the Naqibate in Baghdad, and the future of the great Qadria religious bequest funds, are still a subject of discussion here, and the great interest taken in it by Muslims in India is shown by the numbers of telegrams received. There is a unanimous appeal for unity and for the upholding of the high traditions of this house.

Iraq Land Records.

The Government of Iraq will in future have the benefit of access to the Turkish registers and other documents relative to land, lost or destroyed during the Turkish withdrawal in 1917. Under the Treaty of Lausanne, copies of these have now been obtained from the originals in Constantinople. The work of photographing and classifying the originals, and also 800 maps of Abdul Hamid's Crown estates in Iraq, took five months; the successful result has now reached Baghdad.

Cholera.

A serious outbreak of cholera at Abadan in Persia has spread to Basrah, where 53 deaths have been reported. All third-class railway traffic from Basrah to Baghdad has been stopped, and other passengers are required to produce a medical pass and a certificate of inoculation. It is hoped that this outbreak will not assume the alarming proportions of the cholera outbreak in 1923. At present there is no cause for alarm; no case has yet occurred in Baghdad, and general public inoculation is not considered necessary by the medical authorities.

ON KING IBN SAOUD.

An examination of the conditions in Islam which appeared in *La Nation Belge*, of Brussels, on August 16, is not without interest at the present time, for the writer of it takes up an anti-Wahhabi attitude which would appear to reflect a certain amount of genuine feeling in the Muslim world. The article begins with the statement that the question of the Caliphate has been shelved. It remarks that neither the Cairo Conference nor the Mecca Conference of 1926 was repeated this year, pointing out that the Rector of Al Azhar University had been accused in the Egyptian Parliament of converting credits from the Ministry of Wakfs to the purpose of the Cairo Conference, and that the Indian Muslim delegates, particularly, were exasperated at Mecca in 1926 by the “brutality and intolerance of the iconoclastic Wahhabis.”

Turning to the *hajj* of 1927, the author of this article, after surveying King Ibn Saud's alleged promises of hygienic reform, quotes an Egyptian doctor who made the pilgrimage as having stated that mortality among the pilgrims sometimes reached the number of 2,000 a day. He proceeds:—

The decomposition of the unburied corpses added to the infection caused by the thousands of animals sacrificed. As for the doctors of Ibn Saud, they prudently held themselves aloof from the danger of contagion. At Mecca the filth and motions of sick pilgrims defiled the approaches and spread even into the inner court of the great mosque. Security alone was fully guaranteed. . . . The Wahhabis in their intransigent Puritanism maltreated the foreign pilgrims under the pretext of keeping them within the limits of strict orthodoxy, of which they considered themselves the sole guardians.”

Quite emphatically the writer does not believe in the permanence of King Ibn Saud's hold on Islam. He concludes:—

Two years ago Muslim opinion placed King Ibn Saud by the side of its two favourites: Mustapha Kemal and Abdul Krim. Has this popularity survived intact? I would not say so. Before his campaign against the Sharifian family of Mecca, he protested his complete disinterestedness. He wished no territorial aggrandisement: a Muslim Congress was to decide upon the political status of the Hijaz. Without waiting for this decision he had himself proclaimed Sultan of the Hijaz. This fact was brought up against him by the Indian delegates at the full Congress. Conqueror of the “malik” (King) Husain, he found that he had a right to this title, which he exchanged for that of Sultan. It had been agreed that the Hijaz would not be attached to the Najd. This last stipulation was observed no better than the former. Ibn Saud has just officially taken the title of “King of Najd, Hijaz and dependencies.” And before that he had extended his protectorate over Asir, a region long claimed by the Imam of the Yaman. . . . If war breaks out (between Ibn Saud and the Imam) Ibn Saud will have his hands full. It can be foreseen that the great tribes of the Hijaz, impatient of the Wahhabi yoke, will turn against him; likewise the amirs of Arabia whose independence is threatened by his incessant expansion. Would he be undone by the exigencies of the redoubtable masonry of the “Ikhwan” which he himself organised and which accuses him of Wahhabi lukewarmness? It is certain that his ill-disguised ambition and no less the iconoclastic excesses committed by the Wahhabis in the holy cities of the Hijaz—excesses vouched for by thousands of pilgrims—have dried up the source of his subsidies and have alienated him in Muslim opinion from the sympathy which had hitherto supported him.

We reproduce the views, not because we endorse them—we are very far from doing that, either in detail or in broad outline—but because we believe that the charges contained in them, where not patently false, should be investigated. More light is certainly needed upon the hygienic conditions obtaining during this year's *hajj*.

PROBLEMS OF PALESTINE.

Slowly but quite surely the high lines of British policy in Palestine emerge in their true significance. The mills are working exceedingly small, but their grinding is certain. Other events than British policy, such as Zionist distress or Arab demand, may seem for the time the most important feature of the life of Palestine, but the one indisputable and chronic fact of the situation in the Holy Land is the unswerving pursuance of the Mandatory's policy. That policy no longer constitutes a problem; and the problems of Palestine henceforth will be mainly whatever Arabs and Zionists choose to make them.

At the meeting of the Permanent Mandates Commission last June and July, the Mandatory Power was awarded high marks. The only points of even lenient criticism concerned the Commission's desire for more detailed information regarding the development of the "self-governing institutions" provided for in Article 2 of the Mandate, and for information concerning the conditions of labour and labour legislation in Palestine. As far, therefore, as the international status of Palestine is concerned, that is, the esteem in which the Mandatory Power is held by the League of Nations, all is well.

But things are different in regard to the internal affairs of Palestine, particularly in respect of Jewish activities and feeling therein. There all is not so well. For instance, the promulgation last July of the Jewish Communities Ordinance, a part of the General Communities of Palestine Ordinance, seems to have pleased but one section of the Jews in Palestine: the *Agudath Israel*. Criticism of this measure has been most outspoken. Many Zionists in Palestine appear to resent the implication of being a religious minority; they emphasise their intention to establish in Palestine not a "religious home" but a "national home." Nothing could have so strikingly exemplified the differences existing between Jews in Palestine as the resolution which the *Agudath Israel* forwarded to the Colonial Office. This resolution contained the following sentences:—

The thousands of Jews here express their gratitude to the Government for having given them the opportunity of segregating themselves from the new Jewish Community, and those here present undertake hereby to leave henceforth that Community that shall be organised according to the Jewish Community Regulations.

The thousands of Jews here present beg the Government to grant the members of the *Agudath Israel* the possibility of organising themselves into a separate Community in accordance with the basic principles of their religion.

Now with the internal affairs of Jews in Palestine we have nothing to do: this can be a matter for Jews alone to resolve. But to see how this Jewish Communities Ordinance has been received as a shock, we need but quote the comment of the *Palestine Weekly* upon the resolution passed at Jerusalem by the *Agudath Israel*:

As for our hopes of a Jewish national body in Palestine—in time, indeed, of a Jewish nation—they must be scrapped at present, along with other hopes, promises, assurances, and affirmations.

A problem, however, of even greater importance than that which concerns the relation of Jew to Jew in Palestine centres round the relation of the Jew outside Palestine to the Jew inside Palestine. This is virtually one of the main questions to be answered at the Zionist Congress at Basle on August 30. As we foreshadowed at the time of its accomplishment, the Weizmann-Marshall agreement, by which non-Zionist American Jews were allowed to participate, in the form of being represented upon an extended Jewish Agency, in the development of the Jewish National Home in Palestine, has come in for very considerable criticism. It is difficult to believe, however, that Jewry as a whole will reject the man who has brought the Zionist movement thus far since the War. No part of our duty lies in defending Dr. Weizmann, of course, against the attacks of his fellow Zionists, but it is difficult not to be impressed by the logic and reasonableness of his position. His able lieutenant, Mr. Sokolow, has explained in the *New Judaea* (August 12) his standpoint in regard to the charge that Zionism has "sold the pass" to the money-bags of American non-Zionist Jewry. This leader said:—

It cannot be admitted for a moment that the Executive ever pursued a policy of peace at any price with anti-Zionist Jews. We have never negotiated with anti-Zionists, but only with non-Zionists, with whom all are ready to collaborate. We have never betrayed any fundamental Zionist principle, nor abandoned any portion of our principles. Some of our friends apparently consider that an aggressive political struggle against non-Zionists constitutes the "contents" of which, they allege, Zionism has been "emptied" in recent years. As a matter of fact, an important part of the contents of Zionism is the reconstruction of Erez Israel; and as all agree that for this purpose we must collaborate economically and financially with non-Zionists, the logical consequence is that a purely combative policy is no longer sufficient to form the contents of Zionism.

This difference of opinion among Zionists is a thing in which the people of Great Britain are deeply interested, for upon its solution very largely depends the attitude of the Jewish community in Palestine towards the British Government. For the most part the Jews in Palestine have behaved most creditably, both individually and as citizens, and some part of the praise for this fact should at least be given to Dr. Weizmann and his followers, who have followed a policy which at no time has caused the Mandatory Power serious embarrassment. It is true that such fiery spirits as Mr. Jabotinsky, the Revisionist leader, may stir some Jews in Palestine to look with more reproachful eyes at the Government of Palestine, but surprise will be caused if the Jews already in the Holy Land renounce the conciliatory policy adumbrated by the Weizmann group as the only possible policy, and turn to an aggressive or intensive attitude. But that, as we say, is the Jews' own affair. They must decide this matter for themselves at Basle.

For Zionists the present is a time alike of emergency and of urgency. The pendulum in Palestine has but barely recommenced to swing in their favour; it is for them themselves to keep it swinging. But it must be a natural process; a violent jerk or change of policy might disturb the mechanism of the Jewish National Home altogether. For the sake of the world in general, and of the British Government in particular, it is to be hoped that sane counsels will dominate the Basle Congress.

As for the main, though less advertised, section of Palestine's inhabitants—the Arabs—it is gratifying to record that the distress of the Zionists has largely left them unaffected. The Arab Executive Committee, admittedly, protested to the League of Nations this year that Jewish unemployment had threatened public safety

in Palestine and that the consequences of the over-immigration of 1925 had brought the country to the verge of ruin; but this was only a *façon de parler*. Slowly—very slowly, it is true—the Arabs of Palestine are beginning to realise that the policy of the British Government is not to harm their interests. The results of the Municipal Franchise Ordinance—the first essay in self-government in British Palestine—have been good; and there appears to be some feeling that further progress with the establishment of institutions provided for in the Mandate will be made in the not distant future. Arab goodwill, in short, is not politically unattainable. But we would again emphasise the fact that nothing would more surely retard its approach than the adoption, at the present critical time, by the Zionists of a policy of dropping the pilots whom the British Government and the Arabs know and of their substitution by men of shorter and probably more domineering views.

NOTES ON TRANSJORDAN.

(From a Correspondent.)

Little is heard of the British Mandate east of the Jordan save when some exceptional event takes place. Unhappily the late alarming earthquakes on both sides of the river have brought that region into prominence.

No better example, perhaps, could be found than that afforded by Transjordan of the sure and steady progress which British supervision has brought to lands of the Near East which have long suffered from the blight of Ottoman rule. Travellers who have ventured into what is now called Transjordan were generally attracted by a desire to visit the remarkable remains at Petra, a tour which involved some risk of unpleasant adventures. These visits can now be carried out in complete safety, and increasing numbers now find their way there. Messrs. Cook and Sons have done much to facilitate matters, and have established camps for the tourist season and a hotel at Maan.

The boundaries of Transjordan are not yet completely defined on all frontiers. To the North lies the French Mandate of Syria. To the West are the Jordan and a line running through the Dead Sea. To the South runs a line south of Aqaba eastward. To the East a Boundary Agreement with the Wahhabi King fixed a more or less mathematical frontier. Through the territory, from north to south, runs the Hijaz Railway. No good map of the country appears to be available. Perhaps the best on a small scale is that which accompanies the article on Transjordan in one of the new volumes of the "Encyclopædia Britannica." No census has yet been taken. The population may be placed roughly at about 220,000, including about 10,000 Circassians and 15,000 Christians.

The Capital, Amman, lies about fifteen miles in a straight line from Jericho, and is about 300 feet higher than Jerusalem, viz., 2,755 feet. Motor buses run every hour to and from the railway station on the Hijaz line, about three miles distant. Near the latter is the R.A.F. Station. Amman preserves the old name of Rabbath Ammon (Capital of the Amorites), where, we are told, the Sarcophagus of the giant King of Og was once preserved. When rebuilt by Ptolemy Philadelphus, and renamed Philadelphia, it became a flourishing and luxurious city. Its destruction, like that of so many cities of the Near East, is attributed to earthquakes.

Those who knew Amman before the War would be amazed at the transformation. It has greatly increased in size. Good stone buildings have taken the place of the old hovels, mostly of mud bricks. The streets have been widened, and new shops offer most of the articles generally required. Traffic is controlled by the police. A small hotel provides comparatively comfortable quarters and good cooking. There is a general air of increasing prosperity on the sides of the hills. Good stone houses are being constructed by private persons

for their own use, or to let at very good rents. A new Italian hospital will no doubt do excellent work. Education makes satisfactory progress, elementary and other schools having been established. A small English school, constructed by the Church Missionary Society, is already well attended. As regards communications and transport, the country has been opened up by many new roads, connecting the chief towns and villages. The road from Jerusalem to Amman has been widened, and is traversed by many cars, where in the old days, one rode slowly on horse or mule back.

The ruins of Amman itself are of much interest. Besides a fine Roman Theatre, which could seat 6,000 persons, there are remains of a castle overlooking the town, of temples, and of a basilica, cisterns, towers, porticos, rock-tombs, and so on. Professor Garstang has kept a watchful eye over what remains. To the north the ruins of Jerash (*Gerasa*), where Mr. Horsefield is doing good work, are well worth a visit. There are many other important remains in the country, some of which will no doubt some day repay excavation. The chief towns are Es-Salt to the north, and Kerak to the South.

Since 1921 Transjordan has been under the rule of the Amir Abdullah, second son of ex-King Husain. For some time, while a liberal grant was given by H.M. Government, the Amir attempted to govern on arbitrary principles incompatible with British ideas. In 1922 he visited London, with his Prime Minister, then Rikabi Pasha. In 1923 he was informed that H.M. Government recognised his independence, provided that his administration was conducted on constitutional lines. His independence is subject to the general supervision of the Palestine Mandatary. Lord Plumer, the High Commissioner is, therefore, responsible for the administration. In 1924 the duties of Chief British Administrator were entrusted to the competent hands of Lieut-Colonel C. H. F. Cox, C.M.G., D.S.O., R.F.A. By the exercise of rigid economy, finances, which were in a chaotic state, have been brought into order, and an era of good government has been established. It is due to the painstaking energy, and tact of Colonel Cox that progress is now noticeable in all departments. His knowledge of the Arabs and of Arabic has been of great service, and he possesses the complete confidence of the people. It may well be imagined that the task has been no easy one. In addition to internal affairs, the unrest in Syria, the revolt of the Druses, and anti-French feeling, aggravated by the bombardment of Damascus, must have been the cause of much anxiety. Everything possible appears to have been done to co-operate with the French in their mandate, and they must have appreciated the help given in clearing the Azraq basin, east of Amman, which had become a refuge of both fighting and refugee Druses. Then again until recently there must have been constant anxiety, owing to the proximity of Wahhabi forces, whose attempted raids had to be sternly repressed, and punished by the very efficient Royal Air Force and the Trans-Jordan Frontier Force, whose services have been beyond all praise.

Needless to say, the country, with its small population, is very poor; but under stable government its productivity will be largely developed. In the words of Sir Ernest Dowson "I believe that Transjordan is a richer Judaea, and that during the War it was the granary of the Turkish armies in Palestine." The crops this year, it is said, have been good in parts. Last winter more snow fell than had been known for many years, and rushing torrents filled the river beds and wadis.

The recent earthquakes have been a serious calamity. In Transjordan 60 persons were killed and 135 injured. In Amman there were 9 killed and 35 seriously injured. Hardly a house escaped damage, and many were destroyed. Fortunately the shocks took place in the day time, and many of the people were out harvesting.

The Amir Abdullah is a man of pleasing presence and very courteous manners. He maintains his love of open-air life and of horses. His son Talal is being educated in England and is a very promising youth.

Book Reviews

AN EARLY TOURIST.

"*THE CREDIBILITY OF HERODOTUS: ACCOUNT OF EGYPT.*" By Wilhelm Spiegelberg. Translated by A. M. Blackman. (Oxford: Blackwell, 2s. 6d.)

It was a happy idea of Mr. Blackman to translate Professor Spiegelberg's strikingly able lecture on the value to be put on the account of Egypt given by Herodotus and to make it easily available to the British public. The controversy between those who are prepared to swallow his account whole, and those who look on it as of no value, is of very old standing, and it would seem that the Professor has now definitely decided it.

He shows that Herodotus made his visit to Egypt round about the year B.C. 450, and that he stayed there for not more than about three and a-half months, during the inundation of the Nile, making the Greek settlement of Naucratis his headquarters, from which he made excursions reaching as far as Elephantine in Upper Egypt. Indeed he signed his name in what was equivalent to the visitors' book at Naucratis and this signature still survives. When he made this tour, Egypt was living on the memory of her ancient glories, and, as, is usual in such periods, a great mass of legend was current. During his visits to the various temples and so on he seems to have made a point of having a talk with the priest who showed him round, just as we now-a-days listen to what the Sacristan has to say. In this way he picked up and retained in his memory the popular beliefs current in the country about the golden age of which the people were so proud. No doubt his ignorance of the language, the difficulty of unknown proper names, and the absence of notes made on the spot tended to some confusion, but Professor Spiegelberg's conclusion is that his account of the ancient history of Egypt pretty accurately represents the popular ideas on the subject which prevailed among the Egyptians 2,400 years ago. If, therefore, his narrative of that period has not much direct value as history, it has, nevertheless, a real relative value of its own.

But Herodotus did not content himself with antiquities. He was a tourist of the best kind who interested himself in the actualities of the country he was visiting. He was thus able to write on Egypt as he saw it and on its recent history. It so happens that our records of this period are very scanty. But it also happens that such records, as they turn up, confirm the old historian's account and nowhere contradict it. He is still our main authority on the Saite and Persian periods, and "without Herodotus we should never have been able to construct a picture of the political conditions of the Egypt of those times from the scanty contemporary monuments." Not a bad result of a short tour.

C. S-W.

SOULS IN LIMBO.

"*THE THIBETAN BOOK OF THE DEAD.*" By W. Y. Evans-Wentz (Oxford University Press. 16s.)

The readers of this book will belong to one or other of three classes; professed Buddhists, scholars learned in Buddhist lore, and those who are neither but are desirous, nevertheless, of getting some insight into the thoughts of others on the things of the spirit which really matter. The reviewer belongs to the last of these classes and cannot expect that what he has to say will have any interest for those of the first two. As, however, he feels that, after all, he represents the great majority of the reading public likely to be attracted to a book of this nature, he makes no apology for saying a few words about it from his lay point of view without the use of difficult words or technicalities. All the less so, if he is able to induce others like himself to secure the book and so to share in the great pleasure which he has had in reading it.

The Thibetan does not look on death as natural, though he admits that it is the lot of all human beings. Nor does he regard it as a calamity, because its occurrence provides

special opportunities for what we should call the soul (which is not quite the same as the Buddhist "knower" or principle of consciousness) to escape from its continuous cycle of wanderings in one or other of the worlds into Nirvana. But it is only the adept in Yoga who can hope to find his own way in the mist of delusions which follow death. Others must be constantly instructed so that they may realise the truth and keep clear of hallucination and consequent confusion, for this post-death period is short and very valuable. The object of this treatise, then, is to provide facilities to enable the deceased's Lama and friends to continue after death the instruction which he has received in life and to keep on urgently and insistently instructing him from day to day so that he may be able to make full use of his advantages.

The maximum duration of this transitional stage between death and re-birth is symbolically put down at the mystic number of 49 days, and this is the period served by this treatise. This stage is divided into three parts. During the first three and a half or four days the deceased is in a profound trance or swoon, with no realisation that he is dead. He is bathed in the clear light (of Nirvana), first undiluted and later dimmed by the mists of Karma. If he can only summon up sufficient Yoga power to hold on to that clear light, putting away all else, his wanderings are over. But to do so requires power to realise without confusion what is happening to him, and it is very hard for him, in his deep swoon, to do so. Therefore it is most necessary that his attention should be urgently and very intensively called to what is taking place and that every effort should be made to assist him to effect his escape. All possible means for doing so are here provided.

The next two stages are of the nature of a dream, changing gradually from quiet peacefulness to nightmare. In the first of these two he gradually becomes aware that he is dead but does not yet notice the absence of a material body. During that period he is visited by visions of the gods, first in their peaceful and later in their wrathful aspect. He looks upon these visions as real, but it is of the last importance that he should realise that they are all merely illusions, *karmic* creations of the "Knower." Unless he entirely understands that they are mere hallucinations, he remains confused and cannot, through the power of Yoga, escape. So here too instruction and constant reminder are absolutely essential, and here we are given the best methods of imparting them.

During the last stage he realises, not only that he is dead, but that he has no material body and is entirely severed from his own people. (All the time of the transitional period he is entirely alone.) He is still in a dream state and is pursued in growing measure with horrible nightmares and torture. A vague desire to be embodied once more comes over him and increases in intensity. Unless the Judge awards him a period in Hell or Heaven, immediate re-birth seems to be his inevitable fate. But this will mean the continuance of his wandering and every effort must be made to strengthen him so as to prevent this disaster from overtaking him. Here again, therefore, we are provided with the means of doing what is possible. We may hope that, at one or other of these stages, our efforts to rouse our friend to reality have had effect and that, by the power of Yoga, he has been able to cut the thread of his wanderings, to take the upward path and to reach the clear light of reality. But, if we have not been successful, the weary cycle of births has to go on. Provision is, therefore, made to instruct him how to choose a desirable re-birth.

This is, by necessity, a very insufficient summary of this remarkable treatise. It contains much that is very beautiful, both in thought and in language, and we can only wonder greatly how such a manual came into existence on the frozen roof of the world. For it is not a compilation from treatises prepared in other Buddhist lands. It is a

Thibet. It has been skilfully and reverently translated by a learned Thibetan initiate recently deceased and edited by Dr. Evans-Wentz who, on account of his life-work and study on the spot, both in Thibet and in other lands of Buddhism, is eminently qualified to do so. His notes are masterly and his introduction (with addenda) is of the greatest learning and interest, particularly in his luminous sketch of Thibetan Buddhism and Yoga as far as they concern the teaching of the treatise, as also in his treatment of the many curious parallels in other countries and literatures. It was a happy thought to embellish the book with reproductions from Thibetan pictures and objects illustrating the text.

We gather that Dr. Wentz and his Thibetan friend did not confine their work to this text only and we trust that we may be given the benefit of further studies before long.

C.S.W.

PRIMARY EDUCATION IN INDIA.

"VILLAGE SCHOOLS IN INDIA" By Mason Ollcot. (Oxford University Press, 3s. 6d. net).

This valuable book is devoted to a close and critical examination of rural conditions in India, with special reference to the requirements of village education. It contains a large number of most important suggestions, and fully justifies the claim, made for it in the Foreword, that its aim throughout has been practical and constructive. It does not attempt to minimize the enormous difficulties confronting the educational reformer, many of which are of a kind not to be met with in other countries. For instance, it stresses the obstacles due to religious and linguistic differences among the peoples of India and the paralysing effects of caste among Hindus, and, in regard to female education, says that "the customs connected with the early marriage and seclusion of girls require modification" before there can be any reasonable prospect of educating them—which practically amounts to a demand for what is at present a sheer impossibility. The author suggests that the new political reforms have awakened the "national spirit" and have tended to direct popular attention towards education in general and declares that, inasmuch as millions of the voters in India are illiterate villagers, a thorough and persistent campaign for adult literacy is absolutely vital to the political salvation of the country. It is, however, permissible to suppose that the incentive towards education, provided by the reforms, is confined to the minds of the "political" section of the population: which, besides being only a minute fraction of it, is already literate. It has to be remembered that 78 per cent. of the inhabitants of India earn their living wholly and mainly from agriculture: and it is certainly still true that, in the words of the Calcutta University Commission report, the cultivator has not yet learned to value education as an equipment for his life: he often fears, not without reason, that his children may be tempted away from the land by a system of training which has no bearing upon the work in the fields. Moreover, such village teachers as do exist are poorly equipped and miserably paid: "as things are now, school teaching is scarcely a profession at all, inasmuch as, with few exceptions, qualified men at present working as schoolmasters are avowedly only doing so until they can take up some more lucrative employment." And the vast majority of village schoolmasters are wholly unqualified, content to stumble through their daily duties without enthusiasm and without any prospect of personal advantage.

What is needed for the improvement of education in India is money, and a great deal of it: the only reasonable prospect of raising the necessary funds is the improvement of agriculture and the quickening of the intelligence of the peasant—the release of what the author calls "two very potential reserves," at present scarcely touched—the husbanding of the fertility of India's soil, and the replacement of hoarding by productive investment. Thus education in India is in the vicious circle: money must be found for it, but there is little prospect

of finding the money except through education. There are, however, two hopeful signs: on one of which—the progress of the co-operative movement—the author dwells at some length, while just casually mentioning the other in passing—the boy scout movement. There must be many who, in common with the present reviewer, mingle astonishment at the source with admiration at the results of that magnificent idea: it has already caught on in India and, if it is not allowed to be perverted by the politicians, it may do incalculable good there. Incidentally, an interesting piece of information that will probably be new to most readers, is to be found tucked away in a foot note: that, in India, a literate is defined, for the purposes of the Census, as "a person who can write a letter to a friend and read his reply—the number of those who can decipher the pages of a printed book with more or less difficulty is no doubt much larger." The definition of illiteracy in the United States is confined to those persons who have had no schooling whatever: and it is also to be observed that the figures generally quoted for India include all persons under ten years, while those for other countries do not. Immediately after this note comes the only passage in the book which the reviewer has found to be irritating. The reader is told that, on the whole, the people of British India have had considerably more education than those in the Indian States: though three of the latter take rank above all the British provinces, except Burma. Then follows a table of the percentage of literates in those three States and in all the British provinces—except Burma, for which the figures are not given, either there or anywhere else in the book. This is unfortunate; for, though it is true that Burma is only by accident a province of British India, and that it is practically homogeneous in race and religion, and devoid of caste, it is yet by no means improbable that valuable lessons for the furtherance of education in India might be drawn from "the neighbouring Dominion" of Burma.

FOUR NOVELS.

"MIDSUMMER MUSIC." By Stephen Graham. (London: Harvst and Blackett. 7s. 6d.)

"THE SIRE." By Luke Allan. (London: Hutchinson. 7s. 6d.)

"THE HEATHER BRIDE." By Halliwell Sutcliffe. (London: Long. 7s. 6d.)

"INJUDICIOUS JERRY." By Douglas Walshe. (London: Hutchinson. 7s. 6d.)

Mr. Graham's music sounds on the midsummer sea that washes the coast of Dalmatia, and it affects in different ways a party of English people who go to spend the summer there. Morison, a student of Shakespeare, is the most changed, but we are left wondering whether it will make any real difference to his future. In the same way we wonder whether the sculptor peasant, Ante Reisch, will stay in his native Dalmatia, unhappy and discontented. The flat, abrupt sentences in which Mr. Graham has written suit the inconclusiveness of his subject. But we carry away a picture of uncomfortable, beautiful Castelli and a sound of singing by a blue sea.

"The Sire" is a story of Canada and centres round the character of Rodney Carleton. Carleton is apparently vague and lazy, and he never forgets that he is an Englishman of the Public School and University type and not a Colonial. He succeeds, however, in all his varied attempts to make money in Canada through his calm self-assurance and his persistent good luck. Beside his vividly drawn character, his three sons and their wives seem unreal, and even the picture of his wife, although it has a certain pathos, is shadowy.

"The Heather Bride" is a costume romance which has an arresting beginning and continues with the story of a flight across the wildest part of the Yorkshire moors. The heroine—and the hero and the villain in their separate attempts to pursue her—have many adventures amongst the gipsies and the Potters, who lived in the Forests.

"Injudicious Jerry" is a cheerful young man, with not many brains and a good heart. It is pleasant to read of his adventures.

J. B. Ainslie.

PERSONAL AND GENERAL

TO-DAY

August 25, 1927 (New Style).

August 12, 1927 (Old Style).

Saphar 26, 1346 A.H., of the Muslim Calendar.

Ah 27, 5687, of the Jewish Calendar.

Sir Binode and Lady Mitter arrived at the Empire Hotel, Bath, on August 19.

Shevky Pasha, Counsellor to the Turkish Embassy, has returned to London from the Continent.

The Earl of Lytton last week joined Sir Iain Colquhoun's shooting party at Rosdhu, Luss, Dumbartonshire.

Dr. Amourgi is acting as Greek Vice-Consul in Suez during the absence on leave of M. Papaeliopoulos.

Sir Laming Worthington-Evans left London on August 19 for Scotland, where he will remain until about September 1.

During the absence on leave in England of Sir C. W. Spinks Pasha, Inspector-General of the Egyptian Army, Lewa Palmer Pasha is acting in his stead.

The new Persian Ambassador to Turkey, Mirza Kassim Han Nizam El-Milek, will, according to the *Jumhuriyet*, arrive in Turkey shortly.

Captain Leonard Henshall, who has resigned his appointment as Inspector to the Egyptian Customs, will not be remaining in Egypt.

Mr. Nelson Suter, British Consul for Tanta, and Chief Inspector of Egyptian Markets, Ltd., accompanied by Mrs. Suter, left Egypt early in August for three months' home leave.

Major W. D. Long, O.B.E., Air Advisor to the Ministry of Communications, will be one of the delegates representing Egypt at the Air Post Congress, which is to be held at The Hague next month.

Lieutenant-General Sir A. E. Codrington, grandson of Admiral Codrington, who led the Allied Fleets at Navarino in 1827, will represent Great Britain at the Greek celebration of the centenary of the battle.

Abdel Rahman Reda Pasha, Under-Secretary for Justice, has been appointed president of the delegation representing Egypt at the International Conference to be held in Rome in October, to revise the Berne Convention on the protection of literary and artistic works.

ENGAGEMENT.

VAN MILLINGEN—JACKSON.

The engagement is announced between Evelyn Francis Mackenzie van Millingen, M.A., younger son of the late Rev. Professor Alexander van Millingen, M.A., D.D., of Constantinople, and Mrs. van Millingen, 32, Via Erta Canina, Florence, and Kathleen Maude, only daughter of Dr. and Mrs. D. N. Jackson, Bridge House, Corbridge, Northumberland.

"THE MOSLEM WORLD."

The missionary quarterly, the *Moslem World*, is published by the Missionary Review Publishing Company, New York City. It is edited by Dr. S. N. Zwemer in Cairo, and its London agents are at the Church House, Great Smith Street, Westminster (price per copy 50 cents, or \$2.00 per annum).

KING FAISAL OF IRAQ.

King Faisal of Iraq, who is accompanied on his visit to Europe by Rustam Haidar, Private Secretary, and Tahrim Kori, A.D.C., arrived at Marseilles on August 19. He was met on board the *Macedonia* by the Acting Governor of Marseilles, the Mayor, and the British Consul-General. After staying at the Hotel de Noailles for the night, His Majesty left Marseilles on August 20 for Nice, and the following day proceeded to Aix-les-Bains, where he will stay for an indefinite time. It is hoped that Mr. Stanley Baldwin, after his return from Canada and visit to Scotland, will meet King Faisal at Aix-les-Bains and discuss Anglo-Iraqi relations.

NEWS IN BRIEF.

A gift of 50,000 lire (about £560) has been sent by the King of Egypt to the Podesta of Venice for distribution among the poor of the city.

Sir John Du Cane, Governor of Malta, left on August 17 in H.M.S. *Caradoc* for England, on leave.

An official decree was published in Bucharest on August 17 announcing the coming of age of Princess Ileana, the 18-years old daughter of the late King Ferdinand of Roumania.

Queen Nazli, wife of King Fuad of Egypt, accompanied by her father, Abdel Rahim Sabry Pasha, and her brother, Sherif Sabry Bey, sailed from Alexandria on August 17 for Toulon in the Royal Yacht *Mahroussa*.

A party of 300 Croat pilgrims headed by four Bishops and three Prelates arrived on August 13 in Czechoslovakia on a visit to the tomb at Velehrad of Saints Cyril and Methodius, the Apostles of the Slavs.

The *Rosemary*, a sloop of the Arabis class, now in the reserve at Devonport, where she was paid off last September, is to be brought forward for commission. She will be transferred to Portsmouth shortly and taken in hand for service in the Persian Gulf.

Of the three bandits accused of participation in the hold-up on the Nablus road on May 6, when the Anglican Bishop was robbed and the chauffeur of another car murdered, two were condemned to death and the third to 15 years' penal servitude. The Court of Appeal on August 15 confirmed the sentences passed by the Lower Court.

The Italian cruisers, *Pisa* and *F. Ferruccio*, which have been visiting Alexandria, left on August 20 for Jaffa, where they remain until to-day (Thursday). Three warships from Yugoslavia, the *S/M* *depôt-ship* *Hvar*, and the submarines *Hrabri* and *Nebojaa*, will visit Portland in September, arriving from the Tyne and staying about two months.

M. Marinkovitch, Yugoslav Minister for Foreign Affairs, exchanged ratifications of the Church School Conventions with the Roumanian Minister at Bled on August 17. M. Marinkovitch informed Press representatives that the Yugoslav trade agreement with Germany was ready and was awaiting the sanction of the respective Cabinets.

A scheme for the general construction and maintenance of Greek roads, involving credits of £10,000,000, was considered by the Greek Government on August 17. The successful tenders were from the Asiatic Petroleum Company and the Greek group, the Prezani Company, collaborating with the Mawson and Trinidad Asphalte Company.

King Fuad of Egypt, accompanied by his suite, visited the principal monuments of Venice on August 14. In the evening a festival was held on the Grand Canal in his honour, followed by a reception at the palace of Count Volpi. Mr. Mellon, American Secretary of the Treasury, who is on holiday in Italy, was present at the reception. His Majesty left on August 19 for Paris, where he arrived the following day. After a few days' stay *incognito*, King Fuad will probably go on to Vichy.

SHELL

AN IMPERIAL ANOMALY.

The failure of the General Economic Committee of the recent Imperial Conference to reach a definite understanding in regard to the taxation of non-resident traders is likely to be attended with important practical consequences to Indo-British trade and industry. At present there is a marked diversity of method in the various parts of the Empire in the computation of the profits, for taxation purposes, of a manufacturer or producer resident in one part of the Empire who sells his goods through an agent or branch in another part. The manufacturer or producer is subject to taxation in both countries, though, as we shall show later, his burden is eased by the arrangements which have already been made between many parts of the Empire, including India, for relief in respect of double taxation at the expense, in practice, wholly or mainly of the British Exchequer. The General Economic Committee took the eminently reasonable view that the total profit of the manufacturer or producer which finally emerges on the sale of his goods abroad may be regarded as consisting of two parts—viz., the “manufacturing” or “producing” profit which arises from activities exercised at home, and, secondly, the “merchandising” profit which accrues as the result of operations conducted in the country of sale. There was general, though not complete, agreement among the members of the Committee that such a division was desirable, and that the scope of the charge to income-tax might with advantage be restricted to the “merchandising” profit. This principle has been adopted in Great Britain and Northern Ireland, and a similar idea of taxing only part of the profits of the non-resident manufacturer also underlies the income-tax legislation of some or all of the Dominions, though not in every case of that of the provincial or State administrations within their boundaries. Sir David Chadwick, the representative of India on the Committee, intimated, however, that he was unable to accept the principle, and if the interpretation which the commercial community places upon certain provisions of the latest Indian Income Tax (Amendment) Bill is the correct one the reason for his hesitancy is not far to seek.

According to the Finance Member's speech on the occasion of the introduction of the Bill at the Delhi Session of the Indian Legislature last January, the Bill has been framed “with the purpose of effecting various minor alterations of machinery in regard to the income-tax law as it at present stands.” The volume of criticism, emanating from official as well as from purely non-official sources, which has reached the authorities since Sir Victor Sassoon prevailed upon Sir Basil Blackett to circulate the proposals for general information and comment, suggests on the other hand, that the projected legislation is not quite so innocuous as would be implied from the Finance Member's own description. Much of the opposition, as is invariably the case where income-tax is concerned, takes its rise from the drafting of the measure which, following the accepted Government model, while avowedly designed to clarify the existing law and prevent evasion, succeeds

only too often in merely making “confusion worse confounded” for the well-meaning and conscientious taxpayer, even if it does not at the same time result in a considerable extension of the authorities' range of effective action. Under Section 42 (1) of the Indian Income Tax Act, 1922, profits and gains accruing to a non-resident directly or indirectly through or from any business connexion or property in British India are deemed to be income accruing or arising within that country. It is within our recollection that representations were made before the Act was passed to secure a definition of the words “business connexion” or “agent,” but the Committee convened to advise the authorities regarding the assessment, in particular, of mercantile profits was unable to agree upon a suitable formula and contented itself with a recommendation that “special efforts should be made to make the working of the section uniform and to define the policy to be followed throughout the whole of India.” A provision of so all-embracing a nature has, however, not unnaturally led to considerable doubt as to the income which should be taxable. As to the desirability of clarifying the position there can be no two opinions, especially in the light of certain High Court decisions, which have held that the effect of the existing legislation is to tax not only the profit arising from operations conducted in India, but also that accruing from the sale of the goods abroad. Clause 7 of the Bill, which has aroused the greatest opposition, seeks to amend the law in conformity with the Court's ruling and therefore has a direct bearing upon the subject of the General Economic Committee's discussion. According to the East India Section of the London Chamber of Commerce, which is actively interesting itself in the question, the proposed amendment, in other words, would appear to subject to Indian income-tax not only the merchant's profit, but in the case of a manufacturer who is also a shipper, the “producing” profit earned in this country. Obviously if the contention is correct—the Chamber has endeavoured to obtain official confirmation of this view but the India Office is unable either to confirm or deny the correctness of the interpretation pending the result of a reference to the Indian authorities on the point—the position certainly appears to be in the nature of an anomaly in Imperial taxation.

The inequality of the tax as between one class of trader and another, moreover, is illustrated in the case of a merchant residing not in India but in the United Kingdom, where he also conducts a manufacturing business, exporting his manufactured goods for sale in British India. He would be liable, it is contended, to taxation in India on both his manufacturing and merchandising profit, whereas a rival merchant exporting similar goods manufactured by another person would only be taxable on his merchandising profit. “It seems to be a very strong measure,” the Indian Taxation Inquiry Committee pointed out in the same connexion, “to seek to charge profits which neither arise out of activities carried on in India nor belong to a person resident in India, and the matter is by no means without importance in relation to the arrangement for

double income-tax relief which exists between India and the United Kingdom," to which we have already referred. The moral claim of the British Government to the producing profit cannot be denied and the extent to which, in the circumstances we have described, the British Exchequer can fairly be called upon to continue to bear the brunt of the compensating relief is, at least, a debatable point.

CURRENT TOPICS.

Co-operative Marketing.

In welcome contrast to the views of many of his business associates, which form the subject of caustic comment by a Bombay journal quoted in another part of this issue, Sir Rajendra Nath Mookerjee maintains that the economic salvation of rural India lies in education and improved agricultural economy. The considered opinion of one who deservedly occupies an outstanding position in the industrial and commercial life not only of Bengal but also of the whole of India would in any case command respect. Sir Rajendra Nath is not, however, content with the mere expression of his views and he has accepted the post of Chairman of the Bengal Co-operative Bank in order to be able the better to assist in a movement which in his opinion is capable of far wider and more extensive application than the mere provision of cheap credit facilities for the cultivators. In time he hopes to be able to devise schemes for farming on co-operative lines and for co-operative distribution. Already a beginning has been made by the Bengal Co-operative Department in the matter of the marketing of jute and the experiment will be watched with sympathetic interest.

The Reserve Bank Bill.

The opening of the Simla session of the Central Legislature on Thursday was to a very large extent overshadowed by the prior publication of the report of the Joint Select Committee on the Gold Standard and Reserve Bank of India Bill. The report, as foreshadowed in earlier issues, discloses sharp differences of opinion on the question of the constitution of the Bank, the method of control and the expediency of issuing gold coinage. The majority view, embodied in the amended Bill, favours a purely State institution, because in its opinion a Bank with a share capital would be largely at the mercy of vested interests. Not only, it is suggested, would such an organisation fail to secure the confidence of the Indian public but its utility might be endangered by a conflict within the management between Indian and external interests. The minority contention, expressed in a dissenting minute by Sir Basil Blackett and the official and other members, supports the original proposal and contends that it provides the best method of securing an independent directorate, free alike from undue State control and from political influence. At the same time the minority view recognises the advantages of the best features of the majority scheme, namely, the inclusion on the Board of representatives of the provincial co-operative banks, the Federation of Indian Chambers of Commerce and the Associated Chambers of Commerce, respectively, and has adopted the suggestion. It is, however, absolutely opposed to the majority scheme for ensuring a predominating proportion of Indian-elected directors, including three returned by the elected members of the Assembly and Council of State and three by the provincial legislatures. In particular the definite reservation of the post of either Governor or Deputy-Governor for an Indian is regarded as intruding racial or communal considerations, but the minority is agreeable to the nomination by Government of two additional directors, in order to ensure that the Board is thoroughly representative of the various localities, communities and interests. The majority have retained the sovereign and half-sovereign as legal tender and also included a gold mohur of 20 rupees among the forms of currency which the Reserve Bank is required to

exchange for notes on demand. The decision is regarded by the minority as a breach of the understanding reached at the Bombay session; the latter contends that while it agreed to the minting of a few gold coins as a matter of principle it was never intended that they should be put into effective circulation. As Sir Basil Blackett has made no secret of his determination to withdraw the Bill if the essential feature of the majority scheme—the representation of the legislatures—is endorsed by the Assembly, the debate on the Report Stage may be expected to provide plenty of excitement.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, August, 4.

The Viceroy's Tour.

Their Excellencies the Viceroy and Lady Irwin were greeted by large crowds on their arrival in Bangalore last week. It is reported that a great number of people went to Mysore specially for the occasion. The usual silver casket and address of welcome were presented to the Viceroy, who made a brief reply, sympathising with the Municipal Commissioners in their anxiety about the water supply; but no definite assurance could be given, except that their request would receive from Government the careful consideration it deserves. With them he deplored the delay in bringing to a head the scheme approved in 1925 for an increased water-supply. Their Excellencies visited the Kolar Goldfields, and were much interested to see from the obelisk erected at the entrance to the Balaghat Mine that the total production of the Kolar Goldfields since 1882 had amounted to 14,957,474 oz. The Viceroy after a crowded programme of inspections and visits went out for a hunting excursion in the jungle, early one morning. This was on the closing day of the Viceregal visit. Boy scouts and girl-guides were, of course, inspected. There was a garden party at the Residency, and, after a quiet dinner, their Excellencies left for Mysore by special train. Lord Irwin, whose cold season programme has been slightly altered, will not be in Calcutta before the end of the year, for the Christmas festivities and the New Year amenities. On account of the modified programme, the 7th Congress of the Far Eastern Association of Tropical Medicine will be opened by H.E. the Governor of Bengal instead of by Lord Irwin, as previously announced.

Indian Princes' Status.

Colonel Haskar and Professor Rushbrook Williams, who headed the Deputation sent to England by the Chamber of Princes, returned to India a few days ago. They are said to have brought back a definite opinion on the constitutional position of the Indian Princes. They have made clear to the English Press and English public men that there is no antagonism between the Indian States and British India, but that they constitute two separate entities, each with its own interests and rights; which is what makes the difficulty of an adjustment. A policy of "live and let live" seems to be indicated as the most fitting way towards amity and good understanding. The delegates consider that they have rendered a real and solid service to the States, and to India as well, by bringing home to the British people the right view of the problem. The written opinion of eminent counsel headed by Sir Leslie Scott will be submitted to the Maharaja of Patiala, Chancellor of the Chamber of Princes. Later on it will be considered by the Standing Committee of the Chamber.

The Bengal National Bank.

There has been a meeting of the Bank's shareholders, creditors and depositors. They have been asked to vote for the much discussed shareholders' scheme of reconstruction, or to support a final winding up. A Committee was appointed to appear before Mr. Justice Costello, and pray for a stay of final orders.

The result of the voting was that 504 creditors repre-

senting claims amounting to Rs. 17,24,370 voted for compulsory winding, and 297 whose claims totalled 8½ lakhs were in favour of the reconstruction scheme. Consequently Mr. Justice Costello directed that the Bengal National Bank be compulsorily wound up. The investigations have shown that 50 lakhs or so were advanced to favoured customers, without any kind of security. Fraudulent entries were made in the books, and "companies cropped up in one night," to use one of the directors' own expressions, thanks to the liberalities of the Bank. Big houses were built and motor-cars were bought with the money of thousands of poor depositors. Indignation prevails. The compulsory winding up of the bank is generally accepted as the wisest course.

The Port of Calcutta.

At a Rotary Club meeting the other day, Mr. Stuart Williams explained that the Port Commissioners were rapidly improving the port of Calcutta, and that King George's dock would shortly provide for handling increased imports and exports, and be of help to trade warehouses, overseas business and local industries. Speaking of the future of the River Hoogly as a navigable channel, Mr. Stuart Williams denied any foundation for the opinion expressed in the papers, that the Hoogly is a dying river. If it were the case, how could the Port Commissioners deliberately spend crores of rupees on Port Improvement? There are spots causing anxiety, but it can be proved that a deterioration in one place is always balanced by an improvement in another, and, on the whole, there is nothing to point to steady and cumulative deterioration. The possibilities of future developments seem to be great, there being large areas free for industrial purposes and splendid sites for trade depôts, with good road and rail facilities. This address reminds one of the illuminating lecture delivered at the Town Hall many years ago by Mr. Geddes. It would be interesting to know whether any of his port improvements have been carried out. His demonstrations and the plans of European ports, among which Hamburg's was the most extraordinary, were most convincing at the time: at least many thought so. Mr. Geddes made the question of the Calcutta Port Improvement as clear as could be, even to a layman.

Reserve Bank Bill.

The Reserve Bank Committee has concluded its sittings. The report will be submitted to the Central Legislature, and many wonder what its fate will be. There are two main points still under discussion in well-informed quarters; those points are the composition of the Directorate and the question of Gold Currency. It is generally thought that if the proposals for a gold currency are not pressed, Government will be able to meet the opposition in the matter of the creation of a Directorate—not a shareholding directorate, but one capable of fulfilling its duties to the public better than any shareholding directorate. Experts hold the view that, even in the case of Government being forced to revert to the shareholding directorate scheme, it might be possible to incorporate provisions removing all the disadvantages of the scheme, and ensure safeguards from the public's point of view.

Here and There.

Those who happen to know Serajunge will not be surprised to hear that the river has again been approaching the town at the rate of 300 feet in a month over a distance of several miles. The Chief Engineer's reports show that the attack, this time, is bound to wash the town away. It has occurred several times before, namely in 1848, when Serajunge was rebuilt in the neighbourhood, which is considered by the engineers as a great mistake. Crores of rupees, even if available, they say, could not prevent the town from disappearing before the work of damming and dredging the spot could be completed. The only thing that can be done, it appears, is for the people and the Government to leave the place before the river has done its worst. Another town must be built on a site, not too close to the

affected area, yet in the proximity of the river, on account of the large quantities of jute that must be conveyed to and from Serajunge, which is one of the most important jute markets of Bengal.

In Ahmedabad torrents of unceasing rain have caused the collapse of many houses. The trains are stopped 236 miles from Bombay and cannot advance any further. Telegraph and telephone communications are stopped. Passengers are offered a free return to their point of departure. Many are stranded, and women and children are in need of food, clothing and bedding. The cotton crop is damaged. Many villages are knee-deep in water. Many people are buried under the debris of fallen houses.

The ravages of water hyacinth are a serious menace to the welfare of East Bengal. The noxious growth interrupts communications, damages crops, kills off fish, contaminates drinking water, and offers a breeding place to mosquitoes. Many years ago legislation was suggested that would have made it harder for the pest to invade the province, but, as is usually the case, the special legislation is still under consideration. Here and there funds have been provided, but as the campaign was started without co-ordination, the result was that the neighbouring localities around the area cleared were soon infected. It seems to be a question of funds; implements and men are urgently required. In such cases unemployment appears as an anachronism. Indeed, there is plenty of work to be done in Bengal and elsewhere. H.E. the Governor of Bengal, who saw the damage done by the water hyacinth during his river tour, deplores that so little has been done against it. Much time has been spent on investigations. What is wanted is a law, a number of workers and machinery. Special legislation of that kind, it is said, will entail special taxation and the encroachment upon private property in cases where the owners remain callous to the danger. Here is an interesting problem for the scientist: how is water hyacinth to be destroyed, radically, quickly and cheaply? There must be methods more rational than that which necessitates coolies having to wade waist-deep in the poisoned water?

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, August 5.

Flood Relief.

The next fortnight or so will be the most critical period in flood-stricken Gujerat and Kathiawar. There is the danger of an epidemic of cholera unless prompt sanitary measures are adopted. The attitude of the cultivators, whose labours of the last few months and whose houses have together been swept away by the floods, is one of blank despair. This attitude must be fought and conquered, and it is satisfying to be assured by Government that district officers and the agricultural department are doing all in their power to relieve suffering and to devise means and ways of replanting such crops as will mature in time to prevent widespread disaster. But official agency is not enough, and unofficial efforts towards the provision of food supplies and the rehousing of the thousands upon thousands who have been rendered homeless is an urgent necessity.

The Central Fund.

That the public of Bombay is awake to this fact was amply in evidence at the recent meeting of the citizens called by a large number of our most prominent citizens, and which was presided over by Sir Leslie Wilson, who made a special trip from Poona for that purpose. For once all distinctions of caste and creed were set aside—even political differences were set aside, as was evidenced by Mrs. Sarojini Naidu making a handsome donation of Rs. 10,000 on behalf of the Congress, when knowing only

too well that the Congress would have little say in its disposal. The fund that was inaugurated at the meeting has grown day by day, until at the time of writing it has exceeded two and a half lakhs of rupees. Its administration is likely to give some trouble, but Sir Purshotamdas Thakurdas is leading the Committee along sound lines and has persuaded it to adopt a scheme whereby each district is covered by a separate committee; he has appealed to other relief funds to help on the central fund's work and so secure co-ordination—a very important point indeed.

The Need for Help.

The Presidency is faced with a calamity the like of which it has never experienced before, and it is hoped will never experience hereafter. What is Gujerat's direct loss now, must be shared in time, perhaps indirectly, by the Presidency as a whole. It will hit the revenues of the Government, already in none too good a position, very hard. Sir Chunilal Mehta, indeed, must already be at his wit's ends as to how to balance his Budget next March. But all such considerations must be set aside, as must also the rather inapt expressions of two leading merchants of Bombay who referred at the meeting to the trade depression as a sort of propaganda in favour of the Millowners' claim for protection, and we must all come forward with our mite to help the good work ahead and do so as soon as we can, for time is of first importance.

Back Bay Again.

The recent publication of three Press notes seems to indicate that the Government of Bombay has at least decided to take the public into its confidence regarding the control of the Back Bay Reclamation Scheme and the Suburban Development Scheme. The decisions that Government has come to are at once timely and welcome. In brief, they propose setting up three committees, composed mainly of members of the leading local bodies in Bombay and representing a wide variety of interests, to advise respectively on the prosecution of the Back Bay Scheme, the layout of the three blocks already reclaimed and the development of the suburbs. Curiously enough, Government has chosen the members from among those bodies who have been its severest critics in order that they may take a hand in running things themselves by means of these inquiries, and the result should prove eminently satisfactory.

Cholera Danger.

In view of the floods in Gujerat, the figures for the prevalence of cholera in Bombay Presidency are of particular interest, and they do not by any means provide pleasant reading. Starting in Belgaum and Dharwar, during the period of fair-holding in those districts, it has spread very steadily, until now it is almost approaching epidemic form in more areas than one cares to admit. Khandesh is the latest to be affected, and as it lies on one of the two routes by which Bengal succeeds in spreading its cholera to the rest of India, this fact is naturally causing a great deal of anxiety. Precautionary steps are already being taken to prevent its increasing in virility or spreading, and it is to be hoped that these measures prove effective, for surely we are already sufficiently inflicted with this life's misfortunes to be spared from a Presidency-wide cholera epidemic?

Poona Races.

Last Saturday ushered in the Poona racing season, and in view of the fact that the going was heavy and that it drizzled off and on right through the afternoon, it cannot be said that it was ushered in with a blaze of glory. However, despite the fact that favourites failed consistently, the racing itself was quite good. Jockey Herbert, riding as "first" to the Maharaja of Kolhapur's stable in the absence of Reggie Stokes, was very much to the fore in six out of the nine events on the card, and was instrumental in capturing the chief prize of the day on Shri Narayan (late Know All), who beat a large but moderate field in convincing fashion despite the fact that he is a recent

importation. Incidentally, the totalisator paid the biggest dividend of the day on this race, Rs. 419½ for Rs. 10. Two objections were lodged during the afternoon and were overruled, but it has raised the question as to whether the W.I.T.C. Stewards ought not to impose a fine for frivolous objections.

Commercial Markets.

There has been much doing in commercial circles during the past week, and the Government of India has provided most of the sensations. The very moderate success attained by the new rupee Loan is ascribed to its being a short term loan whereas investors and speculators prefer long terms, the weakness in securities while the loan was open and the maintenance of the bank rate at 5 per cent. In view of what might almost be regarded as a failure, it is surmised that Government will have to borrow in India by the issue of Treasury bills so as to be able to meet the present plethora of funds and render money available to the market at a time when it will most be needed for trade purposes. The money market at the moment is easy, while gilt-edged securities maintain their steady tone. Steady but dull describes both the exchange and gold markets, but wide fluctuations with considerable speculative activity characterised the silver market. Government's sale of silver was productive of a slump, but reports from London to the effect that no further sales would be effected resulted in a small increase. On the share market mills have been weak in sympathy with the lower rates for cotton, but the miscellaneous section has been steady with a rise in Tata Steels following the publication of the company's report showing a profit of one and a half crores and a rise in cements.

THE INDIAN COTTON TEXTILE CONTROVERSY.

The Government of India's new proposals for the protection of the cotton textile industry, a summary of which was given in last week's issue of THE NEAR EAST AND INDIA, have in no way mollified the millowners. On the contrary they claim, with some justice, that the Government's recognition of the necessity of revising its previous decision is a complete vindication of the attitude adopted by the Bombay Millowners' Association and the other bodies represented at the recent conference with the Viceroy and the Commerce member.

In fact, the *Times of India* pertinently observes, the differences between the Government of India and the Tariff Board have now become as great as those between the Government and the millowners themselves, as exemplified by the proposal to increase the import duty on yarn—a course to which the majority of the Board were definitely opposed—and the reiteration of the view that the existing revenue duty of 11 per cent. on cloth is sufficient protection against unfair Japanese competition, in the face of the Board's unanimous opinion that the industry was fairly entitled to claim some measure of additional assistance on that account.

As the precise effect of the proposed revision of the yarn tariff, which was embodied in a separate Bill introduced in the Legislative Assembly at the opening of the Simla Session on Thursday, is not immediately apparent, it may be explained that yarn imports are now subject to a duty of 5 per cent. on their declared value. In cases where the value is under 30 annas, or 2s. 9¾d. per pound, the Government proposes that the duty shall be levied at a fixed rate of 1½ annas per lb. (1 11-16d.), or 5 per cent. ad valorem, whichever is the higher.

As the average value of all descriptions of yarn imports was shown in a recent report to be just under 1s. 11¾d. per pound, the new rate will be applicable to a considerable proportion of the imports of all other than bleached yarns, which average over 3s. per pound, the incidence of the duty being most heavily felt in the case of the cheaper Japanese and Chinese varieties. While therefore the spinning section of the local industry will derive some benefit from the proposal, even that advantage is

conditional upon a relatively stable price level for the raw commodity, which is far from being assured.

While the reduction of the duty on artificial silk yarn from 15 to 7½ per cent. is primarily designed to minimise the effect of the enhancement of the yarn duty on the handloom industry it will, it is hoped, also facilitate the diversification of mill production which the Tariff Board sought to achieve by the proposed bounty on the higher counts of cotton yarn. While it is estimated that two-thirds of the present imports are consumed by hand-loom weavers throughout the country, artificial silk yarn is also extensively used by the Ahmedabad industry, which stands to benefit most by the proposal.

Meanwhile the Committee of the Bombay Millowners' Association is continuing its efforts to educate public opinion on the real issues in dispute. In the third of the series of pamphlets issued under the auspices of the Association, the Government's first resolution, conveying its original decision on the Tariff Board's report, is subjected to close and detailed examination. As previously stated, objection is taken particularly to the summary of the Board's findings which are held not to be in every respect a fair presentation of the facts. The point, for example, is made that the question of exchange is not even mentioned in the resolution, although the majority of the Board referred on several occasions to "the undoubted temporary handicap imposed on the industry by the stabilisation of the rupee at 1s. 6d."

Exception is also taken to the definite statement that "the primary object of this increase (an all-round enhancement of the import duty on cotton piece goods, from 11 to 15 per cent, for a period of three years) is to provide funds to meet the cost of the proposed bounty on the spinning of the finer counts and of certain other proposals made by the Board, but it will also serve to reduce the rigour of the competition from Japan from which the industry suffers." "We have again to draw the reader's attention," the pamphlet proceeds, "that this statement does not convey a true idea of the facts as will be seen from the underquoted extract from page 177 of the report:—

"The fourth method which the majority of us favour is therefore that of an addition to the present *ad valorem* duty of 11 per cent. on all cotton manufactures other than yarn. Such a duty has in our view four great advantages. In the first place, it gives protection against unfair competition. In the second, it avoids complications arising from discrimination against particular countries. In the third, it enables funds to be found to give a definite stimulus to the development of the industry on the lines we have considered desirable, and, lastly, it obviates the necessity for certificates of origin which would be necessary to ensure that goods of foreign origin are not passed off as goods from any part of the Empire."

Again on page 184 it is stated:—

"The majority of us have therefore proposed a small all-round increase in the duty of cotton manufactures other than yarn not only because this eliminates the element of unfair competition and compensates for any maladjustments between prices and wages, but also because it appears to us to be the most suitable way in which to provide the funds for the scheme we propose."

"But paragraph 10," the statement proceeds, "is the most amazing portion of the whole Resolution. The Government of India have no hesitation in accepting the finding of the Board that the advantage to Japan resulting from labour conditions in that country in actual cost of manufacture may be assessed at about 4 per cent. on both yarn and cloth. After going into the calculations made by the Board, Government come to the conclusion that the advantage to Japan when calculated on the right basis should be 10 per cent. on cloth and not 12½ per cent. as stated by the majority of the Board, but they argue that such advantage to Japan is already sufficiently covered by the existing revenue duty of 11 per cent. on cotton piecegoods. Government thus admit that as regards cloth, Japan has an unfair advantage of 4 per cent., or, if a reasonable return on capital is included, as it should be, of 10 per cent., but maintain that such

advantage is already sufficiently covered by the existing duty of 11 per cent."

"In the case of yarn, however, this ingenious argument could not be repeated as the advantage of Japanese Mills is not fully covered by the existing duty. Government therefore side with the majority of the Board and turn down a duty on yarn on the ground of protecting the handloom industry, conveniently forgetting that in order to overcome this difficulty the majority had at the same time proposed a bounty for the spinning of higher counts. Even the majority were not altogether averse from imposing a duty on yarn. On page 192 of the Report they state that if Japan places on the Indian Market large quantities of coarse yarn at low prices, then "an additional duty on yarn would be fully justified" We do not wish to make light of the fact that the hand-loom industry should above all be protected. But we maintain that the best method of protecting both the mill industry and the handloom industry is by eliminating the unfair Japanese competition which cuts at the very root of the home industry. Japan is deliberately selling her yarn at low prices with a view to oust the home product so that once she has established herself in the market, she could raise the prices to the level she chooses. We have seen in the preceding pamphlet that the Tariff Board itself was fully alive to this well-known economic fact."

INDIAN MAIL.

Rural Economics.

The advice which Lord Irwin gave to an audience during his recent tour in Northern India—to create in the educated moneyed classes an earnest interest in agricultural production in India, to translate, in other words, their sentimental attachment to the land into an active part in raising the quantity and quality of its harvest—is made the text, by the *Times of India*, of a stimulating appeal for a wide imitation of the work of the English gentleman farmer. "Great agricultural shows like those of the Royal Society and the Bath and West of England," it rightly observes, "attract little attention in India; the work which they do is almost unknown. Yet through the darkest days of depression they played a powerful part in saving agriculture in England from extinction; in the rather dreary times through which the industry is now passing they afford the one gleam of light." The landed gentry who established these great institutions, the Bombay journal points out, did not call upon the Government to do everything, nor "clamour for a whole programme of negatives—prohibition of the slaughter of cows, prohibition of the export of cattle, export dues on everything if not everybody, save the products of the manufacturing interests." On the contrary they sat down and created great organisations for the general advancement of English agriculture, which they have kept in vigorous life ever since. They kept their own farms, where modern methods were pursued. They bred pedigree cattle known the world over and as eagerly sought after. In a word it contends "it is within the mark to say that the rural life of England would be infinitely poorer to-day but for the attachment of men of means to the soil."

And yet important as her agriculture is to an industrial country like England its value is infinitesimal in comparison with that of India. If the contrast with the attitude of too many of the landed proprietors, or the rent-takers, in India is drawn in vivid colours it is not an exaggerated picture. "Who . . . can find one," the paper asks, "who is prepared to give of his time and money to the Home Farm, or to cattle breeding, or to the scientific production of milk? We rail at the ryot for taking as much out of the soil as he can, and putting little back, but the actual cultivator is prodigal of enterprise in comparison with the rent-taker."

It is often said but it cannot be repeated too frequently that the national wealth of India could be more speedily increased by a diffused interest in agriculture

than by all the manufacturing activity in sight. The consolidation of holdings in Western India would double the produce of the soil. The abolition of smut in its great millet crop would increase the harvest by the cash equivalent of the annual profits of the Bombay textile industry. "Where else in the world," the *Times of India* asks, "are calves thrown on the dung heap in the milch cattle stables because it does not pay to keep them alive? In what other country are herds of miserable cattle allowed to eat the scanty fodder, mere emaciated wrecks in the hot weather, because sentiment prescribes that they must be kept alive? Not this Agricultural Commission, nor a hundred such bodies, will effect a real improvement until there is a change in our outlook. If for no other reason, because there scarcely exists in India the machinery for the translation of discovery into practice. The rent-takers, the co-sharers and all the great host living on the land are concerned only with their revenues; the whole task of production is laid on the cultivator, with such help as he may get from the Government. There will be no great improvement until this is changed—until the landed interest feels that it has an interest in the land, until we see all over India the counterpart of the Home Farm and the breeding establishment which have saved English agriculture from extinction, and until our moneyed men, even if they have been chiefly interested in manufactures, realise that they have a responsibility for increasing the productiveness of the soil."

An Imperial Event.

The inauguration by the Viceroy at Bombay last month of the beam wireless service between India and this country is an event of more than merely domestic interest to the two countries concerned. It marks the completion of the last and most important stage of the much-heralded Imperial wireless chain. "More than twenty years have elapsed," the *Times of India* recalls, "since the Marconi Company submitted to the Colonial Office their first scheme for Imperial wireless communications." After describing the somewhat chequered course of subsequent developments, both prior to and after the War, and the revolutionary changes made possible by the successful completion of the beam system, the Bombay journal proceeds:—"Outstanding though the achievement is from the Imperial point of view, the public of this country are more concerned with what the beam system offers them now, and its possibilities in the future. Beam wireless opens up a new and comprehensive medium of rapid communication between India and other parts of the world, but particularly with Great Britain." Pointing out that its capabilities can best be judged by reference to what other parts of the system have done, the paper explains that although at present communication is through Great Britain, if the traffic demands of the future make it a paying proposition the Indian stations at Kirkee and Dhond can be adapted for direct communication with Australia and, if necessary, the Far East and Japan. The system also renders possible in the future wireless telephony between Great Britain and India. Canada, South Africa and Australia have powers in their agreement to operate a telephonic service. It is understood that the directors of the Indian Radio Telegraph Company, to whose enterprise and initiative India's beam wireless service is due, are endeavouring to obtain a similar concession.

Broadcasting, unlike wireless, is not novel either to Bombay, where Lord Irwin on the same day opened the new Broadcasting station, or to India at large. "For several years past, owing to the enterprise of the Indian States and Eastern Agency programmes have been broadcast in Bombay, but the new service," the same article proceeds; "will be on a scale hitherto unknown in India," and the paper envisages a time when broadcasting, the possibilities of which from an educative and amusement standpoint are as yet only imperfectly realised, becomes as

recognised a feature of life in India as it has long since been to Western countries.

The Progressive League.

The meeting held last week under the auspices of the East India Section of the London Chamber of Commerce to discuss the best means of ensuring that the economic issues at stake in connexion with any future constitutional changes that might be devised should receive adequate consideration at the hands of the forthcoming Statutory Commission continues to excite considerable Press comment in India. "I have from time to time referred to the movement," writes the author of "A Ditcher's Diary" in a recent issue of *Capital*, "but it is best to let Mr. Allen give his own account of the progress already made." After emphasising the latter's contention that "a Royal Commission must listen to a body which claimed to represent both British and Indian trading interests, landowners and large and small property owners" the article proceeds:—"To identify the wealthiest Hindu in the country who has promised finance, and the Muhammedan and Englishman who are the joint treasurers, is much easier than solving a cross-word puzzle. If the finance is adequate the Progressive League will have to be reckoned with for its activity is informed by enlightened self-interest, than which there is no more powerful human influence. I believe the intention of the League is to move for a redistribution of the present number of seats so as to protect the outlanders on the one hand and landed gentry on the other. A solid alliance of these two important factors in the polity of India would burst through the densest thickets of traditional prejudice. But can the boxwallah always depend on the good faith of the zemindar and vice versa? It is a difficult question to answer in view of the fact that the zemindar is not sure of the loyalty of his labourers, nor can the boxwallah bank on the staunchness of the *beparis* when politics invade the domain of trade and barter. Nevertheless, if the League succeeds in rousing the landed aristocracy from lethargy and teaches the traders from over the seas that they have other responsibilities than dividends, it will accomplish much for the good of the body politic. It deserves a rousing send-off and consistent support. *Sursum corda!*"

NEWS IN BRIEF.

The British team for the first international match for the Westchester Cup at Meadow Brook, on September 5, has been selected as follows:—Captain C. E. Pert, No. 1; Major A. H. Williams, No. 2; Captain C. T. I. Roark, No. 3; and Major E. G. Atkinson, back.

Mr. Jamnadas Dwarkadas, President of the Home Rule League and prominent in commercial and social circles in Bombay and other centres, has filed a petition in bankruptcy. The petition states that the liabilities amount to £100,000, while the assets are nil, and attributes the deficit to loss of business in the cotton trade. The personal possessions of the petitioner consist of clothing, valued at £10, and furniture valued at £200, the furniture having been mortgaged.

The Secretary of State for India has received a telegram from the Education, Health, and Lands Department, stating that the rainfall in India for the week ended August 17 was as follows:—Scanty: Punjab (South-West), Baluchistan, Sind, Berar, Mysore, and Madras Deccan. Fair: Bay Islands, Bihar, Kashmir, North-West Frontier Province, Central India (East), Central Provinces (West), Konkon, Hyderabad (South), and Madras (South-East). Normal: Lower Burma, Bengal, Chota Nagpur, Rajputana (West), Gujarat, Bombay Deccan, Hyderabad (North), Malabar, and Madras Coast (North). Excess elsewhere. Monsoon normal.

It has been decided to appoint Quartermasters to the Indian Infantry and Pioneer Training Battalions in replacement of the combatant officers now performing the duties who entered the Indian Army through the ordinary channels. The selections will be made from among officers promoted from the ranks, quartermasters of British units, regimental sergeant-majors of British units, and other warrant officers. Twenty-two appointments have been sanctioned to begin with, and a limit of 66 applications will be received through Indian commands. The selections will be made from British units serving in India from those with not less than five years' Indian service who have a working knowledge of Urdu and are not over 38 years of age.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

Roumania's Improving Trade.

The figures for Roumania's trade for the first six months of this year make a much improved showing owing to the marked expansion of the exports in the April to June quarter. The value of the imports was 16,860 million lei, while that of the exports was 18,921 million lei, there being a favourable balance of trade of 2,060 million lei, which compares with an adverse balance of 634.8 million lei for the first half of 1926. As there was an advance balance of 243 million lei for the first quarter of this year, the nature of the improvement that has taken place will at once be obvious, and this development is the more noteworthy since an adverse balance has in past years been the usual thing for the first half of the year. This change in the trade position is undoubtedly to be attributed to the efforts made by the authorities to further the interests of industry and commerce in such ways as the recent reduction in export duties and transport freights. This improvement in the trade position, which is merely an indication of the development of Roumania's commerce which may be looked for when conditions in the country itself and in the world markets are really in favour of the expansion of the export trade, coupled with the increasing stability of the currency—a fact which is a self-evident tribute to the work of the authorities—will render much easier the coming negotiations for a loan which is needed, among other things, for the railways.

Tobacco Growing in Roumania.

It is a tribute to the universal appeal of the "weed" which makes tobacco normally a most remunerative crop that every country which can grow the crop tends to concentrate on it. This has been particularly the case in the Near East, where the cultivation of tobacco in recent years by Yugoslavia, Greece, and Bulgaria has brought about a crisis through over-production. Roumania is also a tobacco producer on a considerable scale, and it is interesting to note that the country has apparently not been seriously affected by the prevailing conditions owing to the fact that the great bulk of Roumanian tobacco is consumed internally. The statistics of the area under tobacco in recent years also suggests that a greater measure of prudence has prevailed among tobacco growers in Roumania than in other countries. Thus for 1922 the area under tobacco was 21,382 hectares, for 1923 17,774 hectares, for 1924 31,353 hectares, and for 1925 35,723 hectares, the production for the last year being 17,268,632 kgrs., which compares with a production of 11,187,328 kgrs. for 1919. As the national consumption is estimated at roughly 16,000,000 kgrs., it will seem that at present there is no immediate danger of the problem of over-production, the more so as the tobaccos of Bessarabia are enjoying a steadily increasing demand abroad as it has been found that they are eminently suitable for the manufacture of cigarettes.

The Roumanian Market.

While on the subject of Roumania I should like to draw attention to the remarks in the report of the British Commercial Secretary at Bucharest (extracts from which will be found elsewhere in this issue) on openings for British trade in Roumania. Great Britain holds its own in this market as regards quality, it is pointed out, but "more enterprise might be shown in examining the markets personally and persuading local merchants as to the merits of British goods," and it is urged that our traders should take a leaf out of the book of their competitors and see that their customers are visited freely and that note is taken of their needs. This advice, which is of general application so far as most of the Near Eastern markets are concerned, is most timely. May it have some effect in rousing some of our traders from their habitual indifference to these markets.

Turkish Loan Prospects.

The possibility of the early issue of a Turkish loan may be dismissed as quite out of the question pending the ratification of the debt agreement by the Angora Assembly. There is, as I have pointed out, little doubt as to the ratification of the agreement, but until that very definite step towards the re-establishment of Turkey's financial credit has been taken any attempt to raise a loan abroad would be foredoomed to failure. Once the agreement is accepted the necessary negotiations for a loan will no doubt be speedily commenced, for Turkey's need for financial assistance for works of development is becoming more pressing. It is true that a good deal of progress has been made in Turkey in the past few years, but it does not compare with the advance made in other countries which have not had to depend on their own limited resources, and it is realised very plainly at Angora that the country must be developed as far as possible if it is to hold its own.

Sudan Trade Position.

The latest figures of the trade of the Sudan—for the first five months of this year—make a distinctly disappointing showing. As compared with the corresponding period

BANK OF ROUMANIA LIMITED

(FOUNDED 1866).

Head Office: 123, OLD BROAD STREET,
LONDON, E.C.2.

Branch — 11, CALEA VICTORIEI, BUCAREST.

C. De CERJAT, Esq.
SIR JOHN P. HEWETT, G.C.S.I., K.B.E., C.I.E.
General The Hon. SIR H. A. LAWRENCE, G.C.B.
Lieut-Col. SIR ALBERT STERN, K.B.E., C.M.G.

Bankers :

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.
A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

of 1926 there is a decline under every head except exports, where there is the relatively small increase of £E78,642. The value of the imports at £E2,402,268 shows a decrease of £E235,136, while the total value of the trade at £E6,186,906 has decreased by £E204,218. The reduction in the value of the imports is, of course, a reflection of the depression from which the Sudan has been suffering for some time and which has affected the purchasing power of the country. It is significant that the principal increase among the imports is in dura. The imports totalled 16,342 tons of the value of £E134,329 as against 9,857 tons of the value of £E102,050 for the corresponding period of 1926. On the other hand, there is a large decrease in the imports of cotton piece-goods, the value being £E321,807 as against £E443,197, a fact which indicates the position very plainly. The existing depression is no more than a temporary setback, due in the main to the failure of the dura crop last year, but it may have some slight effect for a time on the development of American cotton cultivation in certain districts, since it is obvious that in its present state of progress the Sudan must avoid in the future so far as is possible the necessity of importing food supplies on a considerable scale, and that will mean increased attention to the growing of food crops.

Substantial Cotton Progress.

If the Sudan is temporarily suffering from trade depression, considerable consolation may be derived from the knowledge that the development of her staple industry—the production of Sakellarides cotton—is proceeding on the most satisfactory lines. For the 1925-26 season the yield of Sakellarides was 422,500 kantars, or roughly 105,600 bales, but for the 1926-27 season the yield is approximately 566,463 kantars, or about 141,600 bales. It may be pointed out that this yield was considerably in excess of the estimates, and that while the production per feddan did not reach the remarkable result of the previous season it was as high as 4.74 kantars, which can only be regarded as a very notable yield. This increase in production is the more noteworthy when it is borne in mind that the cotton is of the very highest quality and, as our weekly reports show, it is in great demand on the Liverpool market. The production of American cotton for the past season is disappointing, the yield being 62,814 kantars, or roughly 15,700 bales, as against 84,050 kantars, or 21,000 bales; but it was only to be expected in view of the sharp decline in cotton prices, and now that cotton appears to have turned the corner it is to be hoped that improved results will be forthcoming. In the best circumstances, however, it must be emphasised that the development of the cultivation of American cotton must be slow, for it depends so largely on the expansion of transport and other facilities.

Suez Canal Traffic.

The figures of the Suez Canal traffic for the first six months of this year show a very marked expansion in the shipping using the Canal, the total transit being 14,502,000 tons, which represents an increase of 1,447,000 tons on the figures for the first half of 1926. The outward tonnage at 6,834,000 showed an increase of 820,000 tons, while the homeward tonnage at 7,668,000 increased by 627,000 tons. The tonnage under the British flag totalled 8,277,000 tons, an increase of 750,000 tons, while the Dutch flag was second with 1,501,000 tons, an increase of 80,000 tons, the German flag being third with 1,293,000 tons, a significant increase taking place in this case of 272,000 tons. The merchandise carried through the Canal totalled 14,658,000 tons, an increase of 1,723,000 tons on the figures for the first half of 1926, and 576,000 tons more than in 1925 when the Canal traffic attained a record. Of this total 5,578,000 tons represented the outward traffic and 9,080,000 the homeward traffic, these being an increase of 411,000 tons in respect of the former and of 1,312,000 tons as regards the latter. As regards the outward traffic it may be pointed out that there were only small increases in manufactured metals and machinery and railway material and that the increase was mainly in coal and salt, while the most notable feature of the homeward traffic was the increase in respect of cereals. While the figures as a whole do not give much encouragement with regard to the rapid improvement of trade, they show at any rate that commerce is making steady progress, which is perhaps as much as can be looked for in present conditions.

Ice Making Plant for Mecca.

It is a sign of the times that an order should have come to a British firm for an ice making plant and refrigerator for Mecca. There are not wanting those who are only too ready to decry the possibilities of the lesser markets of the Near East, and this order, which, by the way, was for the King of the Hijaz, may perhaps help to make them realise that civilisation is marching fairly rapidly in the further parts of the Near East, and that openings may be there to-morrow which a little enterprise to-day will turn to our advantage. After all if people do not know the kind of goods that British manufacturers produce it is obvious that orders will not be forthcoming. There is a great truth in the statement that a market's requirements must be catered for, but it is less true that a market's requirements may be expanded by educating the potential buyers. At the moment unfortunately as far as many of the Near East outlets are concerned British traders as a whole are too inclined to follow a third course—that of *laissez-faire*—forgetful of the fact that British trade was developed entirely by enterprise and initiative—qualities which alone will permit of its expansion in the face of post-War competition.

Sluice Gate Contract.

The interesting news is forthcoming that the order for the sluice gates and operating machines for the Nag Hammadi Barrage (the contract for which has been obtained by Sir John Jackson, Ltd.) has been given to Ransomes and Rapier, Ltd., of Ipswich, who, it may be recalled, also supplied the sluice gates for the Assuan Dam,

the Esna Barrage, and the Makwar Dam. The proposed barrage, which has as its object the irrigation of an area of about 500,000 acres, will be over half a mile in length, and the contract now secured is for roller-type gates for the 100 openings on the main barrage, and for the six openings at the head of the irrigation. Each opening will be provided with two gates of six metres span running in parallel grooves. Two power-driven machines travelling on rails on top of the barrage will be provided for operating the gates to regulate the flow of water through the openings, also for removing the gates when necessary.

COMMENTATOR.

THE YUGOSLAV FORESTRY INDUSTRY.

The forests of the Kingdom of the Serbs, Croats, and Slovenes occupy 18,200,000 acres, or some 30.3 per cent. of the total area. There are 150 acres of forest to every 100 inhabitants. The quantities likely to be cut, until economic conditions are different, depend largely on Italian exchange (says an American Consular Report.) Last year improvements of the lira were reflected by increased lumber exports from Yugoslavia.

About 70 per cent. of Yugoslav exports go to Italy, 16 per cent. to Hungary, 4.5 per cent. to France, and 2.5 per cent. to England. The normal timber cut is about 530,000,000 cubic feet per year. About 35,000,000 c.f. are used for fuel. Domestic consumption is placed at 460,000,000 c.f. a year. The remaining rough timber, about 35,000,000 c.f., plus about twice this quantity manufactured under "domestic consumption" is exported. The total annual increase of forests in Yugoslavia is placed at about 495,000,000 c.f. The fall in prices during 1926 struck wood the most heavily. In the case of construction wood, whereas 35,090 metric tons more, or 3.3 per cent. more, was exported than in the previous year, the money received from it was 247,353,640 dinars less, or a diminution of 23.5 per cent. Comparative exports of construction lumber—two-thirds or more of the annual cut being destined for construction lumber—for the past 7 years were as follows in metric tons: 1920, 211,831; 1921, 311,701; 1922, 584,455; 1923, 849,542; 1924, 1,046,292; 1925, 1,051,225; 1926, 1,086,314.

Most of this is softwood, and on the average may be estimated to contain from 700 to 750 board feet per metric ton. The 1926 construction season in Yugoslavia was active and gave quite an amount of domestic business to lumber dealers. The State mortgage bank granted a considerable number of loans, making possible the construction of a large number of houses and extending the demand for building materials throughout the season. The lumber business developed greatly during 1926, and it was expected that 1927 will produce further progress toward a satisfactory recovery of the industry from the crisis it suffered in 1925. Domestic prices for building material were stable during 1926 and this alleviated troubles in the industry to a great extent.

Forestry products take a very large place in the Yugoslav total exports. Lumber and forestry products have formed from one-third to one-half of the bulk of the total yearly export during the past 8 years, and from one-tenth to nearly one-third of the value.

When all the details of export for 1926 are collected it will be found that the volume was no less than that of 1925, but that in value it will have decreased by about 25 per cent., and, as compared with 1924, by about 50 per cent. The causes of the fall in value are 3: The rise in value of the dinar up to the middle of 1925, the fall in the prices of forestry products coordinate mainly with the fall in Italian exchange, and the lessened export of the valuable woods. Since from about the middle of 1925 the value of the dinar has kept about the same level, but the currencies against which it was calculated have fluctuated widely—particularly the franc and the lira. The extent of the decrease in exports of the less cheap woods cannot be ascertained, as the statistics do not differentiate even the largest item, which is oak for building.

If statistics for export of the particular woods were

kept, it would be possible to ascertain quite definitely the influence of currencies on export, i.e., the separate effects of the franc and the lira. Nevertheless, the export figures which are issued by the Yugoslav Government are sufficient to show the importance of the part played by currency rates in wood export, and that the curve of export follows that of the moneys, rise for rise and depression for depression, with some interval, of course. Other factors cause some departures from this rule, but they cannot refute the fact, which has also been true in other exporting countries, that the state of the currency is the dominant factor in the export of forestry products from Yugoslavia.

Roumania has over 10,500,000 acres under maize cultivation this year.

The second International Fair at Salonika will be held from September 18 to October 3.

The National Bank of Egypt announces an interim dividend of 8s. per share (4 per cent.), payable on September 1.

The traffic receipts of the South Indian Railway Company for the week ended July 23 amounted to Rs. 10,89,442, making the total from April 1 Rs. 1,93,73,170.

Sir W. G. Armstrong, Whitworth and Co., Limited, have secured a contract for 26 locomotive boilers for the Bengal Nagpur Railway Company, Ltd.

Merchant ships entering Port Sudan harbour in June totalled 68 of a net tonnage of 249,434. The corresponding figures for June, 1926, were 65 and 233,637.

During the first six months of this year 310 tons of senna were exported from the Sudan as against 246 tons for the same period in 1926.

Among the foreign exhibits at the Zagreb Autumn Samples Fair, to be held from August 28 to September 5, will be a large Polish group consisting of articles used in Yugoslavia but not manufactured in that country, such as wood-working, textile and agricultural machinery.

Near East Markets

BULGARIAN CROPS.

(From Our Own Correspondent.)

Sofia, July 29.

The wheat, barley, and rye crops have been excellent; the harvest has everywhere been favoured by the conditions. Considerable exports of wheat have been made to Greece. Transactions in the new barley crop commenced as early as May—a rare thing in Bulgaria—and in that month some 1,800 tons were sold at prices varying from 4.65 leva for Danube ports to 5 leva for Black Sea ports. In June the transactions amounted to more than 15,000 tons at rates ranging between 4.65 leva and 5.40 leva according to the place of origin and the date of delivery. The rates declined a little at the commencement of July owing to Russian competition, but hardened again, reaching at Varna 5.30 leva and at Bourgas 5.40 leva for delivery at the end of July or the beginning of August.

The crop of colza has been much smaller than that of 1926, having been affected by the dryness of the autumn. It is estimated at 2,000 tons, while that of 1926 amounted to 8,000 tons.

The maize crop has also been affected by the drought. The damage is particularly severe in the north-west district which is the centre for the production of maize. It is less in the south and in the Rustchuk-Varna region. If the drought were prolonged the crop of maize would be completely lost. As it is it is anticipated that it will be 50 per cent. below that of last year.

Tobacco.

In May about 3,000,000 kgrs. of tobacco were sold to the Austrian Régie, 1,000 kgrs. to the Polish Régie, and more than 1,000,000 kgrs. to the Italian Régie, all these sales being of the best qualities. The purchases of the Czecho-Slovakian Régie have been reduced to 1,000,000 kgrs. as compared with five to six million kgrs. taken by them in recent years. This year this Régie appears to have bought more extensively than usual from Turkey and Greece in compensation for purchases by these two countries of Czecho-Slovak manufactures. This system of exchange has been applied, it may be recalled, for some years between Bulgaria and Czecho-Slovakia; the exchanges consisted of tobacco and railway material. The quantity of tobacco purchased so far by German manufacturers is estimated at seven million kgrs.

As regards the decrease in the area under tobacco it was estimated at the commencement of the season that the crop would not exceed twenty million kgrs. Owing to the drought that estimate must be reduced.

CHESS.

By "CARO-KANN."

White to pay and win.

The solution to last week's end-game is as follows:—
1, K—B3, K—B3; 2, P—Q3, PxP; 3, K—K3, P—Q7;
4, KxP, P—B5; 5, PxP, K—B4; 6, P—Kt4, KxP and draws.

I give this week another example of the very difficult Rook and Bishop against Rook ending. There are only a few positions in which it is possible to win; that in the diagram is typical of them.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Massilia for Bombay (Birkenhead, September 8). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mathura for Calcutta (Birkenhead, August 30); s.s. Matra for Calcutta (Birkenhead, September 15).

Bibby Line.—S.s. Leicestershire for Port Said, Colombo, and Rangoon (Birkenhead, September 7).

British India Line.—S.s. Hatimura for Colombo, Madras, and Calcutta (London, September 3); s.s. Warfield for Bombay and Karachi (London, September 7); s.s. Mashobra for Colombo, Madras, and Calcutta (London, September 10).

Cunard Line.—S.s. Brescia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement (Liverpool, Glasgow, and Swansea, August 27); s.s. Sea Glory for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool September 17, and Swansea September 20).

Johnston Line.—S.s. Jessmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 3); s.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 1).

P. and O. Line.—S.s. Rajputana for Bombay (London, August 26); s.s. Perim for Colombo, Madras, and Calcutta (London, August 27); s.s. Ranpura for Bombay (London, September 9); s.s. Nankin for Colombo, Madras, and Calcutta (London, September 17).

Prince Line.—S.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, August 27); s.s. Cyprian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, August 27); s.s. Scottish Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, September 10).

Ellerman and Papayanni Lines.—S.s. Polo for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume* (Liverpool September 3, Swansea September 8); s.s. City of Milan for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, September 3); s.s. Algerian for Gibraltar, Malta, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, September 8); s.s. Mardinian for Oran, Algiers, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, September 24). * Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek out-ports via Piræus or other convenient port; Fiume via Trieste.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

*MASSILIA ...	Sept. 14	*BRITANNIA ...	Oct. 12

*First class passengers only. Specially low fares. †Calls Port Sudan.

SPECIAL NOTICE.

New T.S.S. California, 17,000 tons, carrying 1st, 2nd and 3rd class passengers, sails from Liverpool Oct. 26; Marseilles Nov. 1.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, August, 23.

In most sections of the Stock Markets idleness has been the order of the day during the past week, though in one or two directions there has been a little activity. In the industrial section iron and steel shares have attracted some attention and several of the favourite issues rose a little. Gilt-edged stocks have been very quiet, the Foreign bond market has been featureless and Home Rails quite stagnant. This, of course, is not surprising at the height of the holiday period, though monetary conditions are also no doubt partly responsible for the dullness of the gilt-edged market, which until recently has been so very firm. The present stringency in the money market has caused some selling of Government securities, but the position of the gilt-edged market is likely to improve substantially when maturing War Bonds, to the extent of some £70 millions, are paid off in cash, early in October.

A Prosperous Australian Industry.

Business conditions in Australia seem to be fairly good, and if present tendencies continue throughout the season the various pastoral companies should be able to maintain the good profit record built up during the past few years. The following table shows Australian wool production since 1921, the current season having closed on June 30. :—

1921	...	...	623,950,554	lbs.
1922	...	...	721,678,346	"
1923	...	...	725,414,526	"
1924	...	...	661,128,038	"
1925	...	...	773,983,872	"
1926	...	...	830,459,607	"
1927	...	...	813,780,000	"
*1928	...	...	734,250,000	"

*Estimated figures.

Advices from Sydney indicate that while the wool clips show an increase in quantity the quality is not as satisfactory as it might be owing to drought. At the sales which open at the end of this month, however, good buying is expected, as there is already a fairly considerable demand from overseas. Fair purchases on behalf of the

Moscow Textile Company are expected to be made shortly.

The most important and probably the most progressive of the Australian Pastoral Companies is Dalgety and Co., and the shares of this concern can confidently be recommended to the investor. The ordinary yield over 6½ per cent., but unfortunately they are of a denomination of £20 with only £5 paid. The £10 5 per cent. preference are probably more suitable for the average investor. They return approximately £5 15s. at to-day's price. The 6½ per cent. Preference shares of the Australian Estates and Mortgage Co., can be bought to give over 6½ per cent. on the money invested, while Australian Agricultural Ordinary return £5 16s. 6d. per cent.

"America and the Share Swindler."

All investors who have the opportunity of doing so should read the recently published book by the President of the New York Exchange which has been given the title of "Modern Capitalism." It consists of a series of lectures or addresses on financial questions and has nothing to do with Capitalism in the sense that the word is used in political circles. One of the most interesting chapters is that in which Mr. Simmons discusses the question of share-swindling. "There is," he says, "no field of business which has not sooner or later found itself invaded by this most dangerous parasite of the business world . . . One year the public is invited to sink its savings in alleged oil drilling, or new inventions, or foreign exchange trading. . . Yet under all these outward and rapidly changing forms, the swindling evil itself persists and even grows stronger in the land from year to year. This admission shows that Great Britain is not alone in having experienced an increasing wave of security swindling. Fortunately the new Companies Act, which is expected to be passed into law this year, should do a great deal to protect the public from the wiles of financial rogues, but whether it will prove as successful in practice as it promises to do cannot yet be decided.

Mr. Simmons thinks that there are two ways of combating the evil. The first is to impose severe prison sentences on the culprits or to foster the public education in economic and financial matters. Neither of these methods, however, is so easy and straightforward as appears on the surface. The education principle is sound, but it is also exceedingly slow in producing noticeable results. As to the other suggested remedy, the objection is that with the majority of companies honestly and conscientiously managed, it is undesirable to impose restrictions on them all in order to punish an occasional delinquent. In other words, by so closely linking the security business with the law that honest men are forced to curtail their activities, you at once provide the swindler with a larger and freer field of operations and make matters worse instead of better.

South African Gold Production and Native Labour.

At the present time very little interest is being taken in South African gold mining shares by reason of the position which exists in regard to the supply of native labour. For some while past a shortage has prevailed, and in reporting the July results several of the companies announced that work had been seriously interfered with by lack of "boys." As the total labour force available is now larger than it was a year ago, it is obvious that this condition must be due to increased demands on the part of old as well as certain new undertakings. In point of fact, the supply always does tend to fall off at this time of the year owing to the return of a proportion of the natives to their kraals for harvesting purposes. On the present occasion, the draft has been more severe than usual. The main cause of alarm, however, consists in certain projected legislation under which the supply of natives from Portuguese East Africa would be very seriously diminished. The natives in question are the most satisfactory amongst the whole of the coloured workers. The legislation in question would not in any case take effect until the end of the year; meantime strong representations are being made to the Powers that Be.

ECONOMIC PROGRESS IN THE SUDAN.

An interesting survey of conditions in the Sudan appears in the United States "Commerce Reports." We give the following extracts:—

The Sudan is the source of 85 per cent. of the world's production of gum arabic of the best quality; the supply of this substance in the country is considered to be almost unlimited, for enormous numbers of gum trees exist in forests as yet unsurveyed and untouched. The trees that have been tapped are only those nearest the main transport routes. The trees are tapped by the natives during the winter months, and the gum is collected and sold in the auction markets of El Obeid and other district centres or in Khartoum. The leading purchasers of Sudan gum are Great Britain, France, and the United States. The 1926 production is reported to have surpassed the record crop of 1923, partly because of increased demand and partly because comparatively poor grain crops forced many natives to make up their losses by collecting gum and freed numbers of pack animals for transportation to the markets.

Durra, or millet, is the chief food and money crop of the Sudan, so important that in some of the more remote districts durra prices control those of other commodities. The average crop is about 194,000 tons, though in the record 1920 season 511,000 tons were produced. Since this vital product is a rain crop, the natives' prosperity depends considerably on the rain fall. Its lack was felt particularly in the 1925-26 season, reducing production to only 75,000 tons. Largely because of this, prices soared in 1926. It is believed that increasing cotton production in the Sudan will tend to keep durra prices high.

With the development under the Sudan Plantations Syndicate of the great Gezira irrigation project in the triangle between the Blue and White Nile Rivers south of their junction at Khartoum, interest in cotton growing in the Sudan has had a great impetus. The Gezira includes a possible irrigated area of about 3,000,000 acres; in the 1925-26 season about 120,000 acres were already under cultivation, with 80,000 planted to cotton; in 1926 about 240,000 acres were allotted to tenants. The cultivation of American cotton (grown mostly in the rain sections) is now being urged in all the central southern provinces, and the natives in several localities have shown considerable interest in this rain-grown crop introduced by the Government.

Other important agricultural products of the country are senna, sesame, dates, ground nuts, and colocynth pulp. A new and rapidly-growing foreign market has been found also for doom-palm nuts, or vegetable ivory, which are purchased largely by the United States for the manufacture of buttons.

The average exports of sheep and goat skins now about equal those of ivory, but it is believed that this trade will be increased by the growing prosperity of the country and the resultant increase in meat consumption.

Ginned cotton and gum arabic far outrank all other Sudan exports in value. Durra and sesame rank next. Similarly, cotton textiles and iron or steel tools and machinery (including steam engines and automobiles) far outrank all other Sudan imports.

Cotton textiles constitute almost the sole dress material of nearly all Sudan's population of 6,000,000. The country consequently presents an important market for piece-goods, particularly unbleached sheetings. In 1925, out of a total of 5,000 tons of cotton goods imported by the Sudan, 2,000 were Japanese and 1,600 British or British Indian.

The economic progress of the Sudan is reflected in its increasing imports of metals and metal manufactures, which totalled above £1,000,000 in 1924 and 1925. The launching of important projects, such as the great Makwar Dam near Sennar on the Blue Nile, and the extension of the railway to El Obeid in Kordofan, have necessitated large imports of machinery and equipment.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.)

EGYPT.

Turbo Alternator Groups, Etc.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection at site of Belqas Power Station of three Turbo alternator groups, and accessories required for the Public Works Ministry (October 26); and for the supply and erection at site of Esna Barrage grounds of two Turbo alternator groups, and accessories, required for the Public Works Ministry. November 2.

Meters.—The Director-General, Tazim Department, Cairo, invites tenders for the supply of two verturi meters required for Giza and Gezira Water Works for the year 1927-1928. September 15.

Paper for Targets, Etc.—The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of paper for targets, bathbricks, chalk powder, blanko khaki, and soap palm oil to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. September 12.

Cables.—The General Management, Egyptian State Railways, Telegraphs, and Telephones, Cairo Station, invites tenders for the supply of underground cables. Approximate cost: £E6,000—£E6,300. October 1.

Diesel Alternator Groups.—The Egyptian Ministry of Public Works invites tenders for the supply at site of the Aft Power Station, of four diesel alternator groups and accessories, including alternators, switchboard, transformers, power station auxiliaries, hand-operated travelling crane, workshop equipment (including machine tools, lathes, drills, etc.) mechanical and electrical testing instruments, station electric lighting. October 12 (D.O.T.).

Switchboard and Switch Gear.—The Director-General, State Domains Administration (Commercial Service), Savoy House, Sharia Qasr el Nil, Cairo, invites tenders for the supply and erection of a switchboard and switch gear. September 10.

Leather, Etc.—The Director of Stores, Ministry of Education, Sharia Qasr el Aini, Cairo, invites tenders for the supply of leather, canvas, and other materials for saddlery and shoemakers required for Model Workshops and Trades Schools during the year 1927-1928. August 31.

Diesel Engines.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection at site of Abul Menaga Pumping and Power Station of four internal combustion Diesel groups with flywheel alternators, three pumps and accessories, required for the Public Works Ministry. September 3.

Machinery Tools, Etc.—The Director-General, Ports and Lighthouses Administration, Arsenal, Alexandria, invites tenders for the supply of machinery tools and plants for Suez Workshops. August 29.

Raw Wool, Etc.—The Controller of Technical Education, Ministry of Education, Sharia Qasr el Aini, Cairo, invites tenders for the supply of raw wool, cotton yarns, etc., required for the Rug Factory at Assiut. August 31.

INDIA.

Steam Driven, Steel Sea Going Tug.—The Bombay Port Trust invites tenders for the supply and delivery of one single screw steel hulled steam driven sea-going tug completely equipped, afloat in Bombay Harbour. The dimensions to be as follows:—Length B.P., 90 ft.; breadth moulded, 20 ft.; depth, 10 ft.; maximum draft, 8 ft. October 10. (D.O.T.)

TURKEY.

Drop Hammers.—Tenders are invited by the Chemin de Fer d'Anatolie-Baghdad for the supply and delivery of 2 drop hammers (Lufthammer). September 20. (D.O.T.)

Galvanised Iron Wire.—The Direction Générale des Postes and Telegraphes, Constantinople, invites tenders for the supply of 250 metric tons of galvanised iron wire. September 19. (D.O.T.)

Telephone Sets and Bells. The Post and Telegraphs Department at Constantinople are calling for tenders for the supply of telephone sets and bells. September 15 (D.O.T.).

The traffic receipts of the Egyptian Delta Light Railways for the eleven days ended July 31, amounted to £E7,546, making the total from April 1 £E87,781.

A measure has been drafted by the Yugoslav Minister of Communications to enable the State Railways to be taken over by a private company, in which the State will be the chief shareholder.

British Consular Reports

III. ROUMANIA.

The following extract are taken from the Report on the economic and industrial conditions of Roumania during 1926 of Mr. R. J. E. Humphreys, Commercial Secretary to H.M. Legation, Bucharest:—

While it cannot be gainsaid that, largely owing to the abundant harvest, a noticeable improvement was observed in the economic conditions of Roumania during the last twelve months—an improvement which has been reflected in the rise in value of Roumanian bonds on the markets of the world—the crucial problems of stabilisation and transport, to which reference was made in last year's report, have not been settled, notwithstanding an evident desire to do so. It has been of great interest to note how these two problems have coloured each and every sphere of activity in the economic and financial life of Roumania.

Were the stability of the currency assured—it is immaterial in the long run at what rate of exchange—the business man dealing with Roumania would be able to carry on his transactions with a certainty which has hitherto been wanting.

The improvement in the value of the leu during the latter part of last year, which has continued up to the time of writing, has been as disturbing as was the swift depreciation last spring for the foreign business houses doing trade with Roumania. With the depreciation, exports to Roumania suffered, while, on the other hand, with the rise of the leu, the farmer, the home industries, as well as timber, grain and petrol exporters have been hit to such a degree that sales have either had to be restricted or have been made at a loss.

The exorbitant, though perhaps necessary, rates of interest of 2 to 3 per cent. per month which banks charge even for simple cover transactions, in view of possible fluctuations, are an additional handicap to trade.

The Roumanian Government, in introducing the new customs tariff in April this year, made the provision that, should the leu continue to rise, increased duties would be levied on articles which Roumania produces, in order to protect the home industrialists against the dumping of foreign goods. No stronger evidence could be given of the need for stabilisation, which has now become a matter of prime importance for the population of Roumania, as well as for the foreign business men dealing with this country.

During the year the question of foreign loans has been the subject of considerable discussion, privately and in the press of Roumania. The need for assistance as regards railway construction has been so universally recognised that any rumour of the possibility of foreign assistance has been commented upon with absorbing interest. While nothing of a definite nature had emerged up to the end of April (1927), public opinion is inspired by the hope that a foreign loan, either in cash or material, or both, will be forthcoming at no distant date.

In conclusion, it may be added that, in spite of the difficulties of exchange and transport, last year may be looked upon as one marked by progress. New companies were formed and old ones increased their capital: the trade balance exceeded expectations, and State finances for the fifth year in succession showed a surplus.

Currency and Credit.

The outstanding financial feature of the year 1926 was the effort made by the Government to hold the currency in hand. Taking the average value of the leu for the whole year in relation to the pound, dollar and Swiss franc, and comparing it with the average for the three previous years, it will be found that there is very little difference in the

rate. This is itself satisfactory. Unfortunately for the business man, however, the variations in exchange rates from week to week, and sometimes from day to day, were so frequent and so successfully defied prediction that stability in the proper sense of the word was entirely lacking.

In the month of May, 1926, for one short period it seemed as if the bottom had been knocked out of the leu, and the sudden drop from 1,000 to 1,600 lei to the £ gave rise to grave apprehension. The speculators feared that the leu would share the fate of other Continental currencies, and a gamble took place in the purchase of foreign drafts, especially pounds and dollars. It was then that the Government took energetic action, and, in conjunction with the National Bank, strengthened the control of the sale of foreign currency, which had been in abeyance since the beginning of the year, 1925. An exchange rate was also fixed. No foreign currency was allowed to be purchased without the consent of the Central Exchange Office, which only granted its permission in exceptionally urgent cases, such as for the discharge of due bills of exchange. This measure, together with the strict adherence by the National Bank to its policy not to issue local currency, had its effect. The speculators had to resell their foreign currency at the fixed rate in order to provide themselves with lei, and the rate of exchange appreciated with the same rapidity with which it had fallen. After a time the control of exchange operations was somewhat relaxed in order to assist legitimate trade transactions, but at the end of the year it remained just as strictly in force as regards private requirements.

While these measures acted detrimentally to trade, more especially as the lack of currency was even more keenly felt than in the preceding years, the Government gained its end and the rate of exchange rose to an average of 900 lei to the £ by the end of the year.

Trade Improvement.

At the close of the year 1925 there was an unfavourable trade balance of about one milliard lei. During the first quarter of the last year the imports were greater than exports to the extent of nearly 3.3 milliard lei. As the winter receded and traffic became easier exports began to improve, so that by the end of the summer the deficit had been made up. The improvement continued, and at the end of the fourth quarter there was a trade balance in favour of Roumania of 3.9 milliard lei (provisional figures.) This increase of exports was almost entirely due to oil and cereals.

The export trade of Roumania would have been still greater had it not been for the continued lack of adequate transport facilities. Other adverse factors were the export taxes—which, though reduced, still hampered trade—and the coal stoppage in Great Britain. According to weekly reports on shipping from Galatz, freights rose from 13s. and 17s. in May, for grain to Antwerp, Rotterdam, Hamburg, to 33s. and 34s. to the above ports, and 40s. to the United Kingdom in November. This high freightage had the effect of preventing the maize crop from being shipped during the late Autumn and, while the rates eased slightly in December, the Danube was closed for the winter season before advantage could be taken of them.

The coal stoppage was especially responsible for the falling off of British exports to Roumania. (Most of the goods imported come by ship to Constantza and Galatz.) During the first three months of the year, in anticipation of the new tariff, large quantities of goods, especially textiles, were sent to Roumania from all textile producing countries; a fact which was mainly responsible for the adverse trade balance at that period. These goods had not been exhausted when the coal stoppage supervened.

Meanwhile Poland, Italy, Czechoslovakia and Austria were able to take advantage of the situation, and were only prevented from flooding the market by the increased customs tariff which came into force on April 1. This tariff on textiles and metallurgical goods only (which was drawn up and provisionally put into force by the late Government) was intended as an instalment of a complete revision, both as regards classification and rates of taxation, of the former import tariff of 1924.

Owing to the successful protests of Roumanian importing merchants—as opposed to the manufacturers—the new Government temporarily modified the tariff in certain respects in June. Further alterations were made from time to time, and it was anticipated that the revised tariff in its final form would be completed before 1927. After various delays the new tariff, completely revised both as to nomenclature and duties, came into force on April 24, 1927.

The main object of the new tariff, apart from revenue considerations, was to protect all growing Roumanian industries in proportion to their capacity to supply the needs of the population. Thus the duty on raw materials required by the industries is calculated at 1-10 per cent. of their value, the duty on semi-manufactured goods at 10-20 per cent. of their value, and the duty on completely manufactured goods and colonial wares at 20-30 per cent. of their value, while duties exceeding 30 per cent. ad valorem are reserved only for such goods as were completely prohibited under the old regime as “articles of luxury,” and the former luxury tax has been abolished as well as all import prohibitions.

It is further understood that during the present year all old commercial treaties or agreements will be denounced, including the most favoured nation agreement with Great Britain, with a view of concluding special commercial treaties with each separate country, the first being that with Italy.

In the new tariff there are minimum and maximum rates. Until three months after the official denouncement of the existing agreement, Great Britain will continue to enjoy the minimum rate.

It is to be anticipated that, with the growth of home manufactures, encouraged by the new high tariffs, an opportunity will present itself for the setting up of British machinery, such as weaving looms, etc., especially

if they can be financed on a satisfactory basis. The question of finance and credit is, indeed, the crux of the situation as regards the import of British goods, especially machinery of all descriptions. Firms in competitive countries, such as Germany, Czechoslovakia, Sweden and Poland, have commenced to give credit to responsible people, against acceptances, for periods of twelve months and even two years or longer, at an interest of 6 to 9 per cent. per annum on unpaid balances. With such terms available cash transactions are practically impossible in Roumania.

To the question whether it is advisable or safe to give such long credits, the reply is that other countries think it worth the risk—for risk there undoubtedly is in giving long credit to private firms unless in exceptional circumstances—while the currency of the country is open to the fluctuations which were experienced last year. For instance, H.M. Consul at Cluj states that Germany headed the list of exporters of agricultural machinery into Transylvania, then came Austria and Hungary. Local houses can obtain much more favourable conditions of payment from these countries than from British suppliers; but, although in the case of heavy machinery, long credits were often granted, payments were received with difficulty owing to the money shortage and, it may be added, to the rise in the value of the leu which prevented farmers from exporting at a profit.

Again, Italian, Polish, German and Czechoslovakian houses have been, and still are, giving 6 months and even longer credit in the textile industry against acceptances which they are willing to renew.

The competition in the importation of the cotton goods is so keen, especially in Western Roumania, that Czechoslovakian houses have not only been ready to give long credit, but even to advance money to importers to pay the customs duties.

While the necessity of finding a market for the ever increasing production of these industrial countries is the main incentive to doing business on credit, the prevailing belief in the continued improvement of the credit of Roumania has undoubtedly influenced the exporters.

Openings for British Trade.

Imports into Roumania from Great Britain amounted to nearly 10 per cent. in value of the total imports for the years 1923, 1924 and 1925. Although statistics are not available for 1926, it is likely that the percentage declined, owing to the coal stoppage. The first quarter of 1927 shows that an improvement is taking place. In last year's report a list was given of those articles for which Roumania is a potential market. It must, however, be remarked that if Roumanian industry, which is still in its infancy, expands as a result of the new tariff, especially in metallurgical and even textile manufactures, competition will increase. As regards quality, Great

Britain still holds its own; but more enterprise might be shown in examining the markets personally and persuading local merchants as to the merits of British goods. In this regard, the steps taken by certain competitors, notably Germans, might be imitated with advantage. It is not sufficient merely to appoint a local agent; it is necessary to visit customers frequently—as our competitors do—and take note of their needs. It is also necessary to see what the competitors sell. H.M. Consul at Cluj states, with regard to his district, “British firms should abandon the illusion that Transylvania and the Banat can be worked adequately by agents in Bucharest, who are usually unacquainted either with local conditions or the status of firms; without a knowledge of which they cannot hope to serve their foreign principals efficiently.” These remarks may equally be applied to Bucovina and Bessarabia. Fortunately for the future, interest is at length being shown by responsible British firms, and ways and means discovered of competing with foreign countries in a market which, if rightly approached, should prove to be sufficiently remunerative to warrant the trouble and expense entailed in its careful examination.

Industry.

Industry in Roumania has continued its development during the past twelve months, and especially those industries for which the raw materials are to be found in the country. An impetus was given to certain classes of industry, e.g., textile and metallurgical, by the prospect of greater tariff protection held out to them by the Roumanian Government. Advantage was taken of this protection by foreign capital in conjunction with Roumanian nationals. Polish, Czech and Swiss financial and technical assistance was received, but the fluctuation of the leu, insufficient credit and high rates of bank interest, together with transport difficulties and high freights, have made progress very difficult, especially during the past six months.

During the year 1926, the production of oil was a record one. The area exploited was about 2,500 hectares, on which at the end of the year approximately 3,340 wells were installed—1,605 producing, 1,073 in working, and 662 abandoned or suspended. According to official surveys it is estimated that the oil bearing land in Roumania has an area of approximately 20,000 hectares, with probably reserves of 150,000 hectares.

During 1926 the exploitation of State oil lands which had been granted in concession to various companies was commenced. The full benefit of these concessions has yet to be ascertained.

The production of crude oil in 1926 was 3,241,329 metric tons, which shows an increase of over 900,000 tons on the 1925 total, which at 2,316,979 metric tons was a record yield. The following figures show the quantities of the various products refined:—

	1926. M. tons.	1925. M. tons.
Benzine	749,963	497,545
Refined Petroleum	511,077	365,933
Mineral oil	291,963	211,888
Residues	1,478,425	1,036,723
	3,013,428	2,111,189

The total exports amounted to 1,492,953 metric tons, as compared with a total of 784,545, in 1925: viz:—Benzine, 424,967; Refined petroleum, 527,069; Motor spirit, 199,808; Mineral oil, 42,396; Residues, 298,713; Total, 1,492,953.

While production increased, however, world prices suffered a decline, and so far as the Roumanian industry was concerned, other factors such as those previously mentioned, namely, railway freights and the rise in the leu, together with high exports duties, prevented the oil companies from profiting in proportion of their increased production. The reorganisation of the marketing of oil products on foreign markets is seriously engaging the

attention of the great companies in view of the continued increase of production, and the most up to date refining plant is being installed to enable them to compete with the higher class products of other countries. Official maximum prices for home consumption, which had gradually been reduced, were finally abolished in July, 1926.

Drillings.—Provisional figures for 1926 are given as 260,000 metres, as compared with 204,347 metres in 1925.

To facilitate transport, the construction of an additional pipeline to Constantza has been the subject of negotiation between the oil companies and the Government, but a decision is still pending as to whether a private company or the Roumanian Government should construct the line.

During the Autumn, Italy entered into active co-operation in the Roumanian oil industry through an Italian company.

It is stated officially that the output of brown coal continued to increase satisfactorily. This product is also favoured by a high protective customs tariff on foreign imports. The output in 1925 was 2,928,850 metric tons as against 2,776,371 metric tons in 1924.

Agriculture.

Agriculture, in spite of the endeavours made to stimulate the mechanical industries, remains the staple industry of Roumania. Its importance may be gathered from the fact that 90 per cent. of the entire population of the country is engaged directly in farming. Generally speaking, a good year brings prosperity all round, whereas a bad harvest has its repercussion on every home industry, and also upon foreign trade, both import and export. It is for this reason that British merchants doing business with Roumania would do well to follow attentively the crop reports, for the capacity to purchase goods and pay for them depends to a great degree on the harvest, and the surplus production. Other factors, such as the world's crops and the world market prices and the question of internal and external transport, are of the utmost importance. During the past year all these factors have come into play in Roumania.

The wheat harvest of 1926, has been described, as regards quantity, as the best since the War. Over 30 million quintals were produced, and in normal circumstances, it is estimated that about 900,000 tons could have been exported. Rye, barley and oats did well, and maize reached a record with a total production of over 60 million quintals, giving a possible surplus of 2 million metric tons for exportation.

In nearly every case larger areas were sown than in the previous year, and attention was given to selection of seeds. The use of agricultural implements was fostered, and technical assistance was given to the peasant farmers who, since the division of the former large estates into small holdings, have been backward in the application of modern methods of agriculture.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended August 17 :—

Egyptian Futures.—Sakel Contract.—In studying the course of prices in this contract during the past week it will be noticed that fluctuations have approximated almost entirely in sympathy with movements in the American markets; the tone, however, has inclined to the heavy side and periodical liquidation of cotton bought lower down has continually checked any decided advancing tendency. The fact of the matter at the moment is that trade interests are holding aloof and are not according the necessary support to encourage fresh speculative long commitments. A feature to be remarked on is the almost entire absence of new crop business; shippers at this period of the season generally have quite an important number of new crop contracts on their books, but we understand that as far as this country is concerned, spinners have to date placed very few orders. Unless a decided change takes place, this will mean that the early arrivals will not find their usual ready sale, and that later the future markets will probably have to face more than the customary amount of hedging. The position in the Alexandria market seems fairly similar to that ruling at this side, and it is particularly noticeable that advances to the neighbourhood of 39 dollars for November bring out selling from speculative sources. So far, we understand, growers are demanding high prices for their cotton, and show little anxiety to sell to exporters or to hedge. No further news has come to hand regarding the policy of the Government with their stock, and the opinion seems to be gaining ground that nothing tangible will result from their reported negotiations with the Soviet authorities. As mentioned previously, trade activity since we last wrote has only been moderate, but it has been noticeable that spinners have shown more interest at the higher prices now ruling than they did earlier in the week, and we are quite prepared to see more business developing, provided the market shows stability or even continues to advance moderately. During the past few days we have been in receipt of cables reporting damage; so far, these are not of an official character, but, if borne out, may cause a further wave of speculative activity. We have to-day received the following from Alexandria:—"Owing hot and very damp weather first fortnight August which favoured increase boll worm think situation for Sakels might become alarming if this weather should continue during next few weeks." We still consider that the present situation calls for extreme caution, and, whilst perhaps fundamentally at the moment there is nothing in the Egyptian situation to cause decidedly "bullish" views, values, under the influence of detrimental American crop reports and less favourable news from Egypt, at this critical period of the season may easily be forced to a higher level.

Upper Contract.—More activity has been witnessed in this option during the past week and straddle purchases against sales of equivalent quantities in the American market have been favoured. The basis for the operation is an anticipated scarcity and dearth of competitive staple cottons during the coming season and we must say that at present differences the transaction appears to be warranted. Throughout the week, local spinners have operated very cautiously and only a minor business in actual has taken place. Crop reports continue to be very favourable and a satisfactory yield both as regards quantity and quality is now assured. We still remain "bullish" on the outlook.

Egyptian Spot.—Fluctuations in futures have once again acted in a great measure as a deterrent to would-be buyers of actual cotton. Nevertheless, during the past two days the market trend has been of so obviously a "bullish" nature that here and there buyers have been found,

although, so far, their purchases have not been of any great weight. It appears to us, however, that interest in actual cotton is in process of revival, and we shall not be surprised if a definite buying movement develops before the issue of the next Bureau report. A somewhat depressing feature of the week's inquiry has been the abnormal percentage of orders for low and inferior cotton which have figures on the board. Scarco cotton 4d. to 6d., Sakel 8d. to 10d., or 9d. to 11d. are samples of the orders daily received, and a really genuine trade inquiry, for cotton of tenderable quality or above, has become almost a rarity. Some slight inquiry for Good Fair Uppers has continued, but no improvement in the demand for the better grades has yet made its appearance. Sakellaridis has been very neglected, apart from an odd inquiry here and there for F.G.F. There is, we fear, little chance of disguising the fact that Sakel cotton, at to-day's prices, is hopelessly dear as compared with other growths.

Pilion cotton has been almost entirely ignored, and the market for this growth appears to be very irregular. Sudan cotton has been in slightly better favour. In the Sakel variety, prices have remained very steady, except for a slight easing amongst the lower qualities. American Seed cotton has been in fair request, but it is noticeable that the demand has dropped in quality, and the range mostly in request has been (roughly) 75 to 125 on. Scarcely a solitary inquiry for Tokar has been seen. C.i.f. business has lain dormant.

Forwardings to spinners for the week ending the 12th inst. were returned as 7,221 bales Egyptian and 6,703 bales Sudan—a large total. Estimated sales for the week 750 bales Egyptian and 900 Sudans. Quotations of Sakel have been reduced 45 points (Fair 20 points) and those of Upper 35 points. F.G.F. Sakel to-day, 19.75 d. F.G.F. to-day, 15.25d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended August 11 state:—

Since our last report the futures market opened quiet, then became very active and closed firm at the prices given below. The week's summary of price movements is as follows:—Sakellaridis: November, 38.15 dollars, 3.53 dollars up; January, 37.88 dollars, 3.63 dollars up. Ashmouni: August, 27.43 dollars, 2.68 dollars up; October, 28.18 dollars, 2.73 dollars up; December, 28.33 dollars, 2.70 dollars up; February, 28.48 dollars, 2.63 dollars up.

Sakel.—At the commencement of the week, the market was quiet, but as a result of the publication on the 8th instant of the American Bureau giving the condition of the crop as 69.5 against 69.8 same date last year, and the probable production as 13,492,000 bales against 15,251,000 bales last year, and the sensational rise which took place in New York on the publication of these figures, our market went wild and in a single session prices rose about 5 dollars. Yesterday and to-day the market has been quieter and has lost part of the advance; nevertheless, the tendency remains very firm.

The official figures of the probable production of the American crop were not at all those generally anticipated by our operators; the most pessimistic estimates not going lower than 14,500,000 bales. Naturally, the rise has been induced chiefly by speculative buying; with very few exceptions, all operators in our ring favour at present the long side.

Many people, in view of the situation disclosed by the Bureau report, consider present levels of prices of American cotton justified, and they even forecast a further strengthening of prices. The rapid rise has again stopped the demand for spinners, and the trade has, generally speaking, operated very little on the market this week. As regards the future course of prices, much depends on the attitude which spinners will adopt; but in our opinion

a slight increase in the interest shown by them will be sufficient for prices to be maintained and even to rise still more.

Uppers.—The fluctuations of this market have followed, more or less, those of Sakel but, as has been the case before, the more prices rise, the more the difference between Sakel and Ashmouni has widened. The demand from abroad has been decidedly better than last week, and this has been reflected in the figures of the turnover of business on the spot market.

The week's receipts amount to 4,768 Kantars against exports 70,808 Kantars; the stock in Alexandria stands at 2,212,797 Kantars.

Spot: There has been rather more business done at Minet el Bassal this week, chiefly owing to an improved demand for Uppers. Sales amount to about 8,400 bales, of which we estimate 3,200 bales Sakellaridis, 4,800 bales Ashmouni and Zagora and 400 bales Pilon. The selection of Sakel offering is large but of very poor quality, and cotton with pretensions to good staple is well held and hard to buy. The selection of Uppers is very moderate and all grades, especially medium qualities, are well held.

Sakellaridis: Has been in moderate demand and all styles have changed hands. Spot differences are very steady and unchanged for Fully Good Fair and above, rather cheaper for Good Fair and distinctly easier for the

lower grades, which have not followed the rise in contracts. Any cotton of decent staple and character commands a premium and is readily absorbed.

Ashmouni and Zagora: Have met with a distinctly improved demand, chiefly for the medium qualities, which have absorbed most of the business. Spot differences are rather dearer for the medium qualities and unchanged for the lower and higher grades.

Pilon: A fairly good business has been done at generally stiffer spot differences.

Other varieties: Are neglected and no business is reported. Supplies are, in any case, negligible.

Up-country: Preparations for the new season are in full swing; in fact in Upper Egypt, arrivals of small quantities at the factories are reported. Growers are very pleased at the rise in prices: this applies specially to growers in Upper Egypt, from where we hear that some important growers have just fixed the price of part of their crop.

Crop, 1927: Climatic conditions have been favourable, both in Upper Egypt and in the Delta. The crop in Lower Egypt is slightly in advance of that of last year. Pink boll worm attack continues to be normal and about the same as that at the same time last year. All danger of a scarcity of water is over; the new flood water is now coming down to the Delta.

SUDAN

A PERFECT WINTER RESORT

KHARTOUM, a modern town at 1,200 feet above sea-level, enjoys an ideal winter climate, constant sunshine tempered by invigorating breezes. The Grand Hotel is under the management of the Sudan Government Railways and Steamers.

OMDURMAN, the wonderful African Metropolis, lies near by, stretching for seven miles along the shores of the Nile.

BIG GAME SHOOTING.

The Sudan is one of the most easily accessible countries in which Big Game abounds, and its large territory offers a most varied choice of shooting grounds.

Express Steamer and Dining and Sleeping Car Service between Cairo and Khartoum.

Notes of the Week.

The Salonika Conventions.

On August 17, 1926, after negotiations which with long intervals had extended over two years, Yugoslavia and the Greek Government of General Pangalos concluded a Treaty of Friendship, and signed separate conventions dealing with the Yugoslav Free Zone in the port of Salonika, the Salonika-Ghevgeli Railway and allied questions of tariffs and transit. The Treaty of Friendship was to take the place of the Treaty of Alliance denounced by Yugoslavia in 1924. The latter had made it abundantly clear that there could be no formal agreement between the two countries until Greece had settled to Yugoslavia's satisfaction the question of the Yugoslav outlet at Salonika. The grant of a Free Zone to Serbia had been the subject of an agreement in 1914, but owing to the outbreak of the War it was not ratified. In spite of the territorial changes in the Balkan Peninsula, the new Yugoslav State found that the need for an outlet on the Ægean Sea remained and in November, 1922, formally reopened the question of a Free Zone at Salonika. Greece hastened to ratify the 1914 Agreement, but Yugoslavia refused to accept the pre-War arrangement on the ground that it was not adequate for her later requirements. Negotiations were resumed, and in May, 1923, a new Agreement was signed in Belgrade. Yugoslavia received for a period of fifty years a specified area in the port of Salonika which, while remaining an integral part of Greek territory under Greek sovereignty and subject to Greek police supervision, would be administered by Yugoslav Customs authorities, the officials being Yugoslav under Yugoslav executive authority, which in turn would be under the control of the Greek superintendent of the Port of Salonika. Goods in passage between the Zone and Yugoslavia, i.e., over the Salonika-Ghevgeli Railways, were to be free of all Greek taxation, and there were clauses in the Agreement by which both parties bound themselves not to hinder the transit of goods or otherwise to discriminate between their own and the goods of the other party.

Formal Abrogation.

Of the original area of 94,000 square metres agreed upon for the Yugoslav Free Zone at Salonika only 54,000 were land, and it was soon decided in Yugoslavia that this provision was inadequate for actual requirements. At the same time the Yugoslav Government had strengthened its position *vis-à-vis* Greece by acquiring a controlling interest in the French company owning the Salonika-Ghevgeli Railway, and it claimed the exclusive control of this line in the interests of its trade through the Free Zone. General Pangalos's achievement, which had been carried out more or less under the auspices of the League of Nations, by whose instrumentality the Foreign Ministers of the two countries were brought together in Geneva, consisted in placing the relations between Greece and Yugoslavia on a formally friendly basis and in securing at a price a final settlement favourable to Greece of the problem presented by the Salonika-Ghevgeli Railway. The line was to pass into Greek hands for the sum of £800,000, and Yugoslavia renounced her claim to any share in its control or management; any disputes in connexion with the Railway were to be referred to a French arbitrator to be appointed by the League of Nations. For the advantages she received Greece agreed that the area of the Yugoslav Free Zone should be largely increased, and that, while it would remain nominally under Greek sovereignty, Yugoslav officials should have complete control within it. Five days after the new Conventions had been signed, and before he could ratify them by Decree, General Pangalos fell from power, and signs of opposition to the ratification of the Treaty and Conventions at once began to manifest themselves. The movement came to a head on August 25, when, on the motion of the Minister for Foreign Affairs, and on the recommendation of a Parliamentary Commission, the Greek Chamber unanimously agreed to abrogate the Agreements, on the ground that they involved moral diminution and material damage to Greek interests and that they could, therefore, never fulfil their purpose of placing the relations of the two countries on a permanently friendly footing.

Yugoslavia and Greece.

The action of Greece in repudiating the Agreements entered into by General Pangalos is in the nature of a rebuff to Yugoslavia, which will have been only very slightly lessened by the warnings of its intentions that the Greek Government was careful to give. Yugoslav resentment has been indicated by the prolonged absence from his post of the Yugoslav Minister to Athens; but the studied restraint of the Yugoslav Press, which has avoided the usual recriminations, may be interpreted as of good or of ill augury. If, as may be hoped, the Yugoslav Government is minded to make the best of a bad job, it would be a wise precaution not to allow national passions to be aroused over a matter that cannot be helped. It may be doubted whether the question of a Free Zone at Salonika is one that exercises public opinion in Yugoslavia very much. On the other hand, the persistence with which the subject has been pursued by the Yugoslav Government has been resented in Greece, and there has been no hesitation in Yugoslavia in reciprocating any signs of ill-feeling in Greece. More recently, however, the Balkan States have begun to realise that mutual animosity has been overdone. If Yugoslavia and Greece are now able to start fresh negotiations over Salonika without bitterness on either side, it will be of excellent augury for the future of the Balkan Peninsula. Unless Yugoslavia is looking a long way ahead, her immediate concern is to make sure that the provisioning of Serbia with the oversea goods that she requires and the export of her products should be carried out with reasonable dispatch and without being subject to heavy charges. No doubt she would be better served if the whole of this import and export trade were entirely under her control as between Serbia and the Ægean Sea; but the principle that she has persuaded former Greek Governments to accept is one that, if applied against her, might give Hungary a free zone in a Yugoslav port and running rights over Yugoslav railways. The future harmony of the Balkan Peninsula would seem to point as the better way to the establishment of the principle that Yugoslav goods are to be exempt from Greek Customs duties, and for the rest to give Greece the chance of proving in regard to the handling and dispatch of Yugoslav goods that she can do as she would like to be done by. Possibly no railway administration in the Peninsula is very efficient at this particular time; but the introduction of good relations between Yugoslavia and Greece would remove the main cause for fear that Yugoslav goods will be subject to adverse discrimination in their short journey over Greek territory.

The New Greek Government.

M. Zaimis' second Coalition Government has received an adequate vote of confidence in the Greek Chamber and all the measures required for carrying out the recommendations of the League of Nations in regard to the financial rehabilitation of Greece are in train. What is now needed is definite constructive action in other directions for the betterment of Greece. Any unpopularity that may have fallen upon the last Coalition Government was due mainly to the fact that it was held to be getting nothing done. It is unlikely that there would be three or four attempts to liberate General Pangalos, unless some people considered that his régime compared favourably with his successors' administrations. Their point of view is believed to be that General Pangalos at least did things, even if they were not always right; the Coalition, these critics declare, have done nothing. There is some chance now that the reproach will be taken away. The new Government has shown more signs of effective activity in a few weeks than its predecessor did in twice as many months. A further Pangalist movement has been scotched, and Madame Pangalos, generally reputed to be the Dictator's evil genius, however dutiful a wife she may have been, has been deported from Athens. A still better move would be to hold and to finish the trial of General Pangalos. In matters of internal administration the new Government

has identified itself with a large scheme of road construction, and it has promised to take in hand at once the question of the town police trained by Sir Frederick Halliday. For purposes of his own General Pangalos tried to supersede this efficient force by gendarmerie. M. Zaimis has promised Sir Frederick Halliday that his town police are to have their real work and responsibilities restored to them—a step that will certainly be popular in Greece.

The Rights of Minorities.

Every now and then hopeful signs appear of an improvement in the relations between the States of South-Eastern Europe, and the prospect of an ultimate federation seems brighter. With fatal persistency, however, these favourable symptoms are almost immediately followed by incidents or discussions which show what little chance there is of a permanent settlement in this part of the world until the problem presented by the existence of more or less compact minority populations has been solved. There were considerable misgivings in the West when Turkey insisted that the Greek population of Asia Minor must be removed to Greece. The numbers involved added to the distress of such a measure, and, although less has been heard of this side of the subject, it is safe to assume that the enforced expulsion of Turks from Greek soil was equally unpleasant for them. Apart, however, from the temporary sufferings and losses of the victims, there can be little doubt that in the long run they stand to suffer and to lose less than they would have done, if they had remained under alien jurisdiction. In matters of this description it is impossible for the outside observer to know the whole truth; he cannot put himself in the position of these minority populations, and all that he can do, as appeal is constantly being made to Western sympathy, is to accept the fact that these people consider themselves the innocent victims of grave and continual injustice. The nature of the acts of which complaint is made—for the most part connected with the details of local administration—prevents any practical intervention on the part of outside Powers, even if a case were made out for the direct concern of the League of Nations. Yet it seems foolish on the part of Europe to allow this open wound to continue to fester. There is no need for invidious distinctions or to pretend that one nation is worse than any other in this matter of governing aliens. The fact seems to be that in the particular stage which the spirit of nationalism has reached in South-Eastern Europe every country is resolved to regard any considerable alien community in its midst as a potential danger and to adopt the methods that it considers best for sterilising that danger.

Cutting the Gordian Knot.

If the situation of minorities in South-Eastern Europe is as represented, and is likely to remain so, it would seem worth while for the League of Nations to try to find some solution of the evil. The inquiry would have to start from the accepted fact that no country in that part of the world, in spite of the Minority clauses of the Peace Treaties, is able to reconcile its minorities with their present lot. It is immaterial that those who framed the Peace Treaties imagined that the little on which they insisted would meet the case; civil and political rights, the right to worship and to receive instruction in their own tongue. Whatever the words may have been intended to mean, it is certain that no interpretation has been given to them in the countries themselves that satisfy both the ruling peoples and the Minorities. In these circumstances a case would seem to be made out for the extended application of the exchange system that has worked out for the best as between Greeks and Turks. The solution would have to be adopted as far as possible with the consent of all concerned and carried out under supervision and without undue haste. It would be well that compensation where it has to be given should be paid simultaneously with removal and not left for precarious and belated bestowal. In cases where naturalisa-

tion has been effected, whether voluntarily or under compulsion, with terminal or other name changes, further opportunity should be provided for opting another nationality. Such a method of solving the Minority problem may be crude, but it is less crude than that Europe should continue to be harrowed by the tales of suffering minorities. The solution may not be capable of application throughout Europe—to the Yugoslavs in Italy and the Hungarians in Transylvania, for instance—but it would eliminate a serious cause of friction in Southern Serbia, Macedonia, and the Dobruja.

Paradox in Jerusalem.

As everyone in the world knows, Jerusalem is a city of permanent paradox. The unexpected always mingles there with the expected; surprise is succeeded by shock. There is no end, either from the superficial or the profound point of view, to the contrasts which the Holy City, and, indeed, the Holy Land, holds. An amusing illustration of this fact was provided last week, when two items of news were recorded from Jerusalem. First came the announcement that the first taxicab appeared in the streets of the Holy City on August 26. And secondly, we were informed that the report had come from Jaffa of a certain young Muslim woman there who, wishing to be "modern" had gone about the streets unveiled; and is in way of being divorced by her husband for her pains! Thus, do the new and the old commingle. It is a curious fact that in Palestine, where the new life is attempting to penetrate at every point, the old seems to be more likely to survive than in independent Oriental countries, such as Turkey. The explanation is doubtless psychological. The traditional followers of Islam in Palestine, seeing what they may consider the "profane" habits of the new immigrants, are the more impelled to cling to their immemorial customs, just as, for instance, it was the Mussalmans in countries subject to foreign rule, such as India, who clung most closely to institutions like the Caliphate. The eventual Westernization of the East is, however, probably inevitable. The opening up of the Middle East by motor-car brings naturally in its train a taxicab service in Jerusalem; nor can it be imagined that the disuse of the veil, which symbolises the "emancipation" of Muslim women, will not sooner or later be indulged in Palestine. No doubt there is a tendency in the West to exaggerate the influence which women in the East possess over the affairs of life; feminism in Islam is hardly yet a considerable factor; but some violent change in the relations of East and West must ensue if the present example of women in Turkey and Egypt is not ultimately to be followed by countries farther East.

Zionist Congress at Basle.

The Fifteenth Zionist Congress assembled at Basle on August 30 amid what were perhaps unusual misgivings and unusual hope. For much water has flowed under the bridges of Zionism since the last Congress met two years ago; and most of that water has been muddy. In 1925, it will be remembered, Zionist hopes were high; high, that is, with apparent justification. It was a "boom" year; and over 30,000 Jewish immigrants were attracted to the Holy Land. Reaction, however, came swiftly, and, to the Zionist, tragically enough. A movement of emigration from Palestine set in last year, when there were 13,081 immigrants and 7,365 emigrants; and for the first four months of the present year, 820 immigrants were recorded and 1,547 emigrants. The figures are impressive, whatever the reasons ascribed to the change of conditions. Certain Zionist critics have been quick to impute blame to the Zionist Organisation, asserting that the policy of the President, Dr. Weizmann, has been wrong. Some of the critics have fastened on to the Weizmann-Marshall Pact as the bone of contention, the agreement, that is, which was reached on January 17 of this year between Dr. Weizmann and Mr. Louis Marshall for extending the Jewish Agency and thus ensuring the aid of non-Zionist American Jewry in the de-

velopment of the "National Home." It appears to be thought, incidentally, in some quarters, that this agreement was reached only because the Zionists could see how ill the winds were blowing in Palestine; but the fact is that the scheme had been outlined at the Vienna Congress of 1925, and had been denied earlier consummation only because of the "drive" being conducted in the United States for Jewish colonization in Southern Russia. But to return to the figures of Zionist colonists. At the end of 1922, there were 85,300 Jews in Palestine; at the end of 1923, 93,300; of 1924, 110,000; of 1925, 147,000; and of 1926, 158,000. In the long view, therefore, Dr. Weizmann's policy would appear to have much to recommend it. How the Congress itself will receive the report of the Zionist Executive we naturally have no means of knowing; but that the present is a critical time for the Zionist movement and that the decisions of the Congress will be vital, is obvious. It is illuminating to note, in the meantime, that in Palestine itself the policy hitherto pursued by the Zionist Organisation does not appear to be too popular. That impression, at any rate, is gained from the voting there for this Basle Congress. About a third of the adult Jewish population in Palestine voted; 23,453, to be precise. The *Achduth Haavoda* and the Yamanite Workers secured ten seats at the Congress; these represent the Socialist element. The Revisionists (followers of Mr. Jabotinsky) and the General Zionists (followers of Dr. Weizmann) obtained but two seats each.

A Plan to Divide Palestine.

Apropos of this Zionist Congress, but hardly arising out of it, attention has been called to a plan, which is favoured by a certain section of Zionists, to lighten the load of the Zionist Organisation by means of concentrating upon one definite portion of Palestine. It has been re-suggested—we first heard of the suggestion from the *Jewish Chronicle*—that the time has come for the Zionist Organisation to relinquish an apparently impossible task, to get back to the first ideals, and to make a section of the Holy Land, at any rate, "as Jewish as England is English." The further suggestion is made that those Jews at present living outside this projected *enclave* might be supported by the non-Zionists who have recently come to terms with Dr. Weizmann. Now there is nothing in the published agenda of the Congress which indicates that this scheme is to be discussed; and for ourselves we should be surprised if it were taken seriously by Zionists as a whole. Obviously, there are many complications in this

ZAGHLOUL PASHA—AND AFTER.

It is well for a nation that it should have its great men, to serve as a stimulus to those who follow. Egypt has every reason to be proud of Saad Pasha Zaghoul, for he stood head and shoulders above his generation in his own country, and it is by Egyptian standards alone that there is occasion to judge him. That he modified by his actions and his character the course of the history of his country there can be no doubt. For Egyptians he is the artificer of their political independence, and the time has not yet come for them to decide whether he built well or ill. Few countries can have rallied more whole-heartedly round a national hero than Egypt round Zaghoul Pasha. The devotion—it might almost be termed worship—accorded him was spontaneous; for by whatever means his Party may have contrived to sweep the electorate, there was no suspicion of compulsion in the homage that the people laid so liberally at his feet. The ground was well prepared for the exercise of the talents possessed by Zaghoul Pasha in a special measure, by which he established himself so firmly in the national affection. An Egyptian of the Egyptians, by birth a *fellah*, he had risen by ability and force of character to Ministerial rank; he had the courage of his convictions, and in the early days it was his honesty of purpose and his fearlessness, as much as anything else, that raised him above his fellows. Up to 1914 he recognised Egypt's inability to stand alone and accepted the relationship to Great Britain, even to the point of being the only man with the courage to urge the Government to continue in office when the Protectorate was proclaimed in December, 1914. It was during the War that he surrendered himself to the cause of nationalism, and with deliberate purpose took steps to secure that hold on the Egyptian people which has been such a striking feature in the recent history of Egypt. When the Armistice came Zaghoul Pasha set himself the goal of the complete independence of Egypt, and in that policy he never wavered. That he failed to admit the possibility of any limitations on that independence may be the measure of his lack of statesmanship, or it may have been due to force of circumstances that prevented him, after having once gone as far as he had, from withdrawing his intransigence to all British claims, for fear that he might lose his hold on the people. Be that as it may, for the great mass of the Egyptians Zaghoul Pasha had no shortcomings; he died, as he had lived for the last nine or ten years, a national hero.

For the British people it is to-day immaterial that the greatness of Zaghoul Pasha among his own countrymen should have been achieved mainly, if not entirely, at Great

Britain's expense. If we believe in a Divinity that shapes our ends, rough hew them how we will, we must recognise that many stones are required to complete the edifice of Anglo-Egyptian relations. Zaghoul Pasha has made his own contribution to the final shapening of those relations. It may not have been all that the British people could have desired; but he proved himself honest of purpose and was devoid of all self-seeking. These qualities are valuable in themselves, and it may well be helpful to Great Britain to realise that they are to be found in Egypt. For the rest, there can be little doubt that Zaghoul Pasha was the means of throwing into strong relief Great Britain's own shortcomings in her handling of the Egyptian question. Grave mismanagement during the War, the costly blunder that denied to prominent Egyptians the right to lay before the British Cabinet their country's case for autonomy, the haste with which independence, having been so long denied, was finally given without adequate safeguards—these and other mistakes might have passed unobserved, and being unobserved have led to worse mistakes, if the hostility of Zaghoul Pasha had not forced attention on them. By such means, we believe, the British Empire goes from strength to strength, and no ill-will from Great Britain follows Zaghoul Pasha to the grave. For his own sake it was desired that the finishing touch should be placed during his own lifetime on Anglo-Egyptian relations; but it was not to be.

For Egypt the passing of Zaghoul Pasha may mark an epoch even more clearly than the years during which he maintained his uncompromising struggle for a form of independence that in his latter days he must have known was unattainable in its entirety. The Wafd, his creation, is a powerful instrument, and it remains to be seen what use will be made of it now that the skilled hands that have wielded it hitherto are withdrawn. For some time past it has been clear that it was the authority and prestige of Zaghoul Pasha alone that kept it a united body. Whether there is any Elisha among his followers to take up the mantle of Elijah has not yet been disclosed. From internal evidence it is inferred that the latent struggle between extremists and moderates will break out in an intensive form and result ultimately in a cleavage. The determining factor in the long run will be the good sense of the Egyptian people, and it is unlikely that for some little time at least there will be anyone whose name can be conjured with so effectually as his lieutenants did with Zaghoul Pasha's. Unity in a nation is a fine asset; but in the early stages of constitutional Government a blind subservience is not the most helpful training, and Egypt stands to gain by allowing independence of thought in the country greater rein than it has enjoyed hitherto. The popularity of Zaghoul Pasha tended to engender the belief that he was the one man essential to the salvation of the country. Egypt, however, will never be so badly served as that. Zaghoul Pasha's influence cannot be said to have been uniformly good; he aroused passions that he could not control, and, uncontrolled, they have done harm to Egypt. Yet he served his nation according to his lights, unselfishly, wholeheartedly. Others will be inspired by his example, and, we may hope, profiting by his experience, will conduct the country by progressive and more peaceful stages to heights that it was not given to the national hero whom all Egyptians mourn to-day to gaze upon.

The Near and Middle East*

From Our Own Correspondents.

Cairo, August 21.

The Coptic Patriarchate.

The Coptic community is still rent asunder by the schism caused by the death of the late Patriarch. The most prominent figures in the controversy remain the reformist Bishop of Assiut and the Bishop of Alexandria, the claims of each to nomination to temporary occupancy of the Patriarchal Throne being urged with vigour by their respective supporters. But each day some new suggestion for a settlement is brought forward. One of the most recent proposals is that, since the Church is divided against itself, neither a modernist nor a conservative should be chosen to fill the vacancy caused by the death of Kyrillos V., for whom a lay successor should be found. It is stated that there is no legal objection to such a course, which is held to have many practical advantages. But the suggestion is of such a revolutionary character that it would seem to need the fullest consideration before adoption. That, at least, is clearly the opinion of the Government, to whom the present position in the Coptic Church might, if not handled wisely, prove as embarrassing as did the defiance in 1892 by the late Patriarch of the Ministry of Riad Pasha. The present Cabinet means to be sure of its ground before it takes any decision, and with that object has requested the State Legal Department to submit a full report for the consideration of the Council of Ministers: There is every prospect of the controversy dragging on until late in the autumn, for it is most improbable that the Government will take any decision until the return of Sarwat Pasha and the rest of the Cabinet, most of the members of which are absent in Europe.

Government on Leave.

Patriarchal controversies are not the only matters in which the Government hesitates to take hasty decisions. An alleged weakness of Egyptian administrations—dislike of having to take decisions—is held to be even more prevalent than usual, but this is inevitable owing to the absence of the King, the Prime Minister, more than half the other Ministers, several of the Under-Secretaries of State and many heads of Departments, all on holiday abroad at the same time. Examples of the state of affairs are provided by the Ministry of Finance, whose Minister, both Under-Secretaries of State, Financial Secretary, and many other senior officials were all recently abroad at the same time, and by the Minister of Agriculture who, temporarily holding two portfolios in addition to his own, went off for a three weeks' provincial tour, aiming at arousing enthusiasm for agricultural co-operation. It is certain that the wheels of government revolve more and more slowly, and from all sides, both from officials within the Government and from other quarters having business with Government Departments, there is an outcry about the impossibility of getting decisions taken.

*Under this heading appear weekly or at regular intervals, communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

The following are typical (and in these cases well authenticated) examples of the kind of complaint that is made. The British second-in-command of a very important administration, returning earlier in the summer from leave abroad and taking the place of his chief, departing in his turn to Europe, found the office of the latter (an Egyptian) filled almost to the ceiling with files. Many had been there for six months and a considerable number contained "Urgent" minutes, requesting prompt decisions on matters of Departmental importance. Innumerable "reminders" decorated the dossiers, but nothing had apparently been done in the large majority of cases. In some instances the files had been so long withdrawn from circulation that they and the subjects with which they dealt had apparently been given up for lost. Work up to midnight regularly for a steady three weeks was necessary before this accumulation of arrears had been disposed of and the administrative wheels again set in motion. Another example concerns a firm of engineers who had tendered on behalf of manufacturers abroad for the supply of certain machinery. Nothing was heard for seven months after the submission of the offer, and then the tenderers were suddenly informed that they had been successful and that the machinery must be supplied within six weeks. This was done and payment requested. That was eleven months ago, and not a piastre has yet been paid. In such cases payment is effected by a special system in accordance with which the Ministry of Finance deposits the money due with the Cairo Governorate and sends to the firm to which the amount is payable an order entitling the holder to receive payment on presenting this authority at the Governorate. In the present instance the money has been deposited, but no order for payment has been sent and the supplying firm continues its prolonged attempts, by correspondence and interviews, to obtain payment for the machinery supplied nearly a year ago.

It would be unfair to attach too much importance to the stories and complaints which are so common, or to conclude from them that the Administration is undergoing a serious decline in efficiency. No doubt all Government Departments are liable to slow up at times, and it would be foolish to suggest that there has never before been in Egypt a time when official business in Egypt has been subject to delays. On the other hand, the Arabic Press, even that section of it which contends that never has the business of the country been so well attended to as now, by its "Ministry of the People," is beginning to be very critical of the almost complete administrative paralysis of these summer months and of the fact that such a large proportion of senior officials are simultaneously in Europe on holiday.

Quail Netting.

With the approaching return of the bird immigration season, the annual slaughter of quail is being discussed, and hopes are expressed that the Government will take effective steps to protect these hardly used little birds. The life of the quail is not an easy one. Not equipped with any great spread of wing, the quail yet undertakes

each year long migratory flights which so tax its strength that when unfavourable conditions occur the mortality among the birds is very great. A few years ago, after a heavy autumnal storm off the Egyptian coast, a large area of sea was observed to be covered with the corpses of the birds, too exhausted by their previous efforts to be able to get through the storm to the coast, only a few miles ahead. Even in the best of weather conditions many quail succumb before they reach the African shore, while the survivors, utterly fatigued, tumble down on to the first land they meet. Hence their falling so easy a prey to the net of the quail catchers. Some years ago the Government made regulations, insisting that nets shall not be put up continuously along the shore, but that large intervals must be left through which some at least of the birds might escape to safety. But these regulations have never been properly enforced and the number of quail netted each year is tremendous. Those which reach the interior have to run the risk of being shot, but it is the netting, not the shooting, which is threatening, according to many observers, the extinction of the species. The netted quail are inhumanly treated, being packed into crates so tightly that no movement is possible. The little birds are so pugnacious that unless they are crammed together so tightly as to prevent it, they fight one another to the death. In these crates a large proportion of the captured birds is taken to Europe, there to be fattened. The fate of those intended for consumption in Egypt is only less horrible because the period spent in the crates is shorter. The whole business of quail catching and exportation is, indeed, a cruel one, a sorry proof of the suffering which man is ready to inflict on other living creatures which have the misfortune to be good to eat or can in other ways serve human requirements. The unpleasant nature of the quail traffic, added to the threatened extinction of the species in Egypt and other Mediterranean countries, makes the case for prohibition or at least strict control of quail netting very strong.

GREECE.

Athens, August 23.

The Government's Programme.

The reconstituted Government met the Chamber last night, and M. Kaphandaris explained at length the Government's financial programme. At the moment of writing the debate is still in progress and the vote of con-

fidence has not yet been put in theory. The withdrawal of the Popular Party from the Government should expedite the handling of the numerous outstanding problems, since it is unquestionable that most of the obstruction came from that quarter; but whether in practice the new Government (which otherwise much resembles the old), or in fact, any Government can satisfactorily solve the economic problem, is extremely doubtful. The validity of M. Tsaldaris' objections to the late Government's plan for re-organising the financial system can be estimated only by experts, but, everything points to the conclusion that, whatever their validity, these objections—or, one might say, accusations—are sufficient to encourage considerable anti-Government feeling, and to weaken proportionately the position of the Greek representatives at Geneva. The problem is intensified by the ingrained suspicion with which, in money matters, everyone in this country regards everyone else, and by the question of the régime permanently threatening in the background.

Next to the settlement of the financial question, it is the material needs of the country which are most urgent, e.g., the construction of roads, the drainage of marsh lands, the consolidation of the refugee-settlements. If the re-organisation of the country's finances, with which all these activities are intimately connected and on which they ultimately depend, is to be hindered for the sake of a party, then the country will relapse into chaos, deeper than that from which the Coalition Government has been slowly rescuing it.

One item of the programme which the Government lays before the Chamber to-day will certainly meet with unanimous approval—i.e. the rejection of General Pangalos' agreement with Yugoslavia.

The School at Spetsai.

The school at Spetsai, founded on the initiative and by the generosity of M. Anargyros, a native of the island, opens next month. One boarding-house, to contain 45 boys is ready: the three others will be filled as soon as they are finished. The experiment of founding in Greece a school on English Public-School lines will be watched with the greatest interest. Its success will surely depend not on trying to make Englishmen out of Greeks, but in offering to Greek boys just those good points in an English Public-School education which can hardly be found elsewhere, and which they should be capable of assimilating. M. Anargyros has paid Englishmen a compliment, and at the same time given a notable example of the generosity with which individual Greeks often devote their wealth to the benefit of their country.

Increased Amenities.

In spite of political uncertainties, signs of material improvement are visible throughout the country. In Athens, the new 'buses of the Power and Traction Company have appeared on two lines, and are admirable both in comfort and appearance. Work on the tunnel that is to connect the terminus of the Piræus-Athens electric railway with the Kephissia-Athens terminus is to begin immediately. The tunnel will pass under Homonia Square, where there will also be an underground station. In the Provinces, several excellent hotels have appeared during the year, notably at Volo, Aedipsós, and on the island of Tenos. The habit of going to the sea or the mountains for the summer-heat has increased enormously of late, and these hotels are the result.

American Archæologists.

The terms of the agreement between the Greek authorities and the American Archæological Institute for the excavation of ancient Athens have been accepted by Dr. Capps, and the contract—if so it can be called—is signed. The statement that was recently made that the ancient museums were to be excavated needs correction. The Athenian museums are not old enough to be called ancient, nor are they in such a state of decrepitude as to require excavating.

Sofia, August 15.

King Boris on Tour.

The foreign tour undertaken by King Boris has given rise, as was the case last year, to various interpretations.

There is no doubt that during this tour, which will last at least until the middle of September and which will, of course, include non-official visits to Paris, London and Rome, King Boris will, in addition to scientific studies and pleasure excursions, have interviews with a certain number of European politicians with whom he will discuss more particularly the international situation in so far as it affects Bulgaria. And on this point mention may be made here of an announcement which has appeared in the *Pravda*, of Belgrade, which is the organ of M. Marinkovitch, Minister for Foreign Affairs, to the effect that an interview is imminent between King Boris and King Alexander in view of the realisation of a Yugoslav-Bulgarian Entente in the near future. The statement is certainly incorrect at least in the present stage of Yugoslav-Bulgarian relations, but, emanating from Belgrade and from a journal so closely identified with the Minister for Foreign Affairs, it evidently signifies a marked development of the *détente* which has been noticeable recently in these relations and which will evidently lead sooner or later to an entente between the two countries—an entente which both seem sincerely to desire in spite of the undoubted obstacles hindering reconciliation.

There is, nevertheless, another possible aspect of the Royal tour. It is perhaps sufficient to say that this aspect is one which makes a strong appeal to the Bulgarian people, who are waiting eagerly to see whether Sweden is to be included in the King's itinerary.

An Extradition Convention.

The great improvement which has recently been noted in connexion with Greco-Bulgarian relations has just received a fresh confirmation, by the elaboration of an Extradition Convention which will very shortly be signed by the two Governments. The initiative in this new step, manifested in the Greco-Bulgarian *rapprochement*, again comes from Greece, who recently put forward to Sofia a proposal which the Bulgarian authorities, after minute examination, have declared acceptable—with the exception of certain small modifications which will be made immediately.

CYPRUS.

Nicosia, August 17.

More American Tourists.

Over four hundred American tourists landed at Larnaca on July 25, and proceeded to Nicosia, where they visited the Mosque of Agia Sophia, the Museum and other places of interest. They could not be received at the Greek Archbishop's residence, as had been hoped, as His Beatitude was absent on an annual island tour. Various purchases were made of duplicate "antiques" at the Museum, and of the now well-known Lefkara lace work. The latter were far less than they might have been had not very exaggerated prices been foolishly demanded by the dealers. The large numbers of American tourists who have been lately visiting the island should have the effect of rousing Cypriots to a far more energetic campaign of advertising island attractions than they have so far undertaken.

Visit of King Faisal.

On August 8, King Faisal of Iraq arrived at Limassol, on board H.M.S. *Dahlia*, on a visit to his father, ex-King Husain. Sir Ronald Storrs came down from Mount Troodos to receive him. The King then proceeded to Nicosia. From there he paid a visit to Troodos, and called upon the Governor at "Government Cottage." He stayed a night at the Monte Carlo Hotel at Platres, the fashionable resort a few miles below the Troodos camps. On August 16 he returned to Limassol, accompanied by his father, and embarked on the *Dahlia* for Port Said.

Probable Visit of the Fleet.

News that the Mediterranean Squadron will visit the island has given great satisfaction. For some time there has been much discussion why the Fleet should have ceased for so long to call at Cypriot ports. It has been generally thought that it was owing to rather unfavourable reports received from Admiral de Robeck. It is understood that a number of vessels will put in in September, and it is hoped they will anchor for as many days as possible, different vessels being detailed for Limassol, Larnaca, and Famagusta.

The Wine Industry.

A large meeting has been held, at which villagers representing the large vine growing areas passed a resolution to be presented to the Governor, making known various grievances. It is complained that the recent increase of taxes on wines and spirits has coincided with a state of serious depression, and consequent suffering to a large number of agriculturists; and removal of the burden is asked for. In the same petition hopes are once more expressed that an Agricultural Bank, which will bring real instead of hypothetical relief to the rural classes may be established; and a moratorium for payment of debts is asked for. A suspicion has been aroused that

the present Commission which is inquiring into the condition of agricultural classes in general has in view the imposition of fresh taxes. Such suspicion is generally occasioned in connexion with any such commission. The Commissioner of Nicosia called a meeting and assured villagers that the investigation now proceeding has solely for its object a better acquaintance with the realities of present agricultural life, in order that sympathetic consideration may be given by the Government to problems connected therewith.

General News.

The summer has been a trying one in the plains, and excessive heat has prevailed for a great part of the season. At Nicosia 109 deg. F. has been registered on several days; and on the coasts the prevailing humidity increases the trial.

The gathering of caroubs (locust beans) is proceeding, having begun on August 10 in the plains.

H.M. the King has sent £3 to a Cypriot married couple to whom triplets have been born.

It is understood that, to commemorate fifty years of British occupation next summer, a series of twelve new postage stamps will be issued in June 1928; and that a five shilling silver piece will be put into circulation.

ZAGHLOUL PASHA.

Zaghoul Pasha, whose death was announced just as we went to Press last week, was, as all the world knows, a *fellah*. Hence his age, which was estimated as between 70 and 80, is not precisely known. He was born at Biana, in the Delta. In early years he went to Cairo, where, as Shaikh Saad-Allah, he studied at the University of Al Azhar. He devoted himself at the time to law and to journalism. In 1882 he joined with Arabi Pasha against the British, and was temporarily punished. But on his release from Kasr el Nil Barracks he regained his former occupation, in which he rapidly won a reputation. In 1893 he became a Counsellor of the Court of Appeal.

Soon he came to the notice of Mustapha Fahmy Pasha, who was Prime Minister of Egypt from 1895 to 1908. In 1896 he married the Prime Minister's daughter, and ten years later was appointed Minister of Education. Lord

Cromer's keen eye clearly noted the abilities of the young Egyptian, and his words, uttered in 1907 when he left the country, are worth quoting. He said of Zaghoul:—

He possesses all the qualities necessary to serve his country. He is honest; he is capable; he has the courage of his convictions; he has been abused by many of the less worthy of his own countrymen. These are high qualifications. He should go far.

In a word, Lord Cromer discovered in him the qualities which should have made him popular with the British.

In 1910 Zaghoul became Minister of Justice. But between as honest an Egyptian as he was and the Khedive a dislike grew and increased in intensity. The climax was reached in 1912, when he complained to Lord Kitchener of irregularities in the Wakfs Administration—irregularities which Zaghoul was convinced were instigated by the Khedive; but proofs were lacking, and Lord Kitchener forced Zaghoul to resign.

Before the War Zaghoul had displayed no anti-British feeling. During the War, however, he decided that Egypt would be able to stand alone, and he worked quietly to establish a hold on his countrymen. Immediately after the Armistice he demanded of the High Commissioner, Sir Reginald Wingate, complete independence. This request was refused. The Egyptian Cabinet wished to visit London and confer with British Ministers. This desire was ungratified. Agitation spread in Egypt, and in March, 1919, Zaghoul, with three of his associates was arrested and deported to Malta. After Lord Allenby had been appointed High Commissioner, Zaghoul was released. The Milner mission was sent out to investigate conditions and problems in Egypt, but, at Zaghoul's instigation, it was boycotted. This mission however, in 1920 made such recommendations as Zaghoul was fain to accept, but he failed to clinch matters. In March, 1921, Zaghoul was permitted to return to his country, where he received a remarkable demonstration of affection. In December of that year there was more turbulence in Egypt, with the result that Zaghoul, who by now was apparently becoming identified with forcible hostility to British pretensions in Egypt, was deported to the Seychelles. Then came the Declaration of Independence. In 1923 Zaghoul was allowed once more to return to Egypt.

The Wafd simply swept the country in the first elections held under the new Constitution, and Zaghoul became Prime Minister in January, 1924. In July of that year an attempt to assassinate him was made by a mad Nationalist who imagined that he was yielding to Great Britain. His meeting a few months later—in October—with Mr. Ramsay MacDonald, Prime Minister of Great Britain, was fruitless. Two months later the Sirdar, Sir Lee Stack, was murdered in Cairo. That unhappy event marked the end of Zaghoul's Ministerial service.

For the time being Zaghoul was silenced. At the election at the end of 1924 his party suffered a set-back. The Ziwar Ministry thereupon entered on its precarious existence. In the elections of the Spring of 1926, however, the Zaghoulists again swept the country. For a time it seemed as though Zaghoul might take office again. But it was not to be. Since the middle of 1926 Zaghoul has been behind, not in the front of, the political stage in Egypt. From subsequent conversations with Lord Lloyd, High Commissioner, he appeared to gain the conviction that an ordered régime was best, without overmuch insistence upon the points which had been left unsettled by the 1922 Declaration. During the months that remained to him, in fact, he exercised a surprisingly moderating influence over his fellow-countrymen: so much so that one is now forced to ask:—Who shall lead and knit the Wafd as he led and knitted it?

Historically speaking, this harsh, able, and simple *fellah* is likely to loom large, not only in the record of Anglo-Egyptian relations but also in that of Egypt herself. Incomparably he was the biggest, most impressive figure that has so far sprung from the soil of Egypt itself and who has devoted his life to the cause of his country. Good temper, humour, honesty, and ability were so ingrained in this man that it is the more to be lamented that a final settlement of his country's problems was not achieved during his lifetime.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

THE PERSO-TURKISH FRONTIER.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—May I be permitted to comment on a statement which appeared in your "Notes of the Week" in your issue of August 18 under the heading of "The Perso-Turkish Frontier"?

You state that "In Azerbaijan, in fact, there are always the germs of a Separatist movement." I am at a loss to understand on what facts this statement is based. Should the reference be to the "Khiabani" movement of 1920, it was a mere political move on the part of Khiabani and his followers for introducing reforms into the administrative machinery of the whole country and not that of the Azerbaijan province; and should it refer to subsequent events it should be noted that the people of Azerbaijan province have always been the protagonists of the Constitutional Movement in Persia and have always taken a leading part in all national movements. We Persians have never heard of this Separatist tendency, and I am surprised to read of it in a journal with such long and close association with Persian affairs.

You also state in a subsequent sentence, "one is probably more justified in ascribing the dispute to the long-standing possession of pro-Turkish sentiments by a section of the inhabitants of Persian Azerbaijan." Here again I am at a loss to locate these pro-Turkish sentiments. Have we ever heard of them from an inhabitant of Persian Azerbaijan? We must not be misled by the fantastic claims of Turkish writers who, themselves victims of self-deception, seek to create a Tatar Empire by cutting off pieces of adjacent countries to be cemented by a common language, relying on the fact that the people of Persian Azerbaijan speak a dialect of Turkish in which seventy per cent. of the words are Persian.

When the Mongols invaded Persia they forced a large number of Persians to speak Turkish not only in Azerbaijan, but also in Zinjan, Kasvin, and even as far south as Hamadan. But the Persian population of these provinces was never replaced by Mongols, and only the Mongol dialect was imposed on the Persian inhabitants, who are trying to-day to abandon the Turkish dialect and are wholly out of sympathy with Pan-Turanian claims. If the survival in certain areas of special languages justify the creation of fresh Sovereign States or the readjustment of boundaries, what would happen in Switzerland, Wales, Belgium, or Syria? We all, however, know that nationality, as it is understood to-day, is based on common feelings and interest, which do not exist between the Persians of Azerbaijan and the Turks of Anatolia. Nor can the home lands of Zarthusht, who is supposed to have been born near Urumiah, ever have any affiliation or common interest with a Turanian Empire.—I am, etc.,

MOSTAFA K. FATEH.

160, Cromwell Road, S.W. August 22, 1927.

[We are glad to be able to publish this letter from a Persian correspondent who has, however, read into our "Note of the Week" rather more than we intended to convey. We were suggesting possible reasons for, rather than proffering definite explanation of, the present tension over the Turco-Persian frontier. We made no reference to the Turki, who, as our correspondent rightly points out, are by no means to be confused with the Ottoman Turks. In our reference to North-West Persia we had in mind primarily the Kurds, of whom our correspondent makes no mention. Surely he would not deny that in the past these people have often identified their activities with the cause of Turkey?—ED.]

NEAR EASTERN PRESS.

Politics in Yugoslavia.

Considerable activity prevails throughout Yugoslavia in connexion with the approaching elections. Most of the leading politicians are on tour, and among the more indefatigable is Dr. Koroshetz, leader of the Slovene Clericals, whose inclusion in the new Government—always supposing that M. Voukitchevitch's Radical group retains power—lends special weight to his utterances. In a speech at Ptui Dr. Koroshetz, according to reports, dealt fairly frankly with foreign affairs. In the course of his speech he remarked:—

The principle of the Slovene People's Party in foreign affairs was "Friendship with all neighbours." There were, however, neighbours who did not want peace. On the part of Yugoslavia everything had been given to the Italians, but she had received in return only hostility. This year there had been great danger of war, but at the critical moment, as President of the Slovene People's Party, he had gone to Budapest, in order to make a start with a new policy. He had also been to Sofia, where he had set to work in the direction that the past should be forgotten and that a new era of mutual correct relations should begin. The meeting of King Alexander and King Boris had shown that this policy was sound. Yugoslavia's whole foreign policy had been radically altered. Dr. Marinkovitch, Minister for Foreign Affairs, undoubtedly an outstanding figure, was resolved to restore touch with Germany, which was no longer a military State, but above all a great economic Power. Germany's relations with Italy corresponded with Yugoslavia's relations with the same country, as the Germans could not look on quietly while their compatriots in Italy were suffering. It was one of the services rendered by Dr. Marinkovitch that a desire on the part of Italy for a *rapprochement* was noticeable. Yugoslavia would not refuse an offered hand, as she wished to live at peace with everybody.

[It has been denied that the meeting of King Alexander and King Boris, to which Dr. Koroshetz refers, took place.—ED.]

Dr. Koroshetz, however, had to return to the subject of Italy before his speech was concluded and pointed out that, as the Italians were not friendly disposed to Yugoslavia, it would be dangerous for any Party to look to Italian capital for the development of the country.

The contention of Dr. Koroshetz on a previous occasion that no Government could work with M. Stepan Raditch, the leader of the Croat Peasant Party, has been endorsed by the Prime Minister, M. Voukitchevitch, who in a speech at Voynitch on August 21 deplored the fact that the Croats could not be a factor in the application of the Government's programme. The obstacle, he continued, went by the name of Stepan Raditch.

Raditch was indeed the representative of the Croats, but for productive work he was impossible. Every Government that he supported or in which he took part was placed in an impossible situation after every speech that he made. It was invariably a case at once of apologising or of facing a crisis. As soon as the Croats recognised that Stepan Raditch was the sole obstacle, it would be an easy task to bring about a joint real programme.

Reform of the Turkish Language.

If we may judge by *La République*, of Constantinople, the French edition of *Jumhuriyet*, the question of the reform of the Turkish language may shortly be entering the sphere of practical politics. After a passage emphasising the remarkable improvement in Turkish literary composition during the last thirty years, in particular in Turkish journalism, "which is now in no way behind that of Europe"—no subject can be discussed in the Turkish Press without a preliminary reference to the general improvement in every sphere brought about by the Republican régime—the admission is made that the language problem is still insistent.

We have no definite rules of orthography. We have not fixed the number of words that belong to our language. Rules of grammar and syntax leave terribly much to be desired, since we do not even possess a proper alphabet. Our Prime Minister, who in his moments of leisure does not fail to study the best literary and scientific works of the West, was complaining the other day of the difficulties that he often experiences in expressing in our language what he reads and understands perfectly in these valuable works. Ismet Pasha is thus well aware of the defects of our language and considers with good reason that we ought to make them good by finding corresponding impressions for the terms used in the better works of the West—a step which in our opinion seems to be the only means of filling the many gaps in our national language.

The article then introduces the subject of Turkish script, and shows that the writer, Yunus Nady Bey, who is a close adherent of the President, is inclined to favour the writing of Turkish in Latin characters, although he is careful to keep within the prescribed limits of a *ballon d'essai*.

Naval Disarmament?

The Naval Conference at Geneva has been followed closely in the Near East. It has given rise to the following reflexions in the *Aksham*, of Constantinople, which recalls that a similar conference summoned three years ago to consider disarmament among the smaller States also

failed on account of the reluctance to reduce naval strength.

"Among the smaller States," continues the writer in *Aksham*, "Greece was one of the most intransigent. As the motive of her opposition she cited the fact that Turkey possesses the cruiser Yavouz. She made the most of our absence from the Conference and of the fact that the Yavouz would give us naval supremacy in the Ægean. In these circumstances it is useful for Turkey to study the measures being taken by Greece, who considers us as her rival at sea. . . . the Greek Navy ever since the advent of power of the ex-Director Pangalos has begun to expand seriously. First of all four destroyers of the Nea Genea type (practically equal to our Mouaveneti Millie) were sent to England to be completely overhauled. Repairs were also carried out on the destroyer Smyrni, which Greece inherited from the Austro-Hungarian Navy. The efforts begun under the Pangalos régime have been vigorously continued under the Zaimis Cabinet. The famous Averoff has been repaired in France. Six ex-Austrian torpedo-boats have been repaired in Greece by Austrian engineers. The most important point to bear in mind is that Greece has begun to form a fleet of submarines . . . with an excellent naval base at Scaramanga, near the Piræus. Two submarines have been ordered in France, and these are nearing completion. A further order has been given for four submarines. . . . Such as it is to-day the Greek fleet is the most powerful of those of the Balkan States. . . . It would be too naive to suppose that these persistent and determined efforts are being made for a pacific end. Greece certainly has not the insensate idea of rivalling the naval strength of other States such as Italy. As for the other Balkan States, they neither have a navy, nor do they need one. In this case what aim is Greece pursuing in making herself in no time, thanks to feverish work, relatively powerful? In Turkey even children know the answer to the question."

NOTES OF THE WEEK

(Continued from page 259.)

plan, affecting not only the Mandatory Power and Jews, but also Jews and Jews, and perhaps, most serious of all, Arabs and Jews. Whatever may be said for and against the policy of the Zionist Organisation, there can be no question at all that only along the lines of Arab-Jewish co-operation can the attempt to settle Zionist colonisers succeed and bring prosperity to Palestine. In that matter Dr. Weizmann and his colleagues are indisputably in the right. To endeavour at this stage once more to conjure up the fears of Jewish domination—fears which during the last year or so have manifestly tended to disappear—would in our view be fatal to the all too slender indications of Arab-Jewish collaboration. But the Zionists have pride as well as hope; and it is scarcely to be believed that they will deliberately diminish the task to which they have set their hand. With the ending of the Congress on September 9 we shall know better how Palestine stands in regard to Jewish immigration.

The Affairs of Iraq.

A few more weeks have yet to elapse before King Faisal of Iraq confers with the British Government upon the nature of future Anglo-Iraqi relations. On the course of those conversations there is nothing that may profitably be said at this juncture. In the meantime the Press of Iraq appears to be busying itself with belittling the benefits which Great Britain has brought to Iraq—a procedure which, although perhaps unwise in itself, can have no effect upon the conclusions ultimately to be reached. The only other event of note in Iraq at the present time—apart from the question of the Naqib of Baghdad, which is the concern of Mussulmans alone—is the apparent attempt so to arrange or create positions in the Baghdad Government as to satisfy the Shiah. Two Shiah Ministers have already been appointed to the Cabinet, and it is reported that the decision has been made to appoint Permanent Under-Secretaries to all the Ministers of the Iraq Government. If this report is true, it would seem that, in view of the urgent need for economy in all Iraq Government Departments, the motive of the decision may have been mainly political. This, however, is the affair of the Arab Government, who are presumed to know their own people and business best. It is to be hoped that the political problems which are lately stated to have arisen have now been settled, and that Jaafar Pasha, Prime Minister, will be able to come to England, as originally planned, to assist his King in the Anglo-Iraqi conversations.

PERSONAL AND GENERAL

TO-DAY

September 1, 1927 (New Style).

August 19, 1927 (Old Style).

Rabia 1, 4, 1346 A.H., of the Muslim Calendar.

Ellul 4, 5687, of the Jewish Calendar.

Sir Frederick Gibbie left last week on the Rajputana for Bombay.

Lady Lloyd, wife of the High Commissioner for Egypt, opened the Dundee Horticultural Society's annual show on August 25.

Sarwat Pasha, Egyptian Prime Minister, arrived in Paris on August 26 from Berne.

King Faisal of Iraq arrived on August 22 at Aix-les-Bains, where he will undergo a cure for some weeks.

King Fuad of Egypt, accompanied by Mahmoud Fakhry Pasha, Egyptian Minister in Paris, arrived at Vichy from Paris on August 29.

The Earl and Countess of Lytton returned to Knebworth House, Knebworth, last week from Scotland. The Earl of Lytton is leaving London for Geneva on September 3.

The Greek Minister left London on August 25 for Geneva, and will be away several weeks. During the absence of the Minister M. Collas, Counsellor of the Legation, will act as Chargé d'Affaires.

Mr. R. E. More, Sudan Agent, left Egypt with Mrs. More on August 20 for three months' leave at Home. Colonel C. F. Ryder will act for Mr. More during the Sudan Agent's absence.

The King has given orders for the appointment of Mr. George Antonius, Senior Education Officer under the Government of Palestine, to be an Honorary Commander of the Civil Division of the Most Excellent Order of the British Empire.

The Persian Minister in London, His Excellency Abdol-Ali Khan Sadri, has been recalled. He leaves London to-morrow for Wiesbaden, where he will take the cure before proceeding to Persia. We learn that the new Persian Minister designate is Avanes Khan Mosa'ed, who arrived in England on August 27.

The King has given Mr. Arthur William Green, Chief Inspector, Western Desert Province, Frontiers Administration, authority to wear the Insignia of Commander of the Order of the Crown of Italy, which decoration has been conferred on him by the King of Italy, in recognition of valuable services rendered by him in connexion with the Italo-Egyptian Agreement of November 9, 1926, concerning the Western Frontier of Egypt. His Majesty has also given Mr. Ayerst Henham Hooker, formerly honorary Consul of Norway at Cairo, authority to wear the Insignia of Knight of the First Class Order of St. Olaf, which decoration has been conferred on him by the King of Norway in recognition of valuable services rendered by him in that capacity.

NEW ANGLO-ORTHODOX CHURCH.

According to the *Daily Telegraph*, a ceremony of unique character was performed on August 22 at Beisan (the ancient Bethshan of the Bible, where the bodies of Saul and his sons were buried after their defeat and death in battle). The Orthodox Archbishop of Nazareth, discoverer of the famous Madaba Mosaic, and the Rev. W. H. Stewart, representing the Anglican Bishop in Jerusalem, jointly laid the foundation-stone of a new church. The building will be Orthodox, but has been subscribed for by the Anglican communion in England and America. It will be available for the use of the Anglican community in Beisan, as an inscription written on eighth-century parchment and buried under the foundation-stone, records.

CENTENARY OF NAVARINO.

Several exhibits dealing with the Greek War of Independence, which were on view at the Romantic Exhibition held last June at the Musée Victor Hugo, are being lent for the Philhellenic Exhibition, organised by the Greek Legation for October next, in commemoration of the centenary of the Battle of Navarino. M. René Puaux's collection of philhellenic souvenirs will also be seen among the exhibits.

General Sir Alfred Codrington has promised to lend Admiral Codrington's flag, flown in H.M.S. Asia during the Battle of Navarino, and the uniform coat worn by him in the battle, a round shot from a Turkish ship fired into the Asia, a portion of the stern gallery of the Asia, hit by a round shot, an oil painting representing the battle, a card table made of the wood from the Turkish flagship, a set of volumes of the plays of Shakespeare damaged in the battle, and an engraving of the portrait of the admiral. Earl Spencer has promised the medals of his grandfather, Captain F. Spencer, commander of H.M.S. Talbot, two pictures of H.M.S. Talbot, and other souvenirs of the battle. Lord Talbot de Malahide will lend the portrait of his grandfather, then Lord Ingestre, who brought back the dispatches from the admiral. Lord Ernle is sending some statuettes of Byron, Shelley, and Canning. Sir John Murray, Bt., will give some Byron manuscripts and other mementoes. Sir Arthur Crosfield, Bt., has promised to send a pair of pistols which belonged to Byron. Mr. Richard King and Mrs. Demain Saunders are sending engravings of Navarino which belonged to Commodore Bathurst, who was killed in the battle, and also the Commodore's sword. Mr. R. Edgecumbe is sending a sword taken by Byron to Greece, and given by him to Trelawny. Mr. F. T. Higgins promised a water-colour representing the return of H.M.S. Asia and Albion after the Battle of Navarino; and Mr. E. Houghton will send a set of colour-prints by Friedel.

NEWS IN BRIEF.

The Greek Minister in Belgrade has arrived in Athens on a month's leave.

Queen Nazli, wife of King Fuad of Egypt, arrived in Paris on August 23.

M. Venizelos was asked by the Greek Government to be the head of the mission to Geneva, but has declined the invitation.

It is stated from Jerusalem that the Municipality of Damascus has been disbanded by order of the Government, which has appointed a provisional City Council of six.

In response to the appeal of the Palestine Earthquake Relief Fund, £13,000 is reported from Jerusalem as having been collected up to last week.

The National Theatre in Craiova (Roumania) was destroyed by fire on August 22, with all the furniture and properties, the loss being estimated at 50,000,000 lei.

The Greek Chamber on August 23 passed a vote of confidence in the Government by 159 votes to 16. The members of the Popular Party were absent from the sitting.

It is stated that the Egyptian Minister of Public Works is forming a Committee of ten technicians to study improvements in the Assiout barrage. The cost of the improvements is estimated at £250,000.

It is reported from Cairo that the late Zaghloul Pasha left an autobiography, with instructions to his widow to publish it after his death, and also a political testament for the guidance of his followers.

Four hundred houses were destroyed and 2,000 people rendered homeless by a fire which broke out at Scutari, Constantinople, on August 22. All the houses were built of wood, and a strong wind helped to spread the fire.

The discovery of a Soviet espionage organisation at Chisinau (Kishinev) is reported from Bucharest. It would appear that this organisation was engaged in supplying information of a military character to the Intelligence Department at Kiev. Fifteen arrests have been made.

Book Reviews

THE RENASCENCE OF ISLAM.

"SURVEY OF INTERNATIONAL AFFAIRS, 1925." Volume I. The Islamic World. Issued under the Auspices of the Royal Institute of International Affairs. By Arnold J. Toynbee. (Oxford University Press, 25s.)

To survey comprehensively the events that have taken place in the Islamic world since the Peace Settlement would require more than one volume, and Professor Toynbee, for all his skill in collating and compressing detail, has perforce had largely to omit the development of affairs in such Islamic communities as those inhabiting the Far East, India, Central Asia, Eastern and Western Africa. Enough remains, however, to fill a fascinating book. It is, moreover, in those countries which are the subject of Professor Toynbee's record—in North-West Africa and the Middle East, the countries with which *THE NEAR EAST AND INDIA* specifically deals—that possibly the most impressive and significant events have occurred. Without question, there has been at work since the War a compelling force in Islam. One should, however, modify this and say compelling in some instances; because in others the driving force seems to have been one of mere repelling.

Now the tendency to generalise upon the manifold and simultaneous events in the political disruption of Islam since the War is almost irresistible, and the author of this book is hardly to be gainsaid when he avers that among those non-Western people who had come into contact with the West there were two impulses discernible after the War:—

The first of these was a negative impulse—which frequently found vent in vigorous action—to throw off the ascendancy of the Western Powers. The second was a positive impulse—which was no less strong and no less active than the other—to adopt the military technique, the political institutions, the economic organisation, and the spiritual culture of the West, but to adopt these by deliberate choice instead of being compelled to conform to them under pressure.

That is a bold statement, but its accuracy is adequate. Some observers, it is true, may object that the adoption by such countries as Turkey or Egypt or Iraq or Persia of the "political institutions" of the West is rather nominal than actual; they may ask how the Angora Assembly or the Teheran Majlis resembles any Western Parliament except in theory. They may, indeed, go to the extent of asserting that constitutional government in the East is nothing but a farce. Again, objection is certain to be taken to the statement that the "spiritual culture" of the West is being adopted by Islam. Is it really certain that in abandoning Islamic culture, the East is assuming Christian culture?

But on the whole Professor Toynbee's development of his thesis is useful. He explains that the impact of the West upon modern Islam has divided Mussulmans roughly into two camps: those who are willing to break with Islamic tradition wherever it stands in the way of the adoption of "Westernisation," and those who, fearful lest the bases of their lives are being removed, hark back to the more uncompromising tenets of their religion.

Outside this categorization, however, is to be placed the remarkable resurgence of the Wahhabis: a movement the effects of which upon Islam cannot yet be gauged.

For the most part this "Survey" is concerned with the political aspect of things, or their repercussion not so much upon domestic politics as on international relations. One should not look, therefore, for the internal development of the various Islamic countries which are now forging their future. Sometimes of course internal develop-

ment had very serious external result, and Professor Toynbee is right in attributing capital importance to the changes wrought by Kemalist Turkey.

One has the suspicion, however, that events in Turkey have somewhat coloured the author's views upon the tendency of the Islamic world in general. The present directors of Turkey's revolution are indeed heroes of Islam, but are they representatives of it? The lack of religious feeling which is attributed universally to the leading Turkish statesmen—as, for instance, it is universally attributed to the leading Bolshevik statesmen—may not unduly disturb the large towns in which Mussulmans dwell; but what of the hillsides, the plains, the deserts? Will the tribesman become the more reconciled to the townsman now that the latter has so largely forsaken his faith? For many an urban follower of the Prophet, Turkey's action in abolishing the Ottoman Caliphate was indeed a welcome sweeping away of the cobwebs, but it has left a mass of the more devoted Faithful sorely perplexed.

The author's section on North-West Africa is very useful to have, more especially in view of the delicacy of international relations therein. For the student of Franco-Spanish and Franco-Italian relations this section is indispensable. It includes, of course, the struggle of Abdul Krim, who at one time threatened almost to set the Islamic world ablaze. Apparently, however, Abdul Krim, whose positive abilities, if they existed, were given no chance of expression, was rather an example than an exemplar, although even yet the precise reaction of the Moroccan resistance against the French on that in Syria has not been estimated. Abdul Krim's eclipse seems to be characteristic of Islamic history: a world hero one day, and a forgotten exile the next.

When Professor Toynbee comes to Egypt and that section of the Middle East which has primarily been the concern of Britain, his objectivity, or unimaginative reliance upon the printed word, is most pronounced. He sets down facts, generally giving, in the form of countless footnotes, some authority for them, but disdains to offer much interpretation or deduction. This dispassionate attitude is deserted, however, when examination of the Syrian Mandate is made. Doubtless the author has justification for his condemnation of French policy and of individual Frenchmen—he bases many of his criticisms, indeed, on the reports of the Permanent Mandates Commission—but to one reader, at any rate, his pages devoted to French policy in Syria have the effect of disturbing the general serenity of the compilation. It is something of a shock to read, for instance, of the notorious Captain Carbillet, that "he was a perfect example, in French uniform, of the legendary type of Prussian officer." He refers, again, to the policy of the Mandatory Power in Syria as that of one "who had come to bring not peace but the sword." There are in truth many things to be said against the French administration of Syria: but there are many ways of saying them.

Readers of *THE NEAR EAST AND INDIA* will hardly be unfamiliar with the events recorded in this "Survey" as they affect Egypt, Turkey, Syria, Palestine, Arabia, Iraq, and Persia. But they will certainly be glad to have all the main facts recorded in one volume, and will be able themselves to supply the criticism from which Professor Toynbee generally refrains. The facts, after all, are something, particularly when the author gives chapter and verse. We are sorry to say however, that his footnotes, which generally indicate the source of his statement, fail him when he refers to the death of Simko, the Persian "rebel," in 1922 (page 539) and to the active participation in the Great War against Great Britain of the Imam Yahia of the Yaman (page 44). Would not Simko and the Imam Yahia both resent these charges?

Certain aspects of the development of Middle Eastern affairs have been admirably brought out by Professor Toynbee. His note on oil in Iraq, for instance, is welcome:—

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.
Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscription £1 per annum.

Further particulars may be obtained of

74, Grosvenor Street, W.1.

E. H. Keelling,
Hon. Sec.

Though the truth about "oil politics" was notoriously difficult to ascertain, the history of the Mosul controversy (at least in so far as the facts were known at the time of writing) would appear to show that, with all the Governments concerned, the desire to secure profits from the oil was quite subordinate to political considerations.

On the Kurdish problem in Turkey, again, he is very sound. And there is wisdom in his remarks upon the different attempts to settle minorities in the Middle East—whether Armenian, Jewish, Assyrian, or anything else—in spite of the general tendency of minorities to disappear either by elimination or assimilation.

But one would have liked to see, for instance, more recognition of the fact that the League of Nations Mosul Commission took its cue in regard to recommendations for Southern Kurdistan from, rather than to, the British Administration in Iraq. One would have preferred that the historical parallel which Professor Toynbee draws between the Arabia of Ibn Saoud and the Arabia of the seventh century had been modified by recognition of the fact that, whereas the Muslims of the earlier time could burst through the barriers which had been set up before Rome decayed, the Wahhabis are hardly likely to burst the barriers which Great Britain has only just set up. Conceivably the desert may win in the end against the civilisation of the West; but not in the time of King Ibn Saoud, even were he to wish so.

One last rebuke, and we are done. Why does Professor Toynbee, who is very careful over the spelling of Oriental names, make the capital of Najd "Riyad"? And why does he give us the choice between *ulama* and *ulema*, *shaykh* and *sheykh*, *Shari'ah* and *Sheri'eh*?

It will have been gathered that criticism centres round details. The truth is that Professor Toynbee deserves congratulations for the painstaking way in which he has set out the main facts of a period of time which is likely to loom large, however the history of the future be written. In accordance with the author's labours should be the gratitude of all students of Islam to-day.

THE BUDDHIST EMPEROR OF INDIA.

"ASOKA" By J. M. Macphail. *Heritage of India Series.* (Oxford University Press: 2s. 6d. net.)
